KOPAL, a fort, Russian empire, in the country belonging to the Great Horde of the Khirghis, nearly equidistant from Lake Tenghis on the N.W., and the Chinese town of Kulja on the S.E.; lat. $45^{\circ} N.$; lon. $82^{\circ} E.$ It is the most southerly fort which Russia has erected in this region, and is evidently intended first to overawe, and finally to furnish means for the subjection of the native tribes. It is one of the most desolate spots imaginable, without a tree, and with a soil composed of rough gravel and sand, on which there is scarcely any vegetation. The error committed in selecting it was greatly aggravated by the arrival of 500 Cossacks with their families to form a permanent settlement, and of 200 more, who were to remain for three years to aid in carrying on the works. Much suffering and great mortality ensued. By dint of perseverance, however, the necessary works have been completed, and a town has grown up which already contains 11,000 inhabitants, and has become the centre of a large and rapidly increasing trade.

KOPIS, a tn. Russia, gov. and 35 m. N. Mohilev, on the Dnieper; with a church, two charitable endowments, and a pop. of 2686.

KOPRILI, a tn. Turkey in Europe, Macedonia, eyalet and 26 m. S. by E. Uskub, on the Vardar, which divides it into two parts, and is here crossed by a long bridge. It is poorly built, and consists of streets which are ill formed and very filthy. Koprili is the ancient capital of Bylazozza in Paonia. Pop. 22,000.

KOPYCZYŃCE, a tn. Austrian empire, Galicia, circle and 8 m. N.E. Czortkow, cap. dist. of same name, with an establishment for the poor. A bloody battle was fought here in 1650 between the Cossacks and the Poles. Pop. 4953.

KORA, or **KORANO**, a tn. Greece, nomarch Cyclades, on the S.W. of the island Amorgo, near the mountain and cape of its own name; with a parish school and a pop. of 2000.

KORALAY, a mountain, E. Africa, in the Somanli country, rising up from the rugged plateau which bounds the Marar Prairie on the E., 65 m. E.N.E. Harar. Its name, equivalent to our saddle back, exactly describes its shape, two huge granite boulders forming the pommel and crupper, and a depression between them the seat. The summit commands a good view of the surrounding country. 'On all sides,' says Burton, 'except the north-west and south-east, was a sombre mass of granite hill; the course of the valleys between the several ranges was denoted by a lively green, and the plains scattered in patches over the landscape shone with dull yellow, the effect of clay and stubble, whilst a light mist encased the prospect in a circle of blue and silver.' The mountain is said to be much frequented by lions, and Burton, though he saw but one, had full proof of the fact when he 'came upon dens strewn with cows' bones, and proving by a fresh taint that the tenants had lately quitted them.'

KORAT, a frontier tn. on the boundaries of Siam and Cambodia, in lat. $15^{\circ} 30' N.$; lon. $103^{\circ} 40' E.$; is the centre of a neutral territory of the same name, governed by an independent prince. The town, encircled with walls, is situated on an elevated plateau, which on all sides overlooks the surrounding country; but to reach it the traveller must ascend a thickly wooded steep, named the *Dorg-Phaja-Fai*, or Forest of the King of Fire, a gloomy region not unworthy of its mysterious name, and rendered terrible in many places by the deadly foulness of its atmosphere. The inhabitants of Korat are chiefly engaged in the neighbouring copper mines and manufactories of sugar. Pop. of the kingdom, about 60,000; of the town, 7000.

KORCZYNA, a tn. Austrian empire, Galicia, circle and 16 m. E. Jaslo; with 3760 inhabitants, almost all linen weavers.

KORITSA, a tn. Turkey in Europe, in the S.W. of Macedonia, surrounded on all sides by lofty mountains, 22 m. S.W. Monastir. The advantageous position of the place, at the point where several important roads meet, and communicate with Yanina on the S., Berat on the W., Ochrida on the N., and Monastir on the N.E., give it a considerable trade.

It contains 10,000 inhabitants, of whom not more than 1000 are Turks, all the rest belonging to the Greek church.

KORITSHAN, a tn. Austrian empire, Moravia, circle and 18 m. W. Hradisch, in a beautiful valley; with a parish church, a synagogue, a castle with fine gardens and a picture-gallery, a poorhouse, and manufactures of glass, liqueurs, and rosoglio. There is a mineral spring in the vicinity. P. 2820.

KORNEGALLE, or **KURUNAGALLE** [add.], one of the ancient capitals of Ceylon, 55 m. E.N.E. Colombo. It is beautifully situated within the shade of an enormous rock of gneiss 600 ft. high, and worn by time into the form of a couchant elephant. Nothing of the ancient town now remains except fragments of columns and carved stones belonging to the palace, on the site of which the principal civil officer of the district has his residence. The modern town consists of the bungalows of the European officials, each surrounded with its garden; two or three streets inhabited by Dutch descendants and Moors, and a native bazaar, in which the principal articles exposed for sale are rice and curry stuffs, and cooking chatees of brass or burnt clay. The district suffers occasionally from severe drought, during which there is sometimes such a total destitution of surface water that alligators, bears, and other wild animals, make their way into the town to drink at the wells. Under ordinary circumstances, however, the soil is prolific in the extreme. Rice, cotton, and dry grain are largely cultivated; every cottage has its garden of cocoa-nuts, arecas, jak-fruit, and coffee; the slopes are covered with luxuriant vegetation, and dense forests, in which deer and elephants abound, are seen on every side as far as the eye can reach. Kornegalle is much visited by Buddhists, who come from the remotest parts of Ceylon to visit an ancient temple on the summit of the great rock, where the chief object of veneration is Buddha's footprint hollowed in the rock in a manner similar to that on Adam's Peak, the summit of which, though 44 m. S.S.E., is here visible.

KOROND, a tn. Austrian empire, Transylvania, circle and 27 m. E. by S. Maros-Vasarhely, on a small stream of same name; with several salt springs, a bathing establishment, and 2230 inhabitants.

KOROPIEC, a tn. Austrian empire, Galicia, circle and about 20 m. E. Stanislav, in a beautiful district on the Dniester; with an elegant baronial castle. A bloody battle was fought here with the Turks in 1443. Pop. 2890.

KOROSKO, a tn. Nubia, on the Nile, lat. 22° 35' N. To the S. of this place lies the great desert of Korosko, which, for the

(though dislocations caused by earthquakes may be traced in the valleys of erosion), but are formed by horizontal irregular strata of different density, some only slightly knit, but others united by argillaceous-ferruginous cement, and more capable of resisting the destructive effects of the atmosphere. The upper layers are those that seem less hard, but none of them are very homogeneous. From this geological formation there result the most picturesque effects: the sands are driven along the bottom of the valleys, which they fill up horizontally to a certain height, leaving exposed only the tops of the hills. These hills disappear abruptly about twenty hours' march to the south of Korosko, where their boundary is sharply defined in a direction from E.N.E. to W.S.W. —(Tremaux, *Voyage au Soudan Oriental*, &c.)

KORTION, or **ANO-KASTRON**, a tn. Greece, nomarch Cyclades, island and 6 m. S. town of Andro, on a bay of same name. It has a justice of peace court, a custom-house, a quarantine establishment, a Hellenist and two parish schools. Pop. 1500.

KORYNAUR, a tn. India, Gujerat, dist. Soruth, on the Singora, about 2 m. above its mouth in the ocean, on the S. of the peninsula of Kattywar, 200 m. S.W. Baroda. It is defended by a fort, and possesses a temple of Krishna, which, at certain times, attracts large multitudes of pilgrims. Its harbour is indifferent, and has little trade.

KOSARATZ, a tn. Turkey in Europe, in the N.W. of Bosnia, 22 m. N.W. Banyaluka, on the Sanna, an affluent of the Unna; has a castle built in the form of a square, and enclosed by a fosse.

KOSHI, a territory, Central Africa, lying on the W. of the Nile, at the N. end of the Albert Nyanza. The Nile is navigable from its exit from the lake for a considerable distance, having the Koshi country on its W. side, and Madi on the E.

KOSILLA, or **Kost**, a river, India, which rises in Kumaon, among the mountains of the Central Himalaya, in lat. 29° 52' N.; lon. 79° 34' E.; flows first S., then W., descending from the mountains through a gorge remarkable for picturesque beauty and grandeur; resumes its original S. direction, and retains it to its junction with the W. Ramagunga, about 11 m. below Rampoor. It has a total length of nearly 150 m., and in the lower part of its course a channel 450 yards wide, but carries little water except in the rainy season, when alone it ceases to be fordable.

KOSMANOS, a tn. Austrian empire, Bohemia, circle and 3 m. N.E. Bunzlau; with a parish church, a beautiful castle, a calico printfield, and 2521 inhabitants.

KOSMODEMJANSK, a tn. Russia, gov. and 100 m. N.W. Kasan, cap. circle of same name, on the Volga. It has five churches, a circle school, and a charitable institute, and contains 4407 inhabitants.

KOSSEIR, or **Cosseir** [add.], a seaport, Upper Egypt, E. coast of the Red Sea, 95 m. E.N.E. Thebes, lat. 26° 7' N.; lon. 34° 21' 59" E. It stands on a sandy beach at the E. extremity of the caravan route across the desert from Egypt towards Mecca. The whole neighbourhood is exceedingly bleak and arid, the only green plants seen being contained in two or three gardens, with a few date-trees of sickly appearance.

The principal buildings are, a square citadel at the back of the town, mounting eight long brass guns; the government house, agreeably seated on a small quay near the water's edge; and the bazaar, which is well provided with the ordinary produce of the valley of the Nile. The climate, tempered by the sea breezes, is not so scorchingly hot as in the interior, but the advantage is overbalanced by the want of water, which is brought chiefly by Bedouins from mountain reservoirs at the distance of several days' journey, and sold

GREAT DESERT OF KOROSKO.—Tremaux, *Voyage au Soudan Oriental*.

space of two days' journey before reaching the plains called rivers without water and sea of sand, is covered with remarkable conical hills, among which winds the path of the traveller. On the slopes of these hills lie moving sands, liable to be displaced by every storm; the winds disperse them generally on the slopes opposed to their course. These hills are formed of a quartzose sandstone, which gradually becomes less solid in its composition as we advance towards the south. They are not due to upheavals or convulsions of the earth's crust

at a high price. The harbour consists only of a long wooden pier, running out about 100 yards into the sea. The protection of the town, and a small hillock, make it safe during northerly and westerly winds, but in gales from other quarters there is no security, and shipwrecks are frequent. The chief exports are grain, and white and printed calicoes; the imports—rice, coffee, spices, and tobacc. Kosseir, however, is far less indebted for its prosperity to this general traffic than to the crowds of Mecca pilgrims who arrive at it, and for the conveyance of whom across the sea, in vessels so crowded that they resemble slavers rather than ordinary passenger ships, £2 per head is charged.—Besides the Kosseir above described, there was another situated about 4 m. N., and now distinguished from it by the name of Old Kosseir. The only interest it possesses is in its ruins, which prove its former importance. Off the coast great numbers of lobsters and other excellent fish are caught. Pop. about 2000.—(*Petherick*.)

KOSSETZ, a tn. Austrian empire, Hungary, co. and 12 m. N.N.E. Trencsin, on the Waag, here crossed by a stone bridge; with a castle, manufactures of cloth, a brewery, a trade in corn, and 1000 R. Catholic inhabitants.

KOSSOGOL, or **BAIGAL DALAI**, a lake, Chinese empire, Mongolia, near the Russian frontier, to the S. of the Sianisch Mountains, between lat. 49° 5' and 51° 34' N.; lon. 100° 32' and 101° 30' E.; length, N. to S., 168 miles; mean breadth, about 32 m. It is in the shape of a long and comparatively narrow oblong, tapering gradually towards the S. till it terminates nearly in a point; is fed by numerous streams from the mountains surrounding it on the N.E. and W., and discharges itself at its S. extremity by the Ega, an affluent of the Selenga. Its depth is reported to be great, but has not been ascertained. A little to the S. of its centre is an island of a somewhat circular shape, called Dalai-Kuissa, which is densely wooded with larches, Siberian cedars, and white firs, and said to abound with foxes, hares, goats, and deer. The lake teems with fish, which are caught in great numbers in spring and harvest, at the mouths of the streams. With the exception of a few marshy spots, the banks are high and precipitous. The prevailing rocks are limestone, clay-slate, gneiss, quartz, red and gray granite, syenite, greenstone, and lava. Near its N. extremity is a large and thickly-wooded island, frequented by the Kalkas, who come to it in winter to hunt; and near its centre is another island of conical shape, and apparently volcanic origin. The shores are inhabited chiefly by Urjanks, who possess large herds of cattle. Near the N. shore is a Buddhist dazan, or monastery, containing three principal temples and numerous chapels. The largest of the temples is very spacious, and has numerous images of large dimensions, many of them glittering with gold and precious stones, and others clad in rich Chinese silks. The number of priests, or lamas, is about 130. The Russian traveller Permekin, who visited the lake in 1857, and lived for some days in the monastery, saw fifty of its inmates actually employed on one occasion in conducting the service.

KOSTENDIL, or **GUSTENDIL** [add.], a tn. Turkey in Europe, eyalet and 90 m. S.S.E. Nissa, on the Strymon. It lies on the N. slope of a bleak mountain chain, and is the seat of the kaimakan. The manufactures consist of arms and articles in iron and steel. In the vicinity are hot mineral springs. It contains 8000 inhabitants, whose chief employment is in the gold and silver mines.

KOSTOLAN (**GREAT**), a tn. Austrian empire, Hungary, co. Upper Neutra, on the Dudvagh, 12 m. N.E. Tyrnau; with a synagogue and 1360 inhabitants.

KOTAH, a native state and tn. India, Rajpootana, between lat. 24° 30' and 25° 50' N.; lon. 75° 35' and 76° 56' E.; bounded N.E. and E. by Jhallowa, Gwalior, and Chupra; N.W. the Chumbul, separating it from Boondee; N. a detached part of Gwalior; and S. a detached part of Holkar's Dominions and Jhallowa; length, N. to S., about 90 m.; breadth, 80 m.; area, 4339 sq. m. It forms part of the high table-land of Malwa, and slopes gently northward towards the Chumbul, which drains it directly, and by its affluents the Kala Sinda, Newaj, and Parbati. It is generally fertile and highly cultivated, but has a very indifferent climate, being subject to scorching heat and hot winds in summer, and becoming exceedingly unhealthy during the periodical rains. Pop. 433,900.—The town, cap. of the above state, r. bank

Chumbul, here crossed by a ferry, 195 m. S.W. Agra, is inclosed by a dry ditch and a rampart with bastions, and is defended by a fort situated at its S. extremity. It is a place of considerable size, and contains many temples, several mosques, and two palaces belonging to the rajah: the one situated within the fort, and surmounted by numerous cupolas and slender minarets; and the other, on an islet of the Chumbul, of very florid architecture, and used by the rajah as a summer residence. The trade, both domestic and transit, is important.

KOTAUR, or **KOTAR**, a tn. India, presid. Madras, dist. Travancore, 9 m. N.W. Cape Comorin. It is a large and somewhat straggling place, stretching about 1½ m. from N. to S. in streets which are generally narrow and irregular. The best part of the town is that occupied by the Brahmins, whose houses are of a better description, and arranged with some degree of neatness. The principal buildings are granaries, a large tobacco warehouse, a pagoda, and a free school, founded by the late rajah for the instruction of the native youth in English and Tamil. Kotaur is much resorted to by merchants, as it is the principal mart in the S. of India for exchange in articles of trade and money. About a mile to the N. is Nagercoil, which was once the seat of the Travancore government, and is now the station of the S. Zillah court, as well as the residence of two missionaries of the London Missionary Society.

KOTHKHADE, a small territory and tn. India.—The territory, intersected centrally by the parallel of 31° N., and the meridian of 77° 30' E., is bounded N. by Bussahir and Sundooh, E. Bussahir and Turroch, S. Poondur, and W. Bulsun and Kamharsin; length, N. to S., about 12 m.; breadth, 6 m. It lies between the Sutlej and the Tons, and forms part of a valley which penetrates the great mountain range extending from Wurtu on the N. to the Chur on the S. It is mostly composed of strata of gneiss and red and white quartz, is well wooded, particularly on its S. side, and has much grand scenery.—The town, cap. of the above territory, picturesquely situated on the Girce, in lat. 31° 7' N., lon. 77° 36' E., contains two remarkable masses of building, both perched on lofty rocky promontories. The one belongs to one of the principal zemindars; the other, the residence of the rana, or rather ex-rana, as the territory is now British, is of three stories, and very imposing appearance, each story projecting beyond the one beneath, while the whole is crowned by two handsome Chinese turrets, adorned with beautiful wood carving.

KOT-KUMALIA, a tn. India, Punjab, r. bank Ravee, 105 m. S.W. Lahore. It is an ancient place, built of burnt bricks; possesses a fort and a bazaar, and has been conjectured to be the place where Alexander the Great, in attempting a rash assault, was wounded.

KOTAKO, a prov. Western Africa, forming the E. frontier of Bornou, and bounded N. by Lake Chad, W. Gamerghu, S. Logon, and E. the Shari, which separates it from Baghirmi. It has a surface so flat that a large portion of it is inundated during the rainy season. Immediately afterwards these flats, which have a black argillaceous soil, are converted into one vast field of cultivation, on which great quantities of sorghum or holcus are grown. Among the vegetable productions the most remarkable are arborescent Euphorbiaceæ, some of them attaining the extraordinary height of 30 to 35 ft., and presenting, in their succulent, luxuriant, and cactus-like leaves, a striking contrast to the monotonous and dry vegetation of the mimosas around. The inhabitants, at least of the villages, consist chiefly of the Kanuri and the Shuwa. Some Arabs, mostly of the Salamat tribe, are settled in the province.

KOVROV, a tn. Russia, gov. and 40 m. E.N.E. Vladimir, cap. circle of same name, on the Khasma. It has two churches and a charitable endowment. In the N. of the circle there is a lake with a floating island. Many of the inhabitants are employed in making shoes and sieves out of bast. Pop. 1844.

KOWLOON. See *Cowloon in Supp.*

KOYAM, a dist. Western Africa, Bornou, bounding on the E. with that of the capital Kukawa, and on the N. with the celebrated Bornou Kommadagu Waube. It is well peopled and well cultivated, and has extensive forests of middle-sized mimosas, affording food to the numerous herds of camels

which constitute the wealth of the inhabitants, a tribe originally from Kanem, where they led a nomadic life.

KRAKOWIEC, a tn. Austrian empire, Galicia, circle and N.E. Przemysl, cap. dist. of same name; with a baronial castle with fine gardens, an infirmary, and 1700 inhabitants.

KRALJEVA, a tn. Austrian empire, Military Frontiers, dist. Gradisca, on an island of the Pakra, about 12 m. W. by N. New Gradisca. It is of great antiquity, and was once a large and important place, but now contains only 930 inhabitants, and some beautiful ruins indicative of former splendour.

KRAPINA, a tn. Austrian empire, kingdom of Croatia and Slavonia, co. and 25 m. S.W. Warasdin, cap. circle and on a small stream of same name; with a Franciscan monastery, an hospital, thermal baths, and potteries. The summit of a steep rock in the vicinity is crowned by the ruins of an old castle, once the residence of Louis the Great and Matthew Corvinus. Pop. 1050.

KRASNOI-YAR, a tn. Russia, gov. and 30 m. E.N.E. Astracan, cap. circle of same name, on the Aktuba, an arm of the Volga. It was founded by Alexis Michailovitch as a check on the Khirgis and Kalmucks, contains two churches, a circle and a parish school, a charitable endowment, and a trade in fruit and onions. Immediately in front of the town is a hill from which saltpeter is obtained. Pop. 3785.

KRASNO-UFIMSK, a tn. Russia, gov. and 110 m. S.S.E. Perm, cap. circle of same name, r. bank Ufa. It contains a church, a circle school, and a charitable endowment. Large numbers of beehives are kept in the circle, and there are two sulphur springs. Pop. 2607.

KRAW, isthmus and vil. Siam, connecting Malay peninsula with the continent; lat. 10° 20' N.; lon. 99° E. The peninsula, lying between the Pak-chan River, which separates the Tenasserim provinces from Siam, on the W., and the Gulf of Siam on the E., is about 45 m. wide, level, and intersected with water-courses. The proposal to construct a railway across it, for the traffic from Europe and India to China and Japan, gives it much geographical and commercial importance, as it would lessen greatly the time, expense, and difficulty of the passage through the Straits of Malacca. The village stands upon the Kamau, a small branch of the Pak-chan, and contains about fifty houses, occupied by Chinese, &c.

KRAYOVA [add.], a tn. Turkey in Asia, cap. Little Walachia, advantageously situated near the Shyl, at the junction of three roads which lead S. from the Carpathians, 114 m. W. by S. Bucharest. It is the seat of an appeal court, as well as a court of primary jurisdiction, contains a gymnasium, a normal and a central school, and has a considerable transit trade. Though once a fine town, its chief attraction at present is a handsome park. Pop. 25,000.

KRECHOW, a tn. Austrian empire, Galicia, circle and 7 m. W. Zolkiew; with a Basilian monastery, founded and richly endowed by Peter the Great in 1630, and containing a valuable library and cabinet of antiquities. The only manufacture is paper. Pop. 980.

KREIBITZ, three nearly contiguous places, Austrian empire, Bohemia, circle and 26 m. N.E. Leitmeritz, on a stream of same name. *Kreibitz* proper has a parish church, a town-house, an hospital, a brewery, and a glass refinery. Pop. 1500.—*Lower Kreibitz* has several bleacheries and mills, contains 1700 inhabitants, who are mostly linen weavers or sieve makers.—*Upper Kreibitz* has one of the oldest glass-works in Bohemia, manufactures of linen and cotton, a mill, and 900 inhabitants.

KREMSIER [add.], a tn. Austrian empire, Moravia, circle and 16 m. N.N.E. Hradisch, in the fertile valley of the Hanna, on the March, which is here crossed by a long chain bridge. It consists of the town proper and four suburbs, and has a large market-place, surrounded with trees and adorned with a statue; a collegiate church, built in 1262, mostly in the old German style; two other churches, a beautiful summer palace of the Archbishop of Olmütz, a Piarist college, an institute of the Sisters of Mercy, an ecclesiastical seminary, an upper gymnasium, a high and a common school, and an infirmary. The manufactures consist chiefly of linens, and there are several important yearly markets, mostly for flax, horses, cattle, and corn. Pop. 9110.

KREUTH, a tn. Austrian empire, duchy Carinthia, about 40 m. W. Klagenfurth; with mines of lead and zinc, and 2000 inhabitants.

SUPP. IMP. GAZ.—VOL. II.

KREUTZ, a tn. Austrian empire, kingdom of Croatia and Slavonia, co. and 22 m. S.S.E. Warasdin, cap. dist. of same name, in a plain on the Glogovnica. It is the see of a Greek bishop, and of an episcopal consistory, is governed by its own magistrates as a royal free town, and has two churches, a high-school, and silk spinning mills. Pop. 2100.

KREUZ (DEUTSCH), a tn. Austrian empire, Hungary, co. and 6 m. S.E. Oedenburg; with a fine castle, a mineral spring, and 2965 inhabitants.

KRIZBA, a tn. Austrian empire, Transylvania, circle and about 12 m. W. Kronstadt; with the ruined castle of Heidenburg on a lofty height, and 1820 inhabitants.

KROLOVETZ, a tn. Russia, gov. and 100 m. E. Tchernigov, cap. circle of same name. It has six churches, a circle school, a benevolent endowment, and a famous yearly market, which lasts from the 14th to the 26th of November, and does a large amount of business. Pop. 6317.

KROMPACH, a tn. Austrian empire, Hungary, co. Zips, on the Hernad, in a romantic valley, 16 m. S.E. Leutschau; with a beautiful castle and garden, manufactures of linen, a trade in honey, iron-works, and iron, silver, and copper mines. Pop. 2017.

KRONAU, a tn. Austrian empire, duchy Carniola, on the Save, and a slope of the Schneeberg, not far from the frontiers of Carinthia; with 1000 inhabitants.

KRONAU, a tn. Austrian empire, Moravia, circle Brunn; with a beautiful parish church, and a pop. of 1000.

KROSCIENITO, a tn. Austrian empire, Galicia, circle and 19 m. S.W. New Sandec; with mineral springs and an old mountain castle, in which St. Kunigunda and her nuns found an asylum during an incursion of the Tartars. Pop. 1150.

KROYU, or **AK-HISSAR**, a tn. Turkey in Europe, Albania, eyalet Rum-ili, 40 m. S.S.E. Scutari. It consists of the town proper and a citadel, the latter, which dates from 1338, surrounded by a wall flanked with towers, and the former containing 3000 inhabitants, chiefly Mussulmans.

KRUMBACH, a tn. Austrian empire, Lower Austria, 47 m. S. Vienna; has an old parish church and chapel, an hospital, mills, and various industrial establishments. Pop. 2120.

KRUSHEVATZ, a tn. Turkey in Europe, Servia, cap. circle of same name, near the Rasina, a little above its confluence with the Morava, 90 m. S.S.E. Belgrade. It is the seat of a court of justice and several public offices, and has a church, a school, and a much-frequented yearly market. Pop. 2000.

KRYNICA, a tn. Austrian empire, Galicia, circle and about 20 m. S.E. New Sandec, in a pleasing valley, with chalybeate springs, and a much-frequented bathing establishment. Pop. 1250.

KRYSTYNOPEL, or **KRYSTAMPOL**, a tn. Austrian empire, Galicia, circle Zolkiew, on an affluent of the Bug, 42 m. N.N.E. Lemberg; with a large baronial castle, a Bernardine and a Basilian monastery, and important manufactures of linen. Pop. 2384.

KRZESZOWICE, a tn. Austrian empire, Galicia, circle and 6 m. N.W. Cracow, cap. dist. of same name, on the Cracow railway, with a modern parish church in the Gothic style, an imposing castle, manufactures of paper, and mineral springs. Pop. 1200.

KUBANGO, or **CUBANGO**, a river, S.W. Africa, which rises in the Kimbunda country, in the marshes of the Sambos plateau, where the Cunene also has its source, flows southwards, forming several cataracts, then S.E., separating Galangue, Nyemba, Handa, Kafira, Ovampo, Kogari, and Mukursu on the right, from Kakingi, Dalanhushi, Kiombo, Massaka, Bundsha, Sambo, Indiriko, and Lulu on the left; near Indiriko receives the Kuitu, and is understood finally to join the Chobe or Zabesa, an affluent of the Liambe or Zambesi, which carries its waters to the Indian Ocean.

KUBO, a tn. Western Africa, prov. Dalla, 210 m. S.E. Timbuctoo, is a place of some importance, surrounded by a stockade and several ponds. The houses, made of clay, are well built, and have usually a tolerably large courtyard. At the W. end of the place is a suburb inhabited by Fellatah cattle-dealers. Turtles are very common.

KUDJWA, or **KUDJOOA**, a tn. India, N.W. Provinces, dist. and 20 m. N.W. Futtehpoor. It was founded by Aurung-

zebe, to commemorate a victory which he gained here over his brother Shuja, and was once a place of some importance, with a fine serai. At present it has a well-supplied bazar.

KUDSIR, a tn. Austrian empire, Transylvania, circle and E. Broos; with important iron-works, and 2002 inhabitants.

KUHLOOR, a petty hill-state, India, among the ranges of the sub-Himalaya, lies between lat. $31^{\circ} 10'$ and $31^{\circ} 25' N.$; lon. $76^{\circ} 27'$ and $76^{\circ} 55' E.$; and is bounded N. by the Sutlej, separating it from the Punjab; E. the petty states Mungul and Bhagul; S. Hindoor; and W. Sirhind; area about 150 sq. m.; revenue, £11,000. The surface is elevated, but in general not so elevated as to be unfit for cultivation, while along the banks of the Sutlej there are several alluvial tracts of some extent. The inhabitants are industrious cultivators, and by means of terraces, which rise like the steps of a magnificent amphitheatre, and are carried up to the very mountain-tops, have secured a series of fertile fields, on which are grown rice, maize, millet, wheat, pulse, oil-seeds, ginger, opium, and tobacco. The fruits are numerous, and include peaches, apricots, walnuts, apples, pears, pomegranates, raspberries, gooseberries, and strawberries. Pop. 32,250.—The small tn. of Kuhloor, though it gives its name to the state, is not the capital, the rajah having fixed his residence at the larger town of Belaspoor.

KUKAWA, a tn. Western Africa, cap. Bornou, about lat. $12^{\circ} 30' N.$; lon. $13^{\circ} 12' E.$; about 20 m. W. from the S.W. shores of Lake Chad. It consists of two distinct towns, each surrounded by a white clay wall, and separated from the other by a space about half a mile broad. The E. town, called Kuka Gedibe, occupied chiefly by the wealthy, contains very large establishments; while the W. town, called Kuta Futese, consists of crowded dwellings huddled together in narrow winding lanes. In regard to the W. town, however, an exception must be made of the principal thoroughfare, which traverses it from W. to E., forms the great promenade, and is constantly crowded by persons on foot or on horseback. The space between the towns consists partly of a wide open road connecting them. The rest of it is built upon, and so irregularly, as to present to the eye a mere medley of large clay buildings and small thatched huts, massive clay walls inclosing immense yards, and light fences of reeds. Around both towns are small villages, or clusters of huts, and large detached farms. The buildings of most note are the sheikh's palace, and an adjoining mosque with a minaret, in the *dendal* or principal street of the W. town; the sheikh's palace in the E. town, and the palaces of his son, his brother, and the vizier. In the great market, situated immediately W. of the W. town, a large fair is held every Monday, and presents an interesting spectacle. 'It calls together,' says Dr. Barth, 'the inhabitants of all the eastern parts of Bornou; the Shuwa and the Koyam, with their corn and butter, the former (the Shuwa), though of Arab origin, and still preserving in purity his ancient character, always carrying his merchandise on the back of oxen, the women mounted upon the top of it; while the African Koyam employs the camel, if not exclusively, at least with a decided preference; the Kanembu, with their butter and dried fish; the inhabitants of Makari with their tobos (the *kové berné*); even Budduma, or rather Yedina, are very often seen in the market, selling whips made from the skin of the hippopotamus, or sometimes even hippopotamus meat, or dried fish, and attract the notice of the spectator by their slender figures, their small handsome features, unimpaired by any incisions, the men generally wearing a short black shirt, and a small straw hat, 'suni gawa,' their neck adorned with several strings of *kungona* or shells, while the women are profusely ornamented with strings of glass beads, and wear their hair in a very remarkable way.' The principal articles for sale are mats, and other materials for the light buildings common throughout the country; corn exposed in long rows of leathern bags; camels, often a hundred or more; numbers of horses; textile fabrics, including the 'amagdi,' or tobe from Ujé, and the koré or rebshi, the farash or 'felkema,' and the 'sellama;' cloths, shirts, turkedis, beads of all sizes and colours, leather-work, coloured boxes of every shape and size, very neatly made of ox-hide, and little boxes made of the kernel of the fruit of the doum-tree. Last of all must be mentioned slaves, for the sale of whom a special place in the market is assigned. The number of persons attending the market often amounts to 12,000 or 15,000.

KUKLAENA, a tn. Turkey in Europe, Roumelia, S.W. Philippopolis, at the foot of Mount Rhodope. It contains 2000 inhabitants, partly Christians, partly Turks. The former possess a Greek school, erected at the expense of a Greek native of the place.

KULAT-ESH-SHUKIF, a magnificent but deserted fortress, Palestine, 17 m. S.S.E. Sidon, on a high cliff, r. bank Litany, which pursues its course 1500 ft. below. It figured much in the wars of the Crusaders, to whom it was known by the name of *Belfort*, and indebted for extensive repairs. The ancient portion, probably not of earlier date than the Roman dominion in Syria, is built with bevelled stones, and contains several square towers. The chief work of the Crusaders, still existing, is a fine Latin chapel. The castle, overshadowed by the Jebel Riban only on the N. and N.E., is visible at a great distance from all other directions, and forms a conspicuous object.

KULFELA, a tn. Western Africa, cap. prov. Mosi, 400 m. N. of the Gold Coast. It is said to be more important than all the other towns in the province, and has a well-frequented market. The inhabitants are celebrated for their skill in archery.

KULINJERA, or **KANRA**, a tn. India, Rajpootana, state Banswara, 139 m. N.E. Baroda. It was formerly inhabited chiefly by Jains, and was a place of considerable wealth and trade till it was ruined by Mahratta extortion, and became almost deserted. The chief evidence of its former prosperity is furnished by a Jain temple, a large and complicated structure crowded with images, embellished with elaborate carving, and surmounted by numerous domes and pyramids.

KULLUNG, a river, India, which rises on the S. frontier of the Tooloo Ram Senaputtee country, in lat. $25^{\circ} 4' N.$; lon. $93^{\circ} 5' E.$; flows successively N. and N.W., and joins the Brahmapootra in lat. $26^{\circ} 15' N.$; lon. $91^{\circ} 55' E.$, after a course of about 155 m.

KULOFCHA, a tn. European Turkey, 16 m. E.S.E. Shumla. Here, in 1829, the Turks, under the Grand Vizier, having, with more courage than prudence, quitted their defensive position and given battle to the Russians under Marshal Diebitsch, sustained a signal defeat. The town was in consequence destroyed, but has since been rebuilt.

KUMADAU, a lake, S. Africa, on the N. frontiers of the Kalahari Desert. It is about 12 m. long by 4 m. broad, receives the water of the Zouga, the principal outlet of Lake Ngami, and, though the lowest level of the great depression which occurs in that part of the country, has an absolute height of 2700 ft. The extent of the depression may be inferred from the fact that the lake is 1800 ft. lower than Kolobeng, situated 230 m. to the south.

KUMBIRA, a tn. S.W. Africa, Kimbunda country, territory Bailundo, on a rugged mountain belonging to the Lingi-Lingi range, near the N. frontiers of Kiakka, to which it once belonged; lat. $12^{\circ} 20' S.$; lon. $15^{\circ} 50' E.$ Its inhabitants are notorious for their predatory habits. In the vicinity another place of the same name was recently formed by settlers chiefly from Benguela. This settlement, founded under the auspices of a rich widow, has hitherto given no umbrage to the original inhabitants, and promises to be prosperous, having already some extent of cultivated land, and numerous cattle. Pop. 3000.

KUMPLY, a tn. India, presid. Madras, dist. and 27 m. N.W. Bellary, r. bank Toombudra. It consists of nearly 2000 houses, occupied chiefly by Hindoo shopkeepers and cultivators, with a considerable mixture of Mussulmans, contains many pagodas and mosques, and was once defended by a strong fort now in ruins. There is here an important ferry across the river between the ceded districts and the Nizam's Dominions.

KUNHER, a river, India, presid. Bengal, which rises on the frontier of dist. Sirgooja, about lat. $23^{\circ} 15' N.$; lon. $83^{\circ} 38' E.$, flows N. with a slight inclination westward, and joins the Sone on its right bank, after a course of about 130 m.

KUNOWITZ, a tn. Austrian empire, Moravia, circle Iradish, on the Olsawa; with a very ancient parish church, and 3274 inhabitants.

KUPAROL, **KUBANGULULA**, or **RIO SAN FRANCISCO**, a river, S.W. Africa, Benguela, which, rising in the mountains

of Kitata, flows W. through the parched and stony tract of Ilanya, receives on its left bank the Kalunga, and several other affluents, waters the fertile plains of Dombe, and after forcing its way through a narrow mountain pass, falls into the Atlantic near Cape Luasoo.

KURAYE, a tn. W. Africa, Hausa States, prov. Katsena, 70 m. N.W. Kano. It is a walled town of considerable size. The wall, provided with loopholes for archers, and pierced with three gates, is in good repair. The houses are all thatched huts without any clay buildings. The market is indifferently supplied, and the cultivation of the surrounding district is almost entirely confined to millet. The wells are 3 fathoms deep. Pop. 6000 to 7000.

KURGODE, a tn. India, presid. Madras, dist. and 15 m. N. by W. Bellary. It was formerly a large place, and now contains about 590 houses, and several temples, one of which is a large pagoda with a colossal figure of the bull Nandi 12 ft. high, cut from a single block of granite.

KURNALLI, a river, Asia, which rises in Tibet, in lat. 30° 43' N.; lon. 80° 47' E., flows S.E. for 75 m. to Angarah, on the frontiers of Nepal, enters this state, and proceeding across it, first in a S.E., and then in a S.W. direction, enters Oude, when it again turns S.E. and joins the Gogra. Its total length is about 225 m.

KURNOOL [add.], a tn. India, presid. and 250 m. N.N.W. Madras, cap. dist. of same name, in the fork formed by the junction of the Hindry with the Toombudra. It consists of a pettah, or native town, and a fort. The town, occupying the E. extremity of the fork, where the rivers actually meet, is about 2½ m. in circuit, and inclosed by a ditch and a wall 10 ft. high. The streets are narrow and badly drained, and the houses, about 2000, are meanly built. The bazar, however, is good, and the rivers supply excellent drinking water. The fort, which joins the pettah on the N.W., is about 850 yards long from N. to S., and 690 broad from E. to W. It is surrounded by a wall of limestone and sandstone 17 ft. high and 9 feet thick, and flanked with circular bastions. On the N. and E., where it is washed by the Toombudra, no other defence has been deemed necessary, but on the W. and S.W. there is a deep and broad ditch. It is entered by three gateways. The interior of the fort is inhabited chiefly by the relatives of the late nabob, the government officials, and the officers of the native regiments stationed here. The principal buildings are the palace, barracks, arsenal, and hospital. The cutchery is situated to the S. on the opposite side of the Hindry. The regimental lines, with a contiguous parade ground, are on a plain about 300 yards from the W. gate of the fort, and cover an area 371 yards long by 170 broad. The streets are wide, and the houses good, but the drainage is defective. Between the lines and the Toombudra a new village, called the Novapettah, has sprung up, and has a pop. of about 2000, exclusive of the persons connected with the military bazar, and amounting to about 2000 more. The climate of Kurnool has a bad name. Small-pox and fever prevail, and cholera is seldom long absent. Pop. 23,000.

KURRAH, or **KARHA**, a tn. India, cap. pergunnah of same name, r. bank Ganges, 40 m. N.W. Allahabad. It is about a mile along the river, and was a place of great importance till the emperor Akbar commenced its ruin by removing its civil establishment to Allahabad, and Asof-ud-Dowlah, Nabob of Oude, completed it by pulling down many of its finest buildings, and carrying off the materials to employ them in building and embellishing Lucknow.

KURREFI, or **KULEFI**, a tn. W. Africa, Hausa States, prov. and 25 m. S.S.W. Katsena, bespeaks the troubled state of the country. As a means of defence the inhabitants have thrown up a number of outworks in front of the town, in addition to a double moat and triple wall which previously existed. Pop. 8000.

KURUMAN, or **LATTAKOO**, a vil. S. Africa, near the S. borders of the Kalahari Desert, 550 m. N.E. Cape Town. It is the farthest inland station of the London Missionary Society N. of the Cape, and has thus acquired a degree of interest and importance which mere population could not give it. The mission-houses and church are built of stone. The gardens, irrigated by the Kuruman rivulet, are well stocked with fruit-trees and vines, and yield European vegetables and grain readily. The pleasantness of the place is en-

hanced by the contrast it presents to the surrounding scenery, and the fact that it owes all its beauty to the manual labour of the missionaries. Externally, it presents a picture of civilized comfort to the adjacent tribes; and by its printing-press, worked by the original founders of the mission, and also by several younger men who have entered into their labours, the light of Christianity is gradually diffused in the surrounding region. Knowing the importance of commerce as a means of civilization, the missionaries got permission from the government for a trader to reside at Kuruman, and a considerable trade has been the result. The permanence of the station depends on its perennial fountain, which issues from beneath trap rock, and, having a temperature of 72°, probably comes from the old silurian schists forming the bottom of the great primeval valley of the continent. It is less copious than when the missionaries first settled here, and there is some reason to suspect that this diminished supply is connected with a general desiccation which is taking place over a wide extent of country.

KUSABAT, a vil. N. Africa, regency and a few m. S.E. Tripoli. At its N. extremity is the old castle of Mesellata, built with square stones from old ruins, but scarcely capable of defence, though provided with a Turkish garrison. The vil., containing from 300 to 400 houses, built of stone along a gentle slope, has a mosque situated on a lofty eminence.

KUSADA, a tn. W. Africa, Hausa States, 40 m. N.W. Kano. It is an important place, with a wall which is in tolerable repair, and incloses an area which is rich in trees, and gives the town a cheerful and comfortable appearance. Most of the huts have clay walls and a thatched roof, a mode of construction well adapted to the climate and the nature of the country. The country around has a delightful park-like appearance. Indigo and tobacco are extensively cultivated. Honey is an important article of produce. The rich aromatic bushes, growing everywhere, furnish the bees with abundance of food, and the natives obtain their honey by providing them with hives formed of thick hollow logs, which they fasten to the branches of the colossal kaka-trees.

KUSHYN, a tn. and fort, India, Bussahir, near a considerable feeder of the Pabur, in lat. 31° 11' N.; lon. 77° 42' E. The site, from being completely hemmed in by mountains, is not attractive, but the houses are neatly built and well covered with slate. Close to the town are mines of specular iron ore embedded in mica slate. The ore is both smelted here and converted into malleable iron.

KUSSOOR, a tn. India, Punjab, 40 m. S. by E. Lahore. It is a very ancient place, inclosed not only by one common wall, but consisting of several divisions, each of which has its own separate wall and entrance. Among the public buildings are several mosques and palaces. The environs are covered with gardens.

KUSSOWLEE, a sanitary station, India, Baghut, 15 m. S.S.W. Simla. It consists of a hill about 5 m. in circuit, and considerably detached from the mountain range to which it belongs. Its height above the sea is about 7000 ft. The ascent from the plains is sudden, and the face of the hill, cleft by ravines, in which strata of clay slate at a high angle are exposed, has rather a forbidding aspect. The N. side is less abrupt, and becomes linked with the ranges that slope to the river Gumber. The summit is an undulating flat. The soil overlying the rock is light and porous, quickly parting with any superabundant moisture that may fall upon it; the air is dry and bracing, and the general salubrity of the station may be considered as well established, notwithstanding a visitation of cholera has shown that it is not beyond the reach of that frightful scourge. The principal disadvantage is the want of water, which, during the spring and early part of summer, must be brought on mules and bullocks from springs 1½ m. distant, and 848 ft. below the level of the parade ground.

KUSTENDJI [anc. *Constantia*], a tn. Turkey in Europe, Bulgaria, eyalet and 69 m. E.N.E. Silistria, on a promontory which projects half a mile S.E. into the Black Sea. It has a harbour, which is much visited in summer by vessels loading with corn. The roadstead, though sheltered by the promontory from N. winds, lies open from N.E. to S., but small vessels, by approaching the shore nearer than large vessels could venture, obtain anchorage in a spot where the town itself protects them from the E. Trajan's wall extended

from Kustendji to Chernavoda, and as this is nearly the shortest distance between the coast and the Danube, it was proposed to construct a navigable canal between the two places. By this means about 180 m. of intricate navigation would have been avoided. An actual survey, however, has proved that the summit level to be passed over at 2 m. from the Black Sea, is 164 ft. above it, and that the limestone hills, through which the canal would pass, cannot furnish the water necessary to feed it. The idea of a canal has, therefore, been abandoned, but a railway has been constructed. Pop. 3000.

KUTATU, a river, S.W. Africa, which has its source in the plateau of Sambos, near the S.E. extremity of the Djamba range, flows nearly due N., separating Bailundo from Bihé, and the land of Mungoya or Malemba, and after passing over nearly four degrees of lat., joins the Coanzo on its l. bank, nearly opposite to Pungo Andongo. To distinguish it from several other rivers of the same name, it is usually called Kutatu-an-Mungoya.

KUTNO, a tn. Russian Poland, gov. and 70 m. W. Warsaw; with a church, a circle and an elementary school, some manufactures, and 1038 inhabitants, mostly Jews.

KUTTUNGEE, a tn. India, N.W. Provinces, territory Saugor and Nerbudda, 89 m. S.E. Saugor. It possesses a large and well-supplied bazar, and has long been famous for the manufacture of gun-barrels, which are largely exported.

KYAU-CHU, a tn. China, prov. Shantung, about lat. 36° 17' N.; lon. 120° 12' E. It stands at the N.W. part of the head of a deep bay, is bounded by a peninsula on the E., has a spacious harbour, and is the principal emporium of the province.

KYR-SCHEHR, a tn. Turkey in Asia, Sivas, 310 m. S.E. Constantinople. It stands in a rich and fertile valley, and consists of about 1200 houses, partly grouped together and partly scattered, the one forming the body of the town,

and the other a kind of suburb, almost buried among plantations. The most conspicuous public edifice is the medresseh, or rather a large pile of building, part of which forms a medresseh. It has a richly adorned portal, with a row of twisted pillars, and a tall and slender minaret, which would be of great beauty if it had not unfortunately lost its top. Part of the building is now used as a military magazine. The market is large and much frequented.

KYTHUL, a tn. India, Sirhind, in a flat and fertile district, lat. 29° 49' N.; lon. 76° 28' E. It is irregularly but substantially built of brick, and possesses a lofty palace which overtops a fine grove of trees overhanging a large sheet of water. Great quantities of sal-ammoniac are manufactured here.

KWEI, or KOOE, a tn. China, prov. Houpeh, l. bank Yang-tze-kiang, 200 m. W. by N. Wu-chang-foo. It is a small place, consisting of about 100 houses within its walls, and 30 houses outside. About 2 m. above it coal of indifferent quality is obtained by digging into the side of a hill. It is not used in its natural state, but mixed with water and shaped into bricks, of which large quantities are sent by water to Ichang.

KWEI-LING, or QUEI-LING, a tn. China, cap. prov. Quangsee, in a mountainous dist., near the source of a river of same name. Though the capital of the province, it is said to be poorly built, and to have little or no trade, the river on which it stands flowing through narrow valleys in a channel so encumbered by rocks and shelves as to be un-navigable.

KWESHAN, a group of isls. China, off the N.E. coast of prov. Chekiang. They are 11 in number; the largest, only 3 m. long and 1½ m. broad, is so deeply indented that at two places it is not more than 250 yards across, and its coast line presents a range of steep and lofty cliffs. The whole group is occupied by a dense population, living chiefly on fish.

L.

LABO, a tn. Philippine Isles, prov. Camarines Norte, in the isl. of Luzon, stands in a fertile and well-watered valley at the foot of a lofty mountain, whose summit is in lat. 13° 59' N.; lon. 123° 42' 30" E., and consists of 400 houses. The valley produces rice, maize, sugar-cane, indigo, and abaca, and has the advantage of being protected both from the S.W. and from the N.E. monsoon—from the former by the central cordillera of Caraballos, and from the latter by the sierra of Bagacay. Pop. 2400.

LABRADOR [add.] The vast peninsula which commonly bears the name of Labrador, a term more strictly applied to the N.E. portion of it, occupies an area between the Atlantic and Hudson's Bay, lying between lat. 49° and 63° N., and lon. 55° and 79° W. The Gulf of St. Lawrence, the North Atlantic, Hudson's Straits and Bay, are its boundaries on three sides; Rupert's River, the Mistassinni, and the Bersamits form its approximate limits on the S.W. From the mouth of Rupert's River on Hudson's Bay, to the mouth of the Bersamits on the Gulf of St. Lawrence, the distance is about 470 m.; and from Cape Wolstenholme, the northernmost point of the country, to the Straits of Belle Isle, it is 1100 m. Northwards from the Hudson's Bay Company's post at Bersamits, in a direct line to Ungava Bay, the distance is about 650 m., and to Cape Wolstenholme in the W. not less than 1000 m. The area is about 420,000 sq. m. The whole of this immense country is uninhabited by civilized man, except a few settlements on the St. Lawrence and N. Atlantic coasts, and some scattered posts of the Hudson's Bay Company. It is also thinly peopled by nomadic bands of Montagnais, Nasquapee, Mistassinni, and Swampy Creek Indians, and by wandering Esquimaux on the N. coasts. As a whole, it is unfit for human habitation, and is now in many parts almost a desert. The fisheries on its

coasts give it its principal importance. In the absence of definite boundaries, the entire peninsula is divided into three parts, supposed to be separate watersheds. The area draining into the gulf and river of St. Lawrence belongs to Canada; that supposed to be drained by rivers flowing into the Atlantic is called Labrador, and is under the jurisdiction of Newfoundland; the remaining part, drained by rivers flowing into Hudson's Bay, is named East Main. The longest river tributary to the Gulf of St. Lawrence is the Moisie, which has its source in some of the lakes and swamps of the high table-land of E. Canada, and after a course of more than 250 m., with a fall of more than 2200 ft., debouches in lon. 66° 10' W., about 18 m. E. of the Bay of Seven Islands. The St. John, Mingan, Ouanemé or Roman, Natashquan, and other rivers, all as large perhaps but not so long as the Moisie, also fall into the gulf. The character of the country drained by them is very mountainous, even 100 m. from the coast, forming ridges running and winding in all directions; and lakes, some of very considerable size, are innumerable. Passing this rugged part towards the interior, the country becomes more level; the lakes are of far greater magnitude, well stocked with fish of every description, from the trout of 60 lbs. to the smallest species. Hamilton or Esquimaux Bay is the most important outlet on the E. coast. The Ashwanipi or Hamilton River, rising in the table-land near the head-waters of the Moisie, is the great river of Labrador, and falls into the head of the bay. The Kenamon, cutting through the Mealy Mountains from the S., and the Esquimaux River, N. of the Hamilton, are likewise important tributaries of Hamilton Inlet. The country near the inlet is extremely rugged and hilly, though the S. is more level and better wooded than the N. side. The rivers falling into Ungava Bay are the

Koksoak or South River, George's River, Whale River, and a few other minor streams. The lakes of this northern watershed are not many or large. Lake Caniapuscaw, the headwater of South River, occupies a central part of the peninsula, equidistant about 350 m. from the St. Lawrence and Ungava and Hamilton Bays, and is about 70 m. long and 15 to 20 m. broad. The country drained by the rivers tributary to Ungava Bay is, W. of South River, entirely bare, while bleak and barren rocks distinguish the sea-coast. The western division of the country is drained by the Little and Great Whale rivers, discharging themselves into Hudson's Bay; and the East Main and Rupert's rivers, flowing into James' Bay. The latter river brings down the water of the vast Mistassinni Lake, which lies between lon. 71° and 74° W. In the neighbourhood of Hudson's Bay and Lake Mistassinni the country is occupied by thousands of lakes and enormous rocks piled one on the top of another, and is treeless and sterile.

Since the extinction of the exclusive rights of the Hudson's Bay Company, many fishing posts and villages have been established on the Labrador coast and N. shore of the gulf. The houses of the settlers are mostly of wood, generally, because most easily and cheaply, procured from Quebec. On the coast, between the Straits of Belle Isle and Cape Whittle, the climate is very severe, with prevailing fogs; in the interior it is much better, and the seasons are in advance of those on the coast. The scenery is wild, barren, and gloomy, the mainland being generally about 500 ft. above the sea. From Cape Whittle to Natashquan Point the gneissoid hills seldom rise above 200 ft.; the banks of this coast between this point and the Mingan Islands are very important as fisheries. The Atlantic coast is all of it mountainous, and the faces of the hills which front the sea are generally bare rocks. Inland there is less desolation, and in some parts firs and spruces occupy the valleys and sheltered localities. The lakes of the interior are frozen, and the surface of the country covered with snow, for the greatest part of the year. There is little animal life, and chiefly of the fur-bearing species, the hunting of which forms the main occupation and support of the few tribes of Indians that maintain an existence upon the peninsula. Three Roman Catholic missions upon the shores, and several of the English Church have been recently established in the new fishing settlements, the first English church having been consecrated at St. Francis harbour, by the Bishop of Newfoundland, on July 10, 1853. The Moravians also have missionary stations on the coast. With a coast line of 1000 m., Labrador is said to have a population during the fishing season of above 30,000, who import all the provisions they consume, and export fish to the amount of £800,000 to £1,000,000 annually. The permanent population of the Canadian shore was, in 1863, 4413.

LACHENAIE, a tn. British America, Canada East, co. L'Assomption, on the Jesus, a small affluent of the St. Lawrence, 15 m. from Montreal; with a R. Catholic chapel, some general trade, and a pop. of about 1200.

LACIINE, a tn. British America, Canada East, co. Jacques Cartier, on the S.E. shore of the isl., and 9 m. from the city of Montreal. It possesses a Protestant and a R. Catholic church, and several schools, and carries on a considerable trade in lumber. Pop. about 2500.

LACISE, a tn. Italy, Venetia, prov. and 12 m. W.N.W. Verona, close upon Lake Garda. It is surrounded by turreted walls, and has a parish church, a spacious haven, manufactures of sail-cloth, and a considerable trade in fish. Pop. 2637.

LADENOIE-POLIE, a tn. Russia, gov. Olonetz, cap. circle of same name, on an elevated flat above the Svir, 86 m. S.S.W. Petrozavodsk. It has two churches, but derives any interest which it possesses from its docks, which were constructed by Peter the Great. On the site of the palace which he occupied a monument was erected in 1832. Pop. 1408.

LAFAYETTE, a tn. U. States, Indiana, cap. co. Tippecanoe, at the head of navigation of the Wabash, on the Wabash and Erie canal, and at the junction of three railways, 40 m. N.W. Indianapolis. It contains fifteen churches, several public and private schools, a number of good hotels, paper, planing, and flour mills, agricultural implement, woollen, and soap and candle factories, foundries, tanneries, breweries, and

distilleries. Its ample means of transport by water and rail enable it to command the trade of the surrounding country. Pop. (1860), 9387.

LAFEET, or **LAFITE**, a mountain, E. Africa, in the Latooka country; lat. 4° 33' N.; lon. 32° 49' E. It is the highest peak of the range that forms the northern side of the broad valley of Latooka, and rises abruptly to an elevation of about 3000 ft.

LAGES, a tn. Brazil, prov. Santa Catharina, on the sierra of this name, near the sources of the Uruguay, 105 m. W.N.W. Desterro. It lies in a deep hollow among the mountains, and has two or three handsome streets, with several others of a very indifferent appearance. Most of the houses are merely of compressed earth, and have no glass in the windows. Within the town the number of the inhabitants does not exceed 500, but the municipal district, which is of considerable extent, and well adapted both for agriculture and the raising of cattle, has a pop. of about 9000.

LAGHOUAT, or **EL-AGHWAT**, a vil. N. Africa, Algerian Sahara, on the Jeddi, 200 m. S. by W. Algiers. It forms at present the most advanced spot of the French towards the S., and is the principal market for the inhabitants of the Jeddi valley. It has some manufactures of woollen stuffs and articles made of camel's hair. After a memorable siege it was definitively occupied by the French army in 1852. Pop. 2367.

LAGONOY, a tn. Philippine Isles, on a spacious bay of same name on the E. coast of Luzon, in lat. 13° 14' 30" N.; lon. 123° 29' E. The bay, formed by a large indentation in the mainland, and another in the island of Catanduanes, is too much exposed to give safe shelter to shipping. The district in the vicinity produces rice, sugar-cane, sesame, and abaca. Pop. 7922.

LAGOS, two places, Mexico, state Jalisco:—1, *San Juan de los Lagos*, 80 m. N.E. Guadalajara, at the height of 6000 ft. above the sea; is a large place of very indifferent appearance, consisting almost entirely of mud huts, and possessing no public building worth notice except a handsome church. It is famous, however, for its fair, which is held from 6th to 13th December, and attracts numerous dealers and pleasure-seekers, particularly from Vera Cruz and Tampico. Pop. about 6000.—2, *Lagos*, about 26 m. E. of the former; with a splendid cathedral, and a very large flour mill, which is said to have been erected, fitted up, and supplied with water-power brought from a distance of 10 m. It contains 9000 inhabitants, who are chiefly employed in agriculture, and in the manufacture of cotton and woollen goods.

LAGUNA, a tn. Brazil, prov. Santa Catharina, on a lagoon which gives it its name, near the mouth of the Tubarao in the Atlantic, 60 m. S.S.W. Desterro. It is a small place, but has a large square, on which an elegant church stands, and at least one handsome street, stretching along the beach. The harbour, having only a depth of 8 ft. of water on the bar, cannot admit large vessels. It is, however, much frequented, and forms the port for a considerable district. Trade and fishing are the chief employments. On the banks of the Tubarao coal has been found. No fewer than twenty-two seams are counted, some of them, it is said, from 12 to 14 ft. thick. The working of them, which has already been commenced, promises to be easy. Pop. 1000.—(*L'Allemand.*)

LAGUNA [add.], a lake and prov. Philippine Isles, in the S.W. of the island of Luzon:—*Laguna de Bay*, so called from a town of same name at its S. extremity, is the largest collection of fresh water in the Philippines. Its greatest length is 36 m., but its breadth, owing to the interjection of two peninsulas, is very irregular. Its height above the sea is 58 ft.; its depth, in some places shallow, in others so deep that no bottom can be found, may average from 15 to 16 fathoms. It has no fewer than fifteen feeders, but only one outlet, the Pasig, by which it sends its waters to the Bay of Manila. Of the islands which it embosoms, the largest is Talim, which is about 9 m. long by 3 m. broad. Another, near its S. end, contains a lake which has all the appearance of an ancient crater, and teems with alligators. On the fertile shores of the Laguna twenty-six townships are counted.

—The PROVINCE (*Provincia de Laguna*) is bounded, N. by provs. Tondo and Ecija, W. Cavité, S. Tayabas and Batangas, and E. the ocean; area, including the above lake, 980, or excluding it, 630 geo. sq. m. Its principal products are

geological formation, bordering on the W. sides of Lake Superior, Canada, and Hudson's Bay, and receiving its peculiar appellation from the river St. Lawrence, on whose banks it commences. The Laurentides range is about 200 m. in breadth. It forms the N. shore of the St. Lawrence, from the gulf as far as Cape Tourmente, near Quebec, from which point it leaves the river, and while following its general direction, retires further and further, until near Montreal it is 30 m. from its bank. Proceeding westward, the range follows the line of the Ottawa, and crosses this river near the Lac des Chats, 150 m. from Montreal. Thence, taking a southward direction, it reaches the St. Lawrence near the outlet of Lake Ontario, and from this point strikes across to Lake Huron, which it touches at Matchedash Bay, and forms the eastern shore of the lake as far as 47° N. lat., where, quitting this lake, it gains Lake Superior, and extends in a N.W. direction to the Arctic Sea. The average height of the hills is from 2000 to 3000 ft.; and the rocks of this formation are the most ancient known on the American continent. Two-thirds of its area are covered with ponds, lakes, and marshes, which the cold of winter solidifies into a network of ice. The Laurentides cannot, therefore, be made available for agricultural purposes or for settlement. They abound, however, in the baser minerals, and the northern shores of the great lakes are now the scene of very considerable mining operations.

LAUTERACH, a tn. Austrian empire, Vorarlberg, circle and not far from Bregenz; with a paper mill, a bathing establishment, and 1100 inhabitants.

LAWRENCE, two places, U. States:—1, A tn. Massachusetts, on both sides of the Merrimack, here crossed by two bridges, and at the junction of the Concord, Manchester, and Lawrence, with the Boston and Maine, the Lowell and Lawrence, and the Essen railways, 22 m. N. Boston. The principal public buildings and institutions are the city-hall, 14 churches, a high-school, and other schools—grammar, primary, middle, and mixed, a savings-bank, a provident, a literary, and a young men's Christian association. The cotton manufacture is the staple industry, and is carried on in several large mills, for which water power has been obtained by means of a dam across the Merrimack, constructed at the expense of £50,000. The other industrial establishments are a machine shop and foundry, and paper, flour, and saw mills. Pop. (1860), 17,639.—2, A tn. Kansas, cap. co. Douglas, r. bank Kansas, 23 m. of direct distance above its mouth. It stands on a slope, and consists of above 400 houses, of which only a portion are of brick or stone. The principal buildings are four churches, the state university, an academy, and several schools. The industrial establishments are saw and grist mills, a machine shop, a tannery, a brewery and distillery, and coach and waggon and soap and candle factories. Lawrence was founded in 1854 by the Massachusetts Aid Society, and settled by the opponents of slavery. During several ensuing years it was the scene of violent contests between this party and the 'Border Ruffians.' Pop. (1860), 1645.

LAWRENCEBURG, a tn. U. States, Indiana, cap. co. Dearborn, on the Ohio, 22 m. below Cincinnati, the White-water canal, and the Ohio and Mississippi, and the Indianapolis and Cincinnati railways. It has 6 churches, 10 schools, 2 grist mills, 3 distilleries, and 2 breweries. Pop. (1860), 3599.

LAWRENCE CANALS (Str.), a series of canals in Canada, between the cities of Kingston and Montreal, constructed in close proximity to the banks of the river St. Lawrence, for the purpose of rendering the navigation between Montreal and Lake Ontario, which is impeded by numerous rapids in the river, available for vessels of from four to five hundred tons burden. The length of the cuttings, including lockage, is as follows: viz. at the Gallops Rapids, 2 m., with 2 locks, and a descent of 8 ft.; at Point Iroquois, 3 m., with 1 lock, and a descent of 6 ft.; at Rapid Plat, 4 m., with 2 locks, and a descent of 11½ ft.; at Farren's Point, ½ m., with 1 lock, and a descent of 4 ft.; the Cornwall canal, at the Long Sault Rapids, 11½ m., with 7 locks, and a descent of 48 ft.; the Beauharnois canal, 11½ m., with 9 locks, and a descent of 82½ ft.; the Lachine canal, 8½ m., with 5 locks, and a descent of 44½ ft. Total length of cuttings, 41 m., with 27 locks, and a descent of 204½ ft. Each lock is 200 ft. long by 45 ft. wide, with a depth of water on the mitre-sills

of 9 feet. Fully 8000 vessels, of 700,000 tons, run through this long chain of canals in the course of the year.

LAZAREF, or **VIRGINIE**, a port, China, on the E. coast of Corea, situated in the N. part of Yung-hing Bay, and sheltered on the E. by Nakhimof or Bosquet Peninsula. It is 2 miles wide at its entrance, and trends N. with a breadth varying from 1½ m. to 3½ m. Its depth of water is from 7 to 10 fathoms over a mud bottom. The river Dungan, which falls into the N.W. part of the port, divides near its mouth into several channels. The bar has 10 ft. at low water, and the depth within increases gradually for 6 m. to 5 fathoms. The land around the port is populous and well cultivated, particularly at the river's mouth.

LEAVENWORTH, a tn. U. States, Kansas, cap. co. Leavenworth, beautifully situated on r. bank Missouri, 2 m. below Fort Leavenworth; lat. 39° 16' N.; lon. 95° W. It is the largest city and the commercial emporium of the state, and is surrounded by one of the richest agricultural regions of the valley of the Missouri. The river flows here with a swift deep current, and is bordered on the Kansas side by a natural levée of rock, extending along the entire river front of the city. The city is laid out in regular streets, which cross at right angles; and contains 17 churches and several schools, soap and candle, sash and blind, coach and waggon factories, and numerous saw mills and lumber yards. A firm, engaged as government contractors in the carrier line, have here an immense establishment, which employs 6000 teamsters and 45,000 oxen. Leavenworth was founded in 1854. Pop. (1860), 7429; (1865), 18,000.

LEBANON [add.], five places, U. States:—1, A vil. Pennsylvania, cap. co. of same name, on Quitapahilla Creek, the Union canal, and the Lebanon Valley railway, 24 m. N.E. Harrisburg. It is regularly and substantially built, the houses consisting mostly of brick or stone, and possesses several schools, a library, and manufactures chiefly of iron, malt liquors, leather, and earthenware. The surrounding district is rich in iron ore, which is smelted by several large furnaces in the vicinity of Lebanon. Pop. (1860), 4449.—2, A tn. Kentucky, cap. co. Marion, on Harden's Creek, and at the terminus of the Lebanon branch of the Louisville and Nashville railway, 55 m. S.S.W. Frankfort. It possesses 6 churches, a R. Catholic college with 115 students, an academy, and a female seminary. Pop. (1860), 953.—3, A tn. Tennessee, cap. co. Wilson, on a branch of Cumberland River, 23 m. E. Nashville; with several churches, a Presbyterian university, with 11 professors, 165 students, and a library of 4000 vols.; and several other educational institutions. The manufactures are chiefly cotton and woollen goods. Pop. about 2000.—4, A vil. Ohio, cap. co. Warren, on Turtle Creek, a branch of the Little Miami, and on the Little Miami railway and Warren County canal, 37 m. N.N.E. Cincinnati. It possesses 7 churches, a normal school, a public library, and flour and saw mills. Pop. (1860), 2489.—5, A vil. Illinois, on the Ohio and Mississippi railway, 20 m. E. St. Louis. It is pleasantly situated, and is the seat of a Methodist college, with 6 professors, 82 students, and a library of 5500 vols. Pop. (1860), 1661.

LECOMPTON, a tn. U. States, Kansas, on the Kansas River, about midway between Topeka and Lawrence, and 30 m. above its mouth. Congress, before the civil war, appropriated £10,000 for the erection of government buildings in it, with the purpose of making it the state capital. Pop. (1860), 917.

LEDENICZE, a tn. Austrian empire, Military Frontiers, Croatia, dist. Ogulin, about 45 m. S.W. Karlstadt, on the Strait of Morlacea, in the Adriatic; with a small haven, and the ruins of a castle on a steep height. Pop. 1280.

LEDZAYSK, a tn. Austrian empire, Galicia, circle and 22 m. N.E. Rzeszow, cap. dist. of same name; with a Benedictine abbey, whose church, adorned with fine altar-pieces and frescoes, is regarded as the finest in Galicia. The inhabitants are chiefly employed in dyeing wool, weaving woollen and linen cloth, and trading in fruit. Pop. 4026.

LEEDS, a tn. British America, Canada East, co. Megantic, on the Grand Trunk railway, 40 m. S. Quebec; with a Church of England, a Free, a Baptist, and a R. Catholic church, several schools, and a considerable trade in flour and lumber. Iron and copper abound in the dist., and a copper mine has recently been opened with prospects of success.

LEG, a tn. Austrian empire, Galicia, circle and 6 m. N.N.W. Tarnow; with a beautiful baronial castle, and 1350 inhabitants.

LEGRAD [add.], a tn. Austrian empire, kingdom of Croatia and Slavonia, co. and 25 m. E.N.E. Warasdin, opposite to the confluence of the Mur with the Drave. It has a ferry over to Hungary, a trade in wine and wood, and yearly markets. During the insurrection in 1849, the heights around Legrad were fortified as important strategical points. Pop. 2382.

LEGYA, cap. of a Shan state tributary to Burmah, and at present one of the most prosperous of the Shan states, is situated 54 m. E.S.E. of Ava. Its inhabitants, occupying about 1600 houses, amount, according to the usual calculation, to about 8000.

LEIDEN, a tn. Austrian empire, Hungary, co. Wieselburg, not far from the railway to Raab, 22 m. S.S.E. Presburg; with a Gothic church, and a trade in corn and in peats, of which about 100,000 are annually cast in the vicinity. Pop. 2756.

LEMBACH, a tn. Austrian empire, Upper Austria, dist. and 23 m. N.W. Linz; with a handsome parish church, a town hospital, and several manufactures. On a rocky height in the vicinity are the ruins of the ancient castle of Tannberg. Pop. 1050.

LEMPA [add.], a river, Central America, which rises near Esquipulas in Guatemala, enters the state of Salvador, where it forms part of the boundary between it and Honduras, and after pursuing a very circuitous course for above 180 m., first S.E. and then S., falls into the Pacific a little to the W. of Port Giguilisco, about lat. 13° 22' N.; lon. 88° 12' W. A little above its mouth it is 200 yards wide, and has a depth in its main channel of above 8 ft., but its bar is so shallow that only boats can pass over it, and even were this obstruction removed, it would not become navigable, because throughout its whole course it is interrupted by rapids of a more or less formidable character. So great, however, is the volume of water carried by it, that, according to a calculation which has been made, it discharges 1,285,081 cubic ft. per minute. This great discharge is owing to the numerous affluents which join it as it proceeds through a very mountainous country, and are fed by perennial springs and lakes.

LENDVA (Lower), a tn. Austrian empire, Hungary, co. Zala, on a stream of same name, 29 m. S.W. Zala Egerszeg. It occupies the site of the Roman *Lindavia*, is the seat of a district court, and has a castle situated on a height, and a trade in wine.

LENOX, a tn. U. States, Massachusetts, cap. co. Berkshire, on the Housatonic, 110 m. W. Boston. Occupying the summit of a range of hills in the midst of the finest natural scenery of the state, it has become a favourite residence for persons of retired and literary habits, and contains a number of elegant villas, 3 churches, an academy, a court-house, and county buildings. In its vicinity are extensive iron-works and a manufactory of window glass. Pop. (1860), 1711.

LEON, a tn. S. America, La Plata, prov. Salta, near the source of the Rocky Mountain stream Las Piedras, an affluent of the Jujuy. It is a beautiful little place, forming with its detached houses a complete Arcadian garden. The vegetation is tropical, and so luxuriant that the smell of the flowers and growing plants is oppressive, and probably in some degree injurious to health. The sheltered porch and gallery of a rustic church in the vicinity is surrounded by a little forest of peach trees, and overhung with clusters of grapes.

LEOPOLDO (São), a tn. Brazil, prov. Rio Grande-do-Sul, on the banks of the Sinos, 30 m. N. Porto-Alegre. It commences close to the river, with a large square, in which several streets terminate. The main street contains a number of large and well-built houses, some of them of two stories, and so wide as to have six windows in front, but the greater proportion are of humbler pretensions, and have only mud walls roofed with tile. Almost all the streets are unpaved, but most of them are provided with side paths for foot passengers. São Leopoldo was founded in 1824 by a German colony, under the auspices of Leopoldina, the empress of Don Pedro I. After various vicissitudes, occasioned chiefly by the unsettled state of the country, it has attained a considerable degree of prosperity. The inhabitants, while

devoting themselves to ordinary handicrafts, the cultivation of the soil, and the rearing of cattle, have not forgotten to make ample provision for their religious wants, the R. Catholics having erected 9 churches, which are placed under the superintendence of a provisionary vicar; and the Protestants 12 churches, the ministrations of which are conducted by four regular pastors. The temporal prosperity of the colony may be estimated from the fact that its annual exports now average 30,000 sacks of maize, 27,000 of black beans, 18,000 of manioc flour, and 15,000 of potatoes. To these must be added large quantities of poultry and eggs, butter and cheese, fruit and oil, mats, baskets, covers, &c., which find a ready sale in Porto-Alegre.—The colony includes, in addition to the town, which contains only 1200 inhabitants, an extensive tract situated between lat. 29° 16' and 29° 48' S.; lon. 51° 1' 30" and 51° 35' 53" W., and containing a pop. of 11,346 souls. Of these 4778 are R. Catholics, and 6568 evangelical or reformed Protestants.

LERE, a tn. Western Africa, Adamawa, country of the Mbana, near the Kebbi, an E. branch of the Benue. It is a large place, inhabited by pagan natives, under the government of a chief who has long maintained a manful struggle with the Fellatah and Kanuri. He was obliged, indeed, in consequence of a powerful expedition sent against him in the beginning of 1851, to acknowledge the Fellatah supremacy, but took an early opportunity of throwing off the yoke, and is again independent. He is greatly feared by the dominant tribes, who lie exposed to his sudden excursions, while he is able to set them at defiance by retiring to his fastness of Lere, which, lying in the heart of a large swampy forest, is almost inaccessible.

LERMA, the name of two places, N. America:—1, A small seaport on the W. coast of Yucatan, dep. and 10 m. S.W. Campeachy, on the l. bank, and at the mouth of the San Francisco. The inhabitants, about 1173, are almost all fishermen.—2, A tn. Mexico, 20 m. S.W. from the capital. It is famous for the manufacture of spurs and horse-bits, which are in great demand, and constitute the chief employment of the inhabitants.

LESKOVATZ, a tn. Turkey in Europe, eyalet and 20 m. S. by W. Nissa, l. bank Morava, which is here crossed by a bridge. It is built along both sides of the river, the r. bank being occupied exclusively by Turks. Pop. 12,000.

LESZNIOW, a tn. Austrian empire, Galicia, circle Zloczow, 11 m. N.W. Brody; with a Bernardine monastery. Its trade, which was once important, has decayed. There is a chalybeate spring in the vicinity. Pop. 1400.

LETENYE, a tn. Austrian empire, Hungary, co. Zala, not far from l. bank Mur, 28 m. S. by W. Zala Egerszeg; with a number of fine houses, a baronial castle, and a trade in wine, tobacco, and cattle. Pop. 1028.

LEVENCZ, a tn. Austrian empire, Hungary, co. Bars, cap. dist. of same name, on the Perez, about 20 m. S.W. Schemnitz. It was once fortified, is the seat of a district court and other public offices, and has a Piarist college, an under gymnasium, a castle, a trade in wine, and important yearly markets. Pop. 5112.

LEWISBURG, a tn. U. States, Pennsylvania, on a branch of the Susquehanna, 50 m. N. by W. Harrisburg; with 4 churches, and a Baptist university, with 4 professors, 54 students, and a library of 4000 vols. Pop. (1860), 2666.

LEWISTON, a tn. and port of entry, U. States, New York, on the Niagara, opposite to Queenstown in Canada, with which it is connected by a suspension bridge 7 m. above the falls. It contains 4 churches and 13 schools. Pop. (1860), 3379.

LEXINGTON [add.], four places, U. States:—1, A vil. and township, Massachusetts, at the terminus of the Lexington and West Cambridge railway, 10 m. N.W. Boston. It contains 4 churches and a high-school, sends large supplies of milk to Boston, and is memorable as the scene of the first armed encounter between the British and the Americans in the revolutionary war. Pop. 2329.—2, A tn. Virginia, on the North, an affluent of the James, 110 m. W.N.W. Richmond. It stands in a valley surrounded by beautiful mountain scenery, and contains 5 churches, a college endowed by Washington, 2 seminaries, and a military institute. Pop. 2135.—3, A tn. Kentucky, cap. co. Fayette, on a peak of the Elkhorn River, and on the Louisville, the Covington, and

the Danville railways; lat. 38° 2' N.; lon. 84° 26' W. It stands in a dist. of surpassing beauty, is laid out with great regularity in well-formed streets, one of which is upwards of a mile long; and possesses 12 churches, a university, which in 1859 had 8 professors and only 25 students; a court-house, a city hospital, a state lunatic asylum, an orphan asylum, and 2 libraries, one a city library of 6000 vols., and the other belonging to the university, of 15,000 vols. The whole place is well paved and lighted with gas, and at the west end of its main street there is a beautiful cemetery. About 100 stores and shops supply the demands of a very extensive retail and general trade, and 80 establishments are employed in manufactures, among which that of hemp holds the first place. Lexington figured in the unhappy war between the Northern and Southern States. Pop. (1860), 9521.—4. A tn. Missouri, cap. co. Lafayette, finely situated 1. bank Missouri, 92 m. N.W. Jefferson City. It has 7 churches and a number of flour-mills. Pop. (1860), 4122.

LEYDEN, an isl. in Palk's Strait, off the N.W. coast of Ceylon, 6 m. S.W. of Jaffna. It is of an irregular but somewhat triangular shape, about 10 m. in length from N.W. to S.E., and with a maximum breadth of about 5 m., and has, near its N. extremity, a small port, which bears the name of Kayts or Cays, a corruption of the Portuguese word *cais* or *caes*, meaning a wharf; this being the utmost limit of navigation of a sea-going vessel with a cargo for Jaffna. It thus formed, and to some extent continues to form, the port of Jaffna, though this honour is now possessed, at least in an equal degree, by Point Pedro.

LIBA, or LOBA, a river, S. Africa, which, issuing from an unknown source about lat. 11° S., flows S.S.E. through a valley, which on the east or l. bank seems to be confined by lofty and well-wooded mountains, and on the r. bank to spread out into a prairie which is grassy, but almost treeless, and joins r. bank Liambye at the point where it changes its name to Kabompo. At the junction the Liba is 250 yards wide.

LIBANFALVA, a tn. Austrian empire, Transylvania, circle and about 38 m. S.E. Bistritz; with a Latin, a Greek Catholic, and a Greek non-united church. Pop. 1450.

LIBOCHOWITZ, a tn. Austrian empire, Bohemia, circle and 8 m. S.W. Leitmeritz, on the Eger; with a parish church, a synagogue, a fine castle, a town-house, an hospital, a brewery, and mineral springs. Pop. 2000.

LIBOLLO, a territory, S.W. Africa, Kimbunda country, between lat. 9° 15' and 10° 30' S., and lon. 14° 35' and 15° 20' E.; bounded N. by the Coanza, which separates it from the Portuguese settlements; W. Kissama, S. Ambuim, and E. Hako and Kibala; area about 2000 sq. m. It is covered by steep and rugged mountains, with several intervening valleys, which are well watered by affluents of the Coanza and the Lunga. The climate is healthy; and the inhabitants, owing to their proximity to the Portuguese settlements, have made considerable progress in civilization. They are peacefully disposed, hospitable to strangers, and industrious. One of their chief employments is in weaving cotton goods called *tanga* and *mabala*, which are well known, and in considerable demand in the interior. Pop. about 40,000.

LIBONTA, a tn. S. Africa, Makololo country, r. bank Liambye or Zambesi; lat. 14° 59' S. It is the last town which the Makololo possess on their N. frontiers, and, like all other places in the Barotse Valley, stands on an artificial mound, imperfectly protected against inundation. The town belongs, or belonged, to two of the chief wives of a former chief.

LIBTAKO, a prov. Western Africa, nominally belonging to Gando, is bounded by Yagga and Mosi on the S., Arribinda on the W., and some independent tribes on the E., which interpose between it and the Niger. The surface has a rocky appearance, granite, which occurs in large boulders, as well as *in situ*, alternating with gneiss and mica slate. The vegetation is varied, and the forest loses much of the monotonous character which the prevalence of any one species of tree is apt to give. Further west, however, the trees become scanty, and the soil hard and barren. Libtako is celebrated for a fine breed of horses. The prevalence of internal discord—rival chiefs contending with each other, and producing a kind of anarchy—is the greatest obstacle to its prosperity.

LIBUSCA, a tn. Austrian empire, Galicia, circle and 12 m. S.W. Jaslo, r. bank Ropa. It is an ancient place, of which mention is made as early as 1407, and contains 1100 inhabitants, a large proportion of whom are skilled weavers.

LICHTENSTADT, a tn. Austrian empire, Bohemia, circle and 27 m. N.E. Eger, on the Wistritz; with a parish church, a synagogue, an hospital, a brewery, three mills, and 1000 inhabitants, half of them Jews.

LICHVIN, a tn. Russia, gov. and 35 m. S. Kaluga, cap. circle of same name, l. bank Oka. It has five churches, a circle and a parish school, a charitable institute, and several industrial establishments. Pop. 2699.

LICHWE (UPPER and LOWER), two adjacent places, Austrian empire, Bohemia, circle Chrudim, on the Adler; with a parish church, a castle, two mills, and 2000 inhabitants.

LIDA, a tn. Russia, gov. and 54 m. S. Vilna, cap. circle of same name, on the Libeia. It has three churches, a circle and a parish school, and two charitable institutes; and contains 4094 inhabitants.

LIEBENSTEIN, a tn. Austrian empire, Bohemia, circle and 7 m. W.N.W. Eger, in a valley inclosed by wooded mountains; with a parish church, an old castle seated on a rocky height, a brewery, two mills, and 1700 inhabitants.

LIEBSTÄDEL, a tn. Austrian empire, Bohemia, circle Gitschin, on both sides of the Wolesschka, and on the Pardubitz-Reichenberg railway; with a R. Catholic parish church, a reformed Protestant church, corn and saw mills, and 1000 inhabitants.

LIEVELY, a port, Greenland, on an island of same name, immediately off the S.W. coast of Disco Island, and at the N.W. entrance of Disco Bay. It is a most perfect land-locked and safe anchorage, with depths varying from 6 to 24 fathoms. In the adjoining town of Lievely a Danish governor resides, and in the vicinity a slaty wood-coal, which burns well, and retains its heat when mixed with other coal, is found.

LİKAVKA, a tn. Austrian empire, Hungary, co. Lip-tau, about 28 m. N. by E. Neusohl. In the vicinity are the ruins of a castle, built on Mount Chocs by Matthew Corvinus. It has 1300 R. Catholic inhabitants.

LILIENTFELD, a tn. Austrian empire, Lower Austria, circle Upper Wienerwald, on the Traisen, in a beautiful valley; with saw and other mills, a quarry of gray and red marble, and seams of lignite, which are worked to some extent. The old Cistercian abbey situated here, and founded by Leopold VII. in 1202, has a handsome church and chapel with the tomb of the founder, a library, a cabinet of natural history, and a botanical garden. Pop. 1700.

LILLOETT, a river, lake, and tn. British Columbia:—The RIVER runs S.E. through fine pasture land, occupied to some extent by settlers, into the upper end of the lake of its name, which is surrounded by high mountains, generally very steep to the water's edge.—The LAKE is one of the chain of lakes along which lies the route from the lower to the upper Fraser and the gold-fields.—The town stands at the N. end of this route, at its junction with the Fraser, on a plateau upon the r. bank of the river. It has grown into some importance owing to its position on the great route to the interior gold-fields.

LIMAN, a vil. Persia, prov. Azerbaijan, about 30 m. S.S.E. Tabreez, and at some distance to the E. of Lake Urumiah. It is one of the highest inhabited places in the Saharet mountain chain, which rises 4000 ft. above the level of the lake, and 8400 ft. above that of the Black Sea. It has hot springs, to which the natives attribute miraculous virtues, and a large and apparently thriving population, engaged in cultivating the gardens, meadows, and fertile fields of the environs.

LINARES, a tn. Chili, prov. Maule, on a plain between the rivers Maule and Longavi, 160 m. S.S.E. Valparaiso. It was laid out on a plan far more extensive than it has been found possible to execute; and hence, though the population does not exceed 2500, it has, besides numerous other squares, a vast plaza, an alameda planted with four rows of trees for nearly a third of a mile, and 12 spacious but unpaved streets. The chief buildings are a handsome church and a large market-house.

LINDER, a tn. Western Africa, cap. prov. of same name, which comprises the N.W. extremity of Bornou,

125 m. N.N.E. Kano. It stands in a dist. much broken by rocks of sandstone, and intersected by numerous small water-courses, and is inclosed by a ditch and a low earthen rampart nearly of a circular form. Its commercial importance, for which it is mainly indebted to its position, is so great, that it has been called 'the gate of Soudan.' Still, with all the bustle of its streets and the traffic which centres in it, it has no manufactures of the least importance, its only industrial establishments being indigo dye-works. Estimated pop. 1700.

LINDSAY, a tn. British America, Canada West, co. Peterborough, 57 m. N.E. Toronto. It possesses five churches—two Wesleyan, a Church of England, a United, Presbyterian, and a R. Catholic, and communicating with Port Hope, on Lake Ontario, by the Port Hope and Lindsay railway. It carries on some trade in lumber. Pop. about 1100.

LINGAH, LINGAR, or LINJA, a tn. and port, near the mouth of a small stream, N.E. side of Persian Gulf, upon a strip of territory belonging to prov. Oman of Arabia; lat. 26° 37' N.; lon. 54° 59' E. The town lies along the water's edge, with a narrow intervening beach of white dry sand. The old town is small and compact, having room for 4000 or 5000 inhabitants; nearly half of it consists of market-places, coffee-houses, and similar establishments, besides a large mosque by the sea-side. The houses in it are solidly built—partly of stone and partly of brick—and whitewashed. Carved wood-work about the doors, windows, and balconies bespeaks some degree of Persian taste. Low walls, much decayed, surround this quarter of Lingah. The new parts running E. and W. along the bay, or reaching inland, occupy a considerable extent. Near the middle of the quay is a small dock, partly dry, but capable of containing sixty to eighty Arab vessels, and protected in front by a high sea wall with a breakwater on either side. The harbour is sheltered to the W. by Cape Bostanah; E. by a corresponding promontory and the island of Kishm; on the N. stretch the mainland and mountains of Persia; and only the S. side is at all exposed. Opposite the dock rises a rock, the only one hereabouts, crowned by an old castle and tower. Eastward is the palace of the Omanee governor, forming a large square, and four stories high. Farther on are shipbuilding yards in active operation. On either side and behind the town are gardens; but the soil is poor, and water scarce. So scarce is water that the main supply is from huge cisterns of stone, 30 to 60 ft. in diameter, and dome-roofed, which collect the overflow of the winter torrents, and store it to last the remainder of the year. Lingah is a very busy place by sea and land, and frequented by many races in commercial pursuits. The bulk of the trade is with the maritime Arab ports, to which goods from Bombay and Kurrachee are conveyed in small coasting craft; specie, pearls, and a little salt fish forming the return cargoes. And it is a pretty place, with its white houses along the shore, overhung by palm-trees, and the large glittering cupolas of its reservoirs, and crowded markets, and clear air, and bright sun. Pop. 8000 to 10,000.—(*Palgrave, &c.*)

LINGESI, a 'sand river,' S. Africa, near r. bank Zambesi; lat. 15° 38' 34" S.; lon. 31° 1' E. When Dr. Livingstone reached it, it was in flood, 60 or 70 yards wide, and waist deep; but the kind of stream to which the name has been given is so singular that the Doctor must be allowed to explain it in his own words. 'Like all those sand rivers, it is for the most part dry; but by digging down a few feet water is to be found, which is percolating along the bed on a stratum of clay. This is the phenomenon which is dignified by the name of 'a river flowing underground.' In trying to ford this, I felt thousands of particles of coarse sand striking my legs, and the slight disturbance of our foot-steps caused deep holes to be made in the bed. The water, which is almost always very rapid, dug out the sand beneath our feet in a second or two, and we were all sinking by that means so deep that we were glad to relinquish the attempt to ford it before we were half way over. The oxen were carried away down into the Zambesi. These sand rivers remove vast masses of disintegrated rock before it is fine enough to form soil. The man who preceded me was only thigh deep, but the disturbance caused by his feet made it breast-deep for me. The shower of particles and gravel which struck against my legs, gave me the idea that the

amount of matter removed by every freshet must be very great. In most rivers where much wearing is going on, a person diving to the bottom may hear literally thousands of stones knocking against each other. This attrition being carried on for hundreds of miles in different rivers, must have an effect greater than if all the pestles and mortars and mills of the world were grinding and wearing away the rocks. The pounding to which I refer may be heard most distinctly in the Vaal River when that is slightly in flood. It was there I first heard it.'

LINSHOTEN, a group of islands, N. Pacific, to the S.W. of the isles of Japan, extending between lat. 28° 49' and 30° 42' N., and lon. 129° and 130° 17' E. They are numerous and elevated, but for the most part of small dimensions. Three of them—Suwa-sima, Yerabu-sima, and Ujoga-sima—have active volcanoes, which respectively attain the heights of 2805, 2067, and 2345 ft.

LINYANTI, a tn. S. Africa, cap. of the Makololo; lat. 18° 17' 20" S.; lon. 23° 50' 9" E. It stands on the Chobe, at a height of 3500 ft. above sea-level, and carries on a considerable trade in ivory. The forests around both the town and the district are infested by the poisonous tsetse. Pop. 6000 to 7000.

LIPKA, a tn. Austrian empire, Bohemia, circle and 44 m. E. by S. Königgrätz, on the frontiers of Moravia. It is a long straggling place, with two chapels, two mills, limekilns, limestone quarries, and 1600 inhabitants.

LIPPETHAL, a tn. Austrian empire, Moravia, circle Neutitschen, 32 m. S.E. Olmutz; with a castle, a reformed and a R. Catholic parish church, and 1200 inhabitants, who are mostly Protestants.

LIRA, a tribe and dist. of the Madi country, E. Africa, lying E. of the N. end Albert Nyanza; lat. 2° 30' N.; lon. 33° E. The district is described as extremely fertile, and rich in ivory. The inhabitants are of the same type as the Madi, but wear their hair woven into a thick felt, and covering the shoulders like a full-bottom wig. The Lira tribe are governed by a chief with little real authority.

LISBURNE CAPE, a headland on the coast of Russian America, Arctic Ocean, lat. 68° 52' N.; lon. 166° 6' W., 150 geo. m. N. by E. Cape Prince of Wales, the most western point of North America. It is of limestone formation, and from 800 to 900 ft. in height, of a conical shape, and presents its boldest aspect and greatest elevation at its southern extremity. To the eastward of the cape extends a range of hills surmounted by a mass of loose gray scoria, and separated from each other by ravines, the sides of which are clothed with a certain amount of verdure. It was visited in 1850 by H.M.S. *Investigator*, on the expedition in search of Sir John Franklin.—(*Armstrong's Narrative of Discovery of N.W. Passage.*)

LISIAGORA, a tn. Austrian empire, Galicia, circle and 8 m. N.E. Tarnow. It is a straggling place, with 1900 inhabitants, a large proportion of whom are employed in making wooden and earthen ware.

LISLET, a tn. British America, Canada East, cap. co. of same name, r. bank St. Lawrence, 46 m. N.E. Quebec; with a R. Catholic chapel, a small-debt court, tanneries, and several large general stores. Pop. about 3700.

LISSA [add.], a tn. Austrian empire, Dalmatia, circle Spalatro, on the N.E. side of the island of same name in the Adriatic, at the foot of a mountain ridge which incloses an extensive bay, and forms one of the best and most spacious harbours in Dalmatia. It has a Minorite monastery, and an important sardine fishery, and contains 3300 inhabitants.

LITCHFIELD, a vil. U. States, Connecticut, cap. co. of same name, on the Housatonic, 28 m. N.N.W. Newhaven. It is pleasantly situated on a height, with a beautiful view, and contains four churches, two academies, a court-house and jail, and a private lunatic asylum. It has lately become a favourite summer resort. Pop. 3200.

LITIN, a tn. Russia, gov. Podolia, on the Sgara or Zara, an affluent of the S. Bug. It has five churches, a circle school, and contains 5332 inhabitants.

LITSCHAU, a tn. Austrian empire, Lower Austria, circle Upper Manhartsberg, cap. dist. of same name, near the Bohemian frontier, 76 m. N.W. Vienna. It has an old mountain fort, a castle with an extensive park, and numerous looms employed in weaving linen and cotton goods. Pop. 1420.

LITTAU, a tn. Austrian empire, Moravia, circle and 9 m. N.W. Olmütz, on the river March, and on the Olmütz and Prague railway; is the seat of several public offices, and has three churches, a town-house surmounted by a tower, an hospital for the poor, extensive manufactures of woollen cloth, a paper mill, and flax, yarn, cattle, and other markets. In the vicinity is the hunting seat of Prince Lichtenstein, one of the finest in the empire. Pop. 3127.

LITTLE SOURIS, or MOUSE RIVER, N. America, an affluent of the Assiniboine, rises within the British territory, in a prolongation of the plateau of the Coteau de Missouri, about lat. 49° 20' N.; lon. 104° 30' W.; flows first S.E., and crossing the British frontiers about lon. 102° proceeds S. as far as lat. 48°, where it makes a large circular bend, and changes its direction to N.N.W. On again entering the British territory, about lon. 101°, it flows circuitously N.E., and joins the Assiniboine on its r. bank about lat. 49° 45' N.; lon. 99° 30' W. At its mouth it is 121 ft. broad, has a mean depth of 2 ft. 4 in., and flows at the rate of half a mile an hour. It contains sturgeon and various other kinds of fish. The country to the W. of the Souris is an open, treeless, and undulating prairie, but to the E. rises into picturesque hills, clothed on their sides and summits with aspen. One of the greatest obstacles to settlements on the banks of the Souris, and the adjoining districts, is a species of grasshopper which infests it. 'At the mouth of the Souris,' says Mr. Hind, 'the grasshoppers were in countless numbers, and so voracious as to attack and destroy every article of clothing left for a few minutes on the grass. Saddles, girths, leather bags, and clothing of every description were devoured without distinction. The only way to protect our property from the depredators was to pile it on the waggons and carts out of reach.'

LITUBARUBA, or LEPELOLE, a tn. S. Africa, cap. of the Bakwains, on the slope of a mountain range, 200 m. N.E. Kuruman. Its former name of Lepelole was given it from a cave in its vicinity which no one ventured to enter, because it was believed to be the habitation of the deity, and it was said that every one who went in remained there for ever. When Dr. Livingstone, accompanied by the chief Sechele, who with many of his people were converted to Christianity, undertook what seemed to many of the natives, if not the impious, at least the most hazardous task of examining it, he found it to be only an open cave, with an entrance about 10 ft. square, which, after contracting into two water-worn branches, entered the cave in round orifices, through which the water once flowed. The only inhabitants it seems ever to have had were baboons. The sandstone, which is the prevailing rock at Litubaruba, seems to extend over a vast area. It is found in Angola, and forms the underlying rock all the way from Zumbo to Lupata.

LIUBINYE, a tn. Turkey in Europe, Bosnia, 26 m. N. Ragusa. Like all the towns of the Herzegovina, it has a beautiful site, standing at the foot of a mountain, in the middle of a long and narrow valley, but is one of the most wretched places imaginable, consisting of 120 Mahometan houses, many of them in a ruinous state, occupied by 987 inhabitants, and 12 Christian houses, of a better description, with 92 inhabitants. The Turks, forming at once the dominant class and the great majority, make a tyrannical use of their power, and keep the Christians in a kind of bondage.

LUTZIN, a tn. Russia, gov. and 130 m. N.W. Vitepsk, on the Great and Little Lnsha; with two churches, a charitable institute, and a pop. of 4082.

LIVERPOOL [add.], a parl. and municipal borough and seaport of England, co. of Lancaster, r. bank of the Mersey, about 4 m. from its confluence with the Irish Sea; 185 m. N.W. from London. Lat. of the observatory on the Waterloo dock pierhead, 53° 24' 47.5" N.; lon. 0h. 12m. 0.11s. W. A new observatory is in process of erection at Bidston, on the l. bank of the Mersey; lat. 53° 24' 0.6" N.; lon. 0h. 12m. 17s. W. Liverpool stands partly on flat ground along the margin of the river, but chiefly on the slopes of a series of moderate eminences, whose summits are within the limits of the borough, and the highest of which is about 230 ft. above the level of the quay-wall of the river. Its greatest length from N. to S. is about 5 m., and its greatest breadth from W. to E. is about 2½ m.; its area, exclusive of the docks, is 5002½ ac. It is irregularly laid out; in the older parts of the town the streets are narrow and crowded, with courts, but in the more modern por-

tions the streets are wider and more regular. It is singularly deficient in open places and squares. Of the latter there are only two of any pretensions, Abercromby Square and Falkner Square. The town is well lighted with gas, and supplied with water, partly from wells sunk in the new red sandstone, on which the town is built, but chiefly from the hilly district near Rivington, 24 m. distant. The water from the wells is raised by pumping, and that from Rivington is delivered by gravitation into reservoirs, situated nearly on the summits of the eminences before mentioned, and from these reservoirs a portion is raised into elevated cisterns, so as to supply the highest houses in the town. At Rivington the collecting reservoirs form vast lakes of the aggregate length of 6 m., and from these the water, after being filtered, is conveyed to the distributing reservoirs in town by iron pipes 44 in. diameter. On the pipe line there are two relieving reservoirs, and from the second of these, situated about 9 m. from Liverpool, there is a double line of pipes. From the reservoirs in the town the water is distributed under high pressure, and there being an abundance of hydrants on the mains through the streets, especially in the warehouse districts, fires are readily extinguished by hose and jet. The result is that serious destruction of property by fire, once so common, is now much less frequent. The quantity of water distributed daily is 12,000,000 gallons, a quantity much too small for the present wants of the town, and the corporation are (1867) seeking for some more extensive source of supply.

The most important public buildings are the town-hall, St. George's Hall, exchange buildings, revenue buildings, and the free public library and museum. The town-hall is an elegant structure. A handsome dome, surrounded by an open gallery, rises from the centre of the building. Within are a grand staircase, saloon, drawing-rooms, ball-rooms, banqueting rooms, and refectory, forming a superb suite of entertaining rooms, and also the council-hall and various public offices connected with the municipal business and estate of the corporation. The first town-hall was erected on the same site in 1673, rebuilt in 1749, destroyed by fire in 1795, and restored and finally brought to its present condition in 1802 and 1811. There is at present (1867) in course of erection an immense pile of buildings, to serve as public offices, in which will be concentrated the municipal offices, as well as those connected with the lighting, paving, sewerage, water supply, nuisances, gas and meter testing, smoke inspection, and the department of the medical officer of health. The revenue buildings, which comprise accommodation for the offices of inland revenue, of the Mersey dock and harbour board, and of the post-office, cover an area of 6700 sq. yds., and have an extreme length of 467 ft., and a total height of 67 ft.; lofty porticoes, each of eight Ionic columns, adorn the centre, and east and west fronts; the centre is surmounted by a dome lighted with sixteen windows, and ornamented with the same number of pilasters. St. George's Hall, which contains a large hall for public meetings, concerts, &c., a smaller concert-room, capable of accommodating 1200 auditors, and the assize courts, is a sumptuous building in the Corinthian style, externally and internally. The E. front is 420 ft. long, with a colonnade of sixteen columns 200 ft. long; but from the S. portico to the N. apsis, which contains the small concert-room, the building is 500 ft. long. The free public library and museum is a handsome building of the Corinthian order, occupying an area of 4785 sq. yds. The right, or E. wing, is occupied by the library; the W. wing by the valuable museum of natural history presented to the corporation by the Earl of Derby. A central hall between the two, devoted to statuary and works of art, is 93 ft. long by 53 ft. wide, and 66 feet high; the public reading-room is 109 ft. long, 50 ft. wide, and 48 ft. high; the library has an upper and lower room, each 73 ft. long and 27 ft. wide, with galleries round. There are also a commodious students' room, a room for Biblical illustrations, a room for patents and parliamentary papers, a board-room, several class-rooms, and a lecture-room capable of containing an audience of about 400. This building was opened on the 18th October, 1860, and the corporation are now about to extend it by adding a picture gallery. In connection with this central library there are two lending libraries, one at the N. and the other at the S. end of the town. The expense of maintaining the library, museum, and lending libraries is defrayed by a rate on the inhabitants. The ex-

change buildings form three sides of a square, of which the town-hall forms the fourth side. These buildings are now (1867) in course of reconstruction. The other structures, exclusive of the churches, deserving of notice, are the borough jail at Walton, the work-houses and offices, the industrial schools, the infirmary, the sailors' home, the gymnasium, the Royal bank buildings, the Commercial bank, the bank of England, and the other banks; the Royal Insurance buildings, and the buildings of the London and Liverpool insurance, the Palatine club, the athenæum, the lyceum, the corn-exchange, the Albany, and indeed all the palatial edifices which have been erected as offices within the last few years, and which line the streets in the neighbourhood of the exchange.

Few towns are so well supplied with markets and market-places as Liverpool. The markets are spacious, airy, covered buildings, and are four in number: St. John's, St. James', St. Martin's, and the fish market. St. John's is the largest and most important. It is 660 ft. long and 135 ft. wide. They are all well supplied with provisions. The Haymarket is an area of about 15,000 superficial yds., nearly half of which has been roofed over to form a drill-shed for the volun-

teer corps. This market is also used as a wholesale market for perishable produce.

There are altogether 183 places of worship in Liverpool: of these sixty-five belong to the Church of England, twenty to the R. Catholics, twenty-two to the Wesleyans, twelve to the Independents, five to the Primitive Methodists, eight to the Calvinistic Methodists, ten to the Baptists, fourteen to the synod of the Presbyterian church in England, four to the United Presbyterians, two to the Church of Scotland, four to the Unitarians, two to the Society of Friends, two to the Jews, and the remaining thirteen to other denominations; and to the greater number of these places of worship schools are attached. Many of the churches and chapels are very handsome buildings. Among these are St. George's, St. Catherine's, St. Michael's, St. Nicolas', St. Luke's, the church for the blind, Great George Street chapel, Hope Street Unitarian chapel, St. Francis Xavier's and St. Mary's R. Catholic chapels, and St. Andrew's Scotch church.

Liverpool is remarkable for the number of its charitable and benevolent institutions, and for the suitability of the buildings devoted to these purposes. There are the royal

THE PUBLIC LIBRARY AND MUSEUM, LIVERPOOL.

infirmary, lock-hospital, children's infirmary, northern and southern hospitals, lying-in institutions, dispensaries—in all twelve establishments for the cure or mitigation of disease. And in connection with these may be mentioned the northern and southern public disinfecting apparatus, for gratuitously disinfecting, by means of dry heat, the clothes, bedding, &c., of persons attacked by contagious or infectious diseases; and also, as directly connected with the health of the people, the public baths, of which there are: St. George's, on the pier-head, supplied with filtered salt water, and Cornwallis Street, Margaret Street, and Paul Street, supplied with pure fresh water. The last-named has a public wash-house attached to it, and there is another public wash-house in Upper Frederick Street. There are a blue-coat hospital, a male and female orphan hospital, a R. Catholic male and female orphanage, two penitentiaries, refuges for the destitute, Magdalen institutes, a central relief society, Church and religious societies, shipwrecked mariners' societies, town missions, four R. Catholic convents—altogether, irrespective of the infirmaries and hospitals, eighty charitable institutions and religious societies.

The educational establishments of Liverpool not connected with charities are the royal institution, the mechanics' institute, and queen's college, the collegiate institute, and the medical schools. The schools attached to the various churches and chapels have been already noticed. There are also the corporation schools, the national, infant, industrial, and ragged schools, and those attached to the blue-coat hospital, orphan, and other asylums. The principal places of amusement are the theatre-royal, the Prince of Wales' theatre, the royal amphitheatre, the Adelphi theatre, the Varieties, the Wellington rooms for assemblies and balls, the George

Street assembly rooms, the St. James' hall concert-room, the Alhambra, the philharmonic hall (a concert-room of colossal dimensions, and unsurpassed in this country in the requisites of hearing and seeing), and many minor concert-rooms. There is also a race-course at Aintree, where meetings are held in spring, summer, and autumn.

In addition to the Prince's park, and the botanic gardens and Wavertree parks, already in existence, the corporation are now forming three new parks: the largest, the Sefton park, at the south end of the town, but beyond its limits, will contain 370 acres. The Newsham park, at the east side of the town, will contain about 165 acres, and the Stanley park on the north will contain 99 acres. The corporation too are about to erect public abattoirs in connection with the cattle-market, and situated on a line of railway which will admit of all the cattle landed at the docks being carried, in place of being driven through the crowded streets to the markets and abattoir.

The public cemeteries are nine in number—Anfield, St. James', St. Mary's, parochial at Rue Lane, Smithdown Lane, neeropolis, the Catholic, the Friends', and the Jews' burying-place.

But the most remarkable feature of this great seaport is its docks and basins. These extend along the Mersey for 5 m. There are thirty wet-docks and half-tide docks, among the largest of which are the Brunswick, the Queen's, King's, George's, Prince's, Huskisson, Canada, and New North. The docks have an aggregate water area of 258 acres, 3543 yds., and quay space of nearly 19 m. in extent. There are, besides, twenty graving-docks, with a bottom length of 10,176 ft.; and seven gridirons, with an aggregate length of 1123 ft. 6 in.

points on the Liverpool side, to and from the ferries of East-ham, New Ferry, Rock Ferry, Tranmere, Monksferry, Wood-side, Seacombe, Egremont, and New Brighton. The boats are admirably managed, and besides accommodating the immense multitude whose daily avocations require them to cross the river, they afford facilities to thousands carrying on business in Liverpool to reside in Cheshire.

The town is divided into sixteen wards, which send each three councillors to the council. There are thus forty-eight councillors; there are also sixteen aldermen, elected by the council, and a mayor. The corporation revenues were formerly very large. In 1836 the income derived from the town dues alone amounted to £49,332, in 1849 to £102,596, 13s. 3d.; but in 1858 the corporation was deprived of the conservancy of the Mersey, and of the town dues, which were handed over to a new board, called the Mersey Dock and Harbour Board. Nevertheless, from real property and from the composition received for the taking away the town dues, the council have still a large income to meet their obligatory and ordinary expenditure, and to carry out great improvements in the town without imposing taxes for the purpose. The cost of lighting of the town, too, is defrayed out of the surplus municipal revenue.

Liverpool is the most densely crowded town in England, and as a vast number of its inhabitants are unskilled labourers, who resort thither for precarious and fluctuating labour connected with the docks, which subjects them to periods of poverty and distress, and renders them ready victims to disease, it is not to be wondered at that the town is liable to visitations of epidemic disorders. Sanitary measures, as sewerage, house-drainage, improved paving and cleansing, the regulation of common lodging-houses and slaughter-houses, and closing unhealthy cellars, &c., have done much to mitigate the severity of visitations, and to reduce the rate of mortality. In 1844 the death-rate was 36 in the 1000—in 1866, at the cessation of an attack of epidemic cholera, it was 29 in the 1000.

Great as Liverpool now is, it is of but comparatively recent growth, and has therefore little or no history. In 1644 it was a small fishing town, surrounded by a high mud wall. In that year it was besieged and taken by Prince Rupert, and shortly after retaken by the parliamentary forces under Sir John Meldrum. Seven years later a visitation of the plague carried off 200 inhabitants. In 1709 a wet-dock was constructed, not only the first in Liverpool, but also in the kingdom. From this event may be dated the rapid extension of its commerce and population; though, as evidenced by the following table, the great increase of population has taken place since the beginning of the present century.

Year.	Population.
1700	5,000
1760	26,000
1801	77,653
1821	118,972
1841	224,954
1851	375,955
1861	443,938

The nett rateable value of the borough in 1866 was £2,150,133. Liverpool has quarter and petty sessions, courts of record and requests, and is the seat of assizes for the hundred of W. Derby. Its port jurisdiction comprises the whole estuary of the Mersey. It is the birthplace of Mrs. Hemans, Roscoe the historian, Dr. Currie the biographer of Burns, and the Rev. Legh Richmond. It sends two members to the House of Commons.

LLANQUIHUE, a lake, Chili, in the S. of prov. Valdivia, at the W. foot of the volcanic mountains Osorno and Calbuco. It is of an irregularly triangular shape, about 30 m. long from N. to S., with an average breadth of about 20 m. It discharges its waters through the river Maullin into the Gulf of Reloncavi, in the Pacific, from which it is only 8 m. distant.

LLANQUIHUE [add.], a territory of the republic of Chili, lying between lat. 40° 50' and 41° 45' S.; and bounded E. by the line of the Andes, N. by the river Las Damas, W. by a line which sets out from its N. boundary, strikes across to the confluence of the rivers Rahere and Negro, following the course of the latter as far as the village of Maule, and stretches from thence S.S.E. to Teloncar Sound. The district

thus indicated comprises the N.E. portion of the ancient province of Chiloé, and the S. of that of Valdivia. It has recently been colonized by a body of German emigrants, under the patronage of the Chilean government, who have already founded a town of 15,000 inhabitants, named Puerto Monte, and developed the natural resources of this fertile and interesting country. The whole of the district may be described as a regular and extensive plain, sheltered on the W. by the slopes of the Andes, and nowhere rising more than 90 ft. above the sea-level. It is covered with vast forests; but in the open spaces the soil has been rendered so rich by successive deposits of vegetable matter that it needs no manure, and yields the most abundant crops. To the N. of Puerto Monte a large coal-field has been discovered, adding vastly to the resources of the colony. Roads are being opened in the interior, which will enable the settler to carry his products to the sea-coast. Timber of course abounds here, and several varieties of the potato, which are considered to surpass those grown in England. Oxen, cows, and swine inhabit the forests. Numerous lakes and tributary streams provide the farmer with means of irrigation. The whole area is parcelled out into square lots, so designed that one side of each lot shall touch upon a public road, and the utmost sagacity appears to have superintended all the arrangements of this new and prosperous colony.—(*Chili, par Perez-Rosales; Proceedings of Royal Geog. Soc.*)

LOANDA, or ST. PAUL DE LOANDA [add.], a tn. S.W. Africa, Portuguese settlements, cap. prov. Angola; lat. 8° 48' S.; lon. 13° 8' E. It was at one time a considerable city, but is now greatly decayed. Standing partly on a height above the Atlantic, embosomed among trees, it presents an imposing appearance from the sea; is defended by three forts in good repair, and has many large stone houses, together with a greater number formed of wattle and daub. As the see of a bishop, it has a cathedral, which has few claims to notice, and is but a poor substitute for two magnificent churches, which once adorned Loanda, but are now miserable ruins; the remnant of the one, which belonged to the Jesuits, being used as a workshop, and that of the other as a byre. The other principal buildings are the governor's palace and government offices—commodious structures—and the custom house, the business of which is said to be extremely well managed. The harbour lies between the town on the mainland and a low sandy island called also Loanda; and though once deep enough to float the largest ships close to the custom house, is in course of being gradually curtailed in its dimensions, and silted up, partly by the large quantities of soil washed down into it during the rainy season, and partly by the sand which is driven into it during a high S.W. wind by the dashing of the waves. The island—a narrow sandy flat, about 18 m. long by 2 broad—has about 1300 inhabitants, the half of whom are native fishermen, by whom the town is abundantly supplied with fish. It is not so well situated in respect of water, almost the whole of which is brought from the Bengo by means of launches, as the wells within the city are slightly brackish. The exports, which include those of the whole province of Angola, have an annual value of about £104,000, and consist chiefly of ivory to nearly a half of the whole value, orchella, palm-oil, bees'-wax, gum, coffee, and hides; the customs produce annually about £32,000. Loanda is somewhat of the nature of a penal settlement. Those Europeans who go to it voluntarily, do so in the hope of returning rich in the course of a few years. Nearly all the European soldiers sent out are convicts. These may be said to have the place at their mercy, as they are the only persons who have arms in their hands; but, contrary to what might have been expected, they behave remarkably well. Pop. not more than 12,000, most of them people of colour.

LOCHOWITZ [add.], a tn. Austrian empire, Bohemia, circle and 23 m. S.W. Prague, on the Litanka, here crossed by a long wooden bridge. It has a deanery church, a castle, a brewery, a bathing establishment, a cotton and several saw and flour mills. Pop. 2450.

LOCKPORT, a vil. U. States, New York, cap. co. Niagara, on the Erie canal, which is here crossed by a viaduct of the Rochester, Lockport, and Niagara Falls railway, 500 ft. long and 60 ft. above the water. It contains thirteen churches, a large educational institute attended by above 600

pupils, and two savings-banks. The manufacturing establishments include numerous flour and saw mills, tanneries, foundries, machine shops, glass-works, and factories for agricultural implements, sewing machines, and steam engines. Pop. (1860), 12,523.

LOGON, a prov. W. Africa, forming the S.E. extremity of Bornou, is bounded N. by Kotoko, E. by the Shari which separates it from Baghirmi, and S. by Adamawa. Its W. boundary is not well defined. It possesses many advantages. Water is abundantly supplied by the Logon or Ere, a considerable stream which traverses its E. portion, and joins the Shari before the latter quits its frontier. The soil is of a rich and fertile character, producing much grain and cotton, and the forests, by the variety and luxuriant foliage of the trees, give a charming appearance to the whole country. One of the greatest drawbacks is a superabundance of water during the rainy season, and the consequent conversion of considerable tracts into unproductive and unhealthy swamps. From its position on the frontiers of Bornou and Baghirmi, Logon is to some extent obliged to serve two masters, and suffers accordingly. The inhabitants, besides growing cotton to a considerable extent, also weave it into various articles, some of which are of excellent quality and in great demand.

LOJA, a tn. S. America, Ecuador, dist. Assuay, cap. prov. of same name, in a beautiful valley between the Malacatos and the Zamara, 100 m. S. by E. Guayaquil. It consists of straight streets and adobe houses, many of them of two stories and handsome, and contains a parish church, Dominican, Franciscan, and Augustine monasteries, a college in which Latin, Spanish, and philosophy are taught, various primary schools, and an hospital. Within the town itself quicksilver in a state of purity has been found, and in the neighbourhood gold, coal, and variegated marble. Some attention is also paid to the production of cochineal.

LOLLI BAZAR, a tn. India, territory Cooch Behar, 26 m. N. Rungpoor. It is an inconsiderable place, and deserves notice only on account of the ruined city of Komotapoor situated in its vicinity, on the r. bank of the Dhorla. Everything connected with this city appears to have been on the greatest scale. It was of an oblong form, 19 m. in circuit, and inclosed, except where the river was probably deemed a sufficient defence, by an outer ditch 250 ft. wide, and a rampart which is still 30 ft. high, with indications of its having once been much higher, and 130 ft. in breadth. In the centre stood the citadel or palace of the rajah, surrounded by a wall of brick, with a ditch outside of it, and beyond both an earthen rampart. The defensive works display little engineering skill, and the ruined buildings are more remarkable for magnitude than for architectural merit.

LONDON [add.] The period elapsed since the account in the text was written, has been attended by changes in the condition of London, and in the appearance of many of its districts, such as, perhaps, have not been exceeded in importance in any capital city excepting Paris. It is true that these have left many things to be attained that are essential to comfortable and healthful residence, and to the proper transaction of business; but the growth of the population, and the extension of the inhabited area, have been so great and rapid, that it has been impossible for the metropolitan local-management, however improved, to keep pace, or even to get rid of old arrears of neglect. Still, with the passing of the Metropolis Management Act of 1855, was inaugurated what appears to be a new era, of which we must now (February, 1867) speak in part prospectively; not so much because to treat of the future, however probably prolific of works, enters at all into the plan of this Gazetteer, as because there are works and measures of the last ten years in the metropolis, which, the most important for their present results of any that we could name, are on the other hand to be regarded as imperfect, because in some of their divisions incomplete. Yet it should be here mentioned that the proximate future may be of great importance to the sanitary state and the appearance of the metropolis, or whenever the chief omission of the act is remedied, and the governing body appointed under it, the 'Metropolitan Board of Works,' is adequately provided with funds. Meanwhile, a gigantic operation, the sewerage of London, has been very nearly completed; the embankment of the Thames is far advanced; and two or three important lines of streets,

long previously projected, have been opened. Contemporaneously with these measures, great progress has been made in the supply of communication between the heart of the metropolis and the suburbs, by railway, and progress to some extent, through the same sort of agency, as to those between different parts of the thickly-populated area itself. The railway-works, however, have not yet helped so much to provide the poor immediately with decent, comfortable, and economical dwellings, as to effect dislodgments entailing a large amount of misery. In the decorative aspect of London there is to be observed a greatly increased use of the members of styles of architecture, and abundant evidence of movement of some kind or other in taste. But good resultant effect is confined to individual structures at considerable distances apart, and many of which are of the public-building class, excepting as to one or two suburban quarters, and as to the City. In the City of London the increase in quantity of architectural decoration has been, during the last ten years, exceedingly great: the quality of the architecture also is there much improved; and stone has almost displaced stucco as the vehicle of effect. This decorative and ornamental expression of the streets about Lombard Street and the Bank, and to a certain extent in other parts of the City, was till very recently fostered by the growth of numerous banking and insurance companies. By these no spot of ground has been deemed too costly, and no amount of architectural enrichment has been thought excessive; and, for some time, a sort of rivalry has been apparent; in which the older banking-houses have participated. The architectural expression is, however, subject to two adverse influences—the one the narrowness of the streets, and the other the smoke-nuisance; which prevails, in London, but slightly diminished since the acts of 1853 and 1856, excepting in summer, when the atmosphere is often clear and beautiful. Some of the best of the London prospects, however—those from the bridges—have been greatly deteriorated by the erection of gigantic sheds of railway terminal-stations in the City and at Charing Cross.

Population and increase.—The limits of London are now very difficult of definition. The entire area under the jurisdiction of the Metropolitan Board of Works takes in Bow, Hackney, Clapton, Stamford Hill, part of Highgate, Hampstead, parts of Kilburn and Kensal Green, Acton, and Hammersmith, north of the Thames; and Putney, Roehampton, Tooting, Steatham, the site of the Crystal Palace, Eltham, Woolwich, and Plumstead, south. But beyond most of these districts, important suburban and sometimes thickly populated quarters have grown up. In some of them, as on the left bank of the Lea, the sites are such as should never have been built upon, with regard to health; whilst the buildings bear evidence of being out of the limits of the Building Act; of which the last measure bearing the name was passed in 1855,—though it has been since amended in some details. In several directions there are lines of houses, differing from those of the central quarters only in having gardens in front of them, and in being detached, or 'semi-detached,' all the way from the town itself, to what were little more than a dozen years ago suburban villages or distinct towns. Thus, a complete line of houses may be traversed from London to the town of Croydon, passing by such populous places as Forest Hill and Sydenham. This which is the modern characteristic of towns, but is markedly the feature of London, and is connected with the improved provision of railroad-communication, makes it exceedingly difficult to give any correct statement of the population. The day-population of the City and the night-population have become two extremes of the scale. The last statement of the registrar-general, however, makes the estimated population of London in the middle of 1866, amount to 3,067,536, or very nearly equal to that of the cities of Edinburgh, Glasgow, Dublin, Manchester, and Bristol, and the boroughs of Salford, Birmingham, Liverpool, Sheffield, Leeds, Hull, and Newcastle-on-Tyne all put together. The actual returns of the year 1861 made the population 2,803,989. Then, the increase was 776,461 during the ten years elapsed since 1851, when the numbers, as given in p. 211, vol. ii., were 2,027,528. The area, in the same table, was given as 31,353 acres; it is now stated by the registrar-general as being 77,997. Of the population in 1861, 2,030,814 belonged to the metropolitan part of Middlesex; whilst 579,748 belonged to Surrey, and 193,427 to

Kent. The acreage of the three divisions,—32,455 acres belonging to Middlesex, 22,951 to Surrey, and 22,591 to Kent,—when compared with the figures for population, may serve to indicate the varying density: though in parts of Lambeth, Southwark, Bermondsey, Deptford, Greenwich, and Woolwich, the density is far greater than would be supposed. It should be observed that none of these figures take any account of Essex,—which includes Canning Town, near the Victoria Docks (the district already referred to), and Stratford and West Ham: nor are there considered numerous suburbs and suburban towns that have become attached to London, as before stated, and which send some of their residents to increase the population of the City and of the West End in the day-time. Croydon alone, at the end of 1866, had a population of 55,000; and the number is increasing rapidly. Of the more central districts, that of the largest population in 1861 was St. Pancras, with 198,788 inhabitants. Kensington contained 185,950; Lambeth, 162,044; Marylebone, 161,680; and Islington, 155,341. Shoreditch contained 129,364 inhabitants on an area of 646 ac.; whilst Bethnal Green had 105,101 on 760 ac., and mostly huddled together in houses of the smallest size. The population of the City of London was set down as 45,555 for the area of 434 acres; but the figures, being obtained at night, are admitted to be quite fallacious for any sort of judgment of the City in business-hours.

Some of the facts that have been mentioned, or alluded to, make it easy to apprehend comparative statements of the mortality. The general health of London, in fact, cannot be regarded as having greatly improved, even after leaving out of consideration mortality due to the cholera in 1866, and to the diminished supply of food caused by the cattle-plague of that year and the year previous; and it can no longer be considered to present advantageous contrast with the mortality of Paris,—in which capital, consequently upon the aëration afforded by numerous new and greatly extended thoroughfares, the mortality has been much reduced. The mortality of London for 1866 was 26·47 per thousand of the inhabitants: that for 1865, 24·56, was improved from that for 1864, which was 26·53; but that for 1863 had been 24·47, when there had been a regular increase since 1860. The mean of five years, 1860–4, was 24·05; whilst that of the preceding five years was 23·08. The districts are divided into five groups; and of this number the districts to the north (22·93 deaths to the thousand persons living) are the most healthy; and the 'east' and 'central' districts (the last-named having 25·99 as the figure) are the least. The City proper, however, appears to be healthy.

London Routes: Streets, and the Thames Embankment.—Amongst the street-improvements of late years have been the line of Cannon Street,—which afforded a needed route for the traffic from St. Paul's to London Bridge, relieving Cheapside; the line northwards to Clerkenwell from Farringdon Street; and that of Victoria Street, Westminster. The two last-named lines are still bordered more or less by vacant ground. Under the management of the Metropolitan Board there has been opened the new Southwark Street. It is of great importance to the traffic from Westminster to the London Bridge railway-terminus; for which the shortest route is crossing the river. Prior to this the Board had opened a very short but important street, now Garrick Street, near Covent Garden, in which their first experiment was made of the construction of a subway to contain the water- and gas-pipes and telegraph-wires, as well as to afford access to the sewerage, and so render unnecessary repeated tearing-up of pavements and blocking-up of the streets. A subway was afterwards constructed in the formation of Southwark Street; and another is built in the Thames Embankment; but the gas-companies have thus far (March, 1867) been able to resist the efforts of the Metropolitan Board to compel use of the subway; and the pavement of Southwark Street, which had been exceedingly well laid with a view to permanence, was actually taken up by a company, in spite of the Board, soon after it had been finished. The gas-companies ground their opposition upon experience that there has been (as in Paris) of explosions consequent upon escape of gas in subways, or channels of an analogous description; which escape, and the formation of an explosive mixture in certain parts of the subway, they argue it is

impossible to prevent. At present there is considerable leakage, but into the earth. This waste of gas seems to be considered unavoidable; but, the saturation of the earth with gas, if not one of the minor causes of the pollution of the atmosphere of London, is unquestionably a frequent cause of pollution of the water. The present prosecution of the Thames Embankment, after years of planning and controversy, is due to the necessity that there was in 1861 for immediate decision as to the course that was to be taken by one particular line of the sewerage of London. This line, the Low-level line of the northern side of the Thames, had been designed for the position which it has at length obtained; but so many difficulties were offered to the action of the Metropolitan Board, that their engineer was obliged to contemplate taking the sewer along the Strand and Fleet Street. The prospect of interference with the traffic was too serious for even the British government and parliament; and at length, in 1862, after some opposition from lessees of the Crown, an act passed which allowed the Board, before the end of the year, to mature the main portion of their scheme. This was comprised in so much of the embankment of the Middlesex side of the Thames as extends between Westminster Bridge and Whitefriars. That portion now consists of ground reclaimed for a roadway of 100 ft. in width, with a granite retaining-wall surmounted by a moulded parapet broken by pedestals, for lamps, to which are to be attached heads of lions cast in metal,—these last holding mooring-rings for the craft. The coal-barges that formed previously the foreground of London viewed from 'the silent highway,' are mostly got rid of—partly through the circumstance that a large proportion of the coal burned in London now comes by railway. With this length of the Embankment will be connected several important lines of communication with Whitehall and Charing Cross, with the Strand near Waterloo Bridge, and with the heart of the City. Eastward, the embankment-roadway will be continued, though not altogether on the principle of a solid embankment, as far as Blackfriars Bridge; whence there will be a direct line of street opened to the Mansion House. Within the embankment there will be a railway, as part of the girdle-line, generally distinguished as the Inner Circle, and in great part underground; of which 'circle' the Metropolitan Railway from Farringdon Road to Paddington formed the original portion constructed. The division of the Embankment, spoken of as at present in hand, and which at this time of writing may be considered all but complete, passes from Westminster Bridge under the Charing-Cross Railway Bridge and Waterloo Bridge, and past the front of Somerset House, to opposite the east side of the Temple. The inbend opposite the Adelphi is cut off, and a large unsightly area of mud at low water is got rid of. The original intention as to 'reclaimed' spaces of this kind was to appropriate them as recreation-ground; but this account can scarcely describe the ultimate appearance of the Embankment in all respects; as much of what is decorative, rather than structural, is not even designed. In place of the latest arrangements of dumbies and flying-bridges at the stopping-places of the steamboats, there are well-contrived landing-stages in recesses—namely, one at Westminster Bridge, two at the Charing-Cross Railway Bridge (above and below the bridge), two at Waterloo Bridge (above and below), and one at the end of Essex Street for the Temple. This last will have combined with it landing-stairs; and there will be landing-stairs opposite the Adelphi, and in the middle of the distance between Westminster and Charing-Cross Bridges. Each of these several features of the Embankment is made highly ornamental by balustrades, pedestals for sculpture, and other features. At the landing-stairs between Westminster and Charing-Cross Bridges will be placed (re-erected) the well-known 'York Stairs,' once connected with the residence of that Duke of Buckingham whose names and titles are preserved in the designations of several streets near the Adelphi. In the adjustment of the line of this embankment, the aim has been to equalize the breadth of the river, and to increase the scour, and so prevent the continued formation of mud-banks, and assist the purification of the stream. The embankment of the same side of the Thames above the Westminster Palace, has been sometime complete at Milbank, and onwards past Chelsea Hospital; and a length that is just above the Palace may soon be undertaken.

Ultimately, and within very few years, there will be a line of way from Chelsea to the Bank of England. An embankment of the Surrey side is in hand, as yet, only as regards the length between Westminster Bridge and Gunhouse Alley, Vauxhall Bridge. Next Westminster Bridge is the site for a new building for St. Thomas's Hospital, the building near the London Bridge station having been displaced in the course of the recent extension of the lines of the South-Eastern Company. In connection with this embankment some important street-improvements are in hand. Besides the improvement of the street-communications on the banks of the Thames, there has been some improvement of those between the districts on the opposite banks. This, however, has been chiefly in the provision of bridges devoted to foot-traffic, or to foot-traffic and railways together, or to railways alone. Works under the head of bridges over the Thames, however, will be noticed further on.

One long-projected improvement, that of the substitution of a level-line for Holborn Hill and the corresponding incline on the other side, is in process of realization. It includes a bridge, and considerable alteration in the adjacent buildings. The latter is involved in formation of the inclines requisite for connection between the upper and lower levels.

Railways and Stations.—Of lines of railway devoted specially to the service of Londoners, and of the termini of country-lines in quarters that are central, the number is considerably increased. There are at least two routes between the north and south of England, by which the traveller may pass through the metropolis in a railway-carriage—and two others are in process of construction. This condition of things involves the acceptance of principles once stoutly contested. When the metropolis was first provided with railway-communication to the country, a central location for a railway-terminus was deemed somewhat objectionable; or, at least, it was not obtained excepting in the case of the Greenwich, Blackwall, and South-Western lines. Up to a period later than the date of the first publication of the *Gazetteer*, the only railways available for communication with the suburban districts were lines having their stations at London Bridge, Fenchurch Street, and Waterloo Bridge. Now, there are two terminal stations, side by side, in Pimlico, for many places in western, south-western, southern, and south-eastern London: there are several lines added from London Bridge: there are distinct routes to northern and north-western London, and to the south-east of England, in connection with numerous metropolitan stations,—of which the chief is at Ludgate Hill: there is a terminus near Broad Street, City, with a line to the north of London and the north-west of England; and there are added lines going eastward and north-eastward; with which again there is about being connected a terminus not far from the Bank, or near Finsbury Circus, for the Great Eastern line. But the most important of new terminal stations in the very heart of London, are those at Charing Cross and Cannon Street. These serve not only the communication with Bermondsey, Greenwich, and Woolwich, and that part of England which is of the South-Eastern railway system, but a new course of traffic between the City and the west of London, or crossing the river twice by new bridges. At each of these stations the several lines, with the arrival and departure platforms, are covered over with a single span of iron roof. One end of this is formed by the booking-offices, on the ground-story, and rooms of a large hotel over them. The front in each case is set back a considerable distance from the street, in a forecourt having gates and lodges; and, as the whole has a highly-decorative character, the change in the aspect of the quarter of London is great. The hotel at Charing Cross extends for some distance along one side of the terminus: the pavilions or masses of its angles are surmounted by high French-Italian roofs; and in the centre of the forecourt is an ideal restoration (by the architect of the hotel, Mr. E. M. Barry, A.R.A.) of the Cross of Charing, which stood some distance westward. The hotel and station occupy the site of Hungerford Market; which was reached by a narrow street from the Strand. Several houses in the Strand are removed. A similar clearance has been made for the other station, called the City Terminus. The platforms in this latter case are upwards of 700 ft. in length; and space is afforded for more than 200 railway-carriages, besides street-cabs. The

several stations named, and others which there are in the extreme west of London, are attached to lines that girdle the metropolis, or connect one part of it with another, so as to be of use every day to the same persons; that is to say, the railway-train is so far substituted for the omnibus. Thus there is communication between the City and the western part of London, by many routes; whilst the southern districts are especially well-served: though advantages of railways have been reduced by delays on journeys. A line that has been only alluded to above, but which is perhaps the most important of the 'omnibus-lines,' is the Metropolitan or 'Underground' railway. Its importance arises from the method of its construction, as well as from its effects upon the London railway-system. It is in great part what its popular designation implies, or *underground*; and so also are several of its stations. It is carried in part of its length, or from King's Cross to near the Edgware Road, along the line of 'the northern *boulevard* of London,' in what has the appearance of a tunnel: though, the crown of the vault being immediately beneath the street-pavement, the construction was different from that of other railroad-tunnels. The greatest care was required in passing the numerous mains and pipes of the gas and water services, and in getting light at the different stations, and ventilation everywhere. The engines are specially constructed so as to pass from end to end of each underground portion of the line, giving off as little steam and noxious effluvia as possible. The carriages are lighted by gas. This line has a station near to Finsbury Circus; one in Aldersgate Street; one in Farringdon Road,—where the line is joined by that from the south of England, and south of London, of the London, Chatham, and Dover Company; and one at King's Cross; where it serves the Great Northern railway to the north of England and north of London. Then come four stations; from one of which there is a similar underground-line to St. John's Wood; and, lastly, there is a junction with the Great Western line, at the Paddington Terminus, whence there is railway-communication with Hammersmith and other western districts. The Metropolitan Railway is to be regarded as the first instalment of the 'Inner Circle'—a girdle-line of which one portion will be in the Thames Embankment; and which passes by Kensington and Brompton in the west of London, and Tower Hill in the east. Chief stations of this Inner Circle are fixed as close as possible to the terminal stations of the grand trunk-lines: thus there is a station exactly opposite the Pimlico stations before mentioned; there is one close to Cannon Street Station, and so on. The trains will keep circling all day round London,—each always running in one direction, and so timed that passengers need not wait more than five minutes for a train, or be troubled by time-tables. By this system of the girdle-lines, expense of ground for sidings and turn-tables is in great measure avoided. One of the stations will be at Westminster Bridge; and for communication with it and the steam-boat landing-stage, an underground passage has been formed from the Westminster Palace. One of the lines crossing London will connect the South-Eastern line from Charing Cross, with the London and North-Western line. It will be, in part, constructed similarly to the Metropolitan Railway; which it will intersect, at a lower level. Another line crossing the metropolis, the East London, appropriates the Thames Tunnel. In some portions of the suburbs, as of the town, the appearance of the locality is greatly changed by railways. Between Battersea Park, and Wandsworth and Clapham, there is a network of lines, which it is hard to disentangle even on a map. There are four or five companies having stations in communication with one another at Clapham Junction, where the whole number of trains each day amounts to many hundreds. Some of the railways include work of great importance as engineering-construction; but most of them have added to the streets of London deformity instead of beauty. This is particularly remarkable along the line from Charing Cross to the London Bridge Station, or especially in the bridges close to this station. A considerable alteration in the appearance of Bridge Street (Blackfriars), Farringdon Street, and Ludgate Hill has been produced by the line of the London, Chatham, and Dover Company; which crosses Ludgate Hill by an iron bridge. Much opposition was raised to the erection of the bridge, on the score of apprehended destruction

of the view of St. Paul's Cathedral. The bridge is made somewhat ornamental; whilst it includes a very useful feature—namely, footways for infirm persons and others wishing to cross the street without danger. Accidents to pedestrians in the London streets had become numerous; and not the least important improvements in the streets, are the resting-places, guarded by posts, and each furnished with a large lamp, in the middle of the roadways, which have been established at many dangerous crossings. Some of the smaller stations of the London, Chatham, and Dover line are of superior architectural character; but the larger stations, and especially the Ludgate Hill Station (in Bridge Street), are much the reverse.

Sewerage.—The sewerage of London, the primary duty with which the Metropolitan Board was charged, is at this time of writing nearly complete: indeed its formal inauguration took place on the 4th April, 1865. The system consists of lines of sewer intersecting and intercepting the old lines which ran into the Thames, and, whilst retaining the old outlets for service on occasions of heavy rainfall, conveying the ordinary rainfall and sewage to outfalls, five to seven miles distant, where the sewage discharged into the Thames becomes largely diluted; and where, moreover, with the help of arrangements for storage, the discharge takes place at time of ebb-tide,—so that it is supposed impossible there can be any return to that part of the river which is within the thickly-populated quarters of London. The system for the northern side of the Thames comprises three principal lines, each with branches, and called respectively High-level, Middle-level, and Low-level Sewer. The Middle-level Sewer is upwards of twelve miles in length. Part of its length includes the whole line of Oxford Street and the Bayswater Road. At the northern end of Bedford Row it is joined by an important branch from Lincoln's Inn Fields and Piccadilly. The Middle-level and the High-level Sewers come together on the western bank of the Lea, where there is an elaborately contrived system of weirs and penstocks subservient to the outfall of storm-waters into the Lea. Under ordinary circumstances the sewage flows on, crossing over the Lea by iron ducts, to Abbey Mills, where the line of the Low-level Sewer arrives at a pumping-station. Here the sewage of the low-level districts (which extend as far up the river as Hammersmith) is pumped to the higher level; whence the whole sewage of London on the northern side of the Thames, flows in three parallel brick-culverts, built in an embankment which is upwards of five miles in length, on to the Northern Outfall and reservoir. The reservoir is divided into four compartments, each arched over. It occupies an area of about 10 acres. The sewerage works in the Thames Embankment alone comprise much elaborate construction, as for interception of the sewage, formerly flowing into the river by numerous outlets, and for the utilization of the larger of the old outlets under exceptional circumstances that have been alluded to. The system of the southern side of the Thames is divided into High-level and Low-level. The low-level sewage is pumped to the higher level at Deptford; whence the whole flows, under Greenwich and Woolwich, to near Crossness Point, $7\frac{3}{4}$ miles from the Deptford Pumping Station. Here the whole of the sewage of that side of the Thames has to be pumped and reservoired during the hours that may be required by the state of the tide. The reservoir is similar in construction to that of the northern outfall; but the arrangements in connection with the reservoir are much more elaborate. The pumps are capable of lifting 56,000 gallons per minute from the sewer into the reservoir. The engine-house and a lofty chimney of ornamental brickwork are conspicuous features of that part of the river. Everywhere, throughout the system, the construction has been most skilfully devised by Mr. Bazalgette, the engineer to the Board; and the work, which is now nearly all concealed from the eye, has probably nothing to be compared with it, unless amongst works of the Romans. The total length of the sewers is 82 m.; and the area drained is about 117 sq. m. When complete, the whole system will have cost about £4,200,000. As may have been understood, the area does not include Croydon or Richmond, and many other portions of what is really part of London. It should be observed, that the making use of the river again as an outfall, however unavoidable in the absence of satisfactory proposals for the utilization or disposal other-

wise of the sewage of London, as also in the actual state of knowledge, is regarded as temporary only, at least for a considerable portion of the sewage. There is a scheme, which the Board believe will prove successful, for the appropriation of all, or part, of the northern sewage, to fertilization of the Maplin Sands, on the Essex coast, which are to be 'reclaimed.' About the year 1854 the ordinary daily sewage discharged into the Thames was estimated as 2,457,600 cubic ft. for the south side, and for the north side considerably more than double that amount; but in January, 1867, the average daily quantity pumped at the Southern Outfall Works, at Crossness, was found to be 57,865,359 gallons, or what would appear to be equivalent to not less than 9,285,262 cubic ft. A return some weeks later made the quantity 44,866,199 gallons.

Water-Supply.—The metropolitan water-supply is considerably amended from what was the condition of things as stated in the original issue of the *Gazetteer*. None of the companies drawing their supply from the Thames at present take the water from any place so low down the river as between Westminster and Waterloo bridges, or even so low as Kew; and the quantity supplied by the companies together has more than doubled. At the end of 1866 the quantity averaged about 94,000,000 gallons daily, to 438,298 houses; or over 220 gallons, in place of 164, for each house, and nearly 31 gallons to each person. A more recent statement makes the quantity as much as 108,000,000 gallons. A large number of tenements, however, are, practically speaking, not supplied: great portion of the water that is drawn from the sources is wasted; whilst much is spoiled by storage, and in cisterns or butts that are exposed to the access of every kind of impurity. The largest quantity, 21,621,000 gallons, was supplied by the New River Company; and, including this, rather more than half the total supply was drawn from other sources than the Thames. By an Act passed in 1852, after a lesson had been learned from the contrast, during the cholera-epidemic, between results in two districts—one supplied by the Lambeth Company, and the other by the Southwark and Vauxhall Company,—the supply of the former being drawn from the river at Thames-Ditton, and the deaths being at the rate of 37 per 1000; whilst that of the latter was drawn from the Thames at Battersea, and the deaths were 130 per 1000,—all the companies making use of the Thames were obliged to draw from above Teddington Lock, that is, above the limit of the tidal flow. The Act contained other stipulations: following these, the reservoirs of the New River Company, and others, from which, till then, the supply had been made without filtration, were disused or covered over. The Thames Companies now draw their supply from Thames-Ditton, Kingston, and Hampton. But, by the chief sanitary authorities, the Act was regarded as a compromise with the companies. Now, even above Teddington Lock, the source of supply is become greatly polluted by the sewage of numerous populous towns, and by the drainage of richly-manured land. Moreover, as to water from other sources: in 1866, on the prevalence of cholera, a quarter of London supplied by the East London Company with water that there was reason to suspect of impurity derived from its place of storage, and that had been drawn from the Lea, suffered severely. Water used for drinking being regarded as the main agent of diffusion of the cholera-poison, it is supposed that the smallest impregnation (as by the *dejecta* of cholera-patients in Windsor or Reading) of the sewage, and then of the water supplied, would endanger the health of London. Again, a quantity of water is taken from the Thames which seems to be so great as to interfere with the navigation in the upper part of the river. From these and other reasons, including hardness of the water, the question has reverted to much the same position, compared with the wants of London, as it was in 1852. Rival schemes have been put forward for the supply from different mountain-districts, as in Westmoreland and Wales; and a Royal Commission is engaged (March, 1867) on the consideration of the entire subject. The water has, however, this advantage over that supplied before 1852: it is all filtered through layers of gravel and sand before entering the mains. Besides the seven older companies, there is now the Kent Waterworks Company supplying the Greenwich and Woolwich district. One of the present projects would bring water a distance of 184 m.; and another would bring it 240 m.

It is universally admitted that the water of the London pumps is greatly polluted.

Cemeteries.—The paragraph under this head now requires correction. The cemeteries, as those at Brompton, Kensal Green, Highgate, Abney Park, the Tower Hamlets, Bethnal Green, Nunhead, and Norwood, are the only 'intramural' places in which interments are permitted,—excepting, as in the case of interments in St. Paul's and Westminster Abbey; and some of the cemeteries named would now be closed were they not provided with their special Acts. Several of the parishes now send their dead to cemeteries formed at places that are distant from the thickly-inhabited quarters of the metropolis, where each body is provided with a distinct grave for a period of ten years. These arrangements are in pursuance of the Act passed in the year 1850. A large cemetery has been formed near Woking, in Surrey, by a company. The bodies, with the mourners, are conveyed by railway-trains, separate from the ordinary traffic, on the South-Western line, from a distinct station in the Westminster-Bridge Road, and by a branch line into the cemetery itself. When the whole of the Woking ground, amounting to rather more than 2000 acres, is brought into use, the Company estimate that, allowing as a general rule a minimum-interval of ten years before reopening a grave, their cemetery would afford provision for the entire mortality of the metropolis for many years to come. At the Woking Cemetery the poor of several of the London parishes are buried; but some of the parishes, as Marylebone and St. Pancras, and Paddington, have their own cemeteries. The City of London Cemetery is at Ilford, in Essex. The Great Northern Cemetery, near Colney-Hatch, is similar in its arrangements to the Woking Cemetery. The bodies are taken by the Great Northern Railway.

Bridges.—Considerable change has taken place in the bridge-communication across the Thames. London Bridge and Waterloo and Vauxhall bridges, indeed, are as they were: but an important service is now rendered by Southwark Bridge; which is free of toll: a new bridge has been built on the site of old Westminster Bridge; and one is at present in progress on the site of Blackfriars' Bridge; whilst new bridges for pedestrian- and carriage-traffic have been erected at Lambeth and Chelsea; and there are six new railway-bridges,—counting as two the bridges at Pinlicko, that appear as one, and including the bridge of the West London Extension Railway—the line that connects Kensington and Chelsea with Clapham Junction. One of the railway-bridges, the Charing Cross, has displaced the Humberford Suspension-bridge—making use, however, of its two piers of brick, whilst adding other piers intermediate, that take the form of iron cylinders. This bridge has a footway on each side; so that the original communication is preserved. Another bridge, belonging to the same line of railway, the line between Charing Cross and Cannon Street, City, is similarly provided with footways. The two bridges at Pinlicko, appearing like one (but built at different times, and on different systems of construction as to the foundations), belong to the London, Brighton, and South Coast Railway Company, and the London, Chatham, and Dover Railway Company. The latter company are owners of a bridge which is close to the works of the new Blackfriars' Bridge. Between the railway-bridge and the site of the new Blackfriars' Bridge is at present a temporary bridge of timber. This last has a curious appearance, from the arrangement of different levels for the foot-traffic and the carriage-traffic—the former being carried across at a considerable elevation above the latter, or the carriage-road level. Limited space between the two bridges rendered the arrangement necessary. Another bridge, to connect Cheyne Walk, Chelsea, with Battersea Park, is in progress; as also is a line crossing under the river, near the Charing Cross Bridge, the Waterloo and Whitehall Railway, which will be on the pneumatic principle. These new communications leave the carriage-traffic still inadequately provided for. In each of the nine or ten new bridges that have been named, iron in one or other of its adaptations has been used for the superstructure. Thus, as in the case of Westminster Bridge, the number of arches and obstructing piers has been lessened; and so also in Blackfriars' Bridge, of which the foundations are far advanced. But the material iron also is used in the foundations of nearly all these recently-constructed bridges, or even those where the piers above water are of granite or stone; and

to this material, and to the systems whereby coffer-dams are dispensed with, must be attributed the rapid execution as compared with what was formerly the duration of works in hand. Taking the bridges in the order of their erection: the Chelsea Bridge was completed in the year 1858. Its first cost was £85,319. It is a suspension or chain bridge, with a strengthening truss to the roadway somewhat after the principle of that of the Hammersmith Suspension-bridge, only all in iron. There are two piers in the water, and the centre span is 347 feet. The foundations, along with portions of the piers above water, are constructed of timber-piles and concrete in an outer casing of iron. Mr. Thomas Page was the architect. Following some time after this was the new Westminster Bridge, also by Mr. Page, and having the same system of construction in the foundations, though with stone or granite for the piers above low-water level. This bridge has seven elliptical arches of wrought- and cast-iron. The centre-arch has a span of 120 feet. The bridge, 915 ft. in length, has the ample width of 85 ft. The two footways are each 15 ft., and there are two tramways for heavy traffic. Westminster Bridge has been very generally admired for the form of the arches; though there is an effect of weakness in the crown of the arch. The flatness resulted from the requirements as to headway for the craft. The decorative details are of Gothic character. The railway-bridge of the London, Brighton, and South Coast Railway Company, and the railway-bridge above Battersea, are somewhat similar structures, of iron arches and stone piers. In the construction of the first-mentioned of these two, the foundations were laid, on the old system, in coffer-dams; but in the bridge of the London, Chatham, and Dover line, finished in 1866, which touches the other (so that the two structures are generally regarded as one,—as indeed they are one as to the upper surface), the cylinder-system of foundations was used. The Charing-Cross Railway Bridge was the first of the Thames bridges in which such cylinders, filled with brickwork and concrete, were used for the foundations; as also they are there, above water, for the new 'piers.' Each span of the superstructure is constructed with transverse girders, which are suspended from trusses formed with diagonal cross-bracing; these latter are of great strength—as required by the breadth of the bridge, for the number of lines, and from the necessity for there being no obstacle to the passage of trains from one line to another. Indeed, this bridge may be regarded as a portion of the railway-terminus; and at the northern end it spreads out, in the shape of a fan, to the width of the station proper. Altogether the bridge is one of the most remarkable of modern efforts in railway-engineering; though it is not altogether sightly, despite of gilding. Mr. Hawkshaw was the architect. The chains from the suspension-bridge are now used in the bridge at Clifton, near Bristol. The Lambeth Bridge, at the Horseferry, is a combination of the suspension and trussed-girder principles, and was really the first attempt to apply the girder, or beam, in combination with suspending chains, for more than stiffening, that is for positive support of the roadway. Another peculiarity of the bridge is that the 'chains' are formed of twisted strands of iron wire. This bridge is 32 ft. in width. It was opened in 1862. It cost something less than £50,000. Mr. W. H. Barlow was the architect. The bridge of the London, Chatham, and Dover Railway resembles the Charing Cross Railway Bridge in the principle of construction, both of the foundations and the superstructure; but the piers, formed of clustered iron-shafts with stone bases, and the abutments, are more decorative in character; whilst the trusses are much lighter, and there is a line of truss along the middle of the roadway, as well as on the outsides. The bridge attached to the Cannon Street station, or 'City terminus' of the South-Eastern Railway, is similar to the Charing Cross bridge in its connection with a great railway-terminus, and in its construction with cylinders as the piers, sunk deep into the river-bed without aid of coffer-dams, and in the beam- or girder-principle of the superstructure. But, decoratively, the bridges are very different. The several cylinders in place of a pier of the old system of construction, are Doric columns; whilst there is a facing to the external girders, composed of cantilevers, a cornice, and an ornamented parapet. The new Blackfriars' Bridge, of which the first stone was laid July 20, 1865, will have five segmental arches of iron, springing from granite piers, instead of nine stone arches, as in the old bridge.

The centre arch will be of 185 ft. span. The breadth between the parapets will be 75 ft., or 33 ft. more than the dimension of the old bridge. The details will be of Gothic character; and on the face of each pier, will be a column having a shaft of polished red granite. The foundations are being laid in iron caissons, from which the water is pumped out. The system resembles both that adopted in Westminster Bridge and that of those bridges in which cylinders are used. The only important differences are that the pier will be of the ordinary form, and that the caissons, when put together, are of the same form as the future pier: the pier is built within them, as in the case of use of the coffer-dam. Messrs. Joseph Cubitt and Henry Carr are the architects. Several proposals have been made for crossing the Thames below London Bridge, by high-level bridges; and one or more of these are likely to be carried into effect.

Docks.—Additions have been made to some of the older docks; but they are small works compared with the formation of the Victoria Docks. These are situate near Plaistow, below Blackwall, and occupy about 200 acres of the marshland. The basin is about 90 acres in area, and the wharfage is more than a mile in length. The Victoria Docks were opened in 1855. Mr. Bidder was the engineer. Besides

these, there are the Millwall Docks, in the Isle of Dogs, approaching completion, and an extension of the West India Docks. Docks also are being formed at Dagenham, below Barking Creek. The Commercial Docks, south of the river, towards Deptford, now extend over 150 acres; and the 'ponds' will float 50,000 loads of timber.

Public Buildings.—The Palace at Westminster has received some additions to the internal decoration, in the shape of paintings in fresco and the water-glass medium, and in that of statues, as of great statesmen; and a statue of the architect has been placed on the staircase leading up to the committee-rooms. The crypt of St. Stephen's Chapel has been restored and enriched with elaborate coloured decorations. All the houses on the south side of Bridge Street have been removed; and New Palace Yard has been inclosed,—though not by buildings, correspondingly with the east side of the yard, as Sir Charles Barry designed: thus the base of the Clock Tower has been modified decoratively to suit the new arrangement. The footway, before referred to, is being carried under the roadway, to the pier and the site of the intended railway-station, for the convenience of Members of Parliament. In Old Palace Yard is an equestrian statue of Richard Cœur de Lion by Baron Marochetti, after a model that was in Hyde Park in

THE NEW FOREIGN OFFICE AND INDIA OFFICE, from St. James's Park.
Drawn and engraved by J. L. Williams.

1851. An extensive pile of government-offices, for the India Board and the Foreign Office, has been erected in Downing Street. The style is Italian; and the building exhibits a large amount of decorative detail, part of it in red and other coloured marbles and granites. Mr. G. G. Scott is the architect of the whole exterior, and of the interior of the Foreign Office; Mr. M. D. Wyatt is the architect of the court, and the interior generally, of that part of the building appropriated to the India Board. The old India House in Leadenhall Street is removed, and the site occupied by city-offices. On the Lambeth side of the river, or between Charing Cross and Westminster Bridges, there is now a large building for stores connected with the India Board. Somerset House has now a front towards Wellington Street, which has been designed exactly in the manner of the rest of the building: Mr. Pennethorne was the architect. A long range of buildings has been erected as barracks for the Guards, at Chelsea, near the suspension-bridge.

In the City the most important public work is the restoration of Guildhall. The hall itself is now covered with an open timber-roof of the decorative character of roofs of the 'perpendicular' Gothic period; whilst the old front has been removed and replaced by a front, Gothic, but different to the Gothic of the old front; which last was erected when features of the mediæval styles were not well known to architects, and when

'restoration' was less in fashion than now. Mr. Horace Jones was the architect of the restoration. Some of the City Companies, however, have remodelled or rebuilt their Halls. Of these the Clothworkers' Company have produced the most elaborate street-façade: it cannot, however, be duly appreciated where it is, in Mincing Lane, one of the many narrow defiles in which much of the good architecture of the City lately produced is situate. Almost the only considerable fault of that architecture is that it is not designed for its situation. Features intended to contribute to effect, and costly carving, are placed where either they cannot be seen at all, or where they give pain to any one looking at them. The front of Clothworkers' Hall, of which the late Mr. S. Angell was the architect, is in the Cinque-cento Italian style. Several of the 'Great Companies,' and others, have found the value of ground an inducement to giving up much of it as sites for warehouses or offices. Of these are the Merchant Tailors, and the Haberdashers. The Saddlers' Company have thus produced a conspicuous front in Cheap-side, combining with it an entrance-way to their hall at the back. But the most important buildings architecturally, are the banks, and the insurance companies' premises, to be found in the streets surrounding the Exchange and the Bank of England, and in and about Lombard Street, as well as eastward in Leadenhall Street and about Fenchurch Street, and west-

ward in Chancery Lane. The demand for upper-storey offices has been so great, coincidently with the taste for having the place of residence out of town, that hitherto a company has gained through purchase of a freehold, and after having actually *lavished* decoration on the front of a building. The panic of 1866 may have brought to an end what has been of the nature of excess; but numerous good buildings will be left as evidence of what has decidedly been an important period in the architecture of London,—albeit the evidence is to be looked for in one quarter, rather than in the metropolis generally. Amongst the new banks, that of Messrs. Robarts, Lubbock, & Co., in Lombard Street, of which Mr. P. C. Hardwick was the architect, may be reckoned as an exception to the mistaken system of extensive ornamentation of upper-storeys in narrow streets. In this building, moreover, regarded as a bank, the emphasis of the lower storey is an almost solitary instance of treatment altogether correct. Another building, in the same street, at the corner of Clement's Lane, which is occupied by the Royal Insurance Company's offices, whilst not possessing the meritorious quality of the other, is remarkable for details of ornamentation, and for a very elaborate and effective doorway. In this, as elsewhere on the building, good use is made of incised ornament. Here also, may be observed the application of polished red granite, a material that has come largely into use, chiefly for the shafts of columns. Mr. Belcher was the architect of the building here mentioned. Amongst the other important new buildings in the same street are the banks of Messrs. Barclay, Bevan, & Co., and Messrs. Alexander Cunliffe & Co. The former is by Mr. P. C. Hardwick; the latter, Gothic, is by Mr. Waterhouse. Also noteworthy is the London and County Bank. In Cornhill are several elaborate, if not effective, architectural compositions; and here we may mention that there is a porch, Italian-Gothic in style, added to the church of St. Michael, by Mr. G. G. Scott. At each end of King William Street are good buildings, as those by Mr. P'Anson to the west, and one by Mr. Robert Kerr, the National Provident Institution, in Gracechurch Street, at the east. But it is impossible here to give even the names of all the good new buildings that there are within a short distance of the Exchange and the Bank. There are three or four spots where several of them come into the field of view very effectively. Such points are the western end of King William Street; one of the resting-places in the middle of the street, opposite the Mansion House; either end of Bartholomew Lane, by the Bank; the north-eastern angle of the Exchange, looking in any direction; and the eastern end of Cornhill. From the last-mentioned point is seen the National Provincial Bank of England, a building by Mr. John Gibson. The banking-room is the largest, and at the same time the most effectively treated, room of the kind in the metropolis. In Leadenhall Street, in a building of very superior architecture, by Mr. Henry Currey, are the offices of the Peninsular and Oriental Steam Navigation Company. In the same street is a building erected for the St. Katherine Docks Company's offices. On the north side of the Bank, in Tokenhouse Yard, there is a new building for the Auction Mart: Mr. G. Somers Clarke is the architect. At the entrance of the Yard, and in Lothbury, is a building that is remarkable, not only as a reproduction of the Venetian Gothic, but as an illustration of what is a constant difficulty in the city of London, namely, from the interference with light to adjoining properties. This building, completed with the front wall of the height intended, was arrested in progress, by injunction from the Court of Chancery: the side-walls could not be continued to the height of the front; and the roof had to be put on at the height which had been intended to be that of one of the floors. An alteration, involving a slight addition of height, has been made in the centre of the front of the Bank of England. The architectural effects from the different points referred to would be much superior to what they are, were not many of the older buildings, as the Sun Fire Office, and even later works, lamentably discoloured by the London smoke.

In the western part of London, one of the most important buildings of late years is the Freemasons' Hall, in Great Queen Street, which is by Mr. F. P. Cockerell. Whilst height of the front is somewhat diminished in effect by the position of the chief horizontal lines, the details are most

of them remarkable for their freshness of study, along with classicality. In northern London, at Islington, there is the Agricultural Hall, built chiefly for the accommodation of the Christmas cattle-shows of the Smithfield Club, and used for other exhibitions, and for public meetings. The area of the hall is by far the largest covered space in London, or not counting the Crystal Palace. It is divided by iron columns, which carry the roof and galleries.

Theatres and places of public amusement.—During the last ten years some important additions have been made to the number of buildings for purposes of public amusement. The Covent Garden Theatre, erected in 1809, and remodelled internally about forty years afterwards, was burnt down in March, 1856, on the occasion of a masquerade. The present building was completed and opened on the 15th May, 1858, having occupied but six months in the erection. It is capable of accommodating about 3000 auditors. On one side of the building is an iron and glass structure, called the Floral Hall, which was originally intended as a flower-market, and as an adjunct of the theatre on opera-nights. Mr. E. M. Barry was the architect of both buildings. Also, belonging to the last ten years, are the New Adelphi Theatre, of the year 1858; the Pavilion Theatre, Whitechapel; and the Britannia Theatre, Hoxton; the Surrey Theatre, opened Dec. 26, 1865, on its completion (the old theatre was destroyed by fire on January 30, 1865); and the Holborn Theatre. The Britannia Theatre is remarkable for its plan, which is oval or elliptical, with the longer axis of the oval parallel with the proscenium, and for the great dimensions of its gallery, which will accommodate about 1000 persons. The Strand Theatre, and some others, have been much altered internally. Some of the most important buildings used for purposes of public entertainment are connected with a class of amusements not altogether theatrical. These are the music-halls, of which the chief is the Alhambra Palace (at present so called) in Leicester Square. The building was originally erected as 'the Panopticon Gallery of Science and Art,' and was one of many results of the Exhibition of 1851. It was designed as a reproduction of Saracenic architecture. Its most remarkable feature is a dome of 97 ft. diameter, covering a rotunda. There are two tiers of galleries to the rotunda, excepting where there is a recess, where now is the stage for performance. When first opened, the building was remarkable for the beauty of its internal coloured decorations; these have been exchanged for very inferior work; but the building must always be regarded as an important one structurally. Mr. T. H. Lewis was the architect. Since the change of purpose, needed improvements have been made in the staircases and exitways, such as are still wanted in most of the London places of public amusement. A building in the Strand and Catherine Street, erected as the Strand Music Hall, is the most conspicuous of the new structures provided for the class of amusements which are to a certain extent antagonistic to those of the theatres. It is Gothic, and very peculiar, not to say whimsical, in some of the details: though, internally, many of the details have merit. The interior was originally intended to be lighted on the 'exclusive' principle, or by gas-jets placed above a ceiling of glass. St. James's Hall, remarkable almost entirely for its interior, is chiefly devoted to musical entertainments of a high class. It was completed and opened in March, 1858. The great hall is 136 ft. long, 60 ft. wide, and of proportionate height. It is arched over with semicircular ribs of iron; and this construction is covered internally, and concealed, by rich decoration in colour and gold, arranged in a peculiar frame-work of lines, which intersect the ceiling diagonally, springing from slender shafts at the sides where the windows are. The building is lighted at night from star-shaped gaseliers; and the whole interior has a peculiar, but a highly satisfactory, effect. Mr. Owen Jones was the architect. Following this building were other works by Mr. Jones, bazaars, remarkable for the ceiling-decoration. This decoration in the London Crystal Palace Bazaar includes reproduction of one feature of the Moorish baths, namely, admission of the light through star-shaped apertures in the ceiling. Of the public gardens mentioned in the previous pages, both Vauxhall and the Surrey Zoological have ceased to exist. In the Surrey Gardens was erected, recently, a building of considerable importance, as a music-hall. After it had been injured by fire, it was

taken, and put in order for temporary occupation, by the governors of St. Thomas's Hospital—dispossessed of their building near the London Bridge Station.

Museums and Galleries.—The original text under this head now requires to be supplemented and corrected. To the British Museum has been added a noble reading-room. It is a circle of 140 ft. diameter, or 2 ft. less than the Pantheon at Rome. The space is covered by a domical vault, 160 ft. in internal height; this is constructed of great ribs and cross-girders of iron, and filling-in of brick- and tile-work, all concealed. The dome is carried on piers of iron: thus the largest amount of space is left for books. The whole forms one of the most remarkable works of the class. The original suggestion of a building for the Reading-room within the central court of the Museum, was made by the late Mr. Hosking, architect; but his proposal was not for a circular room. Mr. Sydney Smirke, R.A., was the architect of the actual room. Of late years the collections, the antiquities especially, have received most important additions. These will entail a considerable extension of the Museum. Amongst them are sculptures from the celebrated Mausoleum, of Halicarnassus. In many respects equal in importance with the British Museum, is the South Kensington Museum at Brompton; in connection with which are the schools and head-quarters of the Department of Science and Art. This department was formed soon after 1851, and established at Marlborough House; whence it was removed in 1854 to Brompton; where at present are located the modern pictures of the national collections. Neither for its modern pictures, or others, does the National Gallery now deserve to be regarded as unimportant for number of the works contained in it, or for the excellence of them. Some large bequests, and many purchases, have been made. The former include an immense collection of paintings and drawings by Turner. Thus, the building in Trafalgar Square is to be remodelled or rebuilt; ground, partly occupied by the St. Martin's Workhouse, at the back of the present building, has been purchased; designs have been obtained from several architects, and before these lines are in the reader's hands, a decision will probably have been arrived at. Burlington House, with an added storey and building at the back, will be the future home of the Royal Academy; whilst the ground attached will provide sites for buildings for the University of London, and for various scientific societies. The South Kensington Museum houses collections of several different kinds. There is a collection of educational appliances, a museum of inventions (this under control of the Commissioners of Patents), a collection of animal-products, collections of casts of ornament, and one of the most valuable museums of furniture, and of other objects of decorative art, that there is in the world, besides an art-library. These were some time housed in an iron structure,—ugly, and discreditable to the Department; but considerable progress has been made with the erection of a more important group of buildings. Externally, in the new building, much use is made of terra-cotta.

Near these buildings is a large area of ground that was purchased with proceeds of the Exhibition of 1851. Part of it is occupied by the gardens of the Horticultural Society. These gardens are inclosed by arcades executed in ornamental brick-work and terra-cotta; and, at the northern end of the ground, are terraces, a very cleverly designed conservatory, by the late Captain Fowke, and a monument to commemorate the Exhibition of 1851, of which the chief feature is a statue of the Prince Consort. Part of the ground belonging to the Commissioners was in 1862 the scene of one of the most important events of the period we are considering. This was the International Exhibition of 1862. The building, now cleared away (or with the exception of rooms looking out on the gardens, which were the refreshment rooms, and have been used for exhibitions of portraits, for a naval museum, and other purposes), covered about 25 acres, including the 'annexes' which ran parallel with the side-arcades of the gardens. The main building, or buildings, occupied 16½ acres. Skirting the Cromwell Road was the principal front, 1150 ft. in length, of a brick building, containing in the upper floor picture-galleries 50 ft. in width. This portion, at least, of the building was intended to be permanent. Behind the outer inclosure were glass-roofed courts, and a 'nave' 800 ft. in length, 75 ft. in width, and 100 ft. in

height, with transepts at the ends, where there were glass domes of 160 ft. diameter, and 250 ft. height from the ground to the top of the finials. The nave was lighted by clerestorey-windows: it was spanned by arched ribs carrying the ceiling; and it was richly decorated with colour under Mr. Crace's direction. The annexes were little more than sheds. The late Captain Fowke has generally been stated to be the designer; but he is known to have been largely assisted, as by Mr. Meeson in the iron-work. The picture-galleries have been quoted as models for those of the intended National Gallery,—though they were dark even on fine days. The chief defect in the building was absence of all planning subservient to the circulation of crowds; whereby there was so much confusion, that the advantages accruing from the Exhibition were greatly abridged.

This may be the fitting place to mention the Crystal Palace at Sydenham, which grew out of the Exhibition of 1851, and the decision as to the non-retention of the 1851-building. The materials of the building in Hyde Park, removed, served for a considerable portion of the Sydenham structure. It was commenced in August, 1852, and was completed and opened on the 10th June, 1854. The main difference between the later building and the earlier, is in the adoption of the arched form of roof for the nave, combined with the projection of columns at regular distances for the support of the 'principals' of the roof. There are three transepts, however, in place of one; whilst the centre-transept is made of great width (120 ft.); moreover, there are the new features of the terraces and fountains, the wings, and the water-towers, besides the extensive grounds containing numerous objects of interest. The building is 1608 ft. in length, or rather shorter than its predecessor. The height of the centre-transept is 194 ft. The Sydenham Crystal Palace was originally designed as a great educational museum of art, and natural history and ethnology; and its gardens and fountains were to rival or surpass those of Versailles. This intention, in the matter of art, was carried into effect by the provision of the finest collection of casts of architectural ornament and sculpture that there was in the world. These were brought together chiefly by Mr. Owen Jones and Mr. M. Digby Wyatt, who designed the principal 'courts'—Egyptian, Greek, Roman, Alhambra, Byzantine, Mediæval, Renaissance, and Italian—and arranged the specimens in them. The Pompeian house was produced under the general direction of Mr. Wyatt, and the Assyrian court under that of Mr. Layard and Mr. Fergusson. The paintings in the Pompeian house were produced under Signor Abbate's direction. Mr. Bonomi assisted in the Egyptian court. Mr. Waterhouse Hawkins produced the restored figures of extinct animals in the grounds. No expense was spared to insure accuracy. The courts appropriated to manufactures were designed by various architects. The principal objects of interest in the Palace are described in a valuable series of handbooks, by Messrs. Owen Jones, Wyatt and Waring, Scharf, and others. Of late years, music has taken an important place in the arrangements of the Palace; and an orchestra, extending over the entire breadth of the centre-transept, was constructed previous to 1862, for the great Handel Festival of that year. Of late, however, entertainments of merely amusing character have been largely introduced. But at the same time, lectures and classes have been instituted: there has been an excellent library and reading-room; and the exhibition of objects of interest has been sedulously attended to; and thus the Palace has been so much appreciated as to have been a chief cause of the growth of the suburban district connecting London and Croydon, and which is comprised of Sydenham, Norwood, Anerley, Forest Hill, Dulwich, and other once separate villages. On Sunday, the 30th December, 1866, fire was discovered in the north end of the building, called 'the tropical department,' and in a few hours the whole of that portion northward of, and including, the north transept became a heap of ruins; the Alhambra and Byzantine courts were seriously injured, and the library, the Indian museum, and other collections, and the more valuable zoological specimens, were destroyed, and this notwithstanding the vicinity of the water-works of the Palace.

Whatever the satisfaction of shareholders, with their property, the example of the Crystal Palace has been sufficient to induce the erection of a somewhat similar building on the

northern side of London, with its railway leading to it. This latter building is the Alexandra Palace, at Muswell Hill. The materials of the Exhibition building of 1862 have been turned to account in it, under the hands of the architects, Messrs. Alfred Meeson and John Johnson. Like the Sydenham building, the Alexandra Palace consists of a nave and three transepts; but in other respects it is very different, and its entire length is not more than 900 ft. At the intersection of the nave and centre-transept is one of the domes of the 1862-building. The different parts have more architectural character than have the iron and glass fronts of the Sydenham Palace. It is said to be far advanced (March, 1867), but may not be opened before 1868.

Markets.—With these requisites of a town, London remains ill-supplied; and each description of food is subject to great addition to its price in the passage through the hands of the retailer to those of the consumer. For some reason not apparent, the few markets that there are apart from the localities of Newgate, Billingsgate, Leadenhall, and Covent Garden, have been but partially successful; and one, Hungerford Market, has been extinguished altogether. Newgate and Leadenhall Markets are so much out of sight, and are so inconvenient, that by the bulk of the people non-resident in the City they are never resorted to directly. Some steps to improvement, however, have been taken in the City: Newgate Meat Market is about to be removed to Smithfield; where it will occupy a portion of the ground that was occupied by the Cattle Market, before the latter was removed to the Caledonian Road. The site of the new Meat Market extends over the line of the Metropolitan Railway. Meat is now brought to London in large quantities by railway. Trucks from the Great Western, Great Northern, and other lines will pass under openings in the floor of the market, and their contents will be raised. Mr. Horace Jones is the architect of the new building. The market in the Caledonian Road was designed by the late Mr. J. B. Bunning, City Architect, and predecessor of Mr. Jones. It was opened in 1855, cost nearly £600,000, and occupies 74 acres.

Prisons.—Considerable improvements have been made in the interior of Newgate; and Giltspur Street Compter has been removed. Changes in the law have led to the disuse of some of the debtors' prisons, including the Queen's Bench; whilst the Fleet Prison has been pulled down. A new City Prison, a structure of castellated character, was erected at Holloway in 1853-5, Mr. Bunning being the architect. It provides for 436 criminals. Brixton Prison, at Brixton Hill, provides for female criminals.

Hospitals.—Important additions have been made to some of these, as Middlesex, St. George's, and the Royal Free Hospitals; and several new buildings have been erected. The latter include a new King's College Hospital; St. Mary's Hospital, Paddington; the Great Northern Hospital, in the Caledonian Road; the Cancer Hospital, in the Fulham Road; the German Hospital, Dalston; and the Small-pox Hospital, Highgate Hill: but each of these will be of far less importance than the new St. Thomas's Hospital, before referred to as commenced on ground reclaimed from the river, on the Lambeth side, opposite the Houses of Parliament. It will consist of several buildings, or 'pavilions,' 125 ft. apart, buildings connected merely by a corridor of communication, and is likely to be the most important example in England of the pavilion-principle of hospital-arrangement, and one the more remarkable from the circumstance of the outlay advisedly made in obtaining ground of the extensive area required. The old site of the hospital, and the buildings, were purchased by the Charing-Cross Railway Company for £296,000.

Courts of Law.—Although no improvement in these has been carried into effect, the measures commenced are of great importance. It has been determined to remove the courts from Westminster Hall, and to concentrate the whole of the courts on ground, near Temple Bar, bounded on the south by that part of the line of the Strand which is called Picket Place, and on the north by Carey Street. The group of buildings will exceed in dimensions that of the Palace at Westminster, and is likely to occupy many years in the erection. The principal floor of the courts is to be reached from the Temple by a bridge, substituted for Temple Bar, and from Lincoln's Inn by a bridge across Carey Street. Designs have been received from several architects, and publicly ex-

hibited; and an amount of pains altogether unprecedented has been taken towards insuring that the building may be complete in every respect.

Places of Worship.—Additions to the churches of London have been so many in the last ten years, especially in the suburbs, that they cannot here be enumerated. Nearly all, if not all, these buildings are Gothic in the character of their architecture; but many of them exemplify change that has taken place in the models studied by architects. Especially there is an infusion of the continental Gothic in their general forms and details. They also exemplify what is progress made in the treatment of different materials of building and decoration with regard to their physical properties. Were it allowable to single out one of the new buildings, the church of All Saints, Margaret Street, should be named as one of the most costly, whilst in great part built of red brick. It was commenced, however, in 1850; though it was consecrated only in 1859. The cost was upwards of £60,000. Mr. Butterfield was the architect. The church built for Miss Burdett Coutts (Mr. Ferrey, architect), in Rochester Row, Westminster, is more English in character, but is also remarkable for its internal decorations. Of later churches, and built of brick in a decorative and costly manner, may be mentioned the church of St. James the Less, in Garden Street, Westminster, by Mr. Street, and the church in Baldwin's Gardens, Gray's Inn Lane, by Mr. Butterfield. A commencement has been made with coloured decoration of St. Paul's Cathedral; and the area beneath the dome is now periodically appropriated for services for large congregations. Of the places of worship not belonging to the Established Church, the most important is the Apostolic (or Irvingite) church in Gordon Square, which can only be compared with an 'Early English' Gothic cathedral, for its plan, its dimensions, its character, and its amount of decoration. It was designed by Mr. Raphael Brandon. Each of the denominations has been active. Gothic is usually the style of architecture; but to this the chapels erected by the Baptists are exceptions. One of the earliest of their buildings, which it may be here necessary to notice, was the Bloomsbury Chapel, by Mr. Gibson. It has two towers and spires, and is in the Rhenish or Lombardic-Romanesque style. Regent's Park Chapel, constructed in the building which was occupied by the Diorama in Regent's Park, is Byzantine; whilst the Tabernacle, Newington Butts, erected for the Rev. C. H. Spurgeon, at a cost of about £30,000, and said to be capable of accommodating 5000 persons or more, has a classical portico.

Schools.—These would require as extended description as the churches. The most noteworthy building of the class is that of the St. Giles's Parochial Schools, in Endell Street, by Mr. E. M. Barry. The St. Martin's Schools, in Castle Street, by Mr. Wyld, are Moorish in style, and of brick.

Hotels.—Amongst the conspicuous buildings lately erected in London are some of these. Two of the hotels in connection with railway-stations have been already mentioned. Also connected in some manner with railways, are the Great Western Hotel, at Paddington; the Great Northern Hotel, at King's Cross; the Grosvenor Hotel, at Pimlico; and the International Hotel, at the London Bridge Station. Besides these, there are the Langham Hotel, at the south end of Portland Place; the Westminster Palace Hotel, in Victoria Street; and the Salisbury Hotel, in Salisbury Square, Fleet Street. The Grosvenor, the Westminster Palace, and the Langham, are the most important architecturally. The Grosvenor Hotel, of which Mr. J. T. Knowles was architect, is remarkable for internal as well as external decorative effect,—a fine staircase and entrance-hall being a feature. There is a similar feature in the Westminster Palace Hotel. Each one of the new structures has a considerable number of storeys; and to avoid fatigue of ascent to upper rooms, a luggage-hoist and an ascending-room, worked by water-power, are provided, in addition to the staircase. There are also numerous lifts for the service, and other contrivances not before introduced in hotels in this country.

Private Houses.—Perhaps the most important private residence erected in London of late years, is the house of Mr. Holford, in Park Lane, of which Mr. Vulliamy was architect. In Piccadilly several houses conspicuous for their architecture have been built, commencing with the residence of the late Mr. H. T. Hope, which was designed by a French

architect. The number of later works includes the house of Baron Rothschild, by Messrs. Nelson and Innes, and an adjoining house by Mr. J. J. Cole. Each of these is of one or other version of Italian architecture, and stone-fronted; and the last-mentioned of the number is remarkable for the careful study of its details. In Whitehall a large mansion has been built on the site of Montague House, by the Duke of Buccleuch. Mr. Burn is the architect. The architecture is French-Italian. The Gothic decorative character, for residences, is chiefly to be seen in small houses in the suburbs of London; but it has been adopted in the immediate neighbourhood of Westminster Abbey, as by Mr. G. G. Scott, R.A. During the year 1866, and that in which we write, there has been going on the reconstruction of the entire quarter extending, with hardly a break, from St. George's Hospital to the Victoria Station. The ground forms part of the property of the Marquis of Westminster. The houses are on a greatly increased scale, as compared with those displaced: stucco is no longer the vehicle of attempted decoration; and in general style and character, wherein the influence of French models is obvious, the buildings form the largest and the best contribution to London domestic-architecture that has been made in any similar space of time.

The working-classes of London, and the very poor, remain most inadequately provided with places of residence; though several groups of combined dwellings have been erected by private individuals, trustees, and companies. The most extensive of these are due to Miss Burdett Coutts, and to the action of the trustees of the munificence of Mr. Peabody, an American citizen. But the most important recent steps towards actual solution of the difficulty under which, more than any other, London labours, may be attributed to Mr. Alderman Waterlow, in his formation of the Industrial Dwellings Company. By this company several blocks of buildings have been erected on the same plan. The front doors of the tenements of each storey open from an external gallery, the upper galleries being reached by a common staircase. All that has been yet done, however, goes but a short distance in provision proportionate with the need.

Squares and Monuments.—Some additions have been made to the public statues of the metropolis, besides the statue of Richard I. already noticed. A statue of Sir Charles J. Napier, and one of Sir Henry Havelock have been placed in Trafalgar Square; but it cannot be said that either work is creditable to the country. A seated figure of Dr. Jenner, which was for some time in the Square, is now removed to Kensington Gardens. The Nelson Monument has been completed by the addition of the four couchant lions, cast in bronze, from models by Sir Edwin Landseer. In Waterloo Place a memorial has been erected to the Guards who fell in the Crimea. It takes the form of Victory crowning the heroes—three finely-modelled figures at the base. In Waterloo Place also is a statue of Sir John Franklin, the Arctic explorer. Some progress has been made with the erection in Hyde Park of a national testimonial to the late Prince Consort. It will be Italian-Gothic in character, and will be profusely enriched with sculpture and ornamentation, the best that the state of the arts in this country can accomplish. A monument to Sir Hugh Middleton, who brought the New River water to London, has been erected on Islington Green; and there may be other commemorative erections, belonging to the last ten years, in the metropolis. Amongst them is the Westminster Crimean Memorial, in the open space at the western end of the Abbey. During the same time a great number of drinking-fountains have been erected. All of them attempt decorative character: but usually the opportunity is lost.

Of the London events of late years, the International Exhibition of 1862 has been already alluded to. In June, 1861, occurred, at Tooley Street, the largest fire that there had been in London since the Great Fire of 1666. The property destroyed was valued at a million and a half sterling; and the ruins were still smoking seven weeks after the fire commenced. In 1864, on October 1, there was a great explosion of gunpowder in the Erith Marshes, which blew into the river about 130 ft. of the embankment by which the Thames is kept from flowing over the land; and portions of the low-lying districts of south-eastern London were for a time placed in some jeopardy. Fortunately the tide was low; every

appliance of labour was at hand,—including the men of the sewerage-works, and the military at Woolwich; and the danger was averted, but in a manner that was very remarkable.

LONDON [add.], a tn. British America, Canada West, cap. co. Middlesex, on the Thames, here crossed by several bridges, and on the Great Western railway, 102 m. W.S.W. Toronto. It is regularly laid out in wide streets intersecting each other at right angles, and is remarkably well built. Among its public edifices, several of which are handsome, may be noticed the English church, a Gothic structure with a chime of bells. There are ten other churches, one of them a R. Catholic cathedral, and several superior schools. The manufactures include agricultural implements, carriages, pumps, soap, leather, &c.; and the trade is extensive, particularly in wheat and other agricultural produce. Pop. about 16,000.

LONG ISLAND, West Indies, Bahamas, intersected by the tropic of Cancer, forms a long and narrow belt stretching 57 m. between S.E. by S. and N.W. by N.; but where broadest is only $3\frac{1}{2}$ m., and in several places scarcely 1 m. in width. Its inhabitants amounted in 1857 to 1600. Of these about 140 reside at Clarence Settlement, which is situated on its E. shore, and has a harbour which admits vessels drawing 13 ft., but is imperfectly sheltered.

LONG ISLAND [add.], U. States, forming a part or dependency of New York, derives its name from its shape, which stretches from E. to W. for about 120 m., and has an average breadth of not more than 14 m. On the E. and S. it lies open to the surges of the Atlantic; on the N. it is washed by Long Island Sound, which separates it from the S. shore of Connecticut, and on the N.W. and W. it is washed by East River, New York Bay, and the Narrow, contributing with them and the opposite coasts to form the splendid harbour of New York. Its coast is deeply indented by numerous bays and inlets, abounding with shell and other fish, and has been provided with an excellent system of lighthouses on the track of the vast commerce which passes along its shores. Its surface, though nowhere elevated, is much diversified. A ridge, which has its highest point in Harbour Hill at the head of Hempstead Harbour, stretches obliquely across the island from N. to E., and sends out a number of spurs on either side. To the N. the descent is generally rugged and abrupt, but to the S. is so gentle and gradual as to have all the appearance of a plain. Much of this level tract is of a sterile character, and so ill rewards those who attempt to cultivate it, that 16,000 acres of it, having only a covering of coarse grass, are used as common. A still larger tract, forming nearly a half of the whole area, is still occupied by the primeval forest. The only stream of any consequence is the Peconic, which has a course of about 15 m., and furnishes water-power to numerous mills. In those localities where the soil is fertile, it is generally under high cultivation, and yields profitable returns as market gardens for the supply of New York. For administrative purposes Long Island is divided into three counties, one of which, King's co., has for its cap. Brooklyn, with a pop. of 266,661, while the other two, Queen's co. and Suffolk co., have towns with populations varying from 6000 to 10,000 each. The inhabitants not only possess ample means of communication with the opposite mainland, from their proximity to the sea, but have been provided with a railway which passes through nearly the entire length of the island, and a series of branch lines, giving easy access to every locality within it of any importance or interest.

LONG POINT, a tn. British America, Canada East, cap. co. Hochelaga, l. bank St. Lawrence, 6 m. N.W. Montreal; with a R. Catholic church and some lumber trade. Pop. about 1000.

LONGUEUIL, a tn. British America, Canada East, co. Chambly, r. bank St. Lawrence, 3 m. from Montreal, on the Grand Trunk railway. It possesses a small-debts court, a R. Catholic church, academy, and convent; and carries on some trade, partly general, but chiefly in firewood. Pop. about 3000.

LONIGO [add.], a tn. Italy, Venetia, prov. and 14 m. S.S.W. Vicenza, on the Goa. It is surrounded with walls, is the seat of a court of justice, and several public offices; has five churches, several palaces built by Palladis and Scamozzi, an institute of the Sisters of Mercy, an hospital, a theatre, and a printing-office. Pop. 7902.

LOO-CHOO, or **LIU-KIU** (**GREAT**), the largest of the group of islands of same name in the N. Pacific, intersected nearly in its centre by the parallel of 26° 30' N., and the meridian of 128° E. It is about 56 m. long by 10 or 12 broad, and is of very irregular shape, consisting mainly of four peninsulas.

LOODIANA, a dist. India, Cis-Sutlej territories, between lat. 30° 34' and 31° 2' N.; lon. 76° 25' and 77° E.; is bounded N. by the Jullinder Doab, from which it is separated by the Sutlej; E. Umballa; S. the native state Putteala, and other petty protected states; and W. by Ferozepore; area, 724 sq. m.; pop. 121,000. Both area and pop. here given, though officially returned, are believed to be greatly underrated.

LOODIANA, the cap. of the above dist., 125 m. N.N.W. Delhi, stands on the W. brow of an abrupt bluff, about 30 ft. above a nullah, which becomes a considerable stream in the rainy season, and discharges itself into the Sutlej about 15 m. below. It is poorly built, has no wall, and is only defended by a fort of no great strength, though its position, on one of the great routes from Delhi to the Punjab, makes it strategically important. A large proportion of the inhabitants are Mahometan; but there is not a single mosque deserving of notice. This must be owing rather to indifference than to poverty, since many of them are wealthy capitalists and bankers, with connections in many of the leading towns of India. The manufactures are important, and consist chiefly of fine shawls, made to imitate those of Cashmere, and, though far inferior to them, commanding a ready sale from their greater cheapness; and of a coarse and very strong cotton cloth, much used for clothing by the poorer classes, and suitable also for tent-cloths. Loodiana has also a very extensive transit trade. The morality of the inhabitants is said to be at the lowest possible ebb. Pop. 20,000.

LOONEE, or **LUNI**, a river, India, which rises in a marshy tract W. of Pokhur in Ajmere, about lat. 26° 37' N.; lon. 74° 46' E.; flows S.W., nearly parallel to the base of the Aravullirange, which feeds it by numerous torrents, passes through Joodpoor, and after a course of about 300 m., falls into the Runn of Cutch by two mouths.

LOPATYN, a tn. Austrian empire, Galicia, circle Zloczew, cap. dist. of same name, pleasantly situated N.W. Brody. It is an ancient but thriving place, was once fortified, and has a fine baronial castle. Pop. 1500.

LORD HOWE, an isl. Australia, about 350 m. E. of Port Macquarie in New South Wales, lat. (Mount Gower) 31° 36' 30" S.; lon. 159° 5' 12" E. It is the southernmost of the outlying islands and reefs off the E. coast of Australia, and forms an irregular curve about 5½ m. long by ¾ to 1½ m. broad. It is of volcanic origin, and has a mountainous surface, which rises abruptly in Mount Gower, its culminating point, to the height of 2834 ft., but is well wooded, and has a good deal of fertile low land. In 1854 it was inhabited by between thirty and forty persons, who had settled upon it, and gained a good living by bartering their produce, chiefly pigs, goats, poultry, and vegetables, with whalers and vessels bound to and from California.

LORETO, a tn. S. America, Ecuador, on a beautiful plain above the banks of the Suno, an affluent of the Napo, 105 m. E.S.E. Quito. It was anciently a city of some consequence, but has dwindled down into a comparatively insignificant village, inhabited by about 250 families of Indians.

LORETO, a tn. Mexico, Lower California, on the E. shore of the gulf; lat. 26° N.; lon. 111° 20' W. It was founded in the beginning of the eighteenth century, and from the possession of a wonder-working image, soon became the most celebrated place of pilgrimage on the peninsula. The fame of the wealth accumulated in its church subjected it to a visit from buccaneers, who, after pillaging it of its treasures, left it in ruins. It seems, however, to have preserved the wonder-working image of the Virgin, and the church, a long and narrow but lofty structure, in the form of a cross, has its walls covered with the votive offerings of pilgrims.

LORETTE, a tn. British America, Canada East, co. and about 6 m. from Quebec, with a R. Catholic church, several schools, and a considerable trade in paper, flour, and lumber. Of the pop. forty families are Indians, who have their own church, and employ themselves in making moccasins and snow-shoes. Pop. 2200.

LOS BANOS, a tn. Philippine Isles, prov. Laguna, in the island of Luzon, near the S. shore of the Laguna de Bay, and at the skirt of Mount Maquilang. It takes its name from its hot springs, which were first brought into notice by Franciscan monks, who built a convent and an hospital in their vicinity. The town has a pop. of about 1860, who subsist chiefly by fishing, the ground around being so barren that the grain used must be imported.

LOSING (**GREAT**), a tn. Austrian empire, Hungary, co. and about 12 m. S.E. Oedenburg; with an old castle, a trade in wine, and 1230 inhabitants.

LOSNIETZ, a tn. Turkey in Europe, Servia, cap. circle Podrina, on the Drin, 59 m. S.W. Belgrade. It is protected by a palanka, a species of palisade, formed by trunks of oak-trees; is the seat of a court of justice, and has a church, a school, and important yearly markets. P. 1500.

LOSONETZ, a tn. Austrian empire, Hungary, co. Neograd, 25 m. N.E. Balassa Gyarmuth. It is an ancient place, which was once walled; is the seat of a district court, and several public offices; contains a chalybeate spring with baths, chemical and vinegar works, a tannery, much-frequented yearly markets, and 3399 Magyar inhabitants.

LOTBINIERE, a tn. British America, Canada East, cap. co. of same name, 1. bank St. Lawrence, 39 m. W.S.W. Quebec. It possesses a R. Catholic church, a foundry, and several tanneries, and a manufacture of superior kitchen and other stores, and carries on a considerable trade in flour and lumber. Pop. about 3700.

LOUIS (**SAINTE**) [add.], a tn. U. States, Missouri, on r. bank Mississippi, 20 m. below the point where the Missouri joins it. It occupies an elevated site, defended from the floods of the river by a bench of limestone, and is built on two terraces, the lower one rising abruptly, and the other by a gradual ascent, after which it spreads out into a wide and beautiful plain. It is laid out with considerable regularity, the long streets on the lower terrace running parallel to the curve of the river, while elsewhere they form straight lines, and are intersected by others at right angles. Levee Street, fronting the river, is 100 feet wide, most of the others are 60 ft. The houses generally, and more especially the warehouses and public buildings, are substantially built of brick or stone. The principal public buildings are the city-hall, the court-house, the custom-house, and post-office, 76 churches, among which are a fine cathedral, and some other handsome structures; the U. States arsenal, a large and imposing edifice surrounded with fine grounds, the merchants' exchange, the mercantile library hall, the city hospital, the marine hospital, the St. Louis university, under the direction of the Jesuits, with 18 professors and 134 students; the Washington university, the commercial and medical college, the normal, high, and other schools. The industrial establishments include numerous flour-mills, sugar refineries, oil-mills, distilleries, chemical works, iron-smelting works, foundries, machine works, tobacco, rope, and bagging factories. The staple articles of trade, in addition to those furnished by the above establishments, are furs, lard, beef, and other provisions, chiefly pork, which in 1860 was shipped to the amount of 100,000 barrels, 18,000 casks and hogsheads, and 700,000 pieces. The position of St. Louis on the Mississippi, as well as numerous railways connecting it with all parts of the country, make it a most important general entrepôt, not only for Missouri and the adjoining states, but for the gold region of Colorado, with Utah, Nevada, and California. The first brick house in St. Louis was built in 1813, and a steamer reached it for the first time in 1817. When it received its charter of incorporation in 1822, it had scarcely 5000 inhabitants; in 1860 it had 160,773, of whom 1542 were slaves.

LOUISVILLE [add.], a tn. U. States, Kentucky, cap. co. Jefferson, at the Falls of the Ohio, and on several railways which give ready means of communication with all parts of the country; lat. 38° 18' N.; lon. 85° 46' W. It occupies an extensive flat about 75 ft. above low-water mark, and consists of wide well-paved streets, which cross at right angles, and are lighted with gas. The main street is about 3 m. long, and remarkably handsome throughout. The streets occupied as private dwellings are, for the most part, lined with shady trees. The principal public buildings are a fine court-house which cost above £200,000, a city-hall, a jail,

a custom-house, 60 churches and 2 synagogues, 12 very handsome public schools, a blind asylum, 2 marine and 3 orphan asylums, a house of refuge, and 4 spacious market houses. The literary and scientific institutions are numerous. The manufactures comprehend a great variety of articles, among which, as the most important, it will be sufficient to enumerate tobacco and cigars, which employ above 1000 hands, and require, for storing and sale, three immense warehouses, capable of containing 7000 hogsheds, and are annually disposed of to the value of half a million sterling; machinery, in which above 900 hands are employed; lumber, which is prepared by 12 planing and saw mills; stove and hollow ware; leather, and leather articles, as saddlery, harness, and trunks; ropes and cordage, soap and candles; marble and stone cutting; agricultural implements, cotton and woollen cloth, brass and iron castings, pianofortes, beer, flour, &c. The commerce, of which the estimated annual value exceeds £20,000,000, comprises among its exports every species of western produce and manufacture, and more especially pork and other products of the hog, for the preparation of which there are 8 pork-packing establishments, employing 1200 hands, and a capital of above £400,000. Louisville, which was founded in 1780, received its name in honour of Louis XVI., who was then aiding the Americans in their struggle for independence. For nearly twenty years it was almost proverbial for unhealthiness, but a different opinion now prevails, and American writers speak of it as now 'perhaps the healthiest city of its size in the world.' Pop. (1860), 68,033.

LOURENÇO MARQUES, a Portuguese settlement, E. Africa, Delagoa Bay, on the N. bank of the English River, at the foot of the high red cliff forming the S. and E. face of Point Rubin; lat. 26° S.; lon. 32° 30' E. It is a miserable-looking place, filthy in the extreme, defended by a worthless fort, and consisting of a square of squalid-looking houses, surrounded by native huts, the dwellings of slaves. It is very unhealthy. Lourenço Marques is the S. limit of the Portuguese possessions.

LOVASZ-PATONA, a tn. Austrian empire, Hungary, co. and about 22 m. N.W. Veszprim; with a castellated mansion, and a trade in sheep, wheat, wine, and wood. Pop. 1640.

LOVATZ, a tn. Turkey in Europe, Bulgaria, eyalet and 95 m. S.E. Widin, on the Osma, which is here crossed by a covered bridge; and contains 15,000 inhabitants, partly Christian, partly Mussulman.

LÖVETE, a tn. Austrian empire, Transylvania, circle and about 30 m. N.N.E. Udvarhely; with ironworks on a rather limited scale, a mineral spring, and a bathing establishment. Pop. 2277.

LUBANG, an isl. Philippine Isles, is the largest of a group about equidistant from the S.W. shore of Luzon and the N.W. shore of Mindoro. The interior is mountainous, but the soil, formed apparently by the disintegration of volcanic rocks, is fertile, and produces in abundance rice, cacao, coffee, and pepper. The coast is much frequented by turtles. Lubang contains a town of same name, with a pop. of 6040. Ambil, an islet of the group, is an active volcano.

LUBATSCHOWITZ, a tn. Austrian empire, Moravia, circle and 12 m. N.E. Hradish, on a slope of the Carpathians; with a parish church, a castle, and a mineral spring, the water of which strongly resembles that of Seltzer, and attracts numerous visitors. The ruins of the old castle of Swuttan stand on a height in the vicinity. Pop. 1000.

LUBIEN (GREAT), a tn. Austrian empire, Galicia, circle and 18 m. S. Lemberg; with a fine castle, much-frequented sulphur baths, and 1800 inhabitants.

LUBLAU (OLD and NEW), two places, Austrian empire, Hungary, co. Zips:—*Alt* or *Old Lublau*, one of the Zips royal towns, situated 18 m. N. by E. Leutschau, contains 2000 inhabitants, is the seat of a court of justice, and has a high school, and an active trade to Poland and Silesia.—*New Lublau*, about 3 m. from the former, has 1000 inhabitants, 2 mineral springs, and a much-frequented bath.

LÜCHMUNGURH, two places, India:—1, A tn. Rajpootana, Ulwar, 70 m. S.W. Delhi. It is defended by a fort, which makes some figure in the early Indian wars, and in particular stood a siege which Nujeef Khan, who conducted it, was compelled to raise.—2, A tn. also Rajpootana, terri-

tory Shukawuttee, 154 m. S.W. Delhi. It is a handsome town, built on the model of Jeypoor, and possesses a fort, which is perched on a lofty eminence, and forms a conspicuous object over the country.

LUH-LE-HEEN, a vil. China, prov. Chekiang, about 3 m. from Kanpoo, at the terminus of a canal connected with those which ramify all over the plain of the Yang-tze-kiang. It is a small bustling place, with a good deal of transit trade, and is chiefly remarkable for the number of tea-shops and other houses of refreshment which it contains.

LUHWANG, an isl. on the E. coast of China, the largest in the S.W. part of the Chusan Archipelago, is 9½ m. long between N.W. and S.E., and 6 m. broad at its widest part. In the S.E. there is a conical bare hill which rises to the height of 865 ft., and in the S.W. are five high peaks, one of which is 910 ft. above the sea; but otherwise it is not much elevated. On its S. face are two deep indentations with sandy bays, the access to which is encumbered by a reef. The surface is well cultivated, and maintains a large population.

LUKOS, or **EL KOS** [add.], a river, N. Africa, Morocco, rises in the N.W. of the state, on the slopes of the Little Atlas, flows W. through a beautiful valley, and after a course of about 100 m. falls into a small bay of the Atlantic, near the town of El Araisch. The bar at its mouth has only 5 or 6 ft. at low water, but the tide having a rise of 9 to 12 ft. enables vessels of a moderate size to enter; thereafter the navigation for a considerable distance is easy, the depth within the bar increasing at once to 24 ft.

LUKOYANOV, a tn. Russia, gov. and 90 m. S. by E. Nijnei-Novgorod, cap. circle of same name, on the Tesha. It has two churches, a circle school, a charitable endowment, and manufactures of polish and of articles from linden bark. Pop. 2550.

LUNAWAURA, a small state, India, in the Rewa Caunta division of Gujerat; lies between lat. 22° 50' and 23° 16' N.; lon. 73° 21' and 73° 47' E., and is bounded N. by the Mhye Caunta territory, E. Soauth and Barreah, S. Godrah, and S.W. and W. Balasinore; length and breadth, each nearly 30 m. It is a continuation of the mountain tract which forms the N.E. boundary of Gujerat, lies mainly along the l. bank of the Mhye, and is adjacent to some important passes. Its revenue, derived chiefly from land, falls short of £10,000, and of this about a fifth is payable as tribute, chiefly to Scindia, but partly also to the Guicowar and the Rajah of Balasinore.

LUNAWAURA, cap. of the above state, situated in the fork formed by the junction of the Panum with the Mhye, 63 m. N. by E. Baroda; covers an area about 3 m. in circuit, is surrounded by a wall and defended by other works, and is the entrepôt for a considerable transit trade between Malwa and the interior of Gujerat. Many of the inhabitants are artisans of reputed skill in their particular trades.

LUNDA, or **MALUDA**, a tn. S.W. Africa, Kimbunda country, territory Libollo, about 120 m. S.E. Loanda. It crowns a rocky height, whose base is washed by a mountain torrent; is the seat of an independent chief, and contains 1500 inhabitants, who suffer much from the inroads of their more barbarous neighbours in Kibala and Bailundo.

LUNGA, a tn. S.W. Africa, Kimbunda country, territory Ganda, a little above the confluence of the Ommate with the Katumbela. It crowns a lofty height, is surrounded with a dry stone-wall, and contains 1200 inhabitants, who, when not employed in plundering, collect a little gum-copal from the trees which grow abundantly in the surrounding forests.

LUN-KE, a river, China, which is said to have its sources in prov. Nganhoei, in the far west, near Tein-muh-shan, the highest mountain of this part of China, and flows E. to Hoo-chow-foo, where it is a wide and deep river, and apparently empties itself into the network of canals which cover its extensive plain. On all the flat lands on its banks, on a higher level than the rice-fields, mulberry plantations form the staple crop. Lun-ke is navigable by large boats for 20 m. above Hoo-chow-foo.

LUPATA, a range of hills, E. Africa, Portuguese settlements, on the Zambesi, about lat. 16° 34' S.; lon. 32° 51' E. Portuguese writers used to speak of it as a mountain chain chiefly composed of marble, and so lofty as to be partly

covered with perpetual snow. The truth is that its height above the plain, where it is cut off by the Zambesi, is under 1000 ft., and the rock is compact siliceous schist of a reddish colour and in thin strata. The W. side, which is the most abrupt, rises up perpendicularly from the water 600 or 700 ft.; the E. side, which is much less precipitous, has its slope covered with trees. From the Zambesi the range stretches N. a considerable way into the Manganja country, and then bending round terminates in Mount Morumbala, opposite Senna. On the S. side of the river the range reappears, and following a more direct line than on the N. side is said to terminate in Mount Gorongozo. The rocky precipices overhanging the Zambesi, where it seems to have cut its way through the range, is known by the name of the gorge of Lupata. It is somewhat tortuous, and from 200 to 300 yards wide.

LUSIANA, a tn. Italy, Venetia, prov. and 16 m. N.N.E. Vicenza; with a parish church, extensive manufactures of Venetian straw-hats, of which it is the principal seat, and 3673 inhabitants.

LUSSEKE-GANGUELLA, a small territory, S.W. Africa, about lat. 11° S. and lon. 17° E., situated immediately beyond the S. frontiers of the Kimbunda country, and inhabited by a people of the same name. The area is estimated at nearly 6000 sq. m. Nearly the whole consists of fertile plains watered by the Kunene, which traverses it from N. to S. The people, who are peacefully disposed, employ themselves in cultivating the ground, rearing cattle, and collecting bees'-wax, which is furnished in abundance by the wild bees of the forests. They are governed by several independent chiefs, of whom the two most powerful reside respectively at Lusseke, on the Kunene, containing 1500, and at Lubando, containing 2000 inhabitants. Pop. 120,000.

LUTA N'ZIGÉ, or ALBERT NYANZA, a lake, E. Africa, the head-water of the western branch of the Nile (Bahr-el-Abiad, or White Nile), lying (approximately) between lat. 2° 5' S. and 3° N., and with its N.E. extremity in about lon. 31° 30' E., and its S.W. end in about lon. 28° E. Its general direction is from N.E. to S.W.; its length about 400 m., and its greatest breadth 100 m.; 2448 ft. above the level of the sea. It was discovered in March, 1864, by Mr. (now Sir S. W.) Baker, who came upon its W. side near the village of Vacovia, about lat. 1° 15' N.; lon. 30° 50' E.; from this point, about 1500 ft. above it, the lake presented a vast expanse of water, with a boundless horizon on the S. and S.W.; and on the W., at 50 or 60 m. distance, blue mountains rose to a height of 7000 ft. above its level, and appeared to spring abruptly from the water. The western shore is comprised in the great kingdom of Malegga, the people of which cross the lake in large canoes at its narrowest part; and S. of Malegga is a country named Tori, beyond which nothing is known. The eastern shores of the lake are occupied from N. to S. by Chopi, Unyoro, Uganda, Utumbi, and Karagwé. From the last locality, in about lat. 2° S., the lake is said to turn suddenly to the W., and to continue in that direction for an unascertained distance. N. of Malegga on the W. side of it, is a small country called M'Caroli, then Koshi on the W. side of the Nile, at its exit from the lake; and on the E. side of the Nile is Madi, opposite to Koshi. The lake is a vast depression far below the general level of the country, surrounded by precipitous cliffs, and bounded on the W. and S.W. by great ranges of mountains. Receiving as it does the drainage of these high lands—Mr. Baker distinguished two 'waterfalls' which must have been large streams in the western hills—its apparently most important affluent is the Somerset River, or Victoria Nile, from the E., which issues from the Ripon Falls, at the N. end of the Victoria Nyanza of Speke, and after a N.W. course to the Karuma Falls, about lat. 2° 15' N., turns W., and from this point runs over a series of rapids and cascades, with a total descent of 1276 ft. in rather more than 60 m., and falls into the lake near its N.E. end, in lat. 2° 15' N.; lon. 31° 30' E., and only 30 m. from the point at which the Nile issues. Thus, draining, as it appears to do, the Victoria Nyanza and all the country W. of it, the Luta N'zigé seems to be the true head-water of the W. branch, or White Nile.

The shore, or that part of it seen by Mr. Baker, consists in some places of flats of sand and bush, perhaps a mile in breadth from the water to the base of the cliffs; at others

stupendous heights of 1500 ft. ascend abruptly from the water. These precipitous cliffs are all primitive, frequently of granite and gneiss, and mixed in many places with red porphyry. In the clefts are beautiful evergreens of every tint, including giant euphorbias, and by every rivulet or spring grows the wild date. Near its N. extremity the lake narrows to 15 or 20 m. across, and the appearance of the country to the N. of it is that of a delta. The shores on either side are choked with vast banks of reeds, though the water is deep, no bottom being touched at 20 ft.; hills of about 4000 ft. rise above this part of the lake on the W., a continuation of the more southerly chain, but they decrease in height towards the N., in which direction the lake terminates in a broad valley of reeds. At the embouchure of the Somerset River there is the same accumulation of floating reeds bounding the channel, here half a mile broad, and with a very sluggish stream; the last cataract occurring at a considerable distance up the river. As seen from the village of Magungo, at an elevation of about 250 ft. above the mouth of the Somerset, the course of the Nile in its exit from the lake was easily distinguished by the valley of green reeds that marks its course. This valley, from 4 to 6 m. broad, is bounded on the W. by a continuation of the chain of hills which forms the W. boundary of the lake. Canoes navigate the Nile in its course from the lake to the Madi country, as there are no cataracts in that distance; but beyond this point rapids commence and prevent navigation.

The lake abounds with fish, and crocodiles and hippopotami infest its shores; the country bordering it also is much frequented by elephants. There are several varieties of fish of very large size, some exceeding 200 lbs. in weight. The method of taking the larger kinds by the natives is ingenious. They arrange rows of tall bamboos, the ends being stuck firmly in the bottom, in a depth of about 6 ft. of water, and about 5 or 10 yards apart. On the top of each is a lump of *ambatch* wood 10 in. in diameter, around this is wound a strong line, and a small hole being made in this float it is lightly fixed on the point of the bamboo, to which the line is securely affixed; and the hook, baited with a live fish, is thrown to some distance. When a large fish takes the bait the *ambatch* float falls from the point of the bamboo, and revolving upon the water pays out the line; then by its buoyancy it is sufficient to check and exhaust the fish.

LUTZK, or LUCK, a tn. Russia, gov. Volhynia, cap. circle of same name, on the Stur, 145 m. N.W. Zitimir, is the see of a R. Catholic bishop, and has two churches, a R. Catholic seminary, several monasteries, a circle and a parish school, and four charitable endowments. Pop. 6434.

LUZSNA, a tn. Austrian empire, Hungary, co. Liptau, 8 m. S.E. Rosenberg; with a mineral spring. At a short distance eastward, at the foot of Mount Latiborska, are mines yielding gold, silver, and antimony. Pop. 1640.

LYNCHBURG, a tn. U. States, Virginia, on the James River, the Kanawha canal, and the Virginia and Tennessee, the South Side, and the Orange and Alexandria railways, 90 m. W.S.W. Richmond. It occupies a steep acclivity which rises from the river, and breaks away into hills, whose terraced walks and villas give the place a pleasing and picturesque appearance. In the background, about 20 m. off, but full in view, rises the Blue Ridge with the celebrated peaks of Otter. The principal buildings and institutions are nine churches, a Methodist college, and a flourishing female academy. The staple manufacture is tobacco, which employs about seventy factories and stemmeries, and a capital of £200,000. The other industrial establishments are four foundries and three flour-mills. Standing in the centre of a magnificent country, and in the neighbourhood of large fields of coal and iron ore, Lynchburg is advantageously situated both for manufactures and trade. As yet, however, its resources are very imperfectly developed. Pop. (1860), 6853.

LYNN, a tn. U. States, Massachusetts, on the Eastern railway, 9 m. N.E. Boston. It contains eighteen churches, a high-school, various other schools, grammar, intermediate, and primary, a library association, and two savings-banks. The manufacture for which the place has long been celebrated, and which still forms its staple, is boots and shoes, chiefly those of women and children. According to an approximate estimate of the extent of this manufacture, the number of boots annually made is about three million, and

of shoes six million pairs, and the aggregate value is little short of a million sterling. In connection with the manufacture are numerous leather-carrying works. The annual value of lasts alone is £3000. Pop. (1860), 19,083.

LYONS, a vil. U. States, New York, cap. co. Wayne, on the Erie canal and the New York Central railway, 169 m. W. by N. Albany. It contains seven churches, a union school with 800 to 900 scholars, and a variety of manufactures, among which by far the most important is that of essential oils, chiefly peppermint. The annual quantity produced is about 10,000 lbs., or one-eighth of all that is made in the U. States. Pop. 5076.

LYSIEC, a tn. Austrian empire, Galicia, circle and 8 m. S.W. Stanislau, forms with two adjoining villages a parish, containing 2725 inhabitants; and has a handsome church, an elegant castle, and several fine villas belonging to Armenian merchants, who have settled here, and carry on a considerable trade.

LYTTELTON, a tn. New Zealand, S. Island, or New

Munster, situated on the small bay of Port Cooper, now Victoria, on the N.E. coast of prov. Canterbury, is a neat town, built with considerable regularity, and in a better style than usual in the settlements of a new land. It is surrounded by a belt of rough precipitous hills, beyond which, toward the interior, the Canterbury Plains stretch in almost boundless expanse, and furnish nearly 3,000,000 acres of grassy pastures. The harbour of Port Victoria, a fine land-locked ocean inlet, furnishes it with ample facilities for the export of wool and other produce. A railway connects it with Christchurch, the capital.

LYTTON, a tn. or settlement, British Columbia, at the junction of the Thompson with the Fraser, 160 m. from the mouth of the latter. Capt. Mayne describes it as consisting at the time of his visit of an irregular row of wooden huts, a drinking-saloon, a large courthouse then unfinished, and two small buildings near the river, occupied by the district magistrate. It derives its importance from its situation at the mouth of the Thompson, adjacent to the gold-fields.

M.

MAAN, a tn. N. Arabia, 270 m. E. Cairo, on the route of the Syrian pilgrims to Mecca. It contains about 200 families of seven different clans, or *fenad*, mixed up with emigrants from other villages in Syria, who are said to be able to raise from 150 to 300 brave and well-armed men to keep the Bedaweens in check, and resist their extortionate demands. The inhabitants depend much on two great fairs of two days each, which are held within it, the one when the Syrian pilgrims' caravans halt in going, and the other in returning. The pilgrims, combining business with devotion, bring from Damascus cloth and other European manufactures, for which they find a good market throughout Arabia, and from Mecca coffee and spices, clocks from Bagdad, Persian caps, and Indian swords and daggers. These they exchange for provisions, fodder, or other necessities, with the inhabitants of Maan, to whom the traffic is so profitable that the four days of the fair furnish the means of subsistence to their families during the rest of the year.

MABANI, or UJÉ MABANI, a tn. Western Africa, Bornou, in the Gamerghn country, 70 m. S.S.W. Kukawa. It belongs to the district of Ujé, one of the finest in Bornou, is finely situated on a hill, not only covering its whole top but descending its S. slope, and stretching along its foot till it includes another hill. The houses indicate some degree of ease and wealth, and testimony is borne to the industry of the inhabitants by the state of agriculture, a dyeing establishment, and the market-place containing nearly 200 stalls. Pop. 9000 to 10,000.

MABOX, a vil. British America, on the N. shore of a river of same name, which, in falling into the sea on the W. coast of Cape Breton Island, forms a kind of mountain lake, about three-quarters of a mile wide and 8 fathoms deep. It stands among beautiful scenery, the mountains rising immediately from the shore to the height of 870 ft.; contains a church, and is surrounded by flourishing settlements, chiefly of Scotch Highlanders. The coast to the N.E. is lofty and precipitous, and attains its culminating point in Mabou Highland, which is 1000 ft. above the sea.

MACAO [add.], a seaport tn. and Portuguese colony in China, the earliest foreign settlement there. The barrier wall and Chinese guard-house erected on the narrow isthmus of the peninsula in 1573, to prevent foreigners going into the interior, have been removed, and all restrictions abandoned. In 1844 Governor Pinto entered into more satisfactory arrangements with the Chinese government than previously subsisted; he was allowed to erect a new fort, and permission was given to the Portuguese merchants to trade with the five open ports on the E. coast of the mainland. In November, 1845, Macao was declared by decree of the queen of Portugal

an open port to all foreigners, while the Chinese were still subject to the old tariff. Governor Amaral in 1849 declared the port free to all traders, and swept the customs away. However, as a compensation for the loss of Chinese duties, which were the chief source of revenue, he levied a tax on all native houses. This had the effect of driving the Chinese away, and trade gradually declined until 1854, when it began to revive. The total value of the external trade in the year ended July, 1865, amounted to £1,577,052, of which £859,056 was for exports, chiefly tea, rice, aniseed, and canella; and imports, £717,996, comprising opium, cotton, and silk. The government at Macao does not depend on this legitimate trade for the prosperity of the town and port, for its commerce has again been declining since the opening of the Yang-tze and northern ports by the treaty of Tientsin, which affected Canton in a similar manner. It draws a large revenue from licensing and fostering gambling and immorality among the Chinese, who constitute nine-tenths of the population. An approximate calculation in 1864 gave the natives at 56,500, and Portuguese and other foreigners at 5300. There is, however, a large proportion of the population half-caste, whom, from the natural complexion and hair being the same as the Chinese, it is difficult to distinguish from natives. Besides the revenue derived from the taxation on gambling-houses and other places of bad repute, there is a considerable traffic in coolie emigration, from which further means are derived to enrich the treasury. This traffic equals the cruelty of the old slave-trade in Africa; the natives are kidnapped under the pretence of going abroad as free labourers with good wages, while they are shipped off to the guano islands of Peru or the sugar plantations of Cuba. The largest proportion of the so-called emigrants are villagers of the interior, who are lured by professional 'crimps' to Macao, where they are forced, sometimes under torture, to sign a contract, which consigns them to a kind of 'voluntary' slavery. In twelve years, ended 1862, upwards of 152,000 were shipped, of whom only 1100 were women and children. During 1865 it was estimated that from 15,000 to 20,000 left in this cruel manner, and few, if any, ever return to their native country. There is no doubt that the Chinese authorities are aware of the traffic, and overlook its harshness, as it helps to drain the country of its surplus population. Still the government does not grant the Portuguese the same privileges at Macao as it does to the English and other foreigners at the other ports. It compels them to pay the tribute annually stipulated for in the first settlement of the island. In 1863 Governor Guimaraens went to Peking to have it rescinded, and a new treaty was drawn up, but it has not been ratified, from what cause does not appear.—(M.S. Notes; Hongkong Daily Press, &c.)

MADARAS (Mézö), a tn. Austrian empire, Transylvania, circle and 9 m. N.N.E. Maros Vasarhely, near a tolerably large lake, with a mineral spring. There was a remarkable fall of meteorites here on 4th Sept. 1852. Pop. 1950.

MADISON [add.], three places, America:—1, A vil. Georgia, cap. co. Morgan, on the Georgia railway, 100 m. W. Augusta, in the midst of a fertile district. It possesses a Methodist female college, a Baptist collegiate institute, and a high-school; and carries on an active trade. Pop. 3516.—2, A tn. Indiana, cap. co. Jefferson, on a height above the Ohio, and on the Madison and Indianapolis railway, 60 m. S.W. Cincinnati. It is beautifully situated in a valley inclosed on the N. by hills 400 ft. high, consists of regular streets and substantial brick houses, and possesses a fine courthouse, eighteen churches, a number of schools, two large markets, woollen and cotton factories, five large flour-mills, foundries, and several extensive pork-packing and provision establishments. Pop. (1860), 8130.—3, A tn., the capital of Wisconsin, on the Milwaukee and Mississippi railway; lat. 43° 4' N.; lon. 89° 23' W.; 63 m. W. Milwaukee. In point of situation and scenery it is the most beautiful city of the far west, occupying an isthmus between Lake Mendota and Monona, and possessing wide, straight, and regular streets, with many beautiful buildings. The capitol stands in the centre of a square park of 14 acres, wooded with trees of the original forest; but, though a substantial building of limestone, it has been deemed insufficient, and a new capitol is in course of erection at an estimated expense of £80,000. The other chief buildings are eight churches, five banks, the state university, situated on an eminence, within a park bordering on Lake Mendota, provided with seven professors, and attended by 176 students; a commercial college, a public high-school, and the state lunatic asylum. The manufactures consist chiefly of bricks, flour, ale and beer, waggons and carriages, ironware, clothing, and agricultural implements. Pop. (1860), 6611.

MADRE, a group of isls. S. America, off the coast of Chili, open to the Pacific on the W., and between the islands of Hanover on the S. and Wellington on the N. From the latter it is separated by the Gulf of Trinidad. The most conspicuous summits of the group seen on approaching the coast are April Peak, Tower Rock, and Cape Three Peaks, the last forming the S.W. entrance of the gulf, and terminating in serrated ridges, with three peaks, the loftiest of which is nearly 2000 ft. high. About 3 m. N.E. of this cape is Port Henry, with anchorage in 9 to 10 fathoms, on a sandy bottom.

MADUWARI, a tn. Western Africa, Bornou, near the W. shores of Lake Chad, and about 8 m. N.E. Kukawa, has a melancholy interest attached to it as the place where the African traveller Mr. Overweg died, in the 50th year of his age.

MAFFERSDORF, a tn. Austrian empire, Bohemia, circle Bunzlau, on the Neisse, 4 m. S.E. Reichenberg; with a parish church, a manufacture of carpets, a yarn-spinning mill, and 2104 inhabitants.

MAGALIESBERG or **KASHAN MOUNTAINS**, a range, S. Africa, in the S.W. of the Transvaal Republic, rising abruptly out of a plain to the height of at least 800 ft. above its level, and stretching for 30 m. in the general direction of E. and W. Viewed from below, the range towards the E. presents a high unbroken ridge, little varying in height, with a precipitous red cliff, believed to be quartz. This cliff, which is at a considerable height, extending from end to end, near its crest is surmounted by another of similar appearance but relatively of less height. The lower part of the mountain, composed apparently of débris, is scooped out into thickly wooded gullies. Towards the W. the range recedes peak after peak. One of these attracts notice at the distance of at least 12 m. by an immense projecting white rock, which looks as if it were suspended on the steep slope near the summit. The range gives rise to several streams, most if not all of which belong to the basin of the Limpopo. Much of the scenery of the Magaliesberg is magnificent. The wider ravines are filled with large timber in great variety, and the narrower chasms with tree-ferns, having stems from 15 to 20 ft. high. The walls of these ravines and chasms, says I. Sanderson, 'were draped with curtains of delicate ferns, such as glечиена, trailing their slender fronds, a dozen

or twenty feet long, over the mouth of some dark recess, while, high up, aloes, euphorbia, and other succulent plants in great variety, filled every crevice.' The district has the reputation of producing fine fruit in great quantity. It would seem, however, that almost all kinds of fruit-trees are subject to a rust or blight, and that the fruit of those which escape is destroyed by a kind of wasp. Grapes and figs are less frequently visited by these disasters.

MAGDALEN [add.], a group of isls. British America, in the Gulf of St. Lawrence, 55 m. N.E. of Cape Breton. They extend in an irregular curve from S.S.W. to N.N.E. for 35 m. They consist chiefly of the islands of Amherst, Grindstone, Alright, Grosse, and Coffin, and a considerable number of islets, and in their central parts rise into hills, generally of trap-rocks, with rounded and frequently dome-shaped summits, varying in height from 280 to 580 ft. Around and on the flanks of these hills, are stratified deposits of sandstone and ochreous clays, with gypsum in the hollows and basins, and occasionally in veins. The islands are partially wooded, mostly with small trees of spruce, juniper, birch, and Canadian poplar. Where not wooded they afford good pasturage for cattle and sheep. The soil is very indifferent being, even when of good quality, only a few inches in depth, with a siliceous and ferruginous subsoil. The climate, though neither so cold in winter as Quebec, nor so warm in summer, is severe. Rains, and especially fogs, are extremely frequent. Viewed from sea in a bright summer day, the cliffs of various colours, chiefly different shades of red, and the yellow of the sands, contrasted with the green of the pastures and spruce-trees, and the blue of the sea and sky, have a beautiful effect, and distinguish the Magdalen group from anything else in the Gulf of St. Lawrence. The inhabitants are mostly of French extraction, and chiefly employed in the cod, herring, and seal fisheries. Some gypsum is exported, and some valuable ochreous pigments have been found. None of the islands possesses any harbour for large ships. Pop. (1860), about 1100.

MAGDALEN, a river, British America, Canada East, which rises in a mountainous district in co. Gaspé, flows N.E., and falls into the estuary of the St. Lawrence, on the N.W. side of a sandy bay, close under a rocky cape of same name. At its entrance, though only 30 yards wide, it has a depth of 7 ft., which within is increased for a very short distance to 10 ft., over a clean bottom of fine sand. At springs 13 ft. water can be carried in. Being thus navigable, it is occasionally visited by schooners of 30 to 80 tons, which warp in when the sea is smooth and the weather fine.

MAGDALENA (SANTA), a tn. Mexico, state Sonora, in the beautiful, fertile, and well-cultivated valley, and near the r. bank of the San Ignacio, 80 m. N.N.W. Ures. It has an annual fair, which attracts crowds from the neighbouring districts. Maize, wheat, beans, and fruit are extensively cultivated, and tobacco, rice, and cotton thrive well in the valley.

MAGIEROW, a tn. Austrian empire, Galicia, circle Zolkiew, about 24 m. N.W. Lemberg. It is memorable for the defeat of Prince Rakosky by the Poles under Czarnecki. Pop. 2117.

MAGILL, a group of isls. S. America, in Melville Sound, at the entrance of the Barbara Channel, in Magellan Strait, N. of Terra-del-Fuego. One of them, called Skyring, has a mountain of same name which rises in a peak to the height of 3000 ft., and has been very useful during the admiralty surveys in connecting the triangulation of the strait with that of the outer coast. Port Tom, on the S.E. side of this island, has good anchorage, and is well sheltered, except from the violent squalls which are frequent everywhere among the coves of Terra-del-Fuego. Fury, the central island of the group, though affording only a wild anchorage, with little shelter and bad ground, is much frequented by sealing-vessels.

MAGLAI, a tn. Turkey in Europe, Bosnia, on the Bosna, 52 m. N. by W. Bosna Serai. It contains a large mosque and an old castle.

MAGOMERO, a vil. S. Africa, upon a small stream of the same name, about 15 m. W. of the S. end of Lake Shirwa; lat. 15° 30' S.; lon. 35° 24' E. The spot is a pleasant one, surrounded by stately, shady trees, and derives its interest from having been chosen by Bishop Mackenzie as the first residence of the Oxford and Cambridge mission, which ended

sorrowfully in the death of the bishop and several of his coadjutors from fever.

MAGWE, a tn. Burmah, l. bank Irawadi, about 35 m. above Prome, is the first place of any consideration on the east bank of the Irawadi beyond the British frontier. Its population is estimated at about 8000.

MAGYARAT, a tn. Austrian empire, Hungary, co. and 18 m. N.E. Arad; with 2220 inhabitants, who grow excellent wine, and rear goats and bees.

MAHA-OYA, or KAYMER, a river, Ceylon, which rises in a mountainous dist. S.E. of Kandy, flows W., forming the boundary between the N.W. and W. Provinces, and after a course of 68 m. falls into the sea to the N. of Negambo. Its basin has an area of 453 sq. m.

MAHARAJPOOR, two places, India:—1, A tn. Scindia's Dominions, 15 m. N.W. Gwalior, famous for the battle fought in its vicinity on 29th December, 1843, between the British under Sir Hugh Gough, and the Mahrattas, when the latter were defeated, but not until they had inflicted a heavy loss on the victors.—2, A tn. N.W. Provinces, dist. and 12 m. S.E. Cawnpore, with a well-supplied bazar.

MAHAWELLI-GANGA, or MAHAVILLI-GUNGA [add.], the largest and most important river of Ceylon, which rises near Adam's Peak, flows N. to Kandy, then, almost in a semi-circle, with its concavity northwards, E. to Bintenné, then again nearly due N., and divides into several branches, of which the principal one, still continuing the same direction, has its mouth on the S. shore of the Bay of Trincomalee, 2 m. W. of Cottiar. Its whole course is 134 m., and the area of its basin 4082 sq. m., of which 1782 are in the mountain zone, and 2300 in the low country. Its principal affluent is the Amban ganga, which joins it on the left. In the first part of its course it has all the character of a mountain torrent, and even in the vicinity of Kandy, at a point where it is crossed by a bridge of a single arch, above 200 ft. in span, and nearly 70 ft. above the stream, rushes through a narrow channel, in which it has been known to rise 60 ft. above its ordinary level, hurrying along the trunks of trees and the carcasses of buffaloes, elephants, and deer. At Bintenné it is, when swollen by rains, as broad as the Thames at London, and at all times sufficiently deep to be navigated by small vessels. Thereafter it sweeps through luxuriant solitudes, past wide expanses of rich land now lying waste, and under the shade of forests whose timber and cabinet woods alone would give wealth to an industrious people. About 40 m. before it enters the sea it separates into two branches. The principal one, called Kooroogni-ganga, continues the N. course already described; the other, called the Vergel-aar, diverging almost at right angles, flows N.E., subdivides into new channels, and enters the sea by several mouths, N. and S. of Arnetiroe, or 'the island of elephants.' A survey of the river made by order of government goes to prove that notwithstanding its length, and the volume of water which it carries, it is not available for navigation. Even in the first 32 m. from the sea the boats employed, though mere canoes, often failed to find in the channel the few inches of water necessary to float them. Higher up, while the navigation is impeded by rapids, an upset would be perilous, owing not merely to the strength of the current, but to the multitude of crocodiles with which the river swarms. For the first 80 m. the chief obstructions are sand-banks and drift-wood, which it might be perhaps possible to remove. Higher up the sand disappears, and the river bed is formed of rocks of granite.

MAHEDIAH [anc. *Aphroditium*], a seacoast tn., reGENCY of and 100 m. S.S.E. Tunis, built on Cape Africa, on which there is a height containing cisterns remarkable for their size and for the perfect state of their preservation, and forming subterranean reservoirs of considerable extent. A large rectangular basin, now dry and blocked up, whose outline cut out in the rock is still traceable, formed the port for the galleys. A citadel commands Mahediah and all the peninsula on which it stands, and another square fortress at one of the town entrances defends it towards the N. and W. This latter fortress dates from the Spanish occupation three centuries ago. The date of the foundation of the town goes as far back as the dynasty of the Fatimites.—(Charisson, *Aperçu de Tunis*.)

MAIAS, a tn. Russia, gov. Orenburg, on a river of same name, which rises in the Oural Mountains, on the watershed

between Europe and Asia, and belongs to the basin of the Obi, 270 m. S. Ekaterinburg. It is the centre of the gold region in the S. Oural, and contains a large edifice, with all the offices necessary for the administration of the mines, buildings in which gold is washed both in winter and summer, warehouses and other structures, and many good dwelling-houses. A lake running up among the hills, and the mountain Ilman-tow rising close to the town on the E. side of the river, make the site at once beautiful and picturesque.

MAIDZINA, a tn. Austrian empire, duchy Bukowina, dist. and S.W. Czernowitz; with large seams of gypsum, and 2470 inhabitants.

MAI-GOVA, a vil. Abyssinia, Jalyn, 120 m. W. Axum. It stands on the edge of a plain in the midst of cultivated fields, 15 m. S. of the Bahr el Hamran, and consists partly of square houses built of mud, and partly of round conical-roofed huts, formed of a framework of poles filled in with boughs, and thatched. Pop. about 2000.

MAILBERG, a tn. Austrian empire, Lower Austria, circle Lower Manhartsberg. It contains a palace with fine gardens, and has a considerable trade in fruit and wine. The latter in particular bears a high name, and is considered among the best grown in Austria. Pop. 1190.

MAI-MA-CHIN [add.], a tn. Chinese empire, on the N. frontiers of Chinese Tartary, 170 m. S.E. Irkutsk, and so close to the territory of Russia that Kiachta, belonging to the latter, is only a few hundred yards to the N. and separated from it merely by a door in a wooden barricade. It stands on the edge of a plain terminating towards the S. in a chain of wooded hills, and is composed entirely of wooden houses, inclosed by a wooden palisade with two gates. One of these faces Kiachta, as already mentioned, the other faces the S., a narrow street about 600 yards long leading in a straight line between the two. Other streets, running either parallel or at right angles to this, divide the whole place into numerous blocks. Where the two principal streets intersect there is a square edifice resting on four pillars, which allow the traffic to pass beneath it, and consisting of three stories, which are gradually narrowed as in a pagoda. In each of the upper stories there are openings filled in with highly decorated trellis work; the walls, painted red, are singularly ornamented with green monsters and other allegorical figures. A little beyond this building is the residence of the *sargootcha*, or Chinese governor, which, like all the other dwellings, is only one story high, and is entered through a pair of folding-doors leading into a gallery or colonnade. To the right of the *sargootcha's* residence stands the temple of Fo, and to the left the court of justice. The temple is a small quadrangular building, with an opening in the centre giving a view into the interior, where are seen four statues the size of life, painted so as to look more like demons than gods, musical instruments hanging on the walls, and flags and banners suspended from the roof, and forming a canopy of the most brilliant colours. The court of justice, with a red flag fluttering over it, is chiefly remarkable for the various implements of torture suspended or piled upon its walls. The wealthier merchants, who have their abodes along the line of the principal streets, have generally a show-room decorated with silk and Chinese paintings, and arranged so as to show off their choicest wares. Among these are silks of great variety and beauty, embroidered Kanfa kalats, jackets, and various other articles of costume, porcelain vases of exquisite workmanship, dinner and tea services, ornaments in jade, groups of flowers formed in various coloured stones, window-screens, some of them most minutely carved in ebony, and some other remarkable specimens of wood-carving. The great staples of trade, however, are tea, of which Russia is said to import six millions of lbs. annually, and rhubarb, of which 360,000 lbs. are said to pass through Mai-ma-chin every year. These articles are not disposed of in Mai-ma-chin, but in Troitska-selo, a Russian town situated among the hills about 3 m. to the N., where the custom-house is situated, and where all merchandise, whether from Russia or China, must be deposited previously to its being sold or bartered.—(Atkinson's *Upper and Lower Amoor*.)

MAINDO, a river, E. Africa, one of the smaller branches by which the Zambesi pours its waters into the Indian Ocean; lat. 18° 52' S.; lon. 36° 12' E. It used to be one of the principal stations for shipping slaves, and is still, there is

reason to suspect, illicitly used for that purpose. It is fronted by a portion of the Elephant Shoals from three to four miles distant. Its E. bank is formed by level sea-cliffs, its W. densely covered with trees. The depth of water over the bar in springs, when it is lowest, is only $1\frac{1}{2}$ fathom, but immediately within becomes 2 to 5, and is thereafter 7 nearly all the way up for 20 m. to the barracons where the slaves used to be shipped, and 10 m. beyond them.

MAIS (UPPER and UNDER), two contiguous places, Austrian empire, Tyrol, circle Brixen, on the Passer, opposite to Meran, with which it is connected by a bridge. It occupies the site of the Roman Maja, contains three churches, one of them with fine marble monuments. There are many fine mansions, and a great resort of pilgrims in the vicinity. Pop. 2000.

MAJI-YA-WHETA, a thermal spring, S.E. Africa, at the foot of one of a number of low detached cones in the basin of the Mgeta; lat. $7^{\circ} 35' S.$; lon. $37^{\circ} 35' E.$ Its water boils and bubbles out of a white mud, here and there incrustated with oxide of iron. On the surface lie caked and scaly sheets of a calcareous tufa, and around are detached boulders blackened probably by the fumes. The earth is dark, sometimes sandy, and sprinkled over with broken pieces of quartzite and sandstone. Around the centre of ebullition there is an area of about 200 ft., within which, owing to the heat and instability of the ground, it is impossible to venture. Occasionally, it is said, the spring spurts forth with violence like a geyser, and throws pieces of lime high in the air. The water as it issues runs N. into a small brook, which joins the Mgeta a little below.

MAKARIEV, a tn. Russia, gov. and 50 m. S.E. Nijnei-Novgorod, cap. circle of same name, l. bank Volga. It contains seven churches, a monastery, a circle school, two charitable institutions, and extensive manufactures of boxes and trunks, which, streaked red and blue, painted with various figures, and covered with varnish, are in great demand throughout the country. Many of the inhabitants of the circle are employed in making mats of bast, and preparing potash, tar, and rosin. Pop. 2176.

MAKOLOLO, the name of a once large and powerful tribe inhabiting or holding in subjection an immense tract of S. Africa, chiefly between lat. 13° and $20^{\circ} S.$ Their extensive possessions arose from comparatively small beginnings, and were acquired mainly by the great talents of a single chief of the name of Sebituane. During a long career, in which his political talents were not less conspicuous than his military skill and valour, he added conquest to conquest, and by treating the conquered with lenity, succeeded in incorporating them with his previous subjects, and thus forming them into one tolerably compact whole. The original nucleus of the tribe were the Basuto, who came with him from a comparatively cold and lilly region of the south. With these he successively incorporated various tribes of the Bechuanas, as Bakwains, Bangwaketze, Bamangwato, Batano, &c., and at last carried out this policy on its largest scale by the incorporation of the Makalako, of whose agricultural habits (in which the Makololo are deficient) an undue advantage was taken by forcing them to render certain services and aid in tilling the soil—in other words, by converting them into mere serfs. The Makololo, considered as a whole, were composed of a mixture of various tribes, and had no proper national character. Still, as the dominant race, they were easily distinguished, while at the same time they possessed many qualities which gave them a kind of natural supremacy. In personal appearance indeed they had nothing to boast of. Having exchanged a hilly country with a temperate and healthy climate, for one where excessive heat prevails and much of the ground is swampy, they suffered dreadfully from fever, which left those to whom it did not prove fatal with enfeebled constitutions and features of a pale, sickly, yellow hue. Their great pre-eminence is in their intellectual and moral qualities—in their aptitude for civilization, shown in readiness to receive instruction and act upon it, and in their hospitality, honesty, and warm and steady attachment to those who befriend them. At Linyanti their capital, while Dr. Livingstone remained with them, from 500 to 700 persons (male and female) often attended his religious services, conducting themselves upon the whole with great decorum; and many of their adults

having learned the alphabet in a short time, began to teach it to others, and gave hopes that if the doctor had been able to prolong his stay they would soon have been able to read. They are naturally industrious, but display this quality less in agriculture (for which they seem to have little natural taste) than in the rearing of cattle, which is with them a kind of passion; and in carrying on trade, for which, both by their perseverance and sagacity, they are admirably adapted. But these hopeful circumstances were disappearing at Livingstone's second visit. The wise chief Sebituane had been succeeded by his son Sekeletu, who abandoned his father's prudent policy of treating all the conquered tribes on equal terms with his own Makololo, as all children of the chief and all eligible for the highest honours. Sekeletu appointed none to office but Makololo men, and became unpopular. He was also afflicted with leprosy, and, believing himself bewitched, had suspected a number of his chief men, and put some of them with their families to death; others fled to distant tribes; and the chief had shut himself up. Severe drought and consequent famine brought additional disaster; the country was suffering grievously, and Sebituane's grand empire was crumbling to pieces. A large body of young Barotse revolted and fled to the north; the Batoka and Muemba were independent, and the powerful chief near the Victoria Falls set Sekeletu's authority at defiance. This was in 1861. In 1864 Sekeletu died; a civil war broke out about the succession to the chieftainship; a large body departed with their cattle to Lake Ngami; an insurrection of the black tribes followed; and the kingdom, of which under an able and sagacious rule so much might have been made, has suffered the usual fate of African conquests. 'That fate,' says Dr. Livingstone, 'we deeply deplore; for whatever other faults the Makololo might justly be charged with, they did not belong to the class who buy and sell each other, and the tribes who have succeeded them.'

MAKUNG, a tn. Chinese empire, in the S.W. of Pong-hou Island, the largest of the Pescadore group, to the west of Formosa. It stands on the N. side of an inlet, and is defended by a citadel and a long line of embasures. Its harbour, though much confined by coral reefs, has sufficient depth for vessels of large draft, and is much resorted to by large junks waiting for a favourable wind to take them to Formosa. On Chimney Point, which forms its S. entrance, there is an old Dutch fort.

MALAGARAZI, a river, Central Africa, which rises on the S. slope of the high land which lies between the basins of Lake Tanganyika and Lake Nyanza, flows first S.E., then sweeps round the S. base of Mount Urundi, changes its course to nearly due W., and disembogues on the E. shores of Lake Tanganyika, about lat. $5^{\circ} 15' S.$; lon. $30^{\circ} 10' E.$ Rapids abound upon it, and it is not navigable. Its valley is bounded on the N. by a line of hill-spurs of primitive formation, full of ragged rocks and yawning ravines. On both banks there is a fertile strip of brown or black mould, varying in breadth from one to five miles. Beyond this strip on the N. the valley is mostly desert, whereas on the S. it exhibits an aspect of luxuriant vegetation. The river swarms with crocodiles.

MALAUN, a tn. India, Oude, 38 m. N. Cawnpore. It is a large place, very indifferently built, partly of brick, but chiefly of mud, and is defended by a fort.

MAL BAIC, a tn. British America, Canada East, co. Charlevoix, l. bank St. Lawrence, 10 m. N.E. Quebec; with a R. Catholic church, and a large trade in cordwood, lumber, and flour. Pop. about 2800.

MALCESINE, a tn. Italy, Venetia, 23 m. N.W. Verona, on the N.E. shore of Lake Garda; with a handsome parish church containing a crucifixion by Giolfino, an old Venetian castle, a beautiful palace, a good harbour, and marble quarries. Pop. 2010.

MALDAH, a dist. India, presid. Bengal, between lat. $24^{\circ} 30'$ and $25^{\circ} 25' N.$; lon. $87^{\circ} 50'$ and $88^{\circ} 30' E.$, bounded N. by Purneah, N.E. Dinajepore, S.E. Rajeshayee, and S.W. Moorsheadabad and Bhagulpore; length, S.E. to N.W., 70 m.; breadth, 37 m.; area, 1000 sq. m. It is throughout a flat alluvial tract, nowhere more than 110 ft. above the level of the sea, but with a gentle slope to the S.E., towards which the drainage is carried by numerous streams, and received by the Ganges. The soil is for the most part a rich alluvium, but

in several localities its fertility is much diminished by a pre-dominance either of retentive clay or of sand. The principal crops are rice, wheat, barley, cucurbitaceous plants, pulse, and indigo. Many parts of the surface are covered with magnificent banyan-trees and mango groves. The mulberry is extensively planted. The principal manufactures are coarse cotton and coarse silk fabrics. Pop. 431,000.

MALDAH, cap. of the above dist., situated l. bank Mahanunda, at its confluence with an offset of the Ganges, 170 m. N. by W. Calcutta, is a wretched place, consisting of narrow irregular streets, and about 3000 houses, many of them in a ruinous condition. The only public buildings of any note are several mosques and a large serai. The manufactures, on which the prosperity of the place depended, have been almost destroyed by British competition.

MALIGRADAC, a tn. Austrian empire, Banat, Military Frontiers, about 38 m. E.S.E. Karlstadt; with a German trivial school.—*Vélikgradac* in the vicinity contains two Greek non-united churches.—Pop. 1050.

MALMKROG, a tn. Austrian empire, Transylvania, circle and about 34 m. N.E. Hermannstadt; has a Protestant church, and on a height opposite to it a chapel with some interesting monuments. Pop. 1130.

MALO-JAROSLAVETZ, a tn. Russia, gov. and 40 m. N. Kaluga, cap. circle of same name. It stands on a height at the confluence of the Lusha and the Jaroslavka; and has five churches, a monastery, a circle and a parish school, two charitable institutes, manufactures of woollens, and a trade in horses. A battle was fought here between the Russians and the French on the 24th October, 1812. Pop. 2050.

MALOWN, a fort, India, Hindoor, on the summit of a ridge which rises over the l. bank of the Sutlej, and has an elevation of 4448 ft.; in lat. 31° 12' N.; lon. 76° 52' E. It is strongly built of masonry, and in 1815 became the last refuge of Umeer Sing and the Ghoorkas, when Ochterlonie had by his masterly movements dislodged them from all their other posts in the west. A stout resistance was anticipated, but when a breaching battery, erected with incredible labour within 400 yards, was about to open, a capitulation was entered into, and terminated the Nepanlese war.

MALPELO, or **BALDIEAD**, a detached island of the N. Pacific, nearly in the track of vessels entering the Bay of Panama from the S.; lat. 3° 30' 4" N.; lon. 81° 40' W. It is barren and precipitous; bears a resemblance in its summit, in several points of view, to the crown of a head; and rising to the height of 1200 ft., becomes visible at sea in clear weather at the distance of 40 m. With the islets which surround it, it extends about 10 m. from N. to S. It has never been surveyed, the officer who visited it for this purpose in 1847 having failed to find a landing. Owing to the strong currents in the vicinity there is an appearance of breakers; but it is believed to be steep-to, as a depth of 40 fathoms was found alongside, and of 110 fathoms at the distance of a quarter of a mile.

MALULA, a vil. Palestine, pashalik and 45 m. N.N.E. Damascus, romantically situated near the foot of a towering cliff, at the entrance of a magnificent glen. It is remarkable as one of the three villages in which Syriac is still spoken.

MAMBARI, a tribe, S.W. Africa, not far from Bibé, where they live under an Ambonda chief, and about 300 m. S.W. Angola. They are slave-traders; and before this trade was interdicted by Portugal, they carried it on to a vast extent, buying their victims in exchange for goods, and not scrupling to steal them, and carry them off by force, whenever they found an opportunity. They now profess to use slaves only for domestic purposes, but there is reason to suspect that their old habits still cling to them. They are such enterprising merchants that the whole stretch of the continent from W. to E. may be said to be their market. There is something else very singular in their mode of dealing. When they mean to trade with a town, they deliberately begin by building huts, as if aware that little is to be effected without an ample allowance of time for palaver. They bring the cotton prints of Manchester into the very heart of Africa. When the Makololo first saw these goods, they could hardly believe them to be the work of mortal hands. Aware how much their trade might suffer from the rivalry of the white man, the Mambari are ever on the alert to prevent the natives from having any direct dealings with them. They have

thus been successful in establishing a monopoly in their own hands.

MANA, a tn. India, Kumaon, on the Saraswati, at an elevation of 10,492 ft.; in lat. 30° 46' N.; lon. 79° 32' E. The houses are built of stone, two stories high, and covered with planks. The inhabitants are of the Mongolian type, and are in nothing so remarkable as in the profusion of gold and silver ornaments with which they overload their persons, hanging them around their necks, wrists, and ankles, and inserting them in their ears and noses. The wealth thus indicated is obtained by the extensive traffic they carry on between India and Chinese Tartary through the Mana Pass, which, though 18,000 ft. high, is one of the easiest across the N. frontier, because the ascent following the course of the Saraswati is rather regular and gradual. In conveying the merchandise of this traffic yaks, goats, and sheep are employed. Pop. 1500.

MANAMA, a tn. Arabia, on the N. shore of the island of Bahrein, in an arm of the Persian Gulf. It is a large and populous place, more regularly built than most towns in the gulf, possesses well-stocked bazars, and carries on an extensive trade, principally coasting. About 150 vessels belong to its port, and it also sends a great number of boats to the pearl-fishery. Its pop. is roughly guessed, rather than estimated, by some at 40,000, by others at only 5000.

MANANGKABO [add.], an inland country, Indian Archipelago, Sumatra, about 60 m. long by 50 m. broad, and containing an area of 3000 sq. m. It extends generally from the equator to a degree S. of it, and consists of a series of alpine valleys inclosed by lofty mountains. Among them are the active volcanoes of Talang and Marapi, the former 10,750 and the latter 9800 ft. above the sea. The geological formation is partly volcanic, partly plutonic and sedimentary. The valleys being naturally fertile and well supplied with water, are highly cultivated, productive, and populous. Sir Stamford Raffles thus speaks, from personal observation:—'As far as the eye could distinctly trace was one continued scene of cultivation, interspersed with innumerable towns and villages, shaded by the cocoa-nut and other fruit trees. I may safely say that this view equalled anything I ever saw in Java. The scenery is more majestic and grand, population equally dense, cultivation equally rich.' No details of the early history of Manangkabo exist, or of the mode in which its inhabitants were induced to embrace Islamism. When the Portuguese visited it, it furnished some gold, and was famous for the manufacture of arms. Its reputation in the latter respect it still maintains.

MANARGUDI, a tn. India, presid. Madras, dist. and 22 m. E.S.E. Tanjore. It is a place to which the natives attach importance from the number of Brahmins and Pandarums residing at it. Its pagoda, which is very large, has a goparum 150 ft. high. The manufactures are cotton and silk goods.

MANAYUNK, a tn. U. States, Pennsylvania, l. bank Seluykill, and on the Philadelphia and Norriston railway. Though 7 m. from the state-house of Philadelphia it lies within the chartered limits of this city, and must therefore be regarded as one of its suburbs. It contains six Protestant and two R. Catholic churches, and has extensive manufactures of cottons, jeans, and woollens. Pop. 6158.

MANCHESTER [add.] Manchester is situated almost at the S.E. extremity of the county of Lancaster, and has always been the centre of the cotton manufacture; it may fairly be described as the metropolis of the northern division of England.

The public institutions of Manchester include the *Cathedral*, an ancient and interesting building in the Perpendicular style of architecture, with a tower at the west end, 120 ft. in height. It consists of a nave, chancel, and lady-chapel at the east end, with spacious aisles, and seven other chapels. Though greatly disfigured by galleries in the nave, as a whole the effect may be described as picturesque. The only buildings at all like it in England are Chichester cathedral, and St. Michael's, Coventry. The choir is by far the most beautiful part, the roof is exquisite, and the carving of the fretwork over the stalls is unsurpassed by any cathedral in England. Some of the woodwork shows the ravages which the soldiers of the Commonwealth were too fond of committing. Under some of the miserere seats may be seen proofs of their at-

tempts to set fire to the building at the time they turned it into a stable.

The original parish church of Manchester was of wood, but in the year 1421 the munificence of Thomas de la Warre, the then lord of the manor, obtained a charter constituting it a collegiate church, and in connection with it a college, consisting of eight fellows, four clerks, and six choristers. Many of the wardens who succeeded Lord de la Warre were men of considerable note; amongst the most celebrated of whom may be mentioned Dr. Dee, who, in the time of Elizabeth, was described by Hollingworth as 'a very learned man, a perfect maister of mathematical studies. He was very sober, just, temperate in his studies, yea, an observer of publick and private devotions, but was too much addicted to some over-curious and uncernt arts, as astrology or the like.' Although relieved by Elizabeth from the unjust suspicion of being a necromancer, and received by her at court, he was so persecuted in other ways that he was compelled to leave the country, and his library, consisting of 4000 volumes and 700 MSS., was confiscated. In the year 1847 an act was passed establishing the bishopric of Manchester, and constituting the collegiate church a cathedral. A charter, dated 29th March, 1853, subsequently constituted the municipal and parliamentary borough of Manchester a city. Since that time the cathedral has been restored, and a great part of it rebuilt. There are in Manchester 239 churches and chapels, belonging to various denominations, viz. sixty-eight churches, thirteen R. Catholic chapels, thirty-two Independent, thirty-one Wesleyan, eight Methodist Free churches, eleven Baptist, and sixty-nine of various denominations. Some of these are worthy of notice for their architectural pretensions—St. Mary's, St. George, St. Philip, Hulme, St. James', Birch, St. Matthew's, St. Andrew's, in Manchester, and St. Luke's, Cheetham Hill, St. John's R. Catholic cathedral, Salford, and Cavendish Street Independent chapel, being the most perfect.

Cheetham's Hospital is a noble institution, founded by a merchant of Manchester in 1651. The buildings themselves are interesting, as being the former residence of the lords of the manor, and subsequently of the ecclesiastics connected with the collegiate church. Its present use is for the education of upwards of 100 boys, a preference being given to 'orphans, the children of honest parents;' their dress is somewhat similar to that worn at Christ's Hospital, London. The library is probably the most valuable theological one in England, containing many MSS., together with one of the original copies of the Pentateuch, seven of which only are known to be in existence. It contains nearly 30,000 volumes, some of them rare and curious, which with the manuscripts are also of great interest.

The *Free Grammar School* was founded by Hugh Oldham, Bishop of Exeter, in 1515, who endowed it with certain mills and other property. Other benefactors have since added scholarships and exhibitions at the universities of Oxford and Cambridge.

Owens' College, a modern institution, founded under the will of Mr. John Owens, who died in 1846, 'for providing or aiding the instruction or improvement of young persons over the age of 14 years in such branches of learning and science as are now, or may hereafter be taught in England.' The only restriction being that no 'religious tests shall be applied for admission to the benefits of the college, and no theological instruction or discussion be allowed which can be reasonably offensive to any student.' It is now affiliated to the University of London. A very large subscription has (1867) been commenced to provide new buildings and further endowments, in the hope that, before long, it may form the nucleus of an independent university for the Northern Counties of England.

The *Free Library* mainly owes its origin to the late Sir John Potter, who during his mayoralty in 1851 purchased a building for that purpose. The original cost of its establishment was defrayed by public subscriptions of about £13,000, its subsequent maintenance being provided for under the Public Libraries Act of 1850. The chief library is divided into two departments, reference and lending, there being four branches besides the principal one. The number of volumes in the reference library is 38,426; in the lending and branch libraries 39,318. The issues are as follows, for the year ending September, 1866:—

Reference Library,	80,852
Lending	84,133
—Campfield,	94,183
—Hulme,	45,508
—Ancoats,	75,606
—Roehdale Road,	

The Assize Courts.—Owing to the rapid increase in the population of the Salford Hundred, Manchester was recently constituted an assize town, and it therefore devolved upon the county magistrates acting in the Hundred of Salford to provide suitable accommodation for the purpose. This has been done in such a way as to surpass any building for judicial purposes in any part of Great Britain. The architect whose design was selected, and who has carried out the work, is Mr. Alfred Waterhouse, residing and carrying on his profession in his native place, Manchester. The style may be described as Anglo-Gothic, of about the time of Edward III. The principal front faces the S.W., and is 250 ft. in length, the judges' lodgings being separate, but having an internal communication with the courts, and adding greatly to the effect of the whole. In point of ventilation and arrangement the whole building is almost perfect in its planning, whilst no expense has been spared to render the effect both imposing and picturesque. The cost was about £130,000, exclusive of a large prison in course of erection immediately behind the courts.

First among the ornaments of which Manchester can boast is the Albert Memorial, which has been erected in a square about to be formed in front of the site of the new town-hall. The cost, including the statue, was nearly £7000. The statue itself is by Noble, of Sicilian marble, and represents the prince in the robes of the order of the Garter; the canopy being in a style of corresponding richness. The other statues in Manchester are those opposite the Royal Infirmary, of the Duke of Wellington, Sir Robert Peel, Dr. Dalton, and James Watt—one of Richard Cobden is also in course of erection. In Peel Park, Salford, are those of the Queen, Prince Consort, Sir Robert Peel, and Joseph Brotherton, the first representative of that borough in Parliament—a position which he retained for twenty-four years.

The other public institutions include the town-hall and the exchange, both of which have become too small for their respective purposes. Acts of parliament were obtained in the session of 1865, giving the necessary powers for providing new buildings, which it is expected will be of a character such as to do credit to the city.

The Royal Infirmary is one of the largest hospitals supported by voluntary contributions in the country, and possesses in connection with it a thriving medical school. There are various other hospitals in the town.

The Free-trade hall is an imposing building, erected on the site of the hall in which the mass meetings in aid of the free trade movement were held.

Many of the warehouses are large, lofty, ornate buildings, with considerable pretensions to architectural elegance, and form a striking feature in the general aspect of the city, which, although much improved in recent years by many broad handsome thoroughfares taking the place of narrow streets, cannot be described as very prepossessing in appearance.

The trade of Manchester was originally almost entirely dependent on the manufacture and sale of cotton goods, but it has now become the centre of a large district extending some 40 m. around, and embraces the various productions employed in the manufacturing industry of England. Hence it arose that during the cotton famine the distress was much more lightly felt here than in any purely manufacturing town, as the producers of machinery and other employers of skilled labour have to a great extent taken the place of the mere manufacturers of cotton goods. The following table, being an extract from the mill return for the city of Manchester, for 25th July, 1865, will give an idea of the extent and variety of the manufactures carried on:—

Classification.	No. of Mills.	No. of Hands Usually Employed.
Cotton Mills,	76	22,017
Silk Mills,	10	4,353
Smallware Mills,	27	5,597
Printworks,	1	513
Dyeworks,	21	2,854
Machinists,	43	7,453
Foundries,	23	4,857
Total,	201	47,644

In early history it is mentioned as one of the most important of the Roman settlements. In the year 78 Agricola successfully brought the northern tribes under the rule of the Cæsars, and Mancenion, formerly a British stronghold, was garrisoned by the Romans; forts were established, of which traces can still be discerned at Hyle Wood, near Castle Irwell in Lower Broughton; at Castle Hill, near Singleton Brook; at Raine's How, on Kersal Moor; and at a spot a little above the Goose Inn, Bury New Road;—and various military roads to

the surrounding districts were formed, the conquered Britons in the meantime settling themselves in the Aldport or old town, the site of which is still recalled by the name of Alport Town in Deansgate.

Four hundred years, however, had barely passed when, notwithstanding the erection of a formidable stone fortress in Castle Field, the Saxons, invited by the Britons, tore away the stronghold of Mankastell from the possession of the Romans, and the year 488 finds them dictating from this

THE ASSIZE COURTS, MANCHESTER.—From a large photograph by Eastham, Manchester.

point as their head-quarters to the whole country lying between the Humber and the Mersey. The command of the fortress was given to one Tarquin or Torquine: in the old chronicles of Manchester written by Hollingworth may be found the following legend:—

'It is said that Sir Tarquine, a stout enemy of King Arthur, kept the castle, and neere to the ford in Medlock, about Mabhouse, hung a basin, on which basin whosoever did strike, Sir Tarquine or some of his company would come forth and fight with him, and that Sir Launcelot du Lake, a knight of King Arthur's Round Table, did beate upon the basin, fought with Tarquine, killed him, and possessed himself of the castle and loosed the prisoners.'

The old ballad of 'Sir Tarquine' also commemorates the achievement:—

'Within this ancient British land
In Lancashire, I understand,
Near Manchester there lived a knight of fame,
Of a prodigious strength and might,
Who vanquished many a worthy knight,
A giant great, and Tarquin was his name.'

On a ceiling in the Cheetham hospital, an institution of which an account will be found in another part of this article, a rude carving may be seen representing Tarquin with the legs of an infant sprawling out of his mouth, the fable being that he devoured each day a child for his breakfast.

The name of the town which, during the time of the Romans, was changed from Mancenion into Mancunium, became under the Saxons Manigeceaster or Manchester, by which it has ever since been known. For 180 years it remained under the dominion of the Saxons, but after that period Canute, on his march to Cumberland, took possession of it, leaving as a memento a mill, which he built close by the castle, the place where it stood still bearing the name of Knute or Knott Mill.

Of the history of Manchester from this period up to the beginning of the thirteenth century little is known, but we then find it a thriving mercantile town, in which the Flemish

manufactures and the woollen trade were being successfully carried on. This was the foundation of the wealth of the southern division of the county of Lancaster. Possessing as it does an energetic population, and the advantage of an ample iron, coal, and water supply, the manufacture of cotton goods has spread itself throughout the whole of the surrounding towns, and has led to the development of Liverpool as the port for the trade of the district.

The natural enthusiasm of the inhabitants has led them into political excesses of various kinds. The Reformation was violently opposed there; Collyer the warden of the college of the Blessed Virgin, Pendlebury, and Bradford taking a notorious part, the latter dying a martyr for his support of it. In Ancoats Lane one of the Martin Marprelate presses was established, and its publications issued from thence.

The Great Rebellion finds Manchester greatly excited, and an encounter between some of the inhabitants and the followers of Lord Strange, afterwards the unfortunate Earl of Derby, was reported in London as 'the beginning of civil warres in England, or terrible news from the north; Lord Strange being afterwards impeached by the lower house for his share in the affair. Under the commonwealth Manchester had its representative in parliament, and was made a centre of one of 'the classical divisions of the presbyteries.'

At another period Manchester supported the Chevalier St. George, and five of the principal inhabitants were executed in the town.

In 1745 young Prince Charles's cause was warmly espoused. Not only were the plans of his invasion concocted there, but before publicly appearing in Scotland he was privately entertained for a considerable time at Ancoats Hall, by Sir Oswald Mosley, the lord of the manor, and at another visit he made his head-quarters at an inn which bore the name of the 'Palace Inn' in consequence, until it was recently pulled down. A regiment was raised locally, the last occasion in which it took part being the defence of Carlisle, at the surrender of which the leaders were decapitated,

their heads being set for exhibition on the top of the Manchester exchange.

The American revolution and the French war enabled the inhabitants to testify their loyalty by raising several regiments of volunteers, as well as subscribing their money most liberally, one firm alone, Peel & Yates, the head of which was the first Sir Robert Peel, voluntarily contributing £10,000 for the defence of the country.

The agitators for 'reform,' and subsequently 'free trade,' were mainly supported by associations formed in Manchester, which has led to the term of the 'Manchester school,' as applied to the extreme section of the liberal party.

The most recent efforts which are worthy of record have, however, been directed to the spread of education, and at the present time a bill, initiated by the Manchester Education Aid society, is under the consideration of parliament, and, it is hoped, may be the means of furthering a system of compulsory education.

The population of Manchester has increased at an extraordinary rate, as in 1801 it was 94,876, and, including Salford, in 1861, 460,018. Owing, however, to the encroachments during the past few years of warehouses, and public and private undertakings, the next census will record a decrease, as the rents in the suburbs offer inducements to the working population to reside beyond the limits of the borough.

MANCHESTER [add.], a tn. U. States, New Hampshire, on the Merrimac, at the Amoskeag Falls, and at the terminus of the Merrimac and Connecticut, and the Manchester and Lawrence railways, 52 m. N.N.W. Boston. It is regularly laid out in streets and squares, the former crossing at right angles, and three of the latter with ornamental ponds in their centre. The main street, which is 100 ft. wide and above a mile long, is planted on each side with elms. The principal buildings and institutions are 14 churches, 40 public schools, including 1 high-school, 2 grammar, 1 intermediate, 13 naval, 8 middle, and 15 primary; an academy under the care of the Sisters of Mercy, an atheneum, and a reformatory for juvenile and female offenders. The manufactures, having the advantage of an unlimited supply of water-power from the falls of the Merrimac, are very important, and are carried on chiefly by chartered companies. The chief articles manufactured are cottons and woollens, locomotive and other engines, axes, adzes, and other tools, castings, scales, and paper. The cottons and woollens, which must be considered as the great staples of the place, consist of ticks, flannels, sheetings, drillings, de laines, bareges, prints, Persian cloths, and cassimeres. Pop. (1860), 20,107.

MANDHAR, a territory, Indian Archipelago, forming the W. portion of the main body or nucleus of the island of Celebes, and terminating to the S.W. in a cape of same name, in lat. 3° 35' S.; lon. 119° E. Though hilly, it has no mountains of considerable elevation. The soil is very indifferent, not producing rice, but only maize, cocoa-palm, and cotton. Its exports are cotton cloth, cocoa-nuts, and cocoon oil. The inhabitants are a distinct nation, and have a language peculiar to themselves.

MANDUR, or TUMANDUR, a tn. on the W. side of Borneo, cap. dist. of same name, about 15 m. N. of the equator. It stands on an affluent of the Kapuwas, which falls into the sea below Pontianak, and is a principal station of the Chinese gold-diggers.

MANGA, a prov. W. Africa, Bornou, stretching from E. to W. along the S. frontier of the Tawarek for a considerable length, with a comparatively narrow breadth. The surface is undulated in downs of red sand, famous for the production of ground-nuts and beans. Both of these, constituting a large portion of the food of the inhabitants, are sown on the same field along with millet. The remarkable cornstacks, which form a singular feature in Hausa, but are unknown in Bornou proper, are in common use in Manga. Other marks of distinction appear. 'The Kanuri horseman, or the Koyam camel-breeder was here,' says Dr. Barth, 'supplanted by the Manga footman, with his leather apron, his bow and arrow, and his battle-axe, while the more slender Manga girl, scarcely peeping forth from under her black veil with which she bashfully hid her face, had succeeded to the Bornou female, with her square figure, her broad features, and her open or ill-covered breast.' The Manga owe their origin to a mixture of tribes.

MANGALAGHERRY, a tn. India, presid. Madras, dist. and 13 m. N.N.E. Guntoor. It stands on the great northern road, about 6 m. W. of the Kistna, and has a considerable trade in the white and red cloths worn by Mahometans and the natives generally. They are sent chiefly to Hyderabad and Jaulnah.

MANGALIA, or MANGALI, a tn. Turkey in Europe, Bulgaria, eyalet and 68 m. E.S.E. Silistria, on the W. coast of the Black Sea. Its roadstead, besides being exposed to the E. wind, is frequently visited by mists, which make the navigation uncertain and dangerous. Large vessels, however, can anchor abreast of the town about 1 m. from the shore in 5½ fathoms, and small vessels at only 300 yards from the shore in 4 fathoms. Pop. 7000.

MANGALORE [add.], a tn. India, presid. and 370 m. W. Madras, cap. prov. Canara, on the Malabar coast. It stands behind a backwater formed by the junction of the Balore with the Nellrawutti, and when viewed either from the sea or the adjoining heights has a rather picturesque appearance. The houses, however, are for the most part meanly built, and form not so much one single town as a number of distinct villages. It has no public buildings entitled to special notice. The harbour was much frequented in early times, and became under Hyder Ali and Tippoo Sahib a great naval arsenal, where a fleet of ships was built with the intention of rivaling those of Europe. After this preposterous idea was abandoned, the works were allowed to go to ruin; and the harbour, which had been previously protected against the encroachment of the sea, became in a great measure silted up, so that even native craft find access difficult. The trade, however, is still considerable, the chief exports consisting of rice, betel-nut, black pepper, sandal-wood, cassia, and turmeric, and the imports of salt, raw silk, sugar, oil, and glue. The cantonment stands on a gentle slope on the N. side of the town. The principal buildings are St. Paul's church, the mission-house and seminary of the Evangelical Mission of Basle, a large jail calculated to receive 500 prisoners, an hospital and a dispensary. Within the town the R. Catholics have a bishop's chapel, and three churches, with a school attached to each. Their congregations consist mostly of persons of Portuguese descent, or the descendants of natives, who, during the Portuguese supremacy, were forced to profess Christianity. The latter, though retaining many of their native customs, are extremely observant of the Romish rites and ceremonies. Pop. 18,931.

MANGANJA, a tribe of natives, S. Africa, inhabiting the country S. of Lakes Nyassa and Shirwa, between these lakes and the Zambesi, and on the Shire. The Manganja follow the pursuits of spinning, weaving, smelting iron, and cultivating the soil. They are an industrious race, and all the people—men, women, and children—work in the fields. Large crops of the *mapira* (*Holcus sorghum*) are raised, with millet, beans, and ground-nuts; as well as yams, rice, pumpkins, cucumbers, cassava, sweet potatoes, tobacco, and hemp. Maize is grown all the year round. Three varieties of cotton have been found in the country—two foreign and one native. The *longe manga*, or foreign cotton, is of excellent quality, nearly equal to the best New Orleans; it is perennial, but requires replanting once in three years. A considerable amount of this variety is grown in the Upper and Lower Shire valleys. The indigenous cotton is of shorter staple, and feels like wool; it makes strong cloth. Iron ore is dug in the hills, and each village has its smelting-house; and good axes, spears, needles, arrow-heads, bracelets, and anklets are made very cheaply. In the villages near Lake Shirwa the inhabitants largely manufacture pottery for cooking and other purposes, ornamenting it with plumbago found in the hills. Fishing-nets and baskets are also made, and exchanged with the fishermen on the river or lakes for dried fish or salt. Many of the men are intelligent-looking, with well-shaped heads, pleasing faces, and high foreheads; they take great pride in arranging their hair in a variety of ways, and adorn their bodies with a superabundance of rings upon the neck, arms, fingers, and legs. The women have a most remarkable fashion in the use of the *pelele* or lip-ring. The middle of the upper lip is pierced in youth close to the septum, and a small pin inserted in the puncture; afterwards a larger pin is put into it, and so on, the size of the pin being increased until a ring of two inches in diameter can easily be introduced.

The poorer classes make the pelele of hollow or solid bamboo, and the wealthier of ivory or tin. The Manganja are not a sober people, whole villages devoting themselves to the consumption of beer for days together, with much revelry. They believe in the existence of a Supreme Being, called Mpumbé or Morungo, and in a future state. Formerly all the Manganja were united under the government of their great chief, Undi, whose empire extended from Lake Shirwa to the river Loangwa; but after Undi's death it fell to pieces, and a large portion of it on the Zambesi was absorbed by the powerful southern people the Banyai. The tribe are much addicted to the slave-trade in connection with the Portuguese, and had themselves suffered so much from it at the hands of the stronger tribe of the Ajawa, that at the period of Dr. Livingstone's journey they were being rapidly lessened in both power and numbers.

MANGROL, a tn. India, Gujerat, peninsula of Kattywar, on its S.W. coast. It is a populous place, with a mosque, which is considered the finest in the peninsula; and carries on an active trade, though its harbour is very indifferent. There is another place of same name in the Rajpoot state of Kotah, where, on 31st Sept. 1821, Zalim Singh, then minister of Kotah, aided by the British, defeated the hereditary prince, Kishien Singh.

MANICA, a mountainous tract, S. Africa, furnishing the source of several of the S. affluents of the Zambesi; about lat. 18° S.; lon. 33° E. It is the richest gold-field in this part of Africa, long furnished the Portuguese with their chief supplies of gold, and still attracts numerous natives to its washings. The gold, often as large as grains of wheat, is collected by the natives in gossequills, for each of which they expect to receive 24 yards of calico. At Sofala, the nearest port to Manica, pieces of wrought gold have been dug up, and hewn stones, supposed to have belonged to ancient buildings, have been found. On such evidences and inferences from the Scripture narrative, some have concluded that Manica was the Ophir of Solomon, and Sofala the place where its gold was shipped.

MANIKPOOR, a tn. India, Oude, l. bank Ganges, 35 m. N.W. Allahabad. It extends about 1 m. along the river, but is a decayed place, and consists chiefly of wretched hovels, interspersed with ruins of handsome edifices which were pulled down for the embellishment of Lucknow. It still possesses an extensive brick fort, and a large and well-supplied bazar. The principal traders are money-changers and dealers in grain, cloth, and hardware. On the N.W. of the town is a large structure called Shahabad, which stands in the midst of a garden stocked with betel-nut and fruit trees, and is still occupied by a descendant of the rajah who built it, and was at the time sovereign of a large part of S. Oude. Pop. about 10,000.—There is another Manikpoor, dist. Budaon, 44 m. S.W. Bareilly.

MANITOBAN [add.], a lake, British America, between lat. 50° 25' and 51° 50' N., and lon. 98° and 100° W. It is of very irregular shape, and by means of deep indentations near its centre is divided into two nearly equal portions. Of these the southern is somewhat elliptical, and the northern is again subdivided by a neck of land, the E. side of which is washed by a part of the lake lying nearly due N., while its W. side is washed by a still larger part lying N.N.W.; the whole length from S.E. to N.W. is 120 m., and the breadth, where widest, is about 26 m. The depth within 100 yards of Steep Rock Point, on the N.E. shore, was found by soundings to be 3½ fathoms. In many places large boulders are piled up high upon the beach, with a swamp behind them; in other places horizontal beds of Devonian limestone of a pale buff colour stands close to the water's edge, and is worn into caves; and in not a few localities the beach is composed of water-worn pebbles strewed over a bank of sand. The surface of the lake is dotted with numerous small islands. One of these, which gives the lake its name, and is situated near its centre, where it is narrowest, is about 600 yards long by 200 broad. A perpendicular limestone cliff on its N. side contains a number of caverns. Neither these nor the other caverns on the islands and the shore are ever visited by the native Indians, because they believe them to be the abodes of fairies or *manitou*. 'The origin of this superstition in relation to Manitobah Island,' says Mr. Hind, 'is due to the sounds produced by the waves as they beat upon the beach

at the foot of the cliffs near its northern extremity. During the night-time, when a gentle breeze is blowing from the N., the various sounds heard on the island are quite sufficient to strike awe into the minds of the superstitious Indians. Those sounds frequently resemble the ringing of distant church bells; so close indeed is this resemblance that several times during the night I awoke with the impression that I was listening to chimes. When the breeze subsided, and the waves played gently on the beach, a low wailing sound would be heard at our camping place, about 300 yards from the cliffs where the noise was produced. At night it was peculiarly impressive, and as we lay on the moss-covered rock it was very easy to comprehend the objection which uneducated Indians, naturally of a fanciful and superstitious turn of mind, have to land or remain on this "fairy" island.' On the southern and south-western shores of the lake a series of splendid prairies commences, and stretches far back into the interior, and at its S.W. extremity, where its principal feeder, White Mud River, enters it, there is a fishery, where great numbers of white fish are caught. Lake Manitobah communicates on the N.W. with the Winnepegosis by the Water Hen River, and discharges itself on the N.E. by the Partridge Crop River, carrying its waters into Lake Martin, from which they are forthwith transmitted to Lake Winnepeg. On the W. side of Lake Manitobah the Hudson's Bay Company have a station called Manitobah House. The R. Catholic mission at the same place has been abandoned.

MANTOU, a river, British America, which has its mouth on the N. shore of the estuary of the St. Lawrence to the N.W. of Anticosti. The channel at its entrance is 60 yards wide, with a depth of 5 ft. at low water, 9 ft. in neap, and 12 ft. in spring tides. The depth within increases gradually for 1 m. to 5 fathoms. Here the first rapid occurs, and makes further navigation impracticable. Half a mile farther up, the Manitou plunges in one unbroken sheet of water over a precipice of granite and porphyry 113 ft. high, forming one of the most beautiful cascades to be found in Lower Canada.

MANTOWOC, a tn. U. States, Wisconsin, on the W. shore of Lake Michigan, at the mouth of a river of same name, in lat. 44° N. It is of very recent origin, but has already acquired an important trade, and is rapidly rising into importance. A large proportion of its inhabitants are Germans. Pop. (1860), 3055.

MANJERA, a river, India, which rises in lat. 18° 44' N.; lon. 75° 30' E., flows S.E. through the Nizam's Dominions, and joins the Godavery on its r. bank near the town of Sunglum, after a course of about 170 m.

MANKORE, OR **MANKAUR**, a tn. India, presid. Bengal, dist. and 22 m. N.W. Burdwan. It is a considerable mart for the rice which is extensively grown in its neighbourhood, and has a pop. of 8682.

MANPOOR, a tn. India, Rajpootana, state and about 55 m. E.N.E. Jeypoor, on the Baun or Banganga, a water course which becomes a large stream during the rains. It is surrounded by a ditch and by a mud rampart 12 to 16 ft. high, with eight good semicircular bastions, and has a population of about 4000.

MANSFIELD, a vil. U. States, Connecticut, on the Nachaug River, and on the New London, Willimantic, and Palmer railway, 24 m. E. Hartford. It is noted chiefly for its production of silk, which gives employment to several factories. The other industrial establishments are one woollen factory, two for cotton, three tanneries, four flour and five saw mills. Pop. (1860), 1697.

MANTA, a tn. S. America, Ecuador, prov. Mancavi, 110 m. N.W. Guayaquil. It is the principal port of the province, and notwithstanding a considerable swell has a good landing. The only danger is from patches of shoal which extend about three-quarters of a mile from the shore. The principal exports are straw-hats and hammocks.

MANYTSCHSKAIA, a tn. Russia, gov. Don Cossacks, circle Novo-Tcherkask, l. bank Manytsch; with three yearly markets and 3043 inhabitants.

MAPATIZIA, a small stream, S. Africa, a tributary of the Zambesi, which it joins on its l. bank, about 90 m. E. of the Victoria Falls. In its bed is much calc-spar, with calcareous schist, and the Tette gray sandstone which usually overlies coal.

MARAND, or **MEHRAND**, a tn. Persia, prov. of Azerbaijan, 35 m. N.W. of Tabreez, was once a flourishing and important place, and though shorn of its ancient glories, still contains upwards of one thousand houses. A garrison is maintained here, on account of its proximity to the Russian frontier.

MARAPI, the name of two active volcanoes in the Indian Archipelago. The one, situated on the S.W. of Sumatra, about 27 m. S. of the equator, has an estimated height of 9800 ft.; the other, situated near the centre of Java, about 35 m. S. Samarang, has a height of 9250 ft. Though evidently in a state of activity, there is no record of any great eruption, and hence the sides are in many parts cultivated two-thirds of their height.

MARAR, **THE BAAR** or **PRAIRIE OF**, a plain of the Somali country, E. Africa, stretching from N. to S. between the abutments of a rugged plateau on the E., and a range of cones called Gurays, shooting off from the highlands of Harar on the W. Its breadth is about 27 m.; its precise length is scarcely known. The N. portion of it belongs to the Eesa; the S. to the Habr Awal tribes. Its surface is gently rolling ground, with a soil of black earth, which proves its natural productiveness by the tall waving grass which grows upon it. It is broken by frequent wadies or water-courses, which can easily be traced even at a distance by their border of dense thickets of scrub and thorn trees, and the rich verdure of the grass. This prairie, which wants nothing but cultivation to cover it with fruitful cornfields, remains uncultivated, mainly because it would be exposed to incessant inroads, since on it, as neutral ground, the Eesa, Berteri, and Habr Awal meet to plunder unhappy travellers. It would seem that at one time cultivation had been attempted, for on its outer edge there are frequent vestiges of deserted kraals.

MARBLEHEAD, a tn. U. States, Massachusetts, on a peninsula which projects into Massachusetts Bay, and on a railway which connects it with Boston, from which it is 16 m. N.E. It has a deep and convenient harbour, and was noted from the first settlement of New England for the enterprise of its inhabitants in the fisheries. Of late years, however, these have been comparatively neglected, and the manufacture of boots and shoes has become the staple employment, which is carried on to a very great extent. The other chief articles produced are glue, ship-biscuit, and cakum. Many of the original settlers of Marblehead were from Jersey and Guernsey in the English Channel, and left such traces of their native speech behind them among their descendants as almost to constitute a peculiar dialect. During the war with Great Britain in 1812 a great number of privateers were fitted out here, and hence when peace was concluded no fewer than 500 of the citizens were found to be prisoners in England. Pop. (1860), 7646.

MAREB [add.], a river, Abyssinia, which rises in Mount Doro, near Ade Baro, on the plateau of Hamesen, about lat. 15° 20' N.; lon. 38° 50' E., flows first circuitously S.S.W., then N.W., and is finally lost in the marshes of Filik, about 40 m. N. Kassala. In the province of Taka it takes the name of Bahr- or Chor-el-Gash; and towards the end of the hot season, becoming dry, leaves only a number of swampy pools, the abode of crocodiles and hippopotami.

MARIA (**SENT**), a tn. Austrian empire, Hungary, co. Liptau, on the Waag; with a church, which is said to be the first that was erected after the introduction of Christianity into the country; and the ruins of a castle which originally belonged to the Templars, and was demolished by the Bohemian Taborites in 1426.

MARIAMPOL, a tn. Austrian empire, Galicia, circle and 12 m. N.E. Stanislaw, l. bank Dniester, nearly opposite to the confluence of the Bistritza; with a convent of the Sisters of Mercy, an old castle once a place of strength, an infirmary, and an hospital for the poor. Pop. 1880.

MARIA-NOSTRA, a vil. Austrian empire, Hungary, co. Honth, about 10 m. S.S.E. Ipoly-Sag; with an old Pauline monastery, and a female penitentiary and house of correction large enough to receive 500 convicts.

MARIA-POCO, a tn. Austrian empire, Hungary, co. Szabolcs, 30 m. N.N.E. Debreczin; with a Basilian monastery and a chapel, to which numerous pilgrimages are made. Pop. 1400.

MARIA-THERESIOPEL, a tn. Austrian empire,

Banat, circle and 35 m. N.E. Zombor, on Lake Palitsch, near the frontiers of Hungary. It consists of a royal free town and 16 suburbs; and has several churches, of which the high church and a handsome Greek church are particularly deserving of notice; a Franciscan monastery, with a fine church, a gymnasium for which handsome buildings have been provided, a townhouse, large barracks, a town-hospital, extensive manufactures of linen and boots and shoes, tanneries, dyeworks, four yearly markets, and an extensive trade in horses, horned cattle, sheep, raw hides, and wool. Pop. 53,499.

MARIENBURG, a tn. Austrian empire, Transylvania, circle and 12 m. W. Kronstadt, cap. dist. of same name; with the ruins of an old castle built by the Teutonic knights. In the vicinity the Siebenburgers were defeated by the Moldavian voivod Peter in 1529. Pop. 1900.

MARIETTA [add], a tn. U. States, Ohio, cap. co. Washington, at the confluence of the Muskingum, and at the terminus of the Marietta and Cincinnati railway, 80 m. S.E. Columbus. It consists of wide streets and neatly built houses, and contains a court-house and jail, twelve churches, a college, with 5 professors, 56 students, and a library of 15,500 volumes; a lyceum, a western liberal institute founded by the Universalists, two academies, and a union school. Marietta, which was settled in 1788, and named in honour of Marie Antoinette, is the oldest town in the state, and must occupy the site of a place so ancient that no record of it remains, though the fact of its existence is placed beyond a doubt by a group of ancient works consisting of two large irregular squares with a covered way and sundry mounds and truncated pyramids. Pop. (1860), 4323.

MARIGUANA, an isl. West Indies, situated among the E. portion of the Bahamas, is 25 m. long from E. to W., 6 m. broad at its W. end, about 4 m. at its E. end, but not 2 m. across at its centre. Its general height above the sea does not exceed 30 ft.; but near its centre there is a hill which rises to the height of 100 ft., and behind its S.E. point there is a long flat ridge 90 ft. high. Its inhabitants, who in 1857 amounted only to 20, reside at Belsey Bay, near the W. extremity. Its W. side is so bold that soundings do not reach more than 200 yards from the shore. The anchorages, of which there are several, are fit only for coasters of light draught. Good water is found, and wood abounds on the island.

MARIINSK, a tn. Russian empire, Manchooria, on that branch of the Amoor which communicates with Lake Kidze; lat. 51° 40' N.; lon. 140° 20' E. It was founded in 1851 to serve as a trading post of the Russo-America Company, and in 1855 extended for some distance along the river, and was defended by two batteries. The intention was to make it the chief settlement on the river; but owing to the insufficient depth of water, this intention was abandoned. The batteries have in consequence been dismantled, and the government establishments have been removed to the newly founded town of Sofyesk. A road leads from Mariinsk along the N. shore of the lake to Castries Bay.

MARILE, a river, S. Africa, a branch of the Liambye, which, quitting it by its l. bank in lat. 15° 15' 43" S., flows S., and by again uniting with the main stream converts the whole of the intervening country into an island. Dr. Livingstone, who sailed down this branch from its departure to its reunion with the Liambye, found it to be a fine deep stream, about 60 yards wide.

MARINDUQUE [add.], an island, Indian Archipelago, belonging to the Philippines. It forms part of the prov. Mindoro, lying between this island on the N.W. and Luzon on the E. It is about 33 m. long by 20 m. broad, and has an area of 373 geo. sq. m. Its soil, naturally fertile, is much improved by irrigation, and produces rice in such abundance as to leave a considerable surplus for export. Malagi, on its S. coast, affords a safe and commodious haven for coasters. Pop. about 20,000.

MARINE, a group of islands, S. America, Chili, in the Gulf of Cape Tres Montes, lying in lat. 46° 58' 57" S.; lon. 75° 27' 50" W. It was so named by Byron, because four of its marines had voluntarily remained on shore during his perilous boat voyage after the wreck of the *Wager*. On one of the islands a mountain called the Sugar Loaf rises to the height of 1840 ft., and forming a very conspicuous object,

was seen by him the day before his shipwreck. To another equally remarkable mountain, situated upon the mainland, about 6 m. from the Sugar Loaf, and 2284 ft. high, he gave the name of the Dome of St. Paul. The Gulf of Cape Tres Montes, in which the group lies, occupies a space of 16 m. by 12 m., and the cape itself, forming the S. extremity of the peninsula of Taytao, is a bold and remarkable headland, which rises from the sea to the height of 2000 ft., and being free from all outlying dangers, is one of the safest and easiest of landfalls.

MARION, a vil. U. States, Alabama, cap. co. Perry, near the Cahawba River, and on the Alabama and Mississippi railway, 136 m. N.N.E. Mobile. It has five churches, a Baptist college, an academy, two large female seminaries, and a number of flourishing private schools. Pop. (1860), 1408.

MARIVELES, a tn. Philippine Isles, on the peninsula which forms the W. side of the Bay of Manila, in the island of Luzon. It is situated between two small rivers, which fall into its harbour, and consists of 233 houses. The chief productions of the vicinity are rice, maize, sugar-cane, cotton, and the abaca banana. Pop. 1402, mostly employed in fishing.

MARJA (Kis), a tn. Austrian empire, Hungary, co. S. Bihar, 14 m. N. by W. Grosswardein; with the ruins of an old castle, and weekly and yearly markets. Pop. 1900.

MARKHAM, a tn. British America, Canada West, co. York, 14 m. N.N.E. Toronto. It stands on the Rouge, a fine stream rising in the ridges of Whitechurch, and falling into Lake Ontario; and possesses five churches and several schools, a foundry and machine works, tanneries, and manufactures of agricultural implements, carriages, &c. Pop. about 1000.

MARKOVCHA, a vil. European Turkey, 15 m. S.E. Shumla. It is a flourishing place, with larger houses than usual, all of them neatly tiled, and some of them of two stories. Within it are two Roman fountains.

MARKTSCHHELLKEN, a tn. Austrian empire, Transylvania, circle and 17 m. N. Hermannstadt, cap. dist. of same name; with a large trade in wine, and 1360 inhabitants.

MARLBOROUGH, a prov. New Zealand, forming the N.E. portion of South Island or New Munster, is bounded N. and E. by Cook's Strait and the ocean, and S. and W. by Nelson; extreme length, 140 m.; extreme breadth, 60 m.; area, 2,500,000 ac. The S.E. portion consists mainly of the Wairarapa plains, one of the finest sheep districts in New Zealand; the N. is rugged and densely wooded, and has its coast indented with havens, creeks, and bays of every size and shape. Queen Charlotte's Sound, situated near its centre, and about 25 m. long, forms a gigantic ocean dock capable of receiving the whole British navy. Pelorus Sound is still more capacious, and embraces about 250 m. of shore and beach. From the edge of the water behind these creeks and bays the mountains rise at once so abruptly as scarcely to leave any margin whatever available for cultivation. Picton, the capital, though still insignificant, is so advantageously situated on a deep sea harbour formed by an arm of Queen Charlotte Sound, that it can hardly fail sooner or later to rise into importance.

MARLING, a tn. Austrian empire, Tyrol, circle Brixen; with an infirmary and a poorhouse. In the beautiful surrounding district there is a much-frequented bathing establishment. Pop. 1200.

MARSHALL, a tn. U. States, Michigan, cap. co. Calhoun, on Kalamazoo River and the Michigan Central railway, 70 m. E. Lake Michigan. It possesses ten churches, several schools, and a number of mills and manufacturing establishments. Pop. (1860), 3736.

MARTE, a tn. Western Africa, Bornou, near the S.W. extremity of Lake Chad, 40 m. S. by E. Kukawa. It has a clay wall in good repair, with two gates leading to the market, and one gate in each of the other sides; and consists for the most part of clay buildings lining narrow lanes. Besides the town proper, there is a suburb of large conical thatched huts. Pop. estimated at 4000.

MARTELLAGO, a tn. Italy, prov. and 10 m. N.W. Venice; with a parish church, and 2659 inhabitants.

MARTHA'S VINEYARD [add.], an isl. U. States, off the S. coast of Massachusetts, separated from the mainland

by Vineyard Sound. It has a length of 21 and an average breadth of 6 m., and a surface generally level and tolerably well wooded. It forms the principal part of co. Dukes, containing the three towns of Edgartown, Chilmark, and Tisbury; and contains 4401 inhabitants, whose chief employment is fishing.

MARTIN GARCIA, an isl. S. America, La Plata, situated at the head of the Rio de la Plata, about 30 m. N. Buenos Ayres. It is composed chiefly of granite, and possesses some military importance from its being supposed to command the only navigable entrances of the Parana and the Uruguay. This has since been ascertained to be a mistake, as other channels besides that of Martin Garcia are known to exist; but on the assumption of its accuracy, Britain, France, and the United States, in concluding a treaty in 1853 for the free navigation of the Parana and Uruguay, inserted a clause in which they agreed 'to use their influence to prevent the possession of the said island (Martin Garcia) from being retained or held by any state of the River Plate, or its confluents, which shall not have given its adhesion to the principle of their free navigation.'

MARTINSBERG [add.], a tn. Austrian empire, Hungary, co. and 10 m. S. Raab, cap. dist. and at the foot of a mount of same name. It is the seat of a court of justice, and has a trade in corn and wine. On three eminences on the mount stands a Benedictine abbey founded by St. Stephen, with a beautiful church containing objects of art brought from the East, and an ivory altar. There is also a library, with a cabinet of coins and other curiosities. Pop. 2539.

MARTSCHANNE, a tn. Turkey in Asia, Karamania, 30 m. W. Kaisarieh. It is properly a Troglodyte village. The houses, or rather caverns, which the inhabitants occupy number about 225, and are all in possession of Moslems. It was otherwise in early times, when the Christians, fleeing from persecution, here found an asylum, and hence one of the most interesting of the structures is a chapel or church on which a good deal of architectural skill and labour has been bestowed. In front is a row of pillars bound together by iron rods; the interior, which has the altar entire and the walls covered with frescoes in tolerable preservation, is so spacious as to be well adapted for a place of worship. The dwellings of the early Christians are of course of ancient date; but many of the excavations are evidently modern, having been made to meet the wants of an increasing population.

MARUNGU, a territory, Central Africa, washed on the N. by the Tanganyika Lake; its other boundaries are not defined. According to the Arabs it is a hilly country like Ujiji and Uvira, though the heights bordering the lake have less elevation than these districts. The inhabitants bear a bad name, but Arab merchants have often visited them without sustaining any injury. They are a dark and uncivilized race, and of a surly and stubborn temper, which makes them little valued as slaves. They are almost constantly at war with their neighbours. A river, which, passing through their country, bears the same name, is said to be one of the most important feeders of Lake Tanganyika, which receives its waters at its S.W. extremity. At present nothing more is known of it.

MARYSVILLE, a tn. United States, California, cap. co. Yuba, on the Yuba, a mile above its junction with the Feather, 110 m. N.N.E. San Francisco. It contains Episcopal, Presbyterian, Methodist, Baptist, and R. Catholic churches. The population is largely increased by the influx of miners during the rainy season, when they are obliged to discontinue operations. Pop. 4740.

MARZDORF, a tn. Austrian empire, Bohemia, circle Küniggrätz, near the frontiers of Silesia; with a church and three mills. At the W. end of the place there is a remarkable rock, with a natural passage through it called the Stone Door.

MASAYA, a tn. Central America, Nicaragua, 12 m. N.W. Granada. It stands in the centre of a very fertile district, and the inhabitants, chiefly Indians, are distinguished for their general industry, and the manufacture of hats, saddles, hammocks, cordage, &c. In the vicinity is a lake of same name, from the N.W. border of which the volcanic mountain of Masaya rises to the height of 3500 ft. As its last eruption took place in 1670, it was supposed to be extinct, but within

the last few years it has begun to show signs of activity, and in 1860 sent out great volumes of smoke, which at night were illuminated from below with a lurid glare like a furnace. Pop. 15,000.

MASBATE [add.], an isl. Indian Archipelago, belonging to the Philippines, and situated between Luzon on the N.E., Samar on the E., and Panay on the S.W.; area, 2334 geo. sq. m. It is traversed throughout by a crescent-shaped mountain chain, and has apparently a sterile soil without natural facilities for irrigation. A considerable quantity of gold is washed from its sands. Masbate, along with the smaller island of Ticao, forms one of the Philippine provinces. Its capital, San Jacinto, situated on the latter island, has a good harbour. Pop. 5849, or only 2·3 to the square mile.

MASCHISCHI-KUITU, a vil. S.W. Africa, territory and about 20 m. N.W. Komboka-an-Bihé, on a river and in a beautiful valley of the same name. It consists of houses constructed of poles with clay between them, and thatched with cane. To each house one, and sometimes two, well-fenced courts are attached, and throughout there is a general appearance of neatness and comfort. Ladislaus Magyar, the African traveller, has made this village his home.

MASCOUCHE, a tn. British America, Canada East, co. L'Assomption, 1. bank St. Lawrence, 20 m. N. Montreal; with a R. Catholic church and college, and a considerable trade in potash, flour, and lumber. Pop. about 3000.

MASENA, a tn. Western Africa, cap. of Bagirmi, 100 m. S.E. Lake Chad, and 200 m. S.E. Kukawa. The wall, which is in a state of great decay, has a circuit of about 7 m., but not more than half of the area thus inclosed is inhabited. There are nine gates, most of them on the S. side, and not a single one on the N., because in this quarter it is overgrown with jungle. The houses, some of them of clay, and more of reeds and straw, are generally well constructed, and thatched with care and neatness. The streets are very irregularly formed; indeed from the unevenness of the site it could hardly be otherwise. A deep trough-like depression intersects the town from E. to W., and becoming during the dry and the rainy season alternately clothed with verdure and filled with water, renders the air almost pestiferous. To add to the mischief, all the sewage of the place finds its receptacle in this trough, or *beda*, as it is called. On its S. side stand all the principal buildings, including among others the sultan's palace, built of baked bricks, and inclosed by a wall 18 ft. high and 10 ft. thick, the residences of the principal officials, and a mosque with a minaret. There is no appearance of industry, and the market, which is of limited dimensions, is indifferently supplied. The principal articles exposed in it are grain, beans, ground-nuts, salt, natron, milk and butter, turkenis from Kano, honey, and red pepper retailed in small parcels by Bornou traders. The most important article from Europe is beads, especially the small red ones, which are sold in large quantities to be carried to other countries. Ivory is sold not in the markets, but in the houses of the traders; the same rule being followed in regard to slaves, it is impossible to form any estimate of the number sold.

MASHENA, a tn. Central Africa, Bornou, cap. dist. of same name, 130 m. N.E. Kano. It occupies the S. slope of a height crowned with a rocky crest, is inclosed by a ditch, a thorny fence, and a clay wall. It has not the least sign of industry, the government being too weak to protect the rights of property, or punish the constant depredations of its own officials. The greatest ornament of the district is the tamarind-tree. Pop. at least 10,000.

MASKINONGÉ, a tn. British America, Canada East, cap. co. of same name, 1. bank St. Lawrence, 55 m. N.E. Montreal; with a R. Catholic church, several tanneries, a saw, grist, carding, and fulling mill, and a general trade. Pop. about 4000.

MASSANGANO, a tn. S.W. Africa, Portuguese Settlements, prov. Angola, at the confluence of the Lucatta with the Coanza, 110 m. S.E. Loanda. It is situated on a tongue of rather high land between the rivers, composed of calcareous tufa with great numbers of fossil shells, and is defended by a fort of small dimensions, but in good repair, and containing some very ancient guns which were loaded from the breach. Its two churches, two convents, and hospital are mere ruins, and there is now neither priest nor schoolmaster in the town. The district is well adapted for sugar and rice, and the Coanza,

which is a noble stream about 250 yards wide, notwithstanding a bar at its mouth, is navigable by large canoes, of which ten or twelve laden with country produce pass here daily. Massangano was a very important town when the Dutch held possession of Loanda, but on their expulsion in 1648 was allowed to sink to its present decay. Pop. of tn. 1000, of dist. 28,063.

MASSILLON, a tn. U. States, Ohio, on the Tuscarawas, the Ohio canal, and the Pittsburg, Fort Wayne, and Chicago railway, 180 m. N.E. Cincinnati. It possesses seven churches, a woollen factory, three machine shops, three foundries, and carries on an active trade in grain, flour, and wool. Pop. (1860), 3819.

MASSONGHO, or **KISSENDI**, a territory, S.W. Africa, Kimbunda country, between lat. 9° 20' and 11° S.; lon. 17° 20' and 18° E.; bounded N. and E. by the Coanza, S. Bihé, and W. Andulo and Bailundo; area about 4500 sq. m. It consists of finely undulating plains, on which large forests alternate with still larger grassy prairies, is well watered, and produces much manioc, maize, and wax, which find a market at Porto-Andango. The inhabitants are a thievish, stiff-necked, and superstitious race. Pop. 100,000.

MASULIPATAM [add.], a tn. India, presid. and 220 m. N.N.E. Madras, on a low flat on the Bay of Bengal, near one of the mouths of the Kistnah. It consists of the pettah or native town, the fort, and the cantonment. In the pettah, which extends about 3 m., the houses of a better description are built of brick or mud, of a convenient height, with gilded doors and small windows, while those of the poorer classes are wretched huts of a conical form, and constructed of bamboo thatched with palmyra leaves, and possessing a single entrance which better deserves the name of a hole than of a door. The fort, situated about a mile to the S.E., stands in the middle of a swamp, and is reached from the town by means of a causeway. It is in the form of a rectangle, 800 yards long by 600 broad, inclosed by high walls and a wide, but shallow, ditch. Within it are the arsenal, powder-magazine, garrison hospital, barracks for a European regiment, a Protestant and a R. Catholic church, and residences for several of the European officers, who, however, seldom occupy them. The cantonment, which adjoins the pettah, is about 4½ m. long by 1 m. broad. It is irregularly laid out, and has many inequalities, which, becoming filled with water during the rains, remain as stagnant pools, till the air evaporates or the light sandy soil absorbs them. The public buildings within the cantonment are the provincial and zillah courts, the collector's cutchery, the jail, the barracks for a native regiment, the lines for a company of artillery, and a chapel. Religious ordinances and instruction are further provided for, in addition to the churches already mentioned, by a Protestant and a R. Catholic church within the pettah, and by three ordained missionaries, a catechist, and two assistant schoolmasters belonging to the Church Missionary Society. The manufactures consist chiefly of cotton goods, plain or printed, including towels, table-linens, tartans, gingham, and chintzes. These about half a century ago were carried on to such an extent, that the trade to the Persian Gulf amounted in value to about half a million sterling. In consequence of British competition it has dwindled down to about £10,000. In the heart of the pettah the French possess a patch of ground about 300 yards square. It is called France Pettah, and being excluded from the jurisdiction of the British authorities, is an inveterate nuisance, being full of toddy-shops and smugglers. Pop. 27,884.

MATAGORDA, a tn. U. States, Texas, cap. co. and near a bay of same name, 80 m. S.W. Galveston. It stands on a high prairie, contains two churches, an academy, and a number of stores; and, as an entrepôt for the produce of the fertile Colorado valley, carries on a considerable trade in cotton, sugar, rice, and corn. In 1854 it was nearly destroyed by a great storm, which blew down most of the houses, but it has since been rebuilt in an improved form. White pop. 1200.

MATAMORAS, a tn. Mexico, dep. Tamaulipas, r. bank Rio Grande del Norte, about 10 m. above its mouth in the Gulf of Mexico. It consists of houses, which, at least in the interior of the town, are built of brick; but the streets are unpaved, except on the sides, where there is a brick pavement for foot passengers. The best part is the public square. Here stand the church, a handsome structure, the townhouse,

and the custom-house, with a number of private dwellings of elegant appearance. The site of Matanoras is unfortunate. On three sides it is surrounded by lagoons, and at the same time the Rio Grande embraces its northern and southern sides nearly in a semicircle. The consequence is that during the rainy season it is so flooded that many of the lower streets become impassable, and during the dry season the swamps left by the inundations become almost pestilential. Agriculture and the rearing of horses and cattle are the chief occupations. Pop. about 7000.

MATAN, a river, British America, Canada East, formed by a N.E. and a S.E. branch, the latter of which is said to issue from a lake of considerable dimensions, flows circuitously N.W., and falls into the St. Lawrence, on its r. bank, in co. Rimoeke. Its course, calculated from its most distant source, is supposed to be about 60 m. Its bar, which is continually shifting in gales of wind, has usually a depth of 4 ft. at low water, and of 15 ft. at high water springs. Inside the bar the entrance is not more than 60 yards wide, and the channel is encumbered by large boulders, which, diminishing the depth, become extremely dangerous when there is any swell.

MATAN, a tn. on the W. side of Borneo, cap. state of same name, about lat. 1° S.; lon. 110° 35' E. It stands at a considerable way up a river of same name, which, owing to a bar, is navigable only for boats, and consists of about 300 houses, inhabited almost exclusively by Malays. The state is at present included in one of the Dutch provinces.

MATANÉ, a tn. British America, Canada East, co. Rimouski, r. bank St. Lawrence, 240 m. N.E. Quebec, with a R. Catholic church, several schools, a small debt court, a tannery, a trade in lumber, and an important fishery. Pop. about 1500.

MATAQUITO, a river, Chili, which bounds provs. Talca and Colchagua, and is formed by the junction of the Lontic and the Teno, the former of which has its source near the centre of the Andes, in the snowy Cerro del Medio. From the point of junction the Mataquito flows nearly due W., and falls into the Pacific in lat. 34° 28' S.

MATARA, a tn. La Plata, prov. and 100 m. E. Santiago del Estero, r. bank Salado. It has a central position, and was once a place of some consequence, though its population does not now exceed 500. This declension is mainly owing to the abandonment of *estancias*, and the removal of families to other parts, in consequence of the frequent forays of the Indians, who, crossing the Salado by night, descend suddenly upon the country, drive off horses and cattle, kill all who oppose them, and before dawn have disappeared in the wilds of the Chaco.

MATARAM, a prov. Indian Archipelago, Java, situated nearly in the centre of the island, is bounded N. by Kadu, E. Pajang, S. the sea, and W. Baglen. The mountains of Marapi and Sumbing, to the N. of it, send down perennial streams, which, giving ample facilities for irrigation, have made nearly the whole of it one ample sheet of luxuriant cultivation. Mataram forms the principal part of the dominions of the chief, who bears the title of sultan, and is said to have about 350,000 subjects.

MATARAM, a tn. Indian Archipelago, situated on the W. side of the island of Lombok, about 3 m. inland, consists of regular streets which cross at right angles, and of houses of mud thatched with the palmetto leaf. It is surrounded by a hedge of bamboo, and a barricade resembling a *chevaux de frise*, and contains near its centre two palaces belonging to the rajah, who has made it his capital. A well constructed road, with an avenue of fig-trees, leads to Ampanan, which is its port. The inhabitants are chiefly Balinese.

MATAURA, a river, New Zealand, which rises in the S. of Middle Island, or Munster, and flows nearly due S. into Tootes Bay, in Foveaux Strait. It drains a large extent of valuable country, but as it approaches the sea overflows a considerable tract of flat land. The depth on its bar at low water is only 2 ft.

MATCHIN, or **MACSIN**, a tn. Turkey in Europe, in the N.E. of Bulgaria, eyalet and 83 m. N.E. Silistria, on the r. bank of the Danube, nearly opposite to the place where the numerous branches into which the river had previously divided again unite. It is defended by two bad castles, and was taken by the Russians successively in 1809, 1828, and

Supp. Imp. Gaz.—Vol. II.

1854. Its importance as a strategical position in former times was its proximity to Braila, which served as a *tête de pont* to it, and by means of which the Turks turned Walachia, penetrated into Moldavia, and commanded the whole of the lower Danube. Pop. 3000.

MATELLE, a tn. Ceylon, Central Province, cap. dist. of same name, picturesquely situated in a valley inclosed by magnificent hills, partly covered with forest, and partly occupied as coffee plantations, 15 m. N. Kandy. It figures much in the early history of Ceylon, having been one of the residences of its kings 90 years before the Christian era. Though not possessed of any architectural antiquities to attest its former importance, several of the wealthiest of the Kandyan chiefs still select it for their residence, and traces of ancient luxury may still be discovered in the occupations of the inhabitants. They excel in carving ivory, and in chasing the elaborately ornamented knives and swords formerly worn at the Kandyan court. They weave delicate matting for covering couches, and by means of a peculiar lacquer, prepared by mixing the colours with a resinous exudation obtained from a shrub (*Croton lacciferum*), paint and ornament the covers of books, walking-sticks, the shafts of spears, and the handles of fans for the priesthood. About 2 m. N. of Matelle the road passes within sight of the Alu Wehara, the temple in which, a century before the Christian era, scribes employed by the Cinghalese king reduced to writing the doctrines of Buddha, which had previously been preserved by tradition alone.

MATIAMVO, a tn. S.W. Africa, in the country of the Balonda, about lat. 8° 20' S.; lon. 23° 20' E. It is the residence of Matiamvo, who gives it its name, and is the paramount chief of all the Balonda, but very little is known of it. The surrounding country is said to be well peopled. The inhabitants, however, possess no cattle, and the trade is very limited, consisting chiefly of ivory and slaves, bartered for calico, salt, gunpowder, coarse earthenware, and beads. Though Matiamvo's power is absolute, his rule is said to be mild.

MATTA BONG, a tn. Siam, cap. prov. and on both sides of a river of same name, in the centre of a large plain, about lat. 13° 10' S.; lon. 104° E. The country for nearly 100 m. around it is flooded soon after the commencement of the rains, travelling becomes impossible, except in boats, and the wild animals take refuge among the mountains. The Mattabong River, augmented by the Kimbirri and the Tasawai, is one of the chief feeders of King's Lake, or Tale Sab, situated to the N.E.

MATFIGHOFEN, a tn. Austrian empire, Upper Austria, circle of the Inn, cap. dist. of same name, in a romantic neighbourhood, 53 m. W.S.W. Linz. It is the seat of several public offices, and has an imposing parish church, an old castle, several Roman antiquities, a poorhouse, a female endowment, and various manufactures; and contains 1300 inhabitants.

MATUCONG, an isl. on the W. coast of Africa, 50 m. N. Sierra Leone. It is separated from the mainland by a channel which is not more than three-quarters of a mile wide, is chiefly composed of lava capped with two large pieces of granite, and, though only a mile long, and surrounded in all directions by rocks and mud-banks, is remarkable for the beauty of its appearance. This beauty consists in its gentle slopes, which are in striking contrast to the low swampy tract opposite, in the luxuriance of its trees, and the rich verdure of those spots which have been cleared. The island is the property of a merchant of Sierra Leone, who rears great numbers of cattle upon it.

MATUMMA, or **EL METEMMEH**, a tn. N. Africa, Nubia, cap. dist. of same name, l. bank Nile, 90 m. N.N.E. Khartoom, lat. 16° 38' N.; lon. 33° 18' E. It is a place of some importance, with a garrison of Turkish irregular cavalry, or Bashi Bazoos, and consists partly of houses of sun-dried bricks, and partly of round huts made of the *dourra* or maize, each with a round court attached. Properly speaking there are no streets, each inhabitant erecting his own house or hut wherever he pleases. All appearance of regularity and symmetry is thus lost, except toward the centre, where there is a large open space in which an important weekly market is held. Matumma is celebrated for the manufacture of coarse cotton scarfs, with blue or red borders, the common dress of both sexes in Soudan.—(*Petherick*.)

MAUCH CHUNK, a tn. U. States, Pennsylvania, cap.

co. Carbon, on the Lehigh, at the mouth of Mauch Chunk Creek, 70 m. N. by W. Philadelphia. It is built chiefly on the creek, in a spot so hemmed in by the Mahoning and Sharp Mountains that there is no room for gardens to the houses, and it derives all its importance from the coal and iron mines in its vicinity. Both are extensively worked, and supply material to several blast-furnaces, of which two of large dimensions are close to the town. Pop. (1860), 4008.

MAULE, a prov. Chili, bounded N. by the river of the same name, S. by the Itata and province of Nuble, E. by the Andes, and W. by the Pacific Ocean; about 150 m. long, and 60 broad. The river Maule, one of the largest in Chili, traverses it in its whole extent, and rises from the slopes of the great mountains Campanario and Descabezato, and in its course westward receives many tributaries, some of no small note, such as the Melado, the Longomilla, Pichaman, and Raices, which raise it at last to the dignity of a great river. It falls ultimately into the Pacific, forming a bar at its mouth difficult at all seasons and sometimes dangerous; it is, however, navigable by vessels of 300 tons as far as its confluence with the Longomilla. The Maule was the limit of the Peruvian conquests under the Incas prior to the arrival of the Spaniards; and here also the latter had to encounter the onslaught of the fierce Promanaes, who occupied the southern bank of the river, and for a time successfully disputed its passage. The land is everywhere of the richest description; it yields its fruit with a bountiful hand and with little labour. It produces maize, pulse, wheat, barley, timber, excellent cheese, wine, cattle, and salt, large supplies of which find their way to other provinces, and particularly to Valparaiso, being conveyed down the Maule as far as the port of Constitution, and thence coastwise to the northern parts of Chili. The country abounds in timber, remarkable for strength and durability, and therefore well suited for shipbuilding, a branch of industry which has for some years engaged the attention of the inhabitants, and seems on the increase. It also possesses gold washings, but not of any great value. The chief town of the province is Cauquenes, situated in a narrow valley near the Andes, and with a pop. of 3191. The hot springs of this place have long enjoyed great and deserved celebrity in Chili, and are much frequented by invalids from every part of the country. Some of the springs have a very high temperature, and act very powerfully in rheumatic and cutaneous diseases. The scenery of the environs is of the most romantic and attractive kind, and the climate eminently salubrious. Pop. 118,309.—(*Guía de Chili; Repertorio Nacional.*)

MAUNGAMAKA, a river, New Zealand, in the N. of North Island or Ulster, though only a tributary of the Hokianga, is of considerable importance, being navigable for 3 m. at low water for vessels drawing under 12 ft., and also much used in floating down timber.

MAUTERN, a tn. Austrian empire, Lower Austria, r. bank Danube, opposite to Stein, with which it communicates by a bridge, 37 m. W.N.W. Vienna. It is the seat of several public offices, occupies the site of the Roman Mutara, and has a church with an ancient tower, a castle, an hospital, and a trade in wine, which is produced to a large extent in the district.

MAUVALEEKARRAY, a tn. India, presid. Madras, dist. Travancore, 52 m. S.S.E. Cochin. It consists chiefly of a large and regular fort, of a square form, about 2 m. in circuit, and surrounded by a wall of red stone and mud, with 24 bastions, and a gateway on each side. The interior is laid out in neat streets, which cross at right angles, and are lined with compounds and houses belonging to Nairs, who form the great body of the population. In the centre is an ancient pagoda; on the S. side a spacious palace, where some of the rajah's relatives reside; and on the E. side several public offices. Outside the fort there is a long street inhabited by native Christians, who have a neat church.

MAWO, a tn. Western Africa, Kanem, of which it is considered the capital, 50 m. N.E. of Lake Chad. It is surrounded by a wall with a much more ample circuit than the present population requires, and is adorned with a great number of date-trees. Owing to the unsettled state of the country the weekly market has lost its importance, and it is even difficult to say where the power of government resides. The rival states Waday and Bornou both claim it, and hence there

are generally two khalifas or governors in the place, the one actually in power, and the other on the watch for an opportunity to expel him. The inhabitants seem to belong to a peculiar race. Near Mawo are several favoured valleys; where the date-tree grows in greater or less abundance. The most famous of these is the large valley of Karafu. Pop. about 4000.

MAYON, an active volcano, Philippine Isles, in the S.E. of the island of Luzon. It forms part of the great Cordillera which traverses the island, and has its crater in lat. 13° 14' 40" N.; lon. 123° 34' 10" E. Repeated eruptions have occurred since the first arrival of the Spaniards. One in 1766 destroyed the town of Malinao, and did great injury to Albay, the capital of the province, and four other towns; another in 1814 destroyed the entire town of Albay.

MAYOR, or TUHUA, an isl. New Zealand, in the Bay of Islands, on the N.E. coast of North Island or Ulster, about 14 m. from the mainland, from which it is separated by a channel from 40 to 50 fathoms deep. It is 2½ m. long by 1½ m. broad, has a circuit of 7 m., and rises in its N. peak to the height of 1100 ft. Its centre is an extinct crater, with a stagnant pool in its bottom; its W. face is covered with blocks of obsidian, which give it a remarkably dazzling appearance when reflecting the sun's rays; near its S.E. extremity is a pah, strongly defended by a deep and partly artificial cut through which assailants must approach, as the other sides have steep cliffs down to the water. Immediately W. of the pah is a bay, with anchorage over a sandy bottom.

MAYSVILLE, a tn. United States, Kentucky, cap. co. Mason, on the Ohio, 60 m. S.E. Cincinnati. It is built along a bend of the river, and has a background of hills, which give it a very attractive appearance. It contains county buildings, a handsome city hall, seven churches, many schools, and an hospital, and is extensively engaged in the manufacture of cotton and hempen fabrics. It has moreover several iron foundries, a large coal-oil refinery, and a large bagging factory. Its hemp market is the most extensive in the United States. Pop. (1860), 4106.

MAZATLAN [add.], a seaport tn. Mexico, dep. Cinaloa, on a bay of the Pacific, lat. 23° 11' 48" N.; lon. 106° 23' 45" W. It has a very picturesque appearance, both by sea and land, all the houses being either whitewashed or painted in light colours. Part of the houses are crowded together immediately beneath some detached rocky hills of a conical shape which are situated on the N. side, and project so far as to be washed by the sea; but the best portion of the town occupies a lower level, facing either the harbour or the roadstead. Both of these are well protected on the S. by some rocky islands, but when the S.W. wind blows, large vessels, which from the shallowness of the harbour are obliged to anchor in the roadstead, are completely exposed. Though the streets are rather narrow, Mazatlan is on the whole regularly and substantially built, many of the houses, particularly in the street leading from the plaza to the roadstead, being built either in the old Castilian style, with short columns, Moorish capitals and ornaments, or in a style of elegance and comfort more in accordance with modern taste. The plaza, on which most of the public buildings are situated, is a fine large square, planted all round with orange-trees, and inclosed by iron railings and stone benches. The shops are generally well supplied, and there is a large wholesale and general trade carried on mostly by foreigners. The principal exports are silver dollars, Brazil or Lima wood, and copper in regulus; the imports, quicksilver, provisions, British crockery and hardware, French and German dry goods, tea, flour, and machinery. The government monopoly of tobacco and cigars, owing to the universal consumption, produces a large revenue. The pop., estimated from 12,000 to 15,000, is much mixed, consisting of Spaniards, Old Aztec Mexicans, Indians, and negroes.

MAZITE, or MAZITU, a tribe of natives, S. Africa, occupying the country W. of the northern part of Lake Nyassa, about lat. 11° 30' S.; lon. 33° E. They live in the highlands, and are Zulus who came originally from the south, inland of Sofalla and Inhambane, and are of the same family as those on the Zambesi. At the time of Dr. Livingstone's exploration they were spreading themselves over the adjacent country, murdering and enslaving the inhabitants, and burning their villages. The population had all been swept away;

ruined villages, broken utensils, and human skeletons, met with at every turn, told a sad tale.' Dr. Livingstone himself is reported to have fallen a victim to the ferocity of this tribe, and to have been murdered by them, with the most of his party, about August, 1866. But there is yet (May, 1867) room to hope that the report is untrue.

MBUTUDI, a vil. Western Africa, Adamawa, in a mountainous district, 185 m. S. by W. Kukawa. It encompasses the base of a mass of granite which rises to the height of about 300 ft. above a plain covered with rich herbage and flowers, among which the violet is conspicuous. The mount at its base has a circuit of about 600 yards, and at one time the village, encircling it on all sides, formed a kind of natural citadel, which defied the Fulbe. The ascendancy of this tribe has all but ruined Mbutudi, which has now little to boast of beyond its picturesque landscape.

MEADVILLE, a tn. U. States, Pennsylvania, cap. co. Crawford, l. bank French Creek, an affluent of the Alleghany, 75 m. N. by W. Pittsburg. It contains eight churches, a handsome court-house, a state arsenal, and a Methodist Episcopal college finely seated on an adjoining height, with 6 professors, 104 students, and 9600 vols. Standing in a fertile district, for which it is the principal market, Meadville carries on an extensive trade. Pop. (1860), 3702.

MECCATINA, an isl. and cape, British America, on the coast of Labrador, S.W. from the Straits of Belle Isle. The island, called Great Meccatina, to distinguish it from another of less dimensions, and about 2 m. distant from the mainland, is about $3\frac{1}{2}$ m. long, and rises near its centre to the height of 500 ft. Its granite hills are fissured in a remarkable manner by empty basaltic dykes which traverse it from side to side, N.E. to S.W. On its N.E. shore there is a cove a mile deep and about 400 yards wide, sheltered from easterly winds by a cluster of small islets and rocks lying off its mouth, but leaving a safe passage between them. Another and better harbour, small but safe, with good anchorage in 6 to 7 fathoms, is formed between the island and the mainland.

—The **CAPE**, a long and remarkable promontory situated on the coast, about 4 m. W.N.W. of the island, rises directly in the rear of Meccatina harbour, not less than 700 ft. above the sea, and is the highest land on this part of the coast. Its granite is traversed by enormous basaltic dykes, similar to those on the island. They cut completely through the cape into Portage Bay, ascending again on the E. side of the latter till they are lost to view beyond the summits of the hills.

MEDINA (El) [add.] The following description of this famous city, so little visited by Europeans, is condensed from the *Pilgrimage to El-Medinah and Meccah*, by Lieutenant (now Captain) R. F. Burton:—'El Medinah consists of three parts—a town, a fort, and a suburb little smaller than the body of the place. The town itself is about one-third larger than Suez, or about half the size of Meccah. It is a walled inclosure forming an irregular oval with four gates. The Bab el Shami, or "Syrian Gate," in the north-west side of the enceinte, leads towards Jebel Ohod, Hamzah's burial-place, and the mountains. In the eastern wall, the Bab el Jumah, or Friday Gate, opens upon the Nejd road and the cemetery, El Bakia. Between the Shami and the Jumah gates, towards the north, is the Bab el Ziyafah (of Hospitality); and westwards the Bab el Misri (Egyptian) opens upon the plain called the Barr el Munakhah. The eastern and the Egyptian gates are fine massive buildings, with double towers close together, painted with broad bands of red, yellow, and other colours, not unlike that old entrance of the Cairo citadel which opens upon the Rumayiyah plain. In their shady and well-watered interiors, soldiers find room to keep guard, camel-men dispute, and numerous idlers congregate, to enjoy the luxuries of coolness and companionship. Beyond this gate, in the street leading to the mosque, is the great bazaar. Outside it lie the Suk el Khuzayriyah, or green-grocers' market, and the Suk el Habbabah, or the grain bazaar, with a fair sprinkling of coffee-houses. These markets are long masses of palm-leaf huts, blackened in the sun and wind, of a mean and squalid appearance, detracting greatly from the

appearance of the gate. Amongst them there is a little domed and whitewashed building, which I was told is a sabil or public fountain. In the days of the Prophet the town was not walled. Even in El Edrisi's time (twelfth cent.), and as late as Bartema's (eighteenth cent.), the fortifications were walls of earth, built by order of Kasim el Daulat el Ghorri, who repopulated the town and provided for its inhabitants. Now, the enceinte is in excellent condition. The walls are well built of granite and lava blocks, in regular layers, cemented with lime; they are provided with "mazghal" (or matras), long loopholes, and shararif or trefoil-shaped crenels: in order to secure a flanking fire, semicircular towers, also loopholed and crenellated, are disposed in the curtain at short and irregular intervals. Inside, the streets are what they always should be in these torrid lands, deep, dark, and

EL MEDINAH.—After a drawing by Lieutenant Burton.

narrow, in few places paved—a thing to be deprecated—and generally covered with black earth well watered and trodden to hardness. The most considerable lines radiate towards the mosques. There are few public buildings. The principal wakalabs are four in number; one is the Wakalat Bab Salam near the Haram, another the Wakalat Jebarti, and two are inside the Misri Gate; they all belong to Arab citizens. These caravanserais are principally used as stores, rarely for dwelling-places like those of Cairo; travellers, therefore, must hire houses at a considerable expense, or pitch tents to the detriment of health and to their extreme discomfort. The other public buildings are a few mean coffee-houses and an excellent bath in the Harat Zarawan, inside the town; it is far superior to the unclean establishments of Cairo, and borrows something of the luxury of Stamboul. The houses are well built for the East, flat-roofed and double-storied; the materials generally used are a basaltic scoria, burned brick and palm-wood. The best of them inclose spacious court-yards and small gardens with wells, where water basins and date-trees gladden the owners' eyes. The latticed balconies are here common, and the windows are mere apertures in the walls, garnished, as usual in Arab cities, with a shutter of planking. 'El Medinah fell rapidly under the Wahabees, but after their retreat, it soon rose again, and now it is probably as comfortable and flourishing a little city as any to be found in the East. It contains between fifty and sixty streets, including the alleys and *culs de sac*. There is about the same number of harat or quarters; but I have nothing to relate of them save their names. Within the town few houses are in a dilapidated condition. The best authorities estimate the number of habitations at about 1500 within the enceinte, and those in the suburb at 1000. I consider both accounts exaggerated; the former might contain 800, and the Munakhah perhaps 500; at the same time I must confess not to have counted them, and Captain Sadlier (in A.D. 1819) declares that the Turks, who had just made a kind of census, reckoned 6000 houses and a population of 8000 souls. Assuming the population to be 16,000 (Burckhardt estimates it as high as 20,000), of which 9000 occupy the city, and 7000 the suburbs and fort, this would give little more than 12 inhabitants to

each house (taking the total number at 1300), a fair estimate for an Arab town, where the abodes are large and slaves abound.

'The castle joins on to the N. W. angle of the city enceinte, and the wall of its eastern outwork is pierced for a communication between the Munakah Suburb, through a court strewn with guns and warlike apparatus, and the Bab el Shami, or the Syrian Gate. The outer wall resembles that of the city, only its towers are more solid, and the curtain appears better calculated for work. Inside, a donjon, built upon a rock, bears proudly enough the banner of the crescent and the star; its whitewashed walls make it a conspicuous object, and guns pointed in all directions, especially upon the town, project from their embrasures.

'The suburbs lie to the S. and W. of the town. Southwards they are separated from the enceinte by a wide road, called the Darb el Jenazah, the Road of Biers, so called because the corpses of certain schismatics, who may not pass through the city, are carried this way to their peculiar cemetery near the Bab el Jumah, or Eastern Gate. Westwards, between El Medinah and its faubourg, lies the plain of El Munakah, about $\frac{3}{4}$ m. long by 300 yards broad. The straggling suburbs occupy more ground than the city; fronting the enceinte they are without walls; towards the west, where open country lies, they are inclosed by mud or raw brick ramparts, with little round towers, all falling to decay. A number of small gates lead from the suburb into the country. The only large one, a poor copy of the Bab el Nasr at Cairo, is the Ambari or western entrance, through which we passed into El Medinah. The suburb contains no buildings of any consequence, except the Khaskiyah, or official residence of the Muhafiz (governor), a plain building near the Barr el Munakah, and the Khamsah Masajid, or the Five Mosques, which every Zair is expected to visit.

'The suburbs to the S. of El Medinah are a collection of walled villages, with plantations and gardens between. They are laid out in the form, called here as in Egypt, Hosh—courtyards, with single-storied buildings opening into them. These inclosures contain the cattle of the inhabitants; they have strong wooden doors, shut at night to prevent "lifting," and are capable of being stoutly defended. The inhabitants of the suburb are for the most part Bedouin settlers, and a race of schismatics. Beyond these suburbs, to the S., as well as to the N. and N.E., lie gardens and extensive plantations of palm-trees.'

MEDINET-EL-FAYOUM [add.], a tn. Central Egypt, cap. dist. Fayoum, 49 m. S.S.W. Cairo. It is situated on a channel which here divides into a number of branches, and is crossed by five bridges, is built with materials obtained partly from the ruins of the ancient Crocodilopolis, for which Ptolemy, in honour of his sister, substituted the name of Arsinae. The town lies embosomed among plantations of olive, fig, and date trees, from amid which the minarets of its mosques are seen to rise, and produce, at least at a distance, a very imposing effect; but the interior consists of narrow winding streets and very indifferent houses. It contains five Coptic churches, several mosques and schools or medressels, and has manufactures of cotton, woollen stuffs, and carpets. The bazaar is less extensive than might be expected from its population, but the market is abundantly supplied with fruit, which is grown in the extensive gardens of the vicinity, and being of excellent quality, finds a ready sale in Cairo. The rose-gardens, for which this place was so long celebrated, and from which the most costly of all perfumes was manufactured, no longer exist, other modes of employing the ground having proved more profitable. The Mamelukes at one time took refuge here. Pop. about 10,000.

MEDJERDA, a riv. N. Africa, the ancient *Bagradas*, which rises in the Great Atlas, in the S.E. of the prov. of Constantine, forms part of the boundary between it and Tunis, enters the latter, and after a course of about 200 m., in the main N.E., falls into the Mediterranean on the W. shore of the Gulf of Tunis. Notwithstanding its length, it is nowhere navigable, and owing to the lofty banks within which it flows, is seldom available for irrigation.

MEDYKA, a tn. Austrian empire, Galicia, circle and N.E. Przemysl; with a fine baronial castle, and 1400 inhabitants.

MEERUT [add.], a dist. India, N.W. Provinces, between

lat. 28° 33' and 29° 17' N.; lon. 77° 12' and 78° 15' E., is bounded N. by Muzuffurnugur, E. Bijnour and Moradabad, S. Boolundshuhur, and W. Paniput and Delhi; length, E. to W., 57 m.; breadth, 48 m.; area, 2332 sq. m. It forms part of the Doab, and extends across it, being washed by the Ganges on the E. and the Jumna on the W. The surface consists of a ridge of inconsiderable height, traversing it centrally, and a slope on either side descending gradually towards the rivers. The soil, though in some places light and sandy, is on the whole fertile, retaining its verdure even in the hot season, and displaying a luxuriant vegetation during the rains. One of the principal crops is sugar-cane, which is cultivated on about 28,833 acres. The principal fruits are strawberries, apples, peaches, and mangoes. Grapes ripen, but are only of indifferent quality. The weather is for five months, from November to March, delightfully cool and invigorating. In April the hot westerly winds commence, and are both arid and sultry. The latter part of June, before the setting in of the rains, and September, when they terminate, are the only unhealthy parts of the year. Pop. 860,736.

MEERUT [add.], cap. of the above district, and situated in its centre, nearly equidistant from the Jumna and the Ganges, 36 m. N.E. Delhi, about 3 m. E. of the Kallee Nuddee, is surrounded by a dilapidated wall inclosing a large area, which is occupied for the most part by narrow, dirty streets and wretchedly built houses. None of the mosques and pagodas possess any merit, and not a few of them are in ruins. The building most deserving of notice is the church, which is one of the largest in India, possesses an excellent organ, and is surmounted by a lofty and handsome spire, though the main body of the structure is somewhat flimsy, consisting of brick with a facing of stucco. The British cantonment, situated 2 m. N. of the town, is divided into two parts by a small branch of the Kallee Nuddee, which is crossed by two handsome bridges. On the N. side of the stream are, or rather were, lines for a brigade of horse-artillery, a corps of European cavalry, and a regiment of European infantry; in front a fine parade ground, 1 m. wide and 4 m. long; and on the opposite side of the stream the lines of the native infantry. Meerut has acquired a melancholy celebrity as the scene of the first great outbreak among the Sepoys in 1857, and of the gross mismanagement which allowed them first to spend a whole night in pillage and murder, and then proceed unmolested to make themselves masters of Delhi. Pop. about 30,000.

MEGALO, an isl., the largest of the Petali group, which belongs to Greece, and lies off the S.W. extremity of Negropont. It is about 12 m. long from N. to S., by 2 m. broad, attains near its centre a height of 1300 ft., and is covered, particularly on its S. and W. sides, with brushwood, consisting for the most part of wild olives. Oaks at one time abounded, but most of them having been cut down and exported to Attica, they are now found only on the higher and least accessible summits of the island. The soil, though cultivated only to a limited extent, is very fertile, and produces barley, maize, wheat, an excellent wine, cotton, figs, olives, and almonds. The roadstead, sheltered by the other islands of the Petali group, is one of the best in the Archipelago.

MEGARA, a tn. Greece, nomarch Attica and Bœotia, on a height on the S.E. side of the Isthmus of Corinth, 21 m. W.N.W. Athens. It was the birthplace of Euclides, the founder of the Megarian school; has the remains of an ancient castle, and contains 2984 inhabitants.

MEGYASZO, a tn. Austrian empire, Hungary, co. Zemplin, 38 m. S. by W. Kaschau; with a trade in excellent wine, and 2411 inhabitants.

MEHIDPOOR, a tn. India, Holkar's Dominions, 53 m. N. Indore. It is situated in the angle formed by the junction of a small affluent with the Seepra, and gives name to a decisive victory gained in 1817 by the British, commanded by Sir Thomas Brisbane, over the army of Holkar, who was in consequence obliged to submit to the terms dictated to him.

MEHUM, or MOHM, a tn. India, N.W. Provinces, dist. Rohtuk, 55 m. N.W. Delhi. It was once a large commercial town, but is now greatly decayed. The chief objects of interest within are its excellent bazar, and a remarkably fine well, which is 130 ft. deep, and has flights of stone stairs leading down to the water. Pop. 5000.

MEIACO-SIMA, a group of isls N. Pacific, forming the westernmost portion of a chain of islands extending E. and N.E. from Formosa to the S. extremity of the isles of Japan. It lies between lat. 24° and 25° 6' N.; lon 122° 55' and 125° 30' E., and forms two divisions—a W., consisting of ten, and an E., consisting of five, islands. Of the islands of the W. division five only are at all mountainous; the others are flat and belted with reefs, like the coral islands in the Pacific. Kumi, belonging to this division, is composed of coralline limestone, and is densely capped on all its heights with brushwood and trees, of which none but the pine-fir attain any size. It contains four villages, the principal of which, situated on the N., has a port which is much frequented by junks, but has an entrance so narrow and shallow that both spring tides and very smooth water are necessary for ingress or egress. Pa-Chung-San, also of this division, and the largest island in it, has on its W. side Port Haddington, which would shelter a large fleet, but abounds in coral patches rising suddenly almost to the surface from 10 or 15 fathoms. Kukien-San, situated to the W. between it and Kumi, has a fine stream, which has its mouth at its S.W. angle in Seymour Bay, where the water is so deep close to the shore that vessels might, by means of the hose, with Hearle's pumps obtain water without the intervention of boats and casks. Tai-Pin-San, the principal island of the E. division, is surrounded by an extensive chain of coral reefs, on one of which, situated to the N.W., H.M.S. *Providence* was lost in 1797.

MEICHE, a tn. China, on the E. frontier of the prov. Nganhoei, about 35 m. W. Hoo-chow-foo. It stands on the Lun-ke, where the tide ceases to flow and navigation by boats terminates, and stretches for a considerable distance along the banks of the stream. It has a considerable trade in hill productions, which are brought down to it to be conveyed in boats to the towns in the plains. Its district appears to be the W. boundary of the great silk country, large quantities of rice and other grains here taking the place of the mulberry, which is however still cultivated to some extent.

MEJDEL-ANJAR, a vil. Palestine, on the road between, and nearly equidistant from, Damascus and Beyrout. It is beautifully situated, occupying the top of a hill which looks N. along the magnificent valley of the Bukaa or Cœle-Syria, with Anti-Lebanon on the right, and the still loftier snow-capped ridges of Lebanon on the W. The chief object of interest is one of the finest antique temples now existing, 'simple, massive, and beautiful,' says Dr. Robinson, 'and obviously of a severer and earlier type than those of Baalbek.' To the N.E. of Mejdél is Anjar, containing the ruined walls and towers of an ancient fortified city or citadel, supposed to be the *Chalcis* in Lebanon, where Agrippa had his capital before he was transferred to more S. territories.

MEKLONG, a tn. Siam, near the mouth of a river of same name, in the Gulf of Siam, to the W. of the Menam. It is accessible only by small boats, but many of the inhabitants are employed in the manufacture of salt, which is obtained by evaporation, and besides supplying great part of Siam is largely exported. The river communicates with the Menam, and hence has sometimes been erroneously supposed to be only a branch of that river. The soil along its bank is extremely fertile, producing rice, sugar, sesamum, and fruit in abundance.

MEKONG, or МЕКОН [add.], a river, Asia, which rises in the Chinese prov. Yunnan, near the frontiers of Sefan, in the S.E. of Thibet, in lat. 27° 20' N., flows S.S.E. through Yunnan, under the successive names of Lan-tsan and Kewlung-kiang, or Nine Dragon River, enters the Laos Country, and continues its S.S.E. direction, skirting the W. frontiers of Anam, or Cochinchina. On reaching lat. 16°, and assuming its own name, it curves round to the E., then winds through Anam, describing nearly the arc of an enormous circle, and finally falls into the China Sea by three mouths about lat. 9° 34' N. Its course thus extends over nearly 18° of latitude. Though encumbered in many places by rocks, cataracts, shifting banks, and shallows, few rivers of the same length have an equal extent of navigable channels. Even before it quits Yunnan many flourishing cities are indebted to it for their principal means of transport, and both in Laos and Anam a large proportion of the inhabitants are settled on its banks, or engaged in cultivating its magnificent and fertile valley. Its delta varies in extent with those of the

Yang-tze-kiang and of Hoang-ho, there might be reason to apprehend that the vast quantity of alluvium deposited, and the channels into which it divides in carving out a way for itself across it, would destroy its navigable importance. This is the case with the other large rivers in the same region, but in this respect the Mekong is singularly favoured. While they are obstructed by bars, it has none, so that there is a depth of 28 ft. in its entrance. The importance of this river has hitherto been little appreciated, but now that the French government have taken possession of its mouths, and established themselves at Saigon, it can scarcely be doubted that the Mekong will attract far more attention from Europe, and become a much more important commercial thoroughfare than formerly.

MELBOURNE [add.], cap. of Victoria, Australia. The progress of this city in both size and commercial importance has been astonishingly rapid, the population, which was 23,143 in 1851 having risen to more than five times that number in 1865. Its site is not a favourable one, the mouth of the Yarra, about 9 m. above which the city lies, being obstructed by a bar, and it is so low that it is liable to be flooded by the overflowing of the river in the wet season. Nevertheless it is a noble city, with crowded wharves, and sometimes 1000 vessels lying off the mouth of the river. As first laid out Melbourne consisted of several wide straight streets, crossing each other at right angles. Flinders, Collins, Bourke, and Latrobe Streets run E. and W., and among those intersecting them may be mentioned Elizabeth and Swanstone Street. Collins Street presents a handsome specimen of street architecture, with superior shops, banks, and public buildings. But the city has expanded beyond this rectangular district, and now includes what were formerly the detached districts of Collingwood, Richmond, and North Melbourne. Altogether it now forms a splendid town, and its streets present a scene of constant bustle and activity, especially in the old part, which still monopolizes the chief shops, banks, and places of business. Of public buildings the parliament-house demands special notice. It contains two chambers, one for the assembly, the other for the council: the former modestly decorated, but the latter of profuse and elegant ornamentation. It stands in the highest part of the city, from which the whole of the town and suburbs, with the harbour of Port Phillip in the distance, is in view. Westward lies the great mass of buildings with numerous church spires and other prominent edifices. Northwards the Collingwood portion stretches down to the banks of the Yarra, where the heights are dotted with villas and gardens. There is the suburb also of South Yarra and Prahran, with the botanical gardens intervening; between which and the zoological gardens the river winds and is crossed by half a dozen bridges. Beyond to the S. lies St. Kilda on the bay, the favourite resort of the townspeople for recreation. Besides numerous churches and chapels, Melbourne has a large number of public institutions for secular and benevolent purposes. Water-works have been constructed at an enormous expense for the supply of the city. Owing to the obstructions of the Yarra, Williamstown, lower down, has been made the port, and is connected with Melbourne by a railway. There are also railways from Melbourne to Geelong, Ballarat, and Sandhurst, at the Bendigo gold-fields. Steam-ships ply between it and the other great city-ports of Australia, and its shipping trade is carried on with Great Britain and other European and foreign countries. The trade of Melbourne represents very nearly that of the whole colony of Victoria. In 1863 there entered the port 1739 vessels of 624,061 tons, and cleared 1782 vessels of 618,052 tons. The value of the imports in the same year was £14,118,727, and of the exports £13,566,296. The produce of the gold-fields amounted to £14,100,083 in 1853; in 1855 to £11,172,261; and in 1856 to £11,942,783; from the last-named year there was a gradual decrease, to £6,685,192 in 1862. The exports of gold and gold specie in 1861-3 were as follows:—

	1861.	1862.	1863.
Gold	£7,869,758	£6,685,192	£6,520,957
Gold Specie	1,210,828	918,999	1,169,471

The other principal article of export was wool, which amounted to £2,049,491 in 1863.

The population of Melbourne, which, as before stated, was

23,143 in 1851, was 125,220 in 1861; in 1865, including the suburbs, it was estimated at 140,000.

MELBOURNE, a tn. British America, Canada East, co. Richmond, on the St. Francis, opposite to Richmond, with which it is connected by a covered bridge, 75 m. E.N.E. Montreal. The two, with the addition of a third place, called the Gore, form one township, and aided by the support of government, have united in founding the College of St. Francis, which has its site in Richmond. There is also a mechanics' institute and library association. The streams furnishing a large amount of water-power, a number of saw, grist, fulling, and carding mills have been erected on them, and furnish the materials of a considerable trade. Pop. of township, about 2000.

MELLE, a tn. W. Africa, r. bank Shari, which here forms the W. boundary of the kingdom of Bagirmi, about 60 m. N.W. of Masena, its capital. It occupies a steep bank overhanging r. bank Shari, which is here 600 yards wide and 15 feet deep. The thick forest which borders the place on the N.E. is a favourite haunt of hogs and monkeys. Fish and crocodiles, the latter much relished as food by the natives, abound in the river.

MELENKI, a tn. Russia, gov. and 70 m. S.S.E. Vladimir, cap. circle of same name, on the Unsha. It contains two churches, a parish school, a charitable endowment, and several manufactures. The inhabitants of the circle are largely engaged in making tar, pitch, and turpentine. They also manufacture many articles in wood. Pop. 3574.

MELIPILLA, a tn. Chili, prov. and 40 m. W.S.W. Santiago. It is a large well-built and apparently wealthy place, not far from the N. bank of the Mapyu. The manufactures are ponchos, coarse woollen cloth, blankets, and superior pottery ware. The trade is chiefly transit, much of the produce of Couchagua, and of the southern part of Santiago, passing through this town to its final destination at Valparaiso. Pop. 8000.

MEMPHIS [add.], a tn. and port of entry, U. States, Tennessee, on the Mississippi, just below the junction of Wolf River, and on three great railways, the Memphis and Charleston, the Memphis and New Orleans, and the Memphis and Ohio, 180 m. S.W. Nashville. It stands upon a bluff about 30 ft. above the river in its highest floods, and is fronted by a fine esplanade. The streets are regular, and many of the private dwellings are not only substantial but elegant. The principal buildings and institutions are 15 churches, two medical colleges, an orphan asylum, and several academies and seminaries. The trade is chiefly in cotton, of which, in 1860, 400,000 bales were shipped. Pop. (1860), 22,623.

MENAM [add.], a river, Siam, which rises in the Shan Mountains, about lat. 20° N., flows circuitously S.S.E., and falls into the Gulf of Siam by three mouths, about 38 m. below Bangkok, following the windings of the river. It ceases to be navigable at Rahaing, the most southerly of the Laos States. Owing to a bar, the water at its deepest mouth is only 3 ft. at ebb, and 13 ft. at spring tides, and hence vessels drawing more than 11½ ft., when intending to load at Bangkok, only take in cargo there requiring that depth, and then proceed to the roadstead to fill up. The banks of the river, though fringed with forest-trees, behind which sugar and rice fields extend for a considerable distance inland, are somewhat monotonous. The Meklong has sometimes been considered a branch of the Menam. This is a mistake, probably originating in the fact that they communicate by a channel on approaching the sea.

MENAMAH, a tn. Persian Gulf, at N. extremity of Bahrein Island, lat. 26° 15' N.; lon. 50° 35' E. The first aspect of Menamah from the sea is not pleasing, for the beach quarter is mostly occupied by sailors and fishermen, with their cabins; the beach, too, is of dirty shingle. The length of the town is greater than its depth, though that is not small, the range along the shore being 1½ m., while the houses reach ¾ m. inland; the general level being about 12 ft. above high-water mark. Most of the dwellings are mere palm-leaf cottages, each with its own inclosure, and are arranged in streets and rows. Separate from these, and forming distinct quarters, are large houses of brick and stone, often elegant and spacious, and occupied by the wealthy and upper classes, though many of them are falling into decay. About the centre of the town is the market-place, a labyrinth

of narrow shop-lanes, some vaulted, some sheltered with a thatch-roof, and meeting in a small central covered square. In different quarters are several mosques. The lofty and somewhat imposing residence of the governor stands at the S.W. extremity of the town. Ships of all kinds and sizes occupy the bay. Behind the town stretches a wide plain of level saltilish soil, barren and swampy, upon the extreme verge of which stands a large square fortress, in old times a stronghold and defence for the town, now dismantled and ruinous. The pearl-fishery is a principal occupation of the inhabitants.

MENDOZA [add.], next to Cordova, the largest and best city in the interior of La Plata, and the capital of a prov. of same name, 150 m. E.N.E. Valparaiso, on the Pacific, lies close to the E. foot of the Cordillera of the Andes. Like almost all the other old Spanish towns, it is built in the form of a regular rectangle, subdivided by streets running N. and S., and E. and W., intersecting each other at right angles, and opening at one of their extremities into a large central plaza or square. On this square stand the principal church, a large but by no means handsome structure, built of limestone, and surmounted by two towers terminating in spires; the *cabildo*, containing the courts of justice and the police office; and some private mansions of a very superior description. To the S. of the principal square is another called the Plaza Nueva, on which the only edifice worthy of notice is the small but elegant chapel of San Loretto. The principal streets, three in number—the Cañada, St. Martin, and Constitucion—all terminate in this plaza. Mendoza is remarkable for the number of its ecclesiastical buildings. The principal church and a chapel have been already mentioned, but to these must be added six other churches, numerous other chapels, three convents for monks, and one for nuns. Among buildings not ecclesiastical are the governor's house, the college, the public library, the barracks, the theatre, and the market-hall. The inhabitants employ themselves chiefly in horticulture, agriculture, and the rearing of cattle. Fruit of all kinds is abundant and cheap, and the oranges in particular are famous. Goitre is very prevalent, and is attributed by some to the universal use of water coming from the snowy mountains. Pop. 10,000.

MENSA, a small territory, E. Africa, the E. frontiers of which, bounded by Samara, are about 8 m. W. of the town of Massowa, on the Red Sea. It lies between lat. 15° 30' and 16° N.; lon. 38° 40' and 39° 10' E., and has a mountainous surface formed by offsets from the Abyssinian ranges. Its inhabitants consist of two tribes who are at deadly feud with each other, and occupy the opposite extremities of the territory, the Beit-Shakhan inhabiting the S., and the Beit-Abrehé the N. district. Their chief employment is in feeding cattle, but they are not nomade, and possess two large villages, that of Hamm-hamo, situated on an undulating plain, stretching toward Mount Merrara, which is 7000 ft. high, belonging to the Beit-Shakhan, and that of Galab, which lies at the foot of a mountain steep, belonging to the Beit-Abrehé. Both tribes, apparently of the same origin, are in person light, active, and well-proportioned, of a dark olive complexion, with fine lips, an oval and somewhat Grecian cast of countenance, and large bushy beards. Pop. about 5000.

MEQUINEZ, or MKNAS [add.], a tn. N. Africa, Morocco, gov. and 36 m. W.S.W. Fez, on an affluent of the Sebou, in a beautiful valley of a healthy and mountainous district. It is surrounded by a triple inclosure of walls, about 15½ ft. high and 3 ft. thick, and defended by strong batteries. Among its principal buildings are several mosques, a castle, which was founded by Muli Ismail in 1674; and a palace, in which the emperor of Morocco often resides. This palace contains within its vast inclosure the imperial treasury, and is adorned with marble columns, obtained partly from Roman ruins and partly from Leghorn and Marseilles. The inhabitants are said to be more polished than those of any other town in Morocco.—(Godard, *Description de Maroc.*)

MERCANUM, a tn. India, presid. and 60 m. S. by W. Madras, on the Coromandel coast. Its only title to notice is derived from its salt-pans, which belong of course to government, are very extensive, and produce a salt which is in great demand on account of the size and whiteness of its crystals.

MERCARA, a tn. India, presid. Madras, cap. prov. Coorg, 60 m. Seringapatam. It stands at the S.E. angle of an oblong table-land, 4500 ft. above the sea, sloping gently on the

N. and E., but precipitous in all other directions. It consists principally of a fort situated on an isolated height, and built in the form of an irregular heptagon, with a gateway at one of its angles, and round bastions at the other six. Being commanded by greater height, some of them within breaching distance, it possesses little strength. Among the buildings in its interior are the palace of the deposed rajah, a large castellated building now used as a public treasury and quarters for the European officers of the native troops, a pagoda, a court-house, a jail, and a public bungalow or lodge for travellers. The bazar is tolerably good. The heights around furnish grand and picturesque views.

MERCEDES, a tn. S. America, Banda Oriental, l. bank Rio Negro, 150 m. N.W. Monte Video. Occupying a much larger space than its inhabitants require, it presents a great number of unoccupied spaces in its streets, which are wide and well formed, and many of the houses, both in them and on the public square, are substantial and even elegant. The only buildings of any note are the church, a large building of indifferent architecture, and a large coffee-house in front of it. The shops and market are well supplied. The environs cannot be called beautiful, though they gain somewhat by contrast with the still less attractive country which is passed before reaching them. In the adjoining plains extraordinary numbers of gigantic quadrupeds and other fossils are found imbedded. Mercedes carries on an active trade with Monte Video and Buenos Ayres, exporting chiefly jerked beef, hides, and sheep's wool, and receiving in return European wares. It is much visited by patients, who come to drink the water of the Rio Negro, which is said to be very efficacious in the cure of rheumatic and similar complaints. This remarkable property it owes to the large quantity of sarsaparilla which grows upon its banks. The roots communicating part of their substance to the water, give it the dark tinge from which the river derives its name. Pop. 5000.

MERCERSBURG, a post bor. U. States, Pennsylvania, 60 m. S.W. Harrisburg, is the seat of a college of the German Reformed Church, with 6 professors, 165 students, and a library of 3000 vols. Pop. 897.

MERCURY, or D'HAUSSEZ, a group of islands, New Zealand, off the N.E. coast of North Island or Ulster, about 18 m. E.S.E. Cape Colville; lat. (N. cliff, East Island), 36° 36' 15" S.; lon. 174° 50' 15" E. It consists of four principal and several smaller islands, and occupies a square space of about 10 m. each way. The *Great Mercury*, the largest, being 4 m. long from N. to S., and nearly 3 m. broad at its S. part, is steep and cliffy on its N. and E. sides. On the W. side is a deep bay, with anchorage in 5 fathoms, but safe only in fine weather.—*Red Mercury*, the next largest of the group, is only 3 m. in circuit.

MERDIBBA, a tn. Abyssinia, on a small affluent of the Shimga; lat. 13° N.; lon. 31° 30' E. It is an important market-place, whose inhabitants plant much cotton and maize, and rear many sheep, goats, and camels, but prefer to all other employments the hunting of the elephant, rhinoceros, and buffalo. About 6 m. S. of Merdibba are the boiling, or rather bubbling, springs of Ambo. They are about 15 in number, and issue from a spot of dark-coloured swampy ground. The water is cold and pleasant to drink; its chief ingredients seem to be carbonic acid gas and iron.

MERIDEN, a tn. U. States, Connecticut, on the New-haven, Hartford, and Springfield Railway, 18 m. N.E. New-haven. It stands on a height, contains several churches, an academy, a high-school, and a state juvenile reformatory, and has extensive manufactories, of which the chief articles are tin and britanna ware, ivory combs, table cutlery, hardware, and machinery. Pop. (1860), 7426.

MERRIMACK [add.], a river, U. States, formed at Franklin, New Hampshire, by the union of the Pemigewasset and the Winnipiseogee, flows first S. for 78 m. to Chelmsford, in Massachusetts, and then E. for 35 m. to its mouth in the Atlantic, at Newburyport. Though comparatively insignificant in both length of course and volume, it would be difficult to find a river which has done more for the country through which it flows, since the immense water-power furnished by its falls has created the towns of Lowell and Lawrence in Massachusetts, and of Nashua and Manchester in New Hampshire.

MERS-EL-KEBIR, a tn. N. Africa, Algeria, prov. and

5 m. N.W. Oran. It occupies a rugged site on the shore of an excellent natural harbour, capable of receiving the largest vessels, and is defended by a triangular fort, seated on a rock, and crossing its fire with two other forts at a lower level. The bad harbour at Oran adds greatly to its importance, and it has been contemplated to complete its fortifications, which the Spaniards originally commenced, and make it the rival of Gibraltar. Pop. 1392.

MESAU, a tn. Western Africa, Hausa States, cap. dist. of same name, in a sandy district, on the road from Katagum to Yakoba, 170 m. E.S.E. Kano. It is walled, and the residence of a governor, whose house is built entirely of earth. All the other houses have clay walls, with thatched conical roofs. The weekly market is important. The inhabitants are said to be Fellatah.

MESERITSCH, or WALACHIAN MESERTSCH, a tn. Austrian empire, Moravia, circle and 9 m. S. Neutitschin, in a beautiful valley on the Betschwa, in what is called Moravian Walachia; with two churches, a castle, a house of correction, manufactures of linen and woollen cloth; and wool, cattle, and other annual markets. Pop. 2806.

MESHED ALI, a tn. Turkey in Asia, pach. and 90 m. S. Bagdad. It takes its name from a Mahometan martyr of the Shiite sect, and has a splendid mosque, which is annually visited by thousands of pilgrims, chiefly from Persia. Their offerings, which had accumulated during a long series of years, tempted the cupidty of the Wahhabees, who paid it a visit, and carried off all its treasures to the desert.

MESENIA, a gov. of the Morea, Greece, bounded on the N. by Achaia and Elis, on the E. by Arcadia and Laconia, W. and S. the Mediterranean. The climate is temperate and healthy, and rendered invigorating by the sea-breezes. The soil is fertile, well watered, and abounds in excellent pasturage. It produces wine, cotton, and olive-oil, and its figs excel those of any other part of Greece. The inhabitants are athletic and industrious, but neglect the breeding of cattle and the cultivation of cereals. The principal towns are Koroni, Ravarino, and Kalamata. The ancient city of Messene is now an inconsiderable village, which the Greeks call Mavromati.

METAPAM, a tn. Central America, state and 44 m. N.N.W. Salvador, to the N.E. of a lake of same name, which is properly a branch of the Laguna de Cuija. It is the centre of a mining district particularly rich in iron, and is a clean well-built place, with streets paved with a conglomerate of quartz and sandstone, one of the handsomest churches in the state, and a pop. of about 4000.

METHEMMEH, a tn. Abyssinia, cap. prov. Galabat, in a mountainous district not far from l. bank Atbara; lat. 13° N.; lon. 31° 50' E. It has recently suffered much from an inroad of a neighbouring chief, and now contains only 1200 inhabitants, who live in the straw huts with pointed roofs known by the name of *toqus*.

METIS, a tn. British America, Canada East, co. Rimouski, r. bank St. Lawrence, 210 m. N.E. Quebec; with a Free and a R. Catholic church, and a considerable trade in flour and lumber. Pop. about 1100.

METTERS DORF, a tn. Austrian empire, Transylvania, circle and about 6 m. N. Bistritz; with a salt spring, a trade in wine and hemp, and 1720 inhabitants.

MEYBUT, a tn. Persia, 150 m. E.S.E. Ispahan. It is a small walled town, with a ruined ditch, a paltry citadel, and four gates. Wheat and cotton are extensively cultivated in the vicinity, and there are many well-kept gardens within its walls. Pop. about 2000.

MEZZANÈ DI SOTTO, a tn. Italy, Venetia, prov. and 4 m. N.N.E. Verona; with a parish church, and a beautiful villa adorned with frescoes by Paul Fariuati.

MEZZOVO [add.], a tn. Turkey in Europe, S. Albania, eyalet and 21 m. E.N.E. Yanina. It stands at the N. entrance of an important pass in the Pindus, where the roads to S. Albania, Thessaly, and Macedonia cross each other. Its inhabitants are very industrious, and, like the Savoyards, travel into distant parts, and continue there till they have acquired the means of returning to live comfortably at home. Pop. 5000, mostly Walachs and Zingari.

MGETA, a river, E. Africa, one of the principal affluents of the Kingani, which it joins on the r. bank, about lat. 7° 20' S.; lon. 37° 50' E. It rises among the Duthuni Hills,

and flows E. in a perennial stream, draining a considerable tract of country, and with a current so rapid that scarcely anything that falls into it is ever recovered. In its lower course it is only about 30 yards wide.

MGUNDA MKHALI, an extensive tract, E. Africa, lying between Ugogo on the E. and Unyamwezi on the W., in the line of the caravan route from the E. coast opposite to Zanzibar. Its length from E. to W. is about 140 m., and it bears the name of 'desert' simply because it contains no running water or wells, except after rain. Its general aspect is a dull uniform bush of an emerald green during the rains, and a network of dry, broom-like twigs during the heats. Its most forbidding portion is in the E., where its stony surface and stunted vegetation strikingly contrast with the better country on the E. of it. This portion passed, the neck of the desert may be said to be broken, and an open forest of tall trees begins to run along a flat. That the tract is in many places not incapable of successful cultivation, has been proved by the many clearings which have been made on it. By means of these its extent is being diminished from year to year, and the journey across it, which, about twenty years ago, contained twelve long stages, is now effected in eight marches. The subsoil of the Mgunda Mkhali is a detritus of yellowish quartz, in some places white with powdered felspar, and in others black with the humus of decayed vegetation. In general nothing can be more monotonous than its aspect, but occasionally the scene changes, and outbursts of gray granite and syenite are seen rising abruptly and perpendicularly from the dead plain, or bristling upon a base of low conical hills. Nothing can be more fantastic than the shapes which the rocks assume. Some are stiff and straight, like giant ninpins, and others, split as if an alley or gateway passed between them, might be mistaken at a distance for Cyclopean walls, towers, steeples, domes, minarets, castles, and dwelling-houses. Some of the clearings are like oases in the midst of these granitic outcrops, and furnish pleasant stations for the caravans. As one of the most remarkable, may be instanced the *Jewa la Mkoa*, or 'Round Rock,' so called from its immense granite dome, which is 2 m. in diameter, and rises by gradual slopes to the height of nearly 300 ft.

MIIOW, or *Mow* [add.], a number of places, India:—1, A tn. and British cantonment, Holkar's Dominions, in a clayey tract resting on basalt, 13 m. S.W. Indore. The town, situated on an eminence above the Gumber, is European in its appearance, having a church with a conspicuous steeple, a well-furnished library, a spacious lecture-room, and a theatre. The **CANTONMENTS**, occupied by a considerable force, in virtue of the treaty of Mundisor, are situated about half a mile S.E. of the town, at the height of 2019 ft. above the sea. Mlow was one of the centres of the sepy mutiny of 1857.—2, A tn. N.W. Provinces, dist. Azimgurh, r. bank Surgoo, here crossed by a ford, 55 m. N.E. Benares. It is a large straggling place, possessed of abundant supplies.—3, A tn. N.W. Provinces, dist. and 11 m. S.E. Meerut, in an open but only partially cultivated country.—4, A tn. N.W. Provinces, and 27 m. S.E. Allygurh. It stands in an open country, and has a bazar and a well-supplied market.—5, A tn. dist. and 17 m. N.W. Allahabad, cap. pergunnah of same name, in an open but only partially cultivated country, and with a well-supplied bazar.—6, A tn. Bundelcund, dist. Jhansi, on the Supprar, 70 m. S.W. Calpee. It made some figure in the wars produced by the dismemberment of the Mogul empire, and is still a large commercial place.

MHYEE, a river, India, which rises in a small plain in the native state of Amgharra in Malwa, flows successively N.W., W., and S.W., and falls into the gulf, a few miles below the town of Cambay. Its total length is about 350 m. Opposite to Cambay, not more than 8 m. from the sea, it is nearly 3 m. wide, but so shallow at low spring-tides that the channel is almost dry, so that the smallest boats cannot navigate it.

MIAKO, a tn. Japan. See *KIOTO* in *Supp.*

MIAMI, **GREAT** and **LITTLE**, two rivers, U. States, Ohio.—1, *Great Miami*, rises in co. Hardin, flows successively S. and S.W. through a picturesque and fertile country, and after a course of about 150 m. joins the Ohio at the S.W. corner of the state, 20 m. W. Cincinnati. It is navigable only for a short distance, but the Miami canal follows its course for about 70 m. Its chief affluents are the West Branch, the Mud,

and the Whitewater.—2, *Little Miami*, rises in co. Madison, flows in directions nearly parallel to those of the Great Miami, and joins the Ohio 6 m. E. Cincinnati. Its course is about 100 m.

MIAU-TAU, or **MEISHAN**, a group of islands, China, lying across the entrance of the Gulf of Pechili, and separating it from the Yellow Sea. They are about 15 in number, and lie off the N. coast of prov. Shantung, opposite to the town of Tengchau-fu, from which Chang-shan, the largest, is barely 4 m. distant. The channel between this island and the mainland forms the best entrance into the gulf. Close to it is a secure bay, which is resorted to by great numbers of junks proceeding with grain to Peking, and promises to become a most important station for foreign vessels when the trade has been fully opened up. There are numerous villages on almost all the islands of the group, supplies are tolerably abundant, and the water is better than is usually found on the coast of the mainland.

MICHAILENI, a tn. Turkey in Europe, Moldavia, cap. circle Dorohoi. It is a well-built place, the seat of a civil and criminal court, and has a normal school. P. 3000.

MICHAILOV, a tn. Russia, gov. and 30 m. S.W. Riazan, cap. circle of same name, on both banks of the Pronia. It contains six churches, a monastery, a charitable endowment, and several manufactures. Pop. 3821.

MICHAILOVSKAIA, a tn. Russia, gov. Don Cossacks, dist. Chopersk, l. bank Choper, 125 m. S.E. Voronej. It has three annual fairs, at one of which, held on 6th January, a very large amount of business is done. Pop. 13,405.

MICHELE (SAN), a tn. Italy, Venetia, prov. and 6 m. S.E. Verona, on the Etsch or Adige, and the railway to Vicenza; with a parish church, another church of a circular form, surmounted by a dome, and much frequented by pilgrims; and extensive manufactures of cables and other cordage. Pop. 3409.

MICHIGAN, or **MICHIGAN CITY**, a tn. U. States, Indiana, on the S. shore of Lake Michigan, and on the Michigan Central, and the Louisville, New Albany, and Chicago railways, 42 m. E.S.E. Chicago. It possesses seven churches and several benevolent institutions, and being the principal lake-port in the state carries on a considerable trade. Pop. (1860), 3320.

MICHLIMACKINAC, **MACKINAC**, or **MACKINAW**, a vil. U. States, Michigan, cap. co. and on an island of same name in Lake Huron, 90 m. N.N.W. Detroit. It possesses county buildings and several churches, saw-mills, and a safe and deep harbour, at which a considerable trade, particularly in fish, is carried on. It is a favourite summer resort. On a rocky height in the vicinity stands Fort Mackinac, a military post commanding the village. Pop. about 1500.

MIDDLEBURY, a vil. U. States, Vermont, cap. co. Addison, on the Otter Creek at Middlebury Falls, and on the Rutland and Burlington railway, 31 m. S. Burlington. It possesses five churches, a college, with six professors, eighty-five students, and a library of 9000 volumes; a court-house, a cotton and a woollen factory, an iron foundry, and a flour-mill. In the vicinity there is a marble quarry of so fine quality, that much of it is exported for statuary. Pop. (1860), 2879.

MIDGAN, a race, E. Africa, of doubtful origin, found chiefly in the Somali country, where they are numerous, but regarded as outcasts. They take service under the different chiefs, who sometimes employ them in great numbers in their feuds and forays, and find them most efficient auxiliaries, not on account of their prowess, for they are of somewhat stunted growth, and deficient both in strength and courage; but on account of the terror they inspire by their bow and diminutive arrows, barbed and poisoned with the waba. The Midgan, it is said, is able by the mere twanging of the string, to put to flight a whole village. Many of the race, instead of thus taking service, employ themselves in hunting and agriculture.

MIDNAPORE, a dist. India, presid. Bengal, between lat. 21° 41' and 22° 57' N.; lon. 86° 30' and 87° 59' E.; is bounded N. by Paroolia, Bancoora and Burdwan, N.E. Hooghly, S.E. Hidgellee, S. Balasore, S.W. the Cuttack Mehal Mohurbunga, and W. Paroolia; area, 4015 sq. m. The W. part is covered by jungly hills, and comparatively little known; the S.W. and S. resemble the adjoining tract of Orissa in its marshy soil, numerous shallow torrents, and pestilential atmosphere; the S.E., which, as the route from

Calcutta to Orissa passes through it, is the best known, has a general slope S.E., and is drained chiefly by the Soobunreeka, which falls into the Bay of Bengal, and the Kosai or Cossye, which unites with the Huldee, and joins the Hooghly at its mouth. Over a considerable extent of surface the soil is so thin and unproductive, that no attempt is made to cultivate it, and it remains in a state of nature, growing nothing but stunted and worthless brushwood; in other parts it is fertile, and yields good crops of rice—the staple crop—pulse, sugarcane, and indigo. Silk, obtained by rearing silkworms on the mulberry, is an important branch of domestic economy. The principal manufactures are salt, silk and cotton fabrics, pottery, coarse jewellery, and articles in brass and iron. Pop. 533,063.

MIDNAPORE, cap. of the above dist., l. bank Kosai, 67 m. W. by S. Calcutta, possesses a number of public buildings, in which the civil establishment is accommodated, a large school superintended by a local committee, and attended by above 300 pupils; and a good bazaar, well supplied, especially with provisions.

MIECHOV, a tn. Russian Poland, gov. Radom, cap. circle of same name, is a small but handsome town, said to have been built on the model of Jerusalem, and has a beautiful church which dates from the twelfth century, and a circle and elementary school. Pop. 1478.

MIELEC, a tn. Austrian empire, Galicia, circle and 26 m. N. E. Tarnow, r. bank Wysloka; with a castle, which was the cradle of the Polish family Mielecki; and 2995 inhabitants.

MIGULINSKAIA, a tn. Russia, gov. Don Cossacks, dist. Medviedetza, r. bank Don, 160 m. N.N.E. Novo-Teherkask; with an annual fair, and a pop. of 13,003.

MIHINTALA, an isolated mountain, Ceylon, overlooking from the E. the ancient capital Anarajapoor or Anuradhapura, and 79 m. N. by W. Kandy. It rises suddenly from the plain to the height of 1000 ft., and has its slopes densely covered with wood, and its summit crowned with huge rocks of riven granite. It is undoubtedly the most ancient locality of mountain worship in Ceylon, its highest peak figuring in the legends as the spot on which Mahindo alighted when he arrived in Ceylon to establish the religion of Buddha. The mountain has in consequence been carved into a temple. The southern face, which is almost precipitous, commands a magnificent view, reaching across the island from sea to sea. The northern side is ascended by a flight of steps, said to be 1840 in number, partly hewn out of the rock, but generally formed of slabs of granite 15 ft. wide. On a small plateau near the top, the dwellings of the priests are grouped around the Ambustella dagoba, built not, as usual, of brick, but of stone, and encircled by octagonal pillars, the capitals of which are ornamented with carvings of the sacred goose. The last flight of steps leads to the culminating point, the peak of Ambattalo, on which stands, and for eighteen centuries has stood, the Etwihara dagoba, a semicircular pile of brick-work, enshrining a single hair from the forehead of Buddha. The road leading from the base of Mihintala to Anarajapoor, a distance of 8 m., passes between mouldering walls, by mounds where the grass imperfectly conceals the ruins beneath, and by fragments of fallen columns, marking the site of former monuments.

MIKOLAJOW, a tn. Austrian empire, Galicia, circle and 20 m. N.N.E. Stry, near l. bank Dniester; with 2130 inhabitants, who are mostly employed in weaving linen.

MIKULLINCE [add.], a tn. Austrian empire, Galicia, circle and 11 m. S. Tarnopol, cap. dist. same name, on the Sereth; with a fine baronial castle, an infirmary, manufactures of woollen and linen cloth, and an active trade in wax and honey. In the vicinity there is a village occupied by German settlers, and containing much-frequented mineral springs, with a complete bathing establishment. Pop. 3340.

MILANOVATZ, a tn. Turkey in Europe, Servia, circle Kraina, r. bank Danube, 85 m. E.S.E. Belgrade; with a church and a school. Pop. 1400.

MILDENAU, a tn. Austrian empire, Bohemia, circle and 40 m. N. Bunzlau; with three mills, one of them for spinning yarn, and 1100 inhabitants.

MILFORD, two places, U. States:—1, A vil. and township, Massachusetts, on the Milford branch of the Boston and Worcester railway, 9 m. S.S.W. Boston. It contains six

churches and a high-school, and is extensively engaged in manufactures, particularly that of boots and shoes, which are annually made to the value of more than £350,000. Pop. (1860), 9132.—2, A post borough, Delaware, on the Mispillion Creek, 80 m. S.S.W. Philadelphia. It consists of two distinct portions, N. and S. Milford, one on each side of the river, and contains several churches and a public library. Pop. (1860), 3093.

MILFORD, a sound, New Zealand, forming the northernmost of a series of inlets which indent the S.W. coast of the Middle Island. Though of limited extent, compared with some of the others, it surpasses them all in scenery. Pembroke Peak, about 3 m. inland, and always capped with snow, rises on the N. to a height of 6700 ft.; while Lawrenny, a remarkable saddle-backed mountain on the S., has peaks nearly of the same altitude. Mount Mitre, so called from its remarkable shape, starts up abruptly from the S. side of the sound to the height of 5560 ft.; on the opposite shore stands a dome-shaped mountain, which is nearly bare of vegetation, and from its peculiar colour looks not unlike an enormous mass of metal. 'These alpine features, and its narrow entrance, apparently still more contracted by the stupendous cliffs which rise perpendicularly as a wall from the water's edge to a height of several thousand feet, invest Milford Sound with a character of solemnity and grandeur which description can barely realize.'—(*New Zealand Pilot*.)

MILL BROOK, a tn. British America, Canada West, co. Durham, 52 m. N.E. Toronto. It stands about half a mile from a station on the Port Hope and Lindsay railway, which gives it a direct communication with Port Hope; possesses two churches, a foundry and machine shop, a tannery, a brewery, a steam saw-mill, and a local trade of some importance. Pop. about 1000.

MILLE LACS, British America, about 60 m. N.W. of Lake Superior, is a beautiful sheet of water of very irregular shape, with an estimated length of 25 and average breadth of 4 m. It belongs to the basin not of Lake Superior, but of Hudson's Bay, its principal feeder being the Savaune coming from the E., and its outlet the Seine, which flows W.S.W. and falls into Lake Rainy. The hills around the lake are clothed with patches of pine of fair dimensions, and towards its W. extremity, both on its islands and the adjoining mainland, are seen rocks of white quartz, which at a distance look so like the sails of boats that they have been mistaken for them.

MILLOTITZ, a tn. Austrian empire, Moravia, circle and about 14 m. S.W. Hradisch; with a castle, a poor-house, coal mines, and 1000 inhabitants.

MILTON, a tn. British America, Canada West, cap. co. Halton, on the Sixteen Mile Creek, a feeder of Lake Ontario, 25 m. S.W. Toronto; with four churches, manufactures of waggons and ploughs, a foundry, and several saw and flour mills. Pop. about 400.

MILUM, a tn. India, Kumaon, on the route to Chinese Tartary, 13 m. S. of the Juwahir Pass, at the height of 11,706 ft. above the sea: lat. 30° 25' N.; lon. 80° 11' E. It stands in the fork formed by the confluence of the Gunkha and Goree, and consists of about 140 houses, strongly built of large stones laid without cement, and covered with slates, overlaid with a compact coat of clay. Close to the N.E. of the town there is a temple perched upon a cliff which overhangs the Gunkha. Milum is inhabited only between June and October; during the other months the inhabitants descend to a lower district, and thus avoid the deep snows which render the country impassable, and the avalanches which are constantly rolling down from the stupendous mountains in the vicinity. On their return, the traffic with Chinese Tartary, or Hiundes, as the natives call it, is resumed. It is carried on chiefly by the Juwahir or Uta Dhura Pass, though other passes are far more practicable, because the Tibetan authorities have been pleased to confer upon the Juwahirs the exclusive privilege of visiting and trading in all the marts of Hiundes. The principal exports to this country are grain, cottons, broadcloths, sugar, sugar-candy, spices, dye-stuffs, hardware, wooden bowls, coral, and pearls; the imports from it are gold-dust, salt, borax, goats' and sheep's wool, coarse shawls, yak-tails, ponies, drugs, dried fruit, and tanned leather.

MILWAUKEE [add.], a tn. U. States, cap. Wisconsin,

at the mouth of a small river of same name on the W. shore of Lake Michigan, and on a number of railways connecting it with the Mississippi and all parts of the country; lat. 42° N.; lon. 87° 54' W. It is laid out with considerable regularity, and consists of a central portion situated on a flat, and forming what may be called the business quarter, and two other portions, an E. and a W., seated on commanding heights, and occupied with dwelling-houses generally well shaded with trees. Most of the houses are built of a beautiful cream-coloured brick, which is made from beds of clay obtained in the neighbourhood, and has a light and pleasing effect. The public buildings and institutions are a court-house; a large edifice of Illinois marble, erected by the general government for state purposes, and containing a post-office, a custom-house, and various public offices; thirty-three churches and two synagogues; nine public and a large number of private and select schools; two orphan asylums; an hospital; and a convent. The great staples of trade are grain and flour. The provision trade also, though not yet fully developed, is becoming very important. The population more than doubled within ten years. In 1850 it was 20,061; in 1860, 45,246.

MINAHASA, a prov. or dist. Indian Archipelago, forming the extremity of the N. peninsula of Celebes. It lies between lat. 1° and 2° N., is about 60 m. long by 20 m. broad, and has an area of about 1200 sq. m. It is a romantic region of volcanic mountains, several of which are active, and of valleys, table-lands, and lakes. The mountains are not remarkable for elevation. Klobat, the loftiest of them, being only 6133 ft. above the sea. The table-lands average 2000 to 2500 ft., and contain many lakes, apparently the craters of extinct volcanoes. The fish with which they abound furnish a large part of the subsistence of the inhabitants. The streams, though numerous, are small and unfit for navigation. The cultivated productions are rice, maize, ground pulse (*Arachis hypogaea*), gomati and sago palms, tobacco, coffee, and cacao. The cacao is produced yearly to the extent of 250,000 lbs.; the coffee, considered superior to the best of Java, to the extent of 1,500,000 lbs. The rice produced, though human labour only is employed, exceeds the consumption, and leaves an annual surplus of about 40,000 cwt. for export. The inhabitants are estimated at 96,218. Of these only 3375 are Malays and 510 Chinese; the rest, 92,333, considered as aborigines, are, like the other inhabitants of the Celebes, of Malay extraction, but speak a distinct and peculiar language. Though simple and inoffensive, they are indolent, dirty, and poor. Their chief subsistence is sago.

MINDIF, or MENDEFI, a mountain, Western Africa, connected with a range which forms the western barrier of the country of Wandala, 160 m. S. by E. Kukawa. Surrounded by several other lofty summits, it might be supposed, when viewed at a distance from a particular point, to be the centre of a considerable mountain chain, whereas in reality it is only a detached cone, starting up from a level plain. Its height scarcely exceeds 5000 feet above the sea-line, or 4000 feet above the plain, and its circumference at the base is probably not more than ten or twelve miles. It is partly encompassed by a straggling village of the same name, which seems to stretch out to a considerable length, or rather to consist of two or three distinct clusters. The weekly market of this village is of some importance.

MINERAL POINT, a tn. U. States, Wisconsin, cap. co. Iowa, on a branch of the Pickatonokee River, and on the Illinois Central, and the Galena and Chicago Union railways, 58 m. S.W. Madison. It possesses five churches and four smelting furnaces, and has an active trade. Pop. (1860), 2389.

MINERBE, a tn. Italy, Venetia, prov. and about 19 m. S.E. Verona; with, among other fine buildings, a palace by Sanmicheli. Pop. 3065.

MINERSVILLE, a tn. U. States, Pennsylvania, on the W. branch of the Schuylkill River, and on the Minelhill and Schuylkill Haven railway, 45 m. N.E. Harrisburg. It is situated among hills containing rich seams of anthracite, and possesses four churches, a car-factory, an iron-foundry, a farm and a saw mill. Pop. (1860), 4024.

MINERY, or MINIRI, a vil. Ceylon, East Province, 52. m. N. by E. Kandy. It contains a small temple and a rest-house, but is only deserving of notice for the beauty of the surrounding scenery, which has made it to be pronounced

'the most charming sylvan spot in Ceylon,' and the tank of same name which lies embayed at the confluence of numerous valleys, separated by low and wooded steeps. This tank forms an immense reservoir, upwards of 20 m. in circuit, and its embankment, though overgrown with lofty trees, remains so nearly perfect that the water still issues by the ancient conduit, and after fertilizing a considerable area, flows in a broad stream to the Mahawetti-ganga.

MINGAN, a group of isls. Gulf of St. Lawrence, lying 45 m. along the coast of Labrador, and opposite the N.W. end of Anticosti Island, lat. (of centre) 50° 10' N.; lon. 64° 15' W. The group numbers 29 isls., some of them very small, and the largest not exceeding 11 or 12 m. in circumference. The most easterly is named St. Genevieve; the western is one of the Perroquets, noted for the numerous wrecks upon it. The isls. are of lower Silurian limestone, dipping slightly to the S. at an inclination of 60 to 80 ft. to the mile, outliers of the great Silurian basin of N. America, and formerly connected with Anticosti. Of ancient fossiliferous rock (birdseye to calciferous), the isles are generally low, none of them having an elevation of more than 300 ft. above the sea. Ancient beaches, as well defined as if moulded during the present generation, rise far above the highest tides; and water-worn rocks, shaped like gigantic Egyptian pillars, front the sea, and give a strange and artificial appearance to some of these wave-worn islands. Seals and cod abound upon the limestone reefs and shoals. The four most westerly islands, called the Perroquets, from the vast numbers of these birds which burrow and build on them, are low limestone rocks, quite denuded of trees. The north-western of the Perroquets is the highest of the group, and has a layer of peat on its summit. Shoal water lies off this island for $\frac{1}{2}$ m. both E. and W. The Mingan Islands are bold on the N. side, and free from danger to mariners, but shoals generally project towards Anticosti. With Anticosti and Cape Rosier they form the bounds of the estuary of the St. Lawrence, which, divided by Anticosti, is here 105 m. broad.

MINIEH, a tn. Central Egypt, cap. prov. of same name, on an elevated site above l. bank Nile, 136 m. S. by W. Cairo. It is a large and comparatively handsome place, with several regular streets and some very handsome mosques. Its manufactures consist of cotton goods and earthen vessels called *bardaks*, which by their porosity act as water-coolers.

MINNESOTA, or MINESOTA [add.], North America, one of the states of the American Union, between lat. 43° 30' and 49° N.; and lon. 89° 29' and 97° 5' W.; bounded N. by British America, E. Lake Superior and Wisconsin, S. Iowa, and W. Dacotah or Nebraska; greatest length, N. to S., 380 m.; central breadth, 183 m.; area, 81,259 m. It occupies the summit of a central plateau formed by the conterminous basins of the Mississippi, the St. Lawrence, and Lake Winnipeg. In the N.E. a group of low sandhills, composed of huge deposits of drift, and overlying an outcrop of the primary and metamorphic rocks, rises about 1680 ft. above the sea, and is known by the name of Hanteur de la Terre, or Heights of Land; but with this exception the surface is generally an undulating plain, with an average elevation of about 1000 ft. The general slope is S.E. towards the basin of the Mississippi, which with its affluents drains about two-thirds of the state; the only other important stream is the Red River of the North, which forms the W. boundary for 379 m., and belongs to the Winnipeg basin. The banks of the latter river are bordered by extensive alluvial flats of great fertility; but those of the Mississippi present a number of rocky limestone cliffs, often remarkable for their picturesque scenery. The rock formations appear to belong almost exclusively to the azoic and lower protozoic groups, which for the most part lie concealed beneath diluvial deposit, forming the superficial covering of vast rolling prairies. About two-thirds of the surface are well adapted for the cultivation of the cereals and roots of the temperate zone, the soil consisting generally of a dark calcareous loam, abounding in organic and saline matters, and retentive of moisture. The country, especially above lat. 46°, is well timbered. Far to the N. forests of pine occur; on the river flat basswood, aspen, ash, maple, linden, butternut, &c., abound; and in the swamps, tamarack, cedar, and cypress. The wild animals include the elk, deer, antelope, wolf, bear, otter, racoon, the eagle, grouse, pheasant, partridge, buzzard, and vast flocks of wild ducks,

wild geese, and other water-fowl. The buffalo, once abundant, is no longer found E. of the Red River. The lakes and streams abound with many varieties of fish. The climate is on the whole excellent, the winters though cold being clear and dry, while winds and breezes temper the excessive summer heats. For administrative purposes Minnesota is divided into 68 counties. St. Paul, situated near its E. frontier, is the capital. By the constitution, which was adopted 11th October, 1857, the right of voting belongs to all free white males 21 years of age, who have declared their intention of becoming citizens of the United States, and have resided a year within their limits, and four months previous to voting within Minnesota itself. The executive consists of a governor, lieutenant-governor, secretary of state, treasurer, and attorney-general, all elected for two years. The judges are also elected, those of the supreme and district courts for seven, and those of the other courts for two years. The property valued for taxation in 1862 amounted to £6,250,000. The quantity of land sold by the United States since the establishment of the land system in Minnesota, from the beginning of 1850 to the beginning of 1860, was 6,136,111 acres, or between an eighth and a ninth of the whole area of the state. Pop. by the census of 1850, 6077; by that of 1860, 173,855.

MINNESOTA, or **ST. PETER'S**, a river U. States, has its sources in a series of lakes between lat. 45° and 46° N. in Minnesota, flows S.E. for about 300 m. till it receives the Blue Earth, when it turns N.E., and continuing in that direction for about 120 m., joins the Mississippi at Fort Snelling. Owing to a rapid which occurs 40 m. above its mouth, it is navigable by steamers only for that distance, but small boats ascend about 250 m. farther.

MIRAMICHI [add.], a river, British America, New Brunswick, which rises in the W. of the province, on the high ground which borders the basin of St. John, flows N.E., and falls into a large bay of same name in the Gulf of St. Lawrence, after a course of about 100 m. The bay is nearly 14 m. wide, from the sand-bars off Blackland Point on the N. to Escumenai Point on the S., and about 6½ m. deep from that line across its mouth to the main entrance of the river, between Portage and Fox Islands. Beyond these islands is the inner bay or estuary, the entrance to which is obstructed by a bar of sand, which in some parts has not more than 2 ft. of water over it at low tides. At its S.E. end, off Portage Island, however, there is a part called the Swashway, which has a depth of 16 ft. at low water, and of 22 ft. at high water in ordinary spring tides. The inner bay is about 13 m. long from its entrance to Sheldrake Island, where the river may properly be said to commence, and from 7 to 8 m. wide. Its depth in ordinary spring tides is 16 ft. The river, when it enters the inner bay, is three-quarters of a mile wide, but narrows shortly after to half a mile. This width it retains up to the town of Chatham. At its mouth the country begins to rise into gentle undulations, terminating in steep banks and cliffs of sandstone. The scenery is by no means devoid of beauty, though somewhat of a desolate aspect is given to it by the dead and half-burnt trunks of large pines, standing out from a young growth of green poplar, and bearing testimony to the terrible conflagration of 1835. Veins of bituminous coal are seen along the banks, but as yet no seam of quality and thickness to repay the expense of working has been discovered.

MIRICKVILLE, a tn. British America, Canada West, co. Grenville, on the Rideau canal, 105 m. S.W. Montreal; with a Church of England and a Wesleyan church, a mechanics' institute, manufactures of woollens, an axe factory, a foundry, a tannery, and a large trade in staves and shingles. Pop. about 1000.

MIRISHI, or **MOISHI**, an isl. in the N.E. of Turkey in Europe, formed by the St. George and the Sulina arms of the Danube. It is nearly in the form of an isosceles triangle, with its base facing the Black Sea, and is densely wooded, furnishing haunts to whole herds of wild swine and to various other animals. On its N. side, close to the Sulina mouth, is the town of Sculish, consisting of a lighthouse and about 200 dwelling-houses, the inhabitants of which find employment in assisting the loading and unloading of vessels, in shipbuilding, and in carrying on a little trade. On the St. George arm there is a fishing colony, established by some monks who were driven out of Mount Athos.

MIRRIYA, a tn. Western Africa, near the N.W. frontiers of Bornou, and W. of prov. Zinder, 110 m. N.N.E. Kano. It was once the capital of the whole W. prov. of Bornou, but began to decay on the foundation of the town of Zinder, of which it is now in some degree a dependency. The wall is beautifully adorned with tamarind-trees. Immediately N. of the town is an extensive district, which enjoys the benefit of irrigation, and on which much wheat and cotton are grown.

MIRTA, a tn. India, Rajpootana, state and 68 m. N.E. Goodpoor. It occupies a commanding height, is surrounded by a wall, which is built on the W. side of mud, and on the E. of good masonry; and contains several Hindoo temples, a large and lofty mosque, and a well-constructed but rather meagrely supplied bazar. It is said to have a manufactory of felt. A supply of good water is obtained from three large tanks. Pop. estimated at 25,950.

MIRZAPORE, a dist. India, N.W. Provinces, between lat. 23° 50' and 25° 30' N.; lon. 82° 11' and 83° 39' E.; is bounded N. by Joonpoor and Benares, E. Shahabad, Behar, and Palamow, S. Sirgojja, and W. Rewa and Allahabad; area, 5235 sq. m. The N. portion, forming part of the valley of the Ganges, is of an alluvial character, but has one rugged sandstone ridge, which rises into an abrupt rock of considerable height, and furnishes the site of the fort of Chunar. Southwards the elevation increases, the surface rising first into the Bindachal Hills, which are 250 ft. above the adjacent valley, or 500 ft. above the sea, and ultimately into a tableland, about 900 ft. high, forming part of the N.E. extremity of the Vindhya range, which overspreads the whole S. of the district, and gives it a rugged and barren character. The mineral wealth is less varied than might have been anticipated from the nature of the strata. Coal, however, has been discovered on the banks of the Sone, which is, next to the Ganges, the most important river; kukkur, affording excellent lime, and fine sandstone for building abound, and at different localities are found fine slate, native soda, and iron ore. The principal alimentary crops are wheat, barley, bajra, millet, maize, pulse, and oil-seeds; the commercial crops, sugar, indigo, and cotton. The chief manufactures are woollen carpets, in imitation of Turkish, cotton carpets or setreegins, cotton imitations of Cashmere shawls, chintzes, and silk fabrics. In modern times most of these manufactures, unable to encounter British competition, have greatly declined. Pop. 831,388.

MIRZAPORE [add.], cap. of the above dist., situated 50 m. S.E. Allahabad, on a bed of kukkur above r. bank Ganges, which is here half a mile wide, and crossed by a ferry. It presents an imposing appearance from the river, in consequence of the fine ghats leading down to it, the numerous mosques and temples, the handsome European houses, occupying some of the most conspicuous sites, and the great extent of the place. This first impression is scarcely confirmed by actual examination. The native town consists mainly of three long, straight, and wide streets, shaded with rows of trees, and provided at intervals with wells, some of them so built as to furnish good specimens of architecture. The houses, however, notwithstanding the abundance of excellent building stone in the vicinity, are usually constructed of mud or unbaked brick, seldom of more than two stories, and for the most part of very indifferent appearance. The manufactures of carpets, and other strong woollens, cottons, and silks, have long been on the decline, but Mirzapore still maintains its pre-eminence as the greatest cotton mart in India, and has communication with Allahabad, Benares, and other chief places, by means of the India Steam Navigation Company's vessels. The cotton raised within the district forms a mere fraction of what is here warehoused or brought to market, large quantities to be disposed of in the lower provinces being transmitted hither from the Doab, Oude, Bundelund, the Saugor and Nerbudda territory, and even from parts of Malwa and Nagpore. The military cantonment is 3 m. N.E. of the town, on a kind of peninsula formed by the windings of the Ganges.

MISAMIS, a prov. and tn. Philippine Isles. The prov. one of the four into which the island of Mindanao is divided, lies on its N.W. side, bounded by Caraga on the E., the territory of the sultan of Mindanao on the S., and Zamboanga on the W.; area, 1400 geo. sq. m. The climate, hot and damp,

but not unhealthy, produces a luxuriant vegetation, the most obvious effect of which has been to cover most of the country with forests of unusual density. The inhabitants dwell chiefly on the sea-coast, whose bays and coves, abounding with fish, supply them with their chief means of subsistence. A considerable number employ themselves in washing the sands of the rivers for gold. Pop. 47,388.—The town, cap. of the above prov., situated on the W. side of the Bay of Iligan, in lat. 23° 10' N.; lon. 123° 46' E., contains 3830 inhabitants.

MISCOU, an isl. British America, Gulf of St. Lawrence; at the S.E. entrance of Chaleur Bay. It is of a triangular shape, about 8 m. long from N. to S., and has a maximum breadth from E. to W. of nearly 5 m. On the S.W. the shore is low, and sends out a long ledge of sandy flats; but elsewhere it is tolerably bold, with steep sandy beaches, particularly towards the N. extremity, where several stores and fishermen's huts are seen. Near the same extremity, on Birch Point, there is a lighthouse, in the shape of a wooden octagon-shaped building, with a fixed red light 79 ft. above the level of high water, and visible in clear weather at the distance of 12 m. The channel between the islands of Miscou on the N. and Shippigan on the S. forms an excellent harbour, above a mile long, 400 yards wide, and from 4 to 6 fathoms deep.

MISIVRIA, a tn. Turkey in Europe, on a bay of the Black Sea, on the S.E. coast of Bulgaria. It has a harbour encumbered by reefs, but notwithstanding carries on a considerable trade in wine, and wood for fuel. From the inscriptions and other ancient remains found within it, it appears to have been once much more important than at present. Pop. 3000.

MISLYE (Alsó), a tn. Austrian empire, Hungary, co. Abau-Torna, 7 m. S.E. Kaschau, cap. dist. of same name; with a courthouse, a high-school, a large imposing structure which was once a monastery, and 1000 inhabitants.

MISSLITZ, a tn. Austrian empire, Moravia, circle and about 12 m. N.N.E. Znaim; with a handsome parish church, a castle, a synagogue, and 1600 inhabitants, of whom half are Jews.

MISTASSINI [add.], a lake, river, and dist. British N. America. The lake, of vast dimensions, occupies an area between lon. 71° and 74° W., and lies under the parallel of lat. 51° N. It derives its name, 'Great Stone,' from a huge isolated rock in it, the manitou or 'spirit' of which is invoked by the Indians. In the neighbouring country forest trees disappear, and the whole of it is cut up by thousands of lakes, and covered with enormous rocks piled one upon another, and often covered with large lichens of black colour; in the spaces between these rocks a few pine trees are found not exceeding 3 ft. high. The Mistassini River, or Rivière des Sables, is 150 m. long, and navigable for canoes to a distance of 120 m. from its mouth in Lake St. John (lat. 48° 25' N.; lon. 71° 30' W.) In one place it has a cascade 80 ft. in height, and from the summit of the hills near the cascade a chain of lakes, occupying a long valley, leads to the watershed of the district, whence a small tributary of Lake Mistassini takes its rise.

MITCHELL, a tn. British America, Canada West, co. Perth, on the Thames and on the Buffalo and Lake Huron railway, 90 m. W. by S. Toronto. It has three churches, manufactures of pumps and fanning mills, a tannery, an iron foundry, and several grist and saw mills. Pop. about 1000.

MITROVITZ, a tn. Turkey in Europe, near the S.E. extremity of Bosnia, 30 m. S.E. Novibasar. Its inhabitants are chiefly engaged in the culture of the vine, the lower slopes of a ridge of hills to the N. of the town being wholly planted with vineyards. Pop. about 1000.

MIZDA, a tn. N. Africa, regency and 100 m. S. Tripoli, near the western extremity of the Wady Sofejin, justly celebrated as one of the most fertile within the limits of the regency. It occupies a hill composed entirely of gypsum, and consists of two distinct quarters or villages, of which all the houses are constructed of gypsum. The western and larger village has a wall in a state of decay, and several high round towers equally ruinous, but boasts of being able to furnish 100 full-grown men fit for military service. Two caravan routes, one from Mourzouk, and the other from Ghadamis, join at Mizda, and give it some commercial importance. The inhabitants, belonging to the Zintan tribe, are of a mild disposition, and bear a high character for honesty.

MIZUN, a tn. Austrian empire, Galicia, circle and about 30 m. Stry; with blast-furnaces and other extensive iron-works. Pop. 1700.

MJESHTSHOVSK, a tn. Russia, gov. Kaluga, cap. circle of same name, on both banks of the Moschaika. It contains four churches, a secular and a religious circle school, a charitable endowment, and an important yearly market, which lasts from June 27 to July 3. Pop. 4911.

MLAVA, a tn. Russian Poland, gov. Plock, cap. circle and on a stream of same name; contains 3957 inhabitants, and has a missionary church, an elementary school, and various manufactures.

MOBILE [add.], a tn. U. States, cap. and only seaport of Alabama, on the W. bank of the Mobile, immediately above its mouth in Mobile Bay, and on the Mobile and Ohio railway; lat. 30° 41' 26" N.; lon. 88° 1' 29" W. It stands on a sandy plain rising gradually from the water, and consists of the town proper, with regular, well-paved, and well-shaded streets, and several extensive suburbs partly covered with fine villas. The principal public buildings are the market house, a large and handsome edifice, with an upper story in which the municipal authorities are accommodated; the custom-house, with accommodations for the post-office and U. States courts; twenty-three churches, one of them an imposing R. Catholic cathedral; a Jewish synagogue; the public schools, kept in what was formerly the Barton academy; a city and a marine hospital, an infirmary under the charge of the Sisters of Charity, three orphan asylums, a medical college, a literary institute, a theatre, and Oddfellows' and temperance halls. The industrial establishments include two iron foundries, a resin-oil factory, a dry-dock, and several building-yards; but the great staple of the place is cotton, of which during the five years ending 1859-60, 789,057 bales were exported. The other exports, consisting of lumber, turpentine, rosin, oil, &c., are comparatively insignificant. So also are the imports, which in 1859 had a value short of £200,000, while that of the exports exceeded £6,000,000. The greatest hindrance to the trade of Mobile is the shallowness of its harbour. Vessels drawing more than 10 ft. must anchor in the bay, about 25 m. from the town, and receive their cargoes by the intervention of steamboats. Another serious obstacle to the prosperity of Mobile is its climate. In addition to its excessive summer heats, it is subject to visitations of epidemic yellow fever, which in 1853 carried off about a tenth of its then actually resident inhabitants. In common with the other ports of the south it suffered severely during the civil war, and was surrendered to the Federals. Pop. (1860), 29,258.

MOCSONOK, a tn. Austrian empire, Hungary, co. Lower Neutra, 39 m. E.N.E. Presburg; with a fine summer-palace of the Bishop of Neutra, and 2196 inhabitants.

MODLIN [called by the Russians *Neugeorgiewsk*], a fortress, Poland, woiwod Plock, at the confluence of the united Narew and Bug with the Vistula, 15 m. N.W. Warsaw. Its position, giving it the command of the passage of these rivers, clearly indicates its military importance, and accordingly, in the seventeenth century, the Swedes formed an entrenched camp here. Napoleon saw what might be made of it, and caused its fortifications to be carried on from 1807 to 1812. In 1813 it was blockaded by the Russians, who only obtained possession of it after the provisions of the garrison were completely spent. During the revolution of 1831 it was heroically defended by the Polish general Ledochowski till the fall of Warsaw, when his plan of blowing it in the air was defeated by the pusillanimity of his officers, and he was obliged to surrender. Since then its fortifications have been repaired, enlarged, and strengthened, so that it is now one of the most formidable places in the Russian dominions. The whole space within the works being occupied by military buildings, there is no proper town.

MÖDLING [add.], a tn. Austrian empire, Lower Austria, cap. dist. of same name, in a beautiful and romantic district on the South railway, 9 m. S.S.W. Vienna. It has an ancient Gothic church, a subterranean chapel, a poorhouse, an asylum for children, a theatre, barracks, chalybeate springs, three printfields, and a considerable trade in wine. Immediately behind the town opens the rocky valley of the Brühl or Briel, which is rich in natural beauty, and has some of its most romantic heights crowned with ruined castles. One of these belongs to Prince Liechtenstein, who has in the same locality

a fine summer-palace, with a large park laid out in the English style. In the valley gypsum and limestone are extensively quarried. Pop. 3550.

MÖDRITZ, a tn. Austrian empire, Moravia, circle and 5 m. S. Brünn; with manufactures of beet-root sugar, and three yearly markets.

MOENA, a tn. Austrian empire, circle and 35 m. N.E. Trent, at the entrance of a valley on the frontiers of Venetia; with several ironworks, and a pop. of 1400.

MOENA, MUNA, or PANGASANE, an isl. Indian Archipelago, situated between Boeton and the S.E. peninsula of Celebes. It is about 105 m. long by 30 m. broad, and has a computed area of 744 geo. sq. m. Its capital, bearing the same name, is interior, and the only place where any trade is carried on is Tiworo, situated near its N. extremity, opposite to Celebes. The inhabitants, of Malay origin, speak a dialect of the language of Boeton, to whose sultan Moena is subject. The only staple of trade is trepang.

MOGHAR, the name of two nearly contiguous tns. N. Africa, Algerian Sahara:—The one, *Moghar Futani*, or *High Moghar*, has an elevated site on the S. slope of the Uled Sidi Sheikh range, and contains about 150 houses of indifferent appearance, a mosque, a school, and a fountain. The other, *Moghar Tatani*, or *Low Moghar*, lies at the base of the range, surrounded by productive gardens and groves of dates. Both districts raise large crops of grain, with which they supply several places in the neighbourhood.

MOGILA, a tn. Austrian empire, Galicia, circle and 4 m. E. Cracow, l. bank Vistula; with a Cistercian monastery founded in the thirteenth century, and 1800 inhabitants.

MOGILANY, a tn. Austrian empire, Galicia, circle Wadowice, 8 m. S.S.W. Cracow, on a mountain ridge, commanding a beautiful view of Cracow and the valley of the Vistula, and crowned by a baronial castle. Pop. 1100.

MOGULTOOR, a tn. India, presid. Madras, dist. and 46 m. S. Rajahmundry. It has of late years greatly declined, and derives most of the importance which it still possesses from its government salt-pans. In the vicinity, nearly contiguous to the town, is a mud fort occupied by a pensioned rajah, a descendant of the zemindar who once possessed the greater part of the district W. of the Godavery.

MOHAMRAH, a tn. Persia, Khuzistan or Arabistan, on the N. extremity of the island of Abadan, which is formed by the two W. arms of the Euphrates before discharging their waters into the Persian Gulf, 26 m. below Basra. Forming the key to Persia from the gulf, it is a place of great strategical importance, and is accordingly defended by several batteries. These however were easily silenced by the British during the late Persian war in 1856-7, and the garrison, after only a show of resistance, fled, leaving Mohamrah itself to the victors. The pressure thus brought to bear on the Persian government was doubtless a main cause of the peace which they hastened to conclude immediately afterwards. The advantages which Mohamrah derives from its position are counterbalanced by its climate, which is so pestilential that the mortality among those who are obliged from any cause to reside in it during the hot season amounts to about 50 per cent. The cause of this unhealthiness is, according to Sir Henry Rawlinson, 'the marsh malaria produced by the decomposition of vegetable matters under a burning sun, added to the great humidity of the atmosphere in the immediate neighbourhood of the sea.' Farther up the river the climate is comparatively healthy.—(*Sir H. Rawlinson.*)

MOHAN, a tn. India, Oude, l. bank Sae, which is here crossed by a handsome brick bridge of 15 arches, 18 m. W.S.W. Lucknow. It was once defended by a brick fort, which has disappeared, and gives indications of having once been more important than at present. The road leading into it has a low wall on each side, and is paved with brick.

MOHARREK, or MAHRAGH, a tn. Persian Gulf, at S. end of an island of same name, lies like a long white strip on

the shore of the channel that separates it from the town and island of Menamah or Bahrein; lat. 26° 20' N.; lon. 50° 40' E. Its white houses set off by darker palm-huts, the large low palaces of the head family, two or three imposing forts close to the shore, and a long coast battery, altogether give it a striking and pleasing aspect. Along the low sand-line of the island rise many detached groups of palm-huts, with an occasional white plastered residence amid tall date-trees; all having a quiet and peaceful air.

MOHRAN (LITTLE), a tn. Austrian empire, Silesia, dist. Freudenthal, 15 m. W.N.W. Troppau, on the Mora; with a wire-factory, a paper-mill, iron-mines, and 1400 inhabitants.

MOISIE, or MIS-TE-SHIVU (the 'Great River' of the Montagnais Indians), a river, British America, which has its mouth on the N. shore of the estuary of the St. Lawrence, on the S.W. coast of Labrador, about 18 m. E. Seven Islands Bay; lon. 66° 10' W. It discharges a great volume of water

MOISIE RIVER, THIRD RAPID.—From Hind's Explorations in Labrador.

in spring after the melting of the snows, and brings down quantities of sand which so obstruct its wide and shallow channel in the first 2½ m. from the sea that boats cannot ascend at low tide. At the end of 2½ m. the river, which has decreased in width to ½ m., has a clear channel, and flows with a depth of 9 ft. between steep sandy shores or cliffs for another mile. Flat-bottomed boats can ascend to the first rapids, a distance which, including windings, is about 20 m. above its mouth. It has its source in some of the lakes and swamps of the high table-land of Canada East. For centuries it has been one of the chief lines of communication from the interior to the coast, travelled by the Montagnais during the time that they were a numerous and powerful people. The old and well-worn portage paths round falls and rapids, and over precipitous mountains, on the Upper Moisie, testify the antiquity of the route. The general course of the river is from N. to S., running for the most part through precipitous mountain gorges, with numerous rapids and falls, which quite preclude its utility for purposes of navigation. Its length is about 250 m., with a total descent of more than 2000 ft.—*Moisie Bay*, to the E. of the mouth of the Moisie River, is lined with a beach 100 to 200 yards in breadth, fringed with open glades and forests of small spruce. The fishing station at the mouth of it, like other places on the N. shore of the Gulf of St. Lawrence, presents, during the summer, a busy scene, but in the winter is desolate. In the summer of 1859 the population was 1500, with 300 boats engaged in fishing for cod; in the following winter the number of people was 21 left in charge of the fishing establishments. Professor Hind gives the following account:—'The bay, especially on the E. side, presented a very lively aspect when we visited it. The beach was lined with stones and "flakes" on which 100,000 cod-fish were drying. We went to see Mr. Tétu's patent deep-sea fishing, in which he had taken 150,000 cod-fish in a fortnight. It consists of an immense net divided into eight compartments, into which the fish enter, but from which they cannot or do not escape. The fisher-

men take them out with scoops after lifting one of the compartments of the net nearly to the surface of the water. On looking over the side of the boat we observed thousands of cod-fish swimming about in the "pound." Mr. Tétu informed us that he allows the fish to remain in his nets until he requires them; they feed as in a preserve, and find the workmen employment when the weather is too boisterous for the boats to go to sea. On the day of our visit he took 9000 cod-fish out of his traps.

MOJO, a tn. Bolivia, prov. and 140 m. S. by E. Potosi, in a scattered and barren district. It consists of mud houses badly whitewashed, ranged in straggling ruinous streets. The shops are ill supplied, though the *panaderos* and bread are in high repute.

MOKAU, a river, New Zealand, which rises in the Rangitoto mountain range, in the W. of North Island or Ulster, flows W., and falls into the sea about 35 m. N.N.E. New Plymouth. It has 2 ft. on its bar at low water, and 14 ft. at high-water springs, admits vessels of about 20 tons, and is navigable for boats for many miles, but subject to heavy freshets. Coal is found on its banks.

MOKME, or **MOUNG-MÉ**, a tn. Burmah, cap. of a Shan state, 70 m. S.E. Ava. The inhabitants, occupying about 350 houses, suffer much from the depredations of the Red Karen, who live on their frontier, and compel all the chief villages to pay them black mail.

MOKOROZE, a rivulet, E. Africa, Portuguese possessions. It joins the Zambesi nearly opposite to Tette, and is celebrated both for the hot spring of Nyamboronda, situated about 1½ m. to the E.; and still more for its gold washings, which have been carried on for a long period, and have not yet been abandoned, though the yield is small.

MOLGHOY, a vil. W. Africa, country of the Marghi, 120 m. S. by W. Kukawa. It is not so much one village as a large aggregate of huts, sometimes clustering together, sometimes detached, and spread over an extensive area. The fields, though shaded and adorned by numerous karage trees, presented a melancholy appearance. Agriculture seemed at a stand, and though the rains had set in there was no appearance of activity. Everything showed that the inhabitants, galled by oppression, were bordering on despair.

MOLINE, a vil. U. States, Illinois, on Rock Island, in the Mississippi, and on the Chicago and Rock Island railway, 148 m. W.S.W. Chicago. It possesses a fine school-house and several mills and factories. Water-power, obtained by the river by means of a dam, and a large coal-field in the vicinity, give it great facilities for manufactures. Pop. (1860), 2028.

MOMEIT, a tn. Burmah, cap. of a considerable territory to the E. of the Irrawadi, about 60 m. N.N.E. Ava, has within its district the celebrated ruby mines of Mogont and Kyat-pen.

MONAS, a river, Asia, which, rising in the Himalaya, in lat. 28° 21' N.; lon. 91° 18' E., flows S. through Tibet for 40 m., descends through a mountain gorge into Bhootan, changes its direction by bending gradually round to the S.S.W., receives the Demree, which nearly doubles its volume, enters Assam after forming part of the boundary between it and Bhootan, and joins the Brahmapootra on its r. bank, opposite to the town of Goalpara. Its total length is about 190 m.

MONASSA, a tn. India, Holkar's Dominions, cap. pergunnah of same name, in a valley bounded on the N. by the Chitor range, 18 m. E. Neemuch. It stands at the height of 1440 ft. above the sea, possesses a bazar and a market, and has a pop. of 4100.

MONASTERZYSKA, a tn. Austrian empire, Galicia, circle and 27 m. N.E. Stanislaw, cap. dist. of same name; with an extensive manufacture of cigars, and 3233 inhabitants.

MONASTIR [add.], a small sea-coast town on the Bay of Hammamet, regency and 80 m. S.S.E. Tunis, surrounded by crenelated walls of Saracenic construction. The streets are clean and well laid out, and the palms, which grow in great numbers in the town, and overtop the houses and the wall, impart to Monastir, when seen from a distance, a very unique and picturesque aspect. The town is better fortified towards the sea than towards the land. A tunnel hollowed out in the rock, named by the Arabs the Sultan's Bath, and giving communication between a plateau outside the town and the sea,

is the only noteworthy object of the place. In fine weather this tunnel serves the inhabitants as a bathing-place. Extensive gardens, in which lie many country houses, extend round the town.—(Clarissou, *Aperçu de Tunis*.)

MONAY, a tn. Burmah, cap. Shan state of same name, at the height of 2000 ft. above the sea, 140 m. S.E. Ava. It is built along the foot of the hills bounding the fertile valley of the Nam-tween, a tributary of the Me-ting, is the largest of all the Shan capitals, and the seat where the Burmese government, as the paramount power, exercises its sovereignty; and contains about 8000 inhabitants.

MONCLOVA, a tn. Mexico, dep. Coahuila, 55 m. N.N.W. Saltillo. It is situated in a mountainous district near the centre of the dep. and the sources of the Sabrinias, and contains seven or eight churches, an hospital, and a cotton factory. Pop. about 4000.

MONGHYR, a dist. India, presid. Bengal, between lat. 24° 20' and 26° 1' N.; lon. 85° 40' and 86° 50' E., is bounded N. and E. by Bhagalpore, S.W. Ranghur and Behar, W. Behar and Patna, and N.W. Tirhoot; length, N. to S., 115 m.; breadth, 60 m.; area, 2558 sq. m. It lies chiefly along the l. but partly also along the r. bank of the Ganges. The former or N. portion, constituting about two-thirds of the whole, is in general a low flat, in some places sandy, in others swampy and uncultivated, but containing large tracts of remarkable fertility. The S. portion possesses the same general character, but appears to be on the whole still more swampy and unsightly. The principal crops are rice and wheat, but barley, pulse, oil-seeds, opium, indigo, sugar, and tobacco, are extensively grown, chiefly by means of irrigation. The inhabitants are very industrious, and turn their land to the best account, often raising three crops from it in a single year. The first is Indian corn, the second rice, and the third pulse, dibbled in between the rows of rice, and left to attain maturity after the rice is reaped. To the general flatness of the district there are some exceptions. One of these is a rocky tract in the vicinity of the town of Monghyr, whose fort is built on a cliff projecting boldly into the Ganges. Still farther S. and S.E. an extensive highland is formed by the Kuruckpore Hills, which, partly in isolated groups, partly in continuous ridges, are for the most part covered with wood. Among wild animals are tigers, leopards, hyenas, wolves, bears, jackals, monkeys, &c. The gaur, a large and noble bovine animal, exists in the wilder parts, the rhinoceros is not unknown, and a wild elephant occasionally makes his appearance. Snakes, some remarkable for their size, and others for their venom, are very numerous; and the Ganges teams with alligators, porpoises, tortoises, and good fish. Pop. 800,000.

MONMOUTH, a mun. and parl. bor., market tn., and par. England, cap. co. same name, beautifully situated in a luxurious vale, near the confluence of the Munnow and Wye, 25 m. N. by W. Bristol. It consists of several streets diverging to the Wye, which is crossed by a handsome bridge; was once surrounded by walls, of which only a gate remains; and defended by a castle, now reduced to a paltry ruin; is in general well built, partly of ancient and partly of modern houses, many of them with gardens and orchards attached; and has a parish and a district church, the former with an ancient tower terminating in a beautiful spire; Wesleyan, Independent, Baptist, and R. Catholic chapels, Free grammar, national, and other schools; an excellent market-house, alms-house, a dispensary, manufactures of iron, tin, and paper, and a trade in iron and timber. Monmouth, with Newport and Usk, sends a member to Parliament. Pop. 5710.

MONTAGNAIS, a tribe of Indians, British America, Lower Canada, inhabiting the coast from the heights of the Saguenay to the shores of Labrador. They are an honest, hospitable, and kindly race, and gain a subsistence chiefly from fur-hunting. They have no turn for agriculture, and are fast decreasing in numbers from want and privation. Many of the tribe have been converted to Christianity, and resort to the coast periodically for the visits of the R. Catholic clergy who minister to them.

MONTECRISTI, a tn. S. America, Ecuador, prov. Manavi, at the foot of a mountain of same name, about 10 m. from the coast, and 100 m. N.W. Guayaquil. Owing to the inequalities of its site, its streets are very irregular, but many of the houses, which are all built of wood, have a pleasing

and comfortable appearance. The chief manufacture is straw-hats, and the trade is in them and in brandy, rice, caoutchouc, vanilla, and timber. Montecristi was originally built where the port of Manta now stands, but was removed to its present site in consequence of the depredations of the buccaneers. Pop. about 3000.

MONTEFORTE, a tn. Italy, Venetia, prov. and 20 m. E.N.E. Verona; with a number of handsome villas, a beautiful parish church, a bishop's palace, and 3674 inhabitants.

MONTEMORELOS, a tn. Mexico, state Nuevo Leon, 70 m. S.E. Monterey; with a pop. estimated at about 8000.

MONTORIO, a tn. Italy, Venetia, prov. and 4 m. N.E. Verona; with a parish church, an old castle, a paper, an iron, and a cotton mill, the last on a large scale, with 10,000 spindles. Pop. 2021.

MONTRADOK, a tn. Borneo, the chief place of the Chinese diggers of its W. coast, is situated about 45 m. N. of the equator, and within 25 m. of the sea, in a wide plain belonging to the decayed Malay state of Matan. The diggers, a rude but industrious people, all of the labouring-class, come from the prov. of Canton. Not bringing their families with them, they intermarry with the natives, and give rise to a mixed race, but continue notwithstanding to preserve their original dress, manners, religion, and language. Since the Dutch obtained the retrocession of their settlements in the Archipelago, they have subjected the diggers to their authority, though not much to their own advantage, as several rebellions have in consequence ensued. The inhabitants are estimated by themselves at upwards of 100,000. This however is a palpable exaggeration.

MONT ST. HILAIRE, a vil. British America, Canada East, co. Rouville, at the foot of a mountain, 22 m. E. Montreal. It is much frequented in summer by pleasure parties for its fine scenery. The mountain rises to the height of 1400 ft. above the level of the St. Lawrence, and commands a view embracing the city of Montreal and the St. Lawrence, with its affluents Richelieu, Yamaska, and St. Francis. Some way up its side there is a lake with an outlet sufficiently copious to furnish water-power for several mills. Its base is covered with thriving orchards of apple-trees, for which the soil and climate seem to be peculiarly adapted. A superior hotel has lately been erected on an elevated spot in the vicinity.

MONYE-MAKABA, an isl. of the Zambesi, S. Africa, below the confluence of the Kafue, about lat. 15° 30' S. It is one of numerous islands which crowd the channel of the river, and must ever prove a serious obstruction to the navigation of it; is near 2 m. long by $\frac{1}{2}$ broad; and has, in addition to its human inhabitants, a herd of buffaloes that never leave it, and give battle when they are attacked. The only time when their numbers can be thinned is when the river is in full flood. Then the island is reduced to its narrowest limits, and the buffaloes afford a sure mark to the archers of a fleet of canoes. It is remarkable that under such circumstances they cling to their island home, and refuse to save themselves by swimming, as they might easily do.

MOORHUR, a river, India, presid. Bengal, which, rising in lat. 24° 8' N.; lon. 84° 26' E., flows N.N.E. through dists. Ramghur, Behar, and Patna, and joins the Ganges on its r. bank a few miles below the town of Patna, after a course of about 130 m.

MOORSHEDEBAD, a dist. India, presid. Bengal, between lat. 23° 48' and 24° 47' N.; lon. 87° 52' and 88° 41' E.; is bounded N.E. by the Ganges, separating it from Malda and Rajeshahye; E. Rajeshahye; S.E. Nuddea; S.W. Beerbhoom; and W. Beerbhoom and Bhagulpore; area, 1856 sq. m.; pop. 1,045,000. The E. part is a low flat, subject to inundations, and abounding in gheels or small lakes; the W. part is covered with hills connected with the neighbouring highlands of Rajmahal and Beerbhoom. The alluvial land is very fertile, but the hilly land becomes productive only by a liberal use of manure and irrigation. Before the E. I. Company was deprived of trading privileges, this district was one of the principal seats of its silk manufacture. The mulberry is still extensively cultivated, but the manufacture is comparatively limited. Next to silk, indigo is the most important commercial crop. The town of Moorshebad, though it gives the district its name and is still its largest town, has been supplanted as its capital by Berhampore.

MOR, a river, India, presid. Bengal, which rises in dist.

Bhagulpore, in lat. 24° 31' N.; lon. 87° 1' E., flows successively S.E., E., and S., and falls into the Bhagruttee, in lat. 23° 43' N.; lon. 88° 10' E., after a course of about 130 m. Its chief affluent is the Dwarka, which, after joining it, sometimes gives its name to the united stream.

MORADABAD, a dist. India, N.W. Provinces, Rohilcund, between lat. 28° 15' and 29° 27' N.; lon. 78° 10' and 79° 24' E.; is bounded N.E. by Kumaon, E. Bareilly and the jaghire of Rampoor, S. Budaon, W. Boolundshuhur and Meerut, and N.W. Bijnour; area, 2967 sq. m. Its N. and N.E. frontier is formed by a range of hills of no great elevation, and from these the surface gradually declines towards the S. The plain at the base of the hills consists of terai or marsh land, and is characterized by a luxuriant vegetation of forest trees, jungle, and gigantic rushes and grasses, and by deadly malaria. To the S.W., where the slope is toward the l. bank of the Ganges, a good deal of the land is alluvial. The principal rivers are the Rungunga, the Gunghun, and the Kosila or Kosee. The wild animals include elephants, which are numerous in the forests, and a few of which are annually captured for domestication, though they are less valued than those found further east; tigers, leopards, bears, lynxes, spotted deer, antelopes, nylgaus, &c. Among serpents are the boa-constrictor and the cobra-di-capello. The agriculture is varied and important. Maize and millet form the principal food of the labouring classes; but rice and wheat are extensively grown, and sugar-cane and cotton thrive well. Fruit, among which peaches and grapes hold the first place, abounds. Pop. 997,362.

MORAMBALA [‘the lofty watch-tower’], a detached mountain, S. Africa, about 500 yards from l. bank Shire, 18 m. above its junction with the Zambesi; lat. 17° 30' S.; lon. 36° 40' E. It rises with steep sides to the W. to 4000 ft. in height, and is about 7 m. in length. It is wooded to the very summit, and is very beautiful. The S. end seen from a distance has a fine gradual slope, and appears to be of easy ascent; but the side which faces the Shire is steep and rocky, especially in the upper half. A small village is placed about midway up the mountain, in a pure and bracing air, and above mosquito range. The people on the summit have a very different climate and vegetation from those on the plains. Upwards of thirty species of ferns, and even good-sized tree-ferns, are found upon the mountain, though scarcely a single kind is to be found upon the plains. Lemons and oranges grow wild, and pine-apples have been cultivated by the natives. Hornbills, hawks, monkeys, antelopes, and rhinoceroses find home and food among the great trees round the base. In the plain near the N. end a hot fountain boils up clear as crystal from two spots a few yards apart, and sends forth a good stream of hot water; the temperature is about 174°. An incrustation smelling of sulphur has been deposited by the water upon the stones.

MORELLIA, or VALLADOLID DE MECOACAN [add.], a tn. Mexico, cap. state Mechoacan, at the height of 6000 ft. above the sea, 130 m. W.N.W. Mexico. It stands in a marshy plain occupying the centre of a valley watered by two rivers, is surrounded by productive and beautiful kitchen, fruit, and flower gardens, and consists chiefly of a large square and one principal street, with a number of minor ones. Many of the houses, especially in the principal street, are both substantial and elegant. The most important public buildings and institutions are the cathedral—a beautiful structure, somewhat overlaid with ornament both without and within—two parish churches, a college, an ecclesiastical seminary, seven tolerably good elementary schools, two monasteries, two nunneries, and several hospitals. The Alameda and Paseo, both situated in the S. part of the town, afford beautiful walks. Pop. about 22,000.

MORETON [add.] an isl. Australia, Queensland, forming with Stradbroke Island immediately S. of it the E. shore of the large and fine expanse of Moreton Bay. It is 20 m. long from N. to S., by 5 m. broad near its N. end; is in some parts of considerable elevation, Mount Tempest, near its centre, rising to the height of 910 ft.; and has hills moderately clothed with trees and scrub, though the greater part of the surface is sandy, and approaches to absolute barrenness. Between Moreton and Stradbroke Islands is Rous Channel, leading W. into Moreton Bay. Between Sandy Point, the S. extreme of the former, and Aunity Point, the N. extreme of the latter

island, the distance is only $1\frac{1}{2}$ m., while a mass of sandbanks stretches out $2\frac{1}{2}$ m. from Sandy Point, and forms what is called the North Bar, on which even in calm weather rollers break with great violence. The channel thus becomes contracted to little more than 200 yards in width, and has a depth of only 4 fathoms. Notwithstanding the obvious danger of attempting such a channel, the masters of steamers and coasters often used it, though their only inducement was to save the short additional distance of sailing into the bay by rounding Cape Moreton; but since the loss of the steamer *Sovereign* on the north bar, in 1846, when a great number of the passengers and crew perished, Rous Channel is seldom attempted.

MOROTTU, a tn. Ceylon, on the W coast, 10 m. S. by E. Colombo, with which it is connected by a road which passes between almost continuous gardens of cinnamon. It is a large place; and its inhabitants, most of them carpenters of the fisher caste, are employed chiefly in making furniture from the jak-tree, the wood of which (though yellow when first cut) acquires in time a mahogany tint. The recent adoption of barrels instead of gunny-bags for the export of coffee has given them an additional source of prosperity. Besides these they also make casks for the shipment of cocoa-nut oil. On a rocky headland which projects into the sea about 4 m. N. of Morottu, and bears the name of Mount Lavinia, are the remains of what was meant to be the marine palace of the governors of Ceylon. It had scarcely been completed at an expense which has been estimated at £30,000, when in a fit of economy orders were given to dismantle it. The buildings are said to have been disposed of for less than the cost of the window frames. Morottu is the S. limit of the region of cultivated cinnamon. Pop. 12,000.

MORUMBWA, a cataract and mountain, S. Africa.—The CATARACT, at the head of the Kebrabasa rapids in the Zambesi, in lat. $15^{\circ} 40' S.$; lon. $32^{\circ} 43' E.$, is situated in a sudden bend of the river, which is flowing in a short curve, and above it is jammed between two mountains in a channel with perpendicular sides, and less than 50 yards wide; one or two masses of rock project, and then there is a sloping fall of 20 ft. in 30 yards. The rocks show that in the highest floods the water rises upwards of 80 ft. perpendicularly. On the N. side of the cataract rises the MOUNTAIN, from 2000 to 3000 ft. high, which gives name to the spot. On the opposite side stands a peculiarly formed mountain, partly conical, with a large concave flake peeled off it, as often happens to granite, and leaving a broad smooth convex surface, as if it were an enormous bulb. These two mountains extend their bases along the river about half a mile, and the stream in that distance, still very narrow, is smooth, with a few detached rocks standing out from its bed. The rocks are all water-worn and smooth, to a height of even 100 ft. above low-water.

MOSTAGANEM [add.], a tn. N. Africa, Algeria, prov. and 42 m. E.N.E. Oran. It is situated near the shores of the Mediterranean, on a rock about 270 ft. above its level, and intersected by a river, which divides it into two parts. The one on the r. bank, forming what is called the suburb of Matamora, is almost entirely occupied by the military establishment; the other on the l. bank constitutes the town proper, and is a flourishing place, with wide streets, handsome squares, and a number of public buildings, among which the church, the hospital, and the theatre are conspicuous. Mostaganem has long been famous for its manufactures of common and morocco leather, jewellery, and articles in esparto. Since the occupation of the French, brick-works and limekilns have been erected in the vicinity. Though the harbour is one of the worst on the coast, the export of corn, wool, and hides is considerable. The pop. which at one time rose to 30,000, had dwindled down to 15,000 at the time of the French capture. Since then it has sustained a large decrease, and is not estimated at more than 8517.

MOSTAR [add.], a tn. Turkey in Europe, Bosnia, cap. of Herzegovina, beautifully situated 50 m. N. by W. Ragusa. It stands at the point where two mountain ranges so nearly meet as to leave only a narrow belt of land on either side of the Neretwa, becomes visible at a great distance—its white minarets giving it a very imposing appearance—and is entered by a stone bridge of great height, which spans the river by one bold arch. It is surrounded by walls, and defended by a series of ancient towers; and consists of about 1500 Maho-

metan, 500 Greek, and 300 R. Catholic houses. Among the houses are a great number of small dimensions, with only two windows. In general, however, they are all surrounded by gardens or empty courts, and thus make the area of the place far larger than is indicated by the number of its inhabitants. Different quarters of the town are occupied by the three classes of religionists, and provided with the minarets or churches required. Besides churches and schools, both the R. Catholics and the Greeks have episcopal palaces, Mostar being regarded by both as a bishop's see. None of the buildings require special notice. The trade, which is considerable, is almost entirely in the hands of the Greeks. Pop. estimated at 14,000.

MOULOUA, or MULAUIA, a river, N. Africa, Morocco, which rises on the N. slope of the Great Atlas, near the centre of the country, flows first E. and then N.N.E., skirting the W. slopes of Mount Gueblen, and falls into the Mediterranean near the N.W. extremity of Algeria, after a course of above 250 m. During the rainy season it is a deep and rapid stream, but in summer becomes so completely dry that it has received the surname of the Bahr-Belama, or 'waterless river.'

MOUNT DESERT, an island of the U. States, in Frenchman's Bay, off the coast of Maine, 70 m. E. Augusta. It is of a tolerably compact shape, about 15 m. long by 12 m. broad, with an area of 100 sq. m. Its surface is rocky, and covered to a great extent by mountains of granite, the loftiest of which exceeds 2000 ft. in height. The other peaks are numerous, and give rise to much striking scenery by their fantastic shapes and the many beautiful lakes which they embosom. The island forms three townships, which contain eight churches and numerous schools, and have a united pop. of 3509, chiefly employed in ship-building and fishing.

MOUNT VERNON, a tn. U. States, Indiana, cap. co. Posey, on a bend of the Ohio, 150 m. S.W. Indianapolis. It contains county buildings, seven churches, a number of schools and benevolent institutions, a foundry, a planing-mill, and two saw and two flour mills. Pop. (1860), 1994.

MOUNT VERNON, a tn. U. States, Ohio, cap. co. Knox, on the Vernon River, and on the Sandusky, Mansfield, and Newark, and the Springfield, Mount Vernon, and Pittsburg railways, 38 m. N.E. Columbus. It stands on a gentle eminence, is well and compactly built, containing many elegant mansions, and possesses ten churches, numerous stores, and several mills. Pop. (1860), 4202.

MOURZOUK, or MURZUK [add.], a tn. N. Africa, cap. Fezzan, on a rather picturesque but extremely arid site, in the very heart of the desert, 480 m. S. by E. Tripoli; lat. $25^{\circ} 55' 16'' N.$; lon. $14^{\circ} 10' 15'' E.$ It is situated in a flat hollow, at the height of 1495 ft. above sea-level. All around it are ridges of sand, but the hollow itself is a kind of oasis, covered irregularly with a plantation of date-trees, and particularly towards the N. with gardens and fields, in which wheat, barley, and a few vegetables are cultivated with much labour. The town is situated near the centre of the plantation, and is surrounded by a wall nearly 2 m. in circuit, built of a sort of clay glittering with saline incrustations, and flanked with round and pointed bastions. There are nominally three, but properly speaking only two gates, as the one on the N. side is a narrow entrance unworthy of the name, and the S. side has no gate at all. Though the remains of an old wall in this quarter show that the original area inclosed has been greatly contracted, it is still too large for the actual population, which is thinly scattered, except in the immediate vicinity of the market-place. It has well-built houses and broad streets, but its characteristic feature is the spacious road or *dendal*, which is its principal thoroughfare, and intersects it centrally, commencing at its E. and terminating at its W. gate. Here stands on its S. side the bazar, affording with its halls of palm-stems suitable accommodation to buyers and sellers; and immediately opposite is the principal mosque. To the W. of the mosque are the castle and palace, an immense ponderous structure, with a large court, on the N. part of which barracks, said to be capable of containing 2000 men, have been recently erected. The only other buildings of note are the custom-house, situated on the N. side of the *dendal*, near the E. gate, and a little beyond it the watch-house, ornamented with a portico of six columns. Mourzouk is not so much the seat as the thoroughfare of a considerable trade. Few wealthy merchants reside in it, and foreign

merchants frequent it because it is on the caravan route which, commencing at Tripoli, proceeds directly to Murzuk, and continues thence either S. to Bornou, or S.W. through the Tawarek country towards Soudan. Near Murzuk are ancient remains, apparently Roman. Pop. 3000.

MOWA, a tn. India, Rajpootana state Jeypoor, 70 m. W. Agra. It is surrounded by an earthen rampart, with bastions, and defended by a fort with lofty walls, which rise from 35 ft. to 40 ft. above the bottom of the ditch. The bazar is good, and well supplied with cotton, corn and flour, ghee, coarse cloth, cutlery, and ornaments in gold and silver. Estimated pop. 10,000.—There are several other places in India of same name. One of them in Gujerat, at the head of a small bay on the S.E. coast of Kattywar, in lat. 21° 3' N., lon. 71° 43' E., carries on a considerable trade, though its harbour is very indifferent.

MOZABAD, or MAWZABAD, a tn. India, Rajpootana state Jeypoor, 48 m. E. Ajmere, is a rather large place, with a ruined wall, some good gardens, a mosque, and several temples. One of the last, belonging to the Jains, is a fine structure, adorned with elaborate sculptures, and surmounted by a richly-carved dome and three pyramids.

MOZUFFERPORE, a tn. India, presid. Bengal, dist. Tirhoot, on the Little Gunduck, 45 m. N.E. Dinapore. It is the seat of the civil establishment of the district, and contains a government school, in which Arabic and Persian are taught. Pop. about 8945.

MOZUFFURNUGUR, a dist. India, N.W. Provinces, between lat. 29° 10' and 29° 50' N.; lon. 77° 6' and 78° 10' E.; is bounded, N. by Saharunpore, E. the Ganges, separating it from Bijnour, S. Meerut, and W. the Jumna, separating it from Paniput and Sirhind; length, E. to W., 60 m.; breadth, 40 m.; area, 1617 sq. m. The surface rises gently from the Ganges on the one side, and the Jumna on the other, towards the exterior of the Doab, and is there marked by a series of sandhill ridges. The *khadir* or alluvial soil which lies chiefly along the r. bank of the Ganges is very fertile, and admirably adapted for rice-grounds, the cultivation of which, however, renders the neighbourhood very unhealthy. The other principal crops are the usual cereals, various kinds of pulse, oil-seeds, tobacco, cotton, and sugar-cane. The last, in particular, is said to occupy 21,906 acres. Among wild animals wolves are so numerous that it has been found necessary to offer rewards for their destruction. Pop. 537,594.

MOZUFFURNUGUR, cap. of the above dist., l. bank W. Kallee Nuddee, 65 m. N. by E. Delhi, stands at the height of 900 ft. above the sea, consists chiefly of brick-built houses, possesses an old fort, a court-house, and other buildings for the accommodation of the civil establishment, and a well-supplied bazar, and has a pop. of 7264.

MRIMA, or 'THE HILL,' the name given to that portion of the E. coast of Africa which lies between the island of Mombasa, lat. 4° S., and the delta of the Rufiji River, about lat. 8° S. Its general formation is a mass of coralline, in places comminuted and compressed into a rude sandstone conglomerate, and forming by the grinding action of the waves a beach of brilliant white sand. On the part between the Pangani and the Rufiji there are no ports or harbours, but only open roadsteads, sometimes partially defended on the weather side by low islands and coralline reefs. These islands, forming a species of breakwater, are generally waterless, and too small for habitation. They are mere ledges of rock, only a few feet above the water, and have always rugged edges, except in a few cases where these have been worn and ground down into sand. From their proximity to the coast they appear like detached portions of it, and are in fact often separated from it only by very narrow channels. The Mrima, as seen from the sea, swells in little hills that undulate parallel with the water, and belonging probably to an ancient sea-beach, seem to indicate a former rising of the coast. Indeed, in some places there are distinct signs of two sea-beaches, separated from each other by a flat. Inland the Mrima, wherever regular, exhibits a gently rounded surface, rising 100 ft. to 150 ft. above an alluvial plain; but this uniformity is broken by depressions, hillocks, and cones, the last forming excellent landmarks for the coasting mariner. On the upper parts of the alluvial plain and raised beach the wild vegetation is a dense and thorny jungle, but much of it has been cleared by the natives, who have here their *shambas*, or plan-

tations, and raise grain in such quantities as to leave a considerable surplus for export to Zanzibar, and even to S. Arabia. The climate, though very similar to that of Zanzibar, is said to be drier. It has its *masika* or greater rain, its *vuli* or lesser rain, and in the interval between them its *mehoo* or occasional showers; but the fall is not universal upon the coast, and at some places, e.g. Mombasa, is usually deficient. A general opinion prevails that the rains have diminished since the country was cleared to make way for clove and other plantations. The Mrima is everywhere cut by rivulets and water-courses, but the only rivers deserving of the name are the Pangani, the Kingani, and the Rufiji. They are not sluggish, like those of the W. coast, but descend from high inland mountains through deep channels, and were it not for the bars near their mouths, might be navigated at all times by the larger craft, which cannot now enter except at high tide. According to the general rule of the country, the Mrima has many settlements, but not a single town. The only semblance of a town is when a chain of hamlets are, in consequence of their proximity, included under a single comprehensive name; but even then each hamlet has its own distinct designation. The principal settlements in their order from Pangani southwards, are as follows:—Kipumbui, a roadstead with a perilous approach; Saadani, the principal port of what the Portuguese, by a corruption of the proper name, Utondwe, called the 'kingdom of Atondo;' Whinde, the inhabitants of which have earned an infamous notoriety as kidnappers; Bagamoyo, one of the great points of departure for the caravans trading to Unyamwesi; Konduchi, and numerous small settlements, prolonging the line of copal depôts; Mbuamaji, or Boromaji, the great centre of the Mrima traffic; and beyond it a long series of villages continued S. to the Rufiji delta, but too small to deserve enumeration. These Mrima settlements are apparently of modern date. Their invariable position is the seaward edge of the maritime plain, and not the elevated beach, though recommended by pure air and water. Viewed from the sea at a distance, they appear either embosomed in a luxuriant growth of vegetation, or peeping from behind a wave of snowy sand interposed between the blue water and the bright green plain. A sure sign of the vicinity of a settlement is a foreground of tall cocoas, bent backwards by the violence of the gale, and a background of undulating hill cleared for the growth of cereals. The largest of the settlements may contain half a dozen houses and two or three mosques, all built of lime and coralline; the other dwellings forming the mass of the village consist of penthouses, hovels, and haycock-huts—the characteristic African abodes. The more comfortable, formed of wattle and daub, and of a square shape, are divided into two or three compartments, and have thatched roofs which project so far that their eaves are supported by posts, and leave sufficient room for two raised earth-benches, one on each side of the doorway. Garnished with matting, they furnish the only shops and sitting-rooms. In still weather these houses, when the doors are closed, as they always are at night, are almost unendurable to a European; the round huts are still more suffocating, and swarm with vermin. In general the settlements have a full supply of the necessaries of life. The low lands, when not salted by the tides, and the raised beach, are laid out in plantations of cereals, as rice, holcus, maize, bajri, &c.; the vegetables grown are muhogo or white manioc, cucumbers, gourds, sweet potatoes, and beans of several varieties; betel, pepper, and tobacco abound, and fruits, including the cocoa and water-melon, grow almost wild. Animal food, in the form of goats, poultry, and fish, is equally abundant, but large cattle are somewhat scarce. The inhabitants of the Mrima, though closely allied in respect of origin, possess so many distinctive features that they may be regarded as separate races. They are all what Mr. Burton calls Moslem Negroids, and are included under one general designation, being called by the Arabs Ahl Maraim, and by themselves Watu wa Mrima, abbreviated to *Wamrima*, 'coast clans.' The Wasawahili or Sawahili races, mulattoes, originally African, but semiticized by Yemeni or Omani blood, are confined to the lands N. of the Pangani, to the island of Zanzibar, and to the regions about Kilwa. S. of Mbuamaji the people are called Watu ra Rufiji, or Warufiji, the 'Rufiji clans.' Properly speaking, then, the Mrima is peopled by two distinct but anciently-connected families—the half-caste

Arabs and the coast clans. The former belong generally to the Bayazi or Khariji, the latter to the Shafei school; both, though the most imperfect of Moslems, have no lack of fanaticism. Nominally they are the subjects of the sultan of Zanzibar, but when removed a few miles from the coast they are as free spoken and independent as Bedouins. Between them and the pure Arabs there is a repugnance increased by commercial rivalry: they have also a hatred of Europeans, and more especially of the British. The half-caste Arab is degenerate in body, and becomes in the third generation as truly negroid as the interior heathen. The Wamrima are still more completely negroid, and delight in nothing so much as mere indolence, being inert, stupid, and apparently incapable of the least mental exertion.

MSENE, a dist. E. Africa, Unyamwezi country, prov. Usumbwa, about lat. 4° 30' S.; lon. 32° 10' E. It is the great bunder or meeting-place of merchants and station of caravans in W. Unyamwezi, and may be called the capital of the coast Arabs and Wasawhili who have settled in it, leaving Unyanyembe to the purer Omani, for whom they have a great antipathy. Besides these settlers there is a large floating population of the pastoral clan Watosi and of fugitives from Ubha; the native inhabitants, forming the great mass of the population, are Wasumbwa, a Wanyamesi sub-tribe. Msene, like Unyanyembe, is not a town, but a number of detached settlements. To the N. lie Kwihanga and Yovu, the sultan's villages. They are defended by a thick milk-bush hedge, a deep moat, and a strong stockade; and consist of thatched circular huts, separated by wynds and alleys or open square-like spaces. The other principal settlements are Mji Mpia and Chyambo; the former the favourite locality of the Wasawhili, and the latter that of the coast Arabs. Chyambo, containing nine large tembe and about 150 huts, has a kind of bazar, where grain, vegetables, and milk are exposed for sale. The natural unhealthiness of the climate of Msene is greatly aggravated by the filth of the villages and the large number of stagnant pools. The principal crops are holcus, maize, millet, and manioc, grown in such abundance as to leave room for export. Other vegetable products are tobacco, sweet potatoes, egg-plants, pulse, beans, pumpkins, and water-melons. Among a host of wild fruit-trees the tamarind is conspicuous. Milk, poultry, honey, and tobacco are cheap and plentiful. Manufacturing industry is confined to cotton cloths, coarse mats, clay-pipe heads, and various articles in iron. Msene is a place of gross debauchery, and all, from sultan to slave, indulge in intoxication. The drum is never silent, and the dance fills up the intervals of carousing. So strong do these attractions prove, that the fidelity of even household slaves, born and bred upon the coast, is shaken, and the caravans in passing through Msene invariably lose numbers by desertion. The chief possesses considerable power, and affects some degree of state. His subjects approach him with clapping of hands and kneeling, the usual honours paid to royalty. Specimens of the rigorous exercise of his authority may be seen in the heads of criminals stuck upon poles in the front of his villages.

MUBI, a tn. Western Africa, on the N. frontiers of Adamawa, 170 m. S. by W. Kukawa. It stands in a mountainous but well-cultivated district, and is inhabited by the Fulbe, a distinct race between the Arab and the Berber on the one side, and the negro stock on the other. The mixture is not an improvement, since, while lively and intelligent, they have a dash of malice, and are not nearly so good-natured as the real blacks. Almost all the grain cultivated is sorghum, which attains an average height of 9 to 10 ft.

MUGHUR, a tn. India, N. W. Provinces, dist. and 18 m. W. Goruckpore, on the Annee. It is a poor straggling place, surrounded by a ruinous brick wall, and possesses a large mosque, with the tomb of Kafir, a reputed saint, claimed by both Mussulmans and Hindoos, though his actual existence at any period is more than doubtful. Pop. 2220.

MUGRIBEE, a tn. India, Scinde, on the Piniaree, a branch of the Indus. It contains 5000 inhabitants, who deal extensively in rice.

MUHABUN, a tn. India, N. W. Provinces, dist. and 8 m. S. E. Muttra. It was anciently a place of much more importance than at present, and was taken by Mahmood of Ghuznee, who obtained a rich booty in it. Pop. 6968.

MUHESUR, a tn. India, Holkar's Dominions, r. bank Nerbudda, 28 m. S. W. Mhow. It consists of about 3500 houses, and contains a large modern palace built by Holkar, of gray basalt, and overcharged with sculptured figures of human beings and animals. The celebrated Ahalya Bai, who appears much in the history of the Holkar family, resided here.

MUJHOWLEE, a tn. India, N. W. Provinces, dist. and 45 m. S. E. Goruckpore, on the Little Gunduck, opposite to Selemoor, which properly forms one town with it, Hindoo inhabiting the former, and Mahometans the latter. Mujhowlee alone consists of about 200 houses, one of them the brick-built residence of a petty rajah.

MUKONDOKUA, a river of E. Africa, in the prov. of Usagara, rises in the Robeho Mountains, and flows in a S. E. direction, to empty itself into the Indian Ocean at Pangani. The country on either bank is deficient in features of interest, and lacks the attraction of picturesque scenery. In the latter part of its course it is known as the Wami.

MULGRAVE, or BADOO, an isl. Australia, Torres Strait, nearly equidistant from Cape North, the N. E. extremity of Australia, and the S. E. coast of New Guinea; lat. (Mulgrave Hill) 10° 8' 15" S.; lon. 142° 8' 20" E. It is nearly 8 m. long by 6 m. broad, and though generally low along the coast, which is mostly covered with bush and mangroves, rises in the interior to the height of 686 feet. The ground between the high land and the shore seems fertile. The natives, who live partly scattered over the island and partly in villages, are numerous, of much lighter colour than those of Australia, and far more intelligent, but bear a bad character for treachery.

MULONDO-ZAMBI, an active volcano, S. W. Africa, Kimbunda country, territory Libollo, to the S. of the Coanza, and 120 m. S. E. Loanda. It towers with its conical summit far above the rest of the bare mountain mass, and from time to time, usually at short intervals, sends forth eruptions from its crater. According to the opinion of the natives, the souls of the dead have their abode in this mountain, and they are hence chary of approaching it.

MUNCHUR, a lake, India, Scinde, formed by the expansion of the Narra, a branch of the Indus, and discharging itself by the Arul. During the rainy season it is about 20 m. long by 10 broad, but in the dry season assumes the form of a circle about 10 m. in diameter. The space then left dry is sown with grain, principally wheat, and yields heavy crops. When the lotus is in flower nearly the whole surface is covered with bloom and leaves. So abundant are the fish that about 1000 boats are employed in taking them.

MUNDALOR, a tn. India, Scindia's Dominions, 67 m. W. Gwalior. It stands on an isolated hill about 2 m. N. of the Chumbul, is surrounded by a wall of masonry, and is defended by a fort seated within the town, and commanding very fine views of the surrounding country.

MUNDOMBE, a country, S. W. Africa, prov. Benguela, inhabited by the tribe from which it takes its name, and extending southwards along the sea-coast from the river Katumbela to lat. 13°. The tribe of Mundombe is spread over a much larger area, including the country of the Mukabalo, Muknaudo, Mukuissi, and Mukurokko, which has its S. limit at Cape Negro. As the original possessors of Benguela, the Mundombe maintained a long and bloody struggle with the Portuguese, and were not subjugated till 1847, when the greater portion of them submitted. Some, however, who live in the mountains and lead a nomadic life, are still independent.

MUNEEMAJRA, a tn. India, Sirhind, on the Sutlej, 29 m. N. Umballa. It stands near the S. base of the Sub-Himalaya, possesses a well-supplied bazar, and has a considerable trade in indigo, which is extensively grown in the district, and exported chiefly to the Punjab and Khorasan.

MUNGHONO, a tn. Western Africa, Bornou, within a short distance of Kukawa. It stands on a height between two hollows, in the one of which wheat and onions are cultivated after the rainy season, while the other during that season is converted into a lake. Ironstone abounds in the vicinity, and is used by the native blacksmiths. Munghono is an ancient place, and is often mentioned in the history of Bornou.

MUNIYO, a prov. Western Africa, in the N. W. of

Bornou, bounded S. by Manga, W. Zinder, and N. and E. the Tawarek country. It has a very rugged and even mountainous surface, being much better adapted for pasturage than agriculture, though in many parts a good deal of millet is grown, particularly in narrow vales and glens inclosed by ridges of granite, which is the prevailing rock. The extent and importance of the province may be estimated from the power and income of the governor, who, though nominally the representative of Bornou, is virtually his own master. He is able, it is said, to bring into the field 1500 horsemen, and from 8000 to 10,000 archers; and besides drawing a tribute in corn which amounts to about a tenth of the produce, annually raises by other modes of taxation a revenue of 30,000,000 shells, which is equivalent, according to the standard of currency in use, to 10,000 Spanish dollars.

MUNKAIRA, or MUNKERE, a tn. India, Punjab, in the Doab, between the Jhelum and the Indus, 175 m. W. Lahore. It stands in an arid tract covered with sandhills, and is defended by a mud wall and a brick fort. Runjeet Singh in 1821, after a siege, during which he was obliged to supply his troops with water brought from a considerable distance, succeeded in capturing it.

MUPINDA, a dist. S. W. Africa, Kimbunda country, situated between the Longa on the N. and the Kuvo or Keve on the S.; its boundary on the E. is dist. Ambuim, and on the W. the Atlantic; area about 1700 sq. m. The surface obtains a considerable elevation in the E., where it is covered by ridges of the Hama range; but the W. is very flat, and being exposed to inundation from two considerable rivers, is much flooded during the rainy season. It is hence less adapted for agriculture than pasturage. Good crops of manioc, maize, tobacco, &c., are however raised in various quarters, though the abundance of game and the rich pastures, both of the mainland and several considerable islands in the Longa, make hunting and the rearing of cattle the principal employments. The climate, owing to the prevalence of miasma, particularly on the W. flat, is unhealthy. The inhabitants are much milder and more peacefully disposed than those of the surrounding districts. Pop. 20,000.

MURCHISON CATARACTS, S. E. Africa, between the Upper and Lower Shire, in lon. $34^{\circ} 45'$ E., and beginning in lat. $15^{\circ} 20'$ S., and ending in lat. $15^{\circ} 55'$ S.; their entire length being a little under 40 m. The river in this space runs nearly N. and S., and the principal cataracts are five in number, and are called Pamofunda or Pamoziwa, Morewa, Panoreba or Tedzane, Pampatamanga, and Papekira; besides which are three or four smaller ones. While these lesser cataracts descend at an angle of not more than 20° , the greater ones fall 100 feet in 100 yards, at an angle of about 45° , and one at an angle of 70° . One part of Pamoziwa is perpendicular, and when the river is in flood, causes a cloud of vapour to ascend, visible at a distance of 8 or 10 miles. The entire descent from the Upper to the Lower Shire is 1200 feet. Only on one spot in all the distance is the current moderate, namely, above Tedzane; the rest is all rapid, and much of it only 50 to 80 yards wide. Pamofunda or Pamoziwa has a deep shady grove on its r. bank. The rock lowest down in the series is dark reddish-gray syenite, which seems to have been an upheaving agent, for the mica schists above it are much disturbed. Dark trappean rocks of hornblende have in many places burst through these schists and appear in nodules on the surface. The highest rock seen is a fine sandstone, quite metamorphosed where it comes in contact with the igneous rocks below it. It sometimes gives place to quartz and reddish-gray schists much baked by heat. This is the usual geological condition on the r. bank of the cataracts. On the other side are masses of porphyritic trap in contact with the same mica schists, giving the soil great fertility. The great body of the adjacent mountains is syenite. So much mica is washed into the river that myriads of particles may be seen floating and glistening in the sun.—(*Livingstone*.)

MURCHISON FALLS, on the Somerset River, or Victoria Nile, Central Africa, lat. $2^{\circ} 17'$ N.; lon. $31^{\circ} 47'$ E.; about 25 m. from the mouth of the river in the Albert Nyanza. Viewed from below, the cliffs on either side of the river rise abruptly to the height of 300 feet, and are beautifully wooded, with rocks jutting out from the intensely green foliage. Rushing through a cleft in the rock, the river, contracted from a broad stream, is pent up in a narrow gorge not more

than 50 yards wide, and roaring furiously plunges in one leap of about 120 feet perpendicularly into a dark abyss. The fall of water is snow-white, and has a beautiful effect in contrast with the dark cliffs and graceful palms and other trees around it.—(*Daker*.)

MUREN, a riv. Chinese empire, Manchooria, which has its sources in the mountains E. of Ninguta, flows N. N. E. and joins the Usuri on its l. bank, 25 m. above Imma, in lat. $45^{\circ} 45'$ N.; lon. 134° E. At its mouth it forms a delta, with an area of 200 sq. m., and sends its waters across it by numerous channels, of which the largest and most northern has a width of only 50 to 60 yards. Its banks are formed by the edge of a plateau, which is densely wooded and well adapted for cultivation, the soil consisting of a loose reddish earth.

MURFREESBOROUGH [add.], a tn. U. States, Tennessee, near the centre of the state, on an elevated plain, surrounded by the Cumberland Mountains, and on the Nashville and Chattanooga railway, 35 m. S. E. Nashville. It is well built, chiefly of brick, contains six churches, a Baptist university with 3000 students, two female colleges, one of them with 150 pupils; a military institute, and two high-schools. It has also a foundry and machine shop and a few factories. On January 5, 1863, the town was occupied by a Federal army after several days' hard fighting in the vicinity. Pop. (1860), 2861.

MURI, a mountain range, Western Africa, stretching along the north side of the Benuue, where this river intersects the province of Hamaruwa. A similar range on the S. side, from its being supposed to link with the mountains of Adamawa, has received the name of Fumbina. The Muri range is continuous, and has precipitous sides, often terminating in peaked summits, of which the loftiest, called Tangale, has an estimated height of 3000 feet.

MURRAY, a group of islets, Australia, Torres Strait, near the N. extremity of the Great Barrier Reef. Mear, the largest of the three islets which compose the group, is only about 2 m. long by two-thirds of a mile wide, and has a conical peaked hill, in lat. $10^{\circ} 55'$ S.; lon. $144^{\circ} 2'$ E., which rises abruptly to the height of 750 feet. It is well wooded, and in many parts cultivated, producing cocoa-nuts, yams, plantains, and other vegetables and fruits. The natives of the group, estimated at about 700, are partly of a dark chocolate colour and partly almost black, active and muscular, and warlike. They are dexterous in the use of their weapons, chiefly bows of a superior construction, and have large and fast canoes, carrying 18 to 20 men.

MUSCATINE, a tn. U. States, Iowa, cap. co. of same name, on the Mississippi, at the apex of what is called the Great Bend, in the midst of picturesque cliffs, and in connection with an extensive network of railways, 27 m. S. E. Iowa city. It contains 16 churches, planing, saw, and flour mills, and having an excellent landing-place is the centre of a large and increasing trade. The annual sale of lumber exceeds 10,000,000 feet. Pop. (1860), 5324.

MUSESTRE, a tn. Italy, prov. and about 15 m. S. E. Treviso, where the Via Claudia Augusta crosses the Sile. It contains a church, and a strong tower, the only existing remnant of an old castle.

MUSGU, a country, Western Africa, bounded N. by Bornou, W. and S. Adamawa, and E. Bagirmi. It was reported to be a mountainous and inaccessible tract, but Dr. Barth, the first European who set foot in it, had full opportunity of proving the contrary, by accompanying a hostile expedition sent against it by the government of Bornou. It has indeed a hilly surface, intersected by numerous water-courses, which form extensive swamps, rendering even a peaceful journey through it a task of no ordinary difficulty, and a hostile invasion of it for the purpose of effecting a permanent conquest all but hopeless; but the soil, besides being generally fertile, is cultivated with a care of which few examples are seen in Central Africa. Even the importance of manure is understood, and Dr. Barth saw a field to which it was actually applied. The uncultivated land, moreover, is not without its value. Wild rice grows spontaneously, and is collected in vast quantities among the swamps of the forest. Though inferior in quality to the cultivated kinds, it is by no means despicable food, and finds its way as a regular article of sale to the market of Kukawa. The chief disadvantage is that the elephant, which abounds so much that his footprints

are everywhere visible, knows the value of rice as well as man, and besides selecting what is best in quality, too often appropriates or destroys far more than his fair share. The inhabitants, from whom the country takes its name, are a division of the great nation of the Masa, which comprises the Kololoko or Makari, the Logon or Logone, the Mandara or Ur Wandala, the Gamerghu, and the large tribe of the Batta. Unfortunately the friendship which a common origin should have perpetuated, has disappeared, and even the Musgu themselves, whose only safety is in union, are split up into hostile communities, from which it were vain to hope for any vigorous effort against the enemies who surround them, and who are influenced, in addition to the ordinary love of conflict, by the sordid desire of procuring slaves. There cannot be a doubt that, though other objects were pretended, the Bornou expedition which Dr. Barth accompanied was undertaken mainly in the hope of capturing and enslaving the inhabitants of Musgu. Considering the circumstances in which they are placed, it is astonishing to find the country so populous and so industriously cultivated. The religion of the Musgu is fetishism, in which the principal fetish is a long spear-like pole. They seem not to have any sacred groves.

MUSHUALAGAN, a lake, British America, Lower Canada, near the upper part of the Manicouagan River, about lat. 50° 30' N., and lon. 67° 30' W. It is about 50 m. in length, and varies from 3 to 9 m. in breadth; it is surrounded by high mountains, is very deep, and contains pike, the kokomesh, a variety of salmon trout, the meméhil, a red kind of fish, and other species.

MUSKONISIA, a group of islets in the Archipelago, on the coast of Asia Minor, N.E. of Mitylene, and at the entrance of the Gulf of Adramyti. They are so near the mainland that one of them is connected with it by a causeway, near the spot once occupied by the town of Arwali, or Cydonia, which was celebrated for its schools, till it was laid in ruins, and its inhabitants were dispersed by the Turks.

MUSSOOREE, a sanitary station, India, on the N. frontier of the Delra Doon. It stands 6282 ft. above the sea, on a rugged ridge composed of beds of compact limestone, alternating with others of soft slate, and has a site so irregular and uneven that the houses are built at considerable distances from each other, on ground which it has been necessary to level on a ridge, a crag, or on the S. slope of the mountain. In the E., however, which has been longest settled, the houses stand more closely together, and have more the appearance of a regular town. The principal public buildings are a neat church with a turret, and a club-house. The surrounding scenery is splendid.

MUSTAFABAD, a tn. India, Sirhind, 33 m. N.W. Saharanpoor. It is of moderate size, surrounded by a brick wall, is defended by a fort, which has round towers at the angles; and is the residence of the Sikh chief to whom the adjoining territory, comprising thirty-one villages, belongs; and possesses a well-supplied bazar.

MUSZYNA, a tn. Austrian empire, Galicia, circle and 22 m. S.E. New Sandec, r. bank Poprad; with 1950 inhabitants, who carry on an active trade in linen between Galicia and Hungary, and have several walk-mills.

MUTNE, a tn. Austrian empire, Hungary, co. Arva-Murocz, on the frontiers of Galicia; with 1300 inhabitants, who grow flax, rear cattle, and saw timber.

MUTTRA, a dist. India, N.W. Provinces, between 27° 14' and 27° 58' N.; lon. 77° 20' and 78° 34' E.; is bounded N. by Goorgaon and Allygurh, S.W. and S. Agra, and W. Bhurtapore; area, 1607 sq. m. With the exception of a few hills on the W. frontier, the surface is an extensive plain, watered and drained almost entirely by the Jumna. The soil on the W. bank of this river is sandy, with a mixture of kunkar, or calcareous conglomerate; on the E. bank, though still rather light and shallow, it improves and becomes good towards the middle of the Doab. The alimentary crops are chiefly wheat, barley, millet, pulse, oil-seeds, cucurbitaceous plants, and sugar-cane; the commercial crops, indigo and some other dye-plants, cotton, tobacco, and opium. Pop. 701,688.

MUTTUPETTA, a vil. India, presid. Madras, dist. Madura, near the extremity of the peninsula which forms the W. side of the Paumbun Pass between the Gulf of Manaar

and Palk's Strait. Its inhabitants, almost all fishermen, are chiefly R. Catholics, and have a large church in the centre of the village.

MVAI, a mountain, S. Africa, the highest peak of Kirk's range, which runs in a nearly due N. and S. direction to the W. of Lakes Shirwa and Nyassa. The Mvai peak is in lat. 14° 53' S.; lon. 34° 27' E. It is a huge bare rounded block of granite shooting up from the rest of the chain. It and several other masses of rock are of a light gray colour, with white patches, as if of lichens; the sides and summits are generally thinly covered with rather scraggy trees. There are several other prominent peaks: one, for instance, still further N., called Chirobve. The range is probably not less than 5000 ft. above the sea.—(*Livingstone*.)

MYAPOOR, two places, India:—1, A vil. Bundelcund, Jhansi, 50 m. N.E. Calpee. About 1 m. S.W. of the village the Majapoor Pass commences.—2, A vil. r. bank Ganges, dist. Saharanpoor, about 2 m. below Hurdwar. At this spot the artificial channel of the new Ganges canal commences, at the extremity of a natural branch across which a dam of masonry is thrown.

MYCONI, a tn. Greece, nomarch Cyclades, cap. and on the W. shore of the island of same name; is the seat of a justice of peace court, and has a Hellenist and a parish school, and the only springs of water on the whole island. The harbour is open except towards the N. The inhabitants are famous sailors, and number 5600.

MYEENGYAN, a tn. Burnah, on a low plain opposite the little delta of the Kyendwen, l. bank Irawadi, 23 m. S.W. Ava. It is one of the largest provincial towns in the kingdom, and is a great mart for rice, brought both from the adjoining districts and from Pegu. Pop. about 10,000.

MYMENSING, a dist. India, presid. Bengal, between lat. 24° 4' and 25° 41' N.; lon. 89° 28' and 91° 13' E.; is bounded N. by Goalpara, on the borders of Assam and the Garrow tribes; E. Sylhet; S. Tipperah, Dacca, and Furreedpoor; S.W. Pubna; and W. Bogra and Rungpoor; area, 4712 sq. m. In the N. and the S.W. there are many hills and irregular tracts densely covered with jungle. The rest of the district is in general flat, covered with extensive gheels, and traversed by numerous streams, of which the Brahmoputra, which both bounds in several directions and traverses it, is far the most important. The soil, except on the jungly hills, is in general a dark, deep, and fertile loam, from which in a single year two crops of rice and a crop of mustard are often obtained; the other chief crops are sweet potatoes, ordinary potatoes, dhul and other pulse, wheat, cucurbitaceous plants, sugar-cane, indigo, hemp, flax, tobacco, and plantains. The manufactures are confined to coarse cotton cloths, blankets, and a few finer fabrics; the principal article of export is rice. Nusserabad is the capital. Pop. 1,487,000.

MYNPOORIE, a dist. India, N.W. Provinces, between lat. 26° 54' and 27° 50' N.; lon. 78° 30' and 79° 30' E.; is bounded N. by Budaon, N.E. and E. Furruckabad, S. Etawah and Agra, and W. Agra, Muttra, and Allyghur; area, 2009 sq. m. The surface is level and well-watered, chiefly by the Jumna and the E. Kallee Nuddee. In the N. the soil is generally light and sandy, depending much on rain or moisture for its successful cultivation; in other parts the soil is rich and moist, and rice is the staple crop; sugar-cane also is extensively cultivated; indigo grows wild, but though it is said that it might be grown at little more than half the usual cost, not much attention is paid to it. The chief crops, in addition to those already mentioned, are wheat, barley, millet, gram and other pulse, cotton, and tobacco. Pop. 639,809.

MYNPOORIE, cap. of the above dist., situated 70 m. E. Agra, on the banks of the Esun, here crossed by a bridge, is a walled town of considerable size, but has suffered so much from the ravages of war that it now contains only 2773 inhabitants. Its principal buildings are those of the civil establishment, a Jain temple, and a jail.

MYSORE [add.], a tn. India, presid. Madras, cap. dist. of same name, 250 m. W.S.W. Madras. It stands on two parallel ranges of elevated ground, running N. and S., 2450 ft. above the sea, and consists of the town proper, surrounded by a rampart, and a fort of a quadrangular form. The latter, which is about 450 yards each way, has a large tank on one of its sides, and on the others a deep double ditch, beyond which is a stone rampart flanked with bastions. The streets

of the town are regular—the principal one stretching N. and S., while most of the others intersect it at right angles. Many of the houses are large and substantial, of two or three stories, and occasionally with terraced roofs, though most of them are tiled. Within the fort is the palace of the titular rajah. It is a large building, forming three sides of a square, but has nothing attractive either in its external appearance or its internal arrangements. The old residency and the church belonging to it are badly situated on the outskirts of the town. Owing to the elevation, the climate is tolerably cool. It is, however, unhealthy, and both fever and cholera prevail. One cause, probably, is the defective supply of water, which is only obtained from tanks, and, when these fail in droughts, from wells impregnated with soda or other deleterious ingredients. The manufactures consist chiefly of carpets, which

are said to be fair imitations of British and Persian; the trade, though there are many rich merchants in the town, is limited. Pop. 55,424.

MZETHA, a tn. Transcaucasian Russia, in Georgia, l. bank Kur, 10 m. N.N.W. Tiflis. Though now a miserable and ruinous place, it was for ages famous, wealthy, and powerful, and the capital of the Georgian kings, who lie buried in the vaults underneath the cathedral. This building, the foundation of which is ascribed to king Miriam, who was converted to Christianity, A.D. 276, was originally of wood, but after various vicissitudes was rebuilt of stone about the middle of the 17th century. It still soars with its conical dome over the remains of other buildings, and is one of the most remarkable churches south of the Caucasus. The present pop. is scarcely 1000, but appears to be increasing.

N.

NACAOME, a tn. Central America, Honduras, dep. Choluteca, on a river of same name, about 10 m. above its mouth in the Gulf of Fonseca. It is one of the hottest and most unpleasant places in the state, and stands in an amphitheatre of hills, where ventilation is greatly impeded. During the hot months fevers are both prevalent and fatal. Pop. about 3000.

NACHIRA, a tn. Central Africa, about a mile N.E. Tassaua, is a straggling place, composed of clusters of huts which cover a large area. The staple commodity of its market is provisions and ready-dressed food, but a considerable number of cattle and occasionally camels are exposed for sale.

NAGPORE [add.], a tn. India, cap. territory of Nagpore or Berar, 440 m. E.N.E. Bombay. It occupies a low swampy flat, with a slight inclination towards the E., and covers an area about 7 m. in circuit. From the number of trees interspersed over all parts of its site, it might at a distance almost be mistaken for a forest; when more nearly approached, it is found to be little better than a vast assemblage of huts straggling or huddled together in the most irregular manner. Some houses of large size, built of brick, with terraced roofs, rise up among the general mass; but even these have no architectural merit, and the whole has been not incorrectly characterized as 'perhaps the meanest capital city in India.' Even the rajah's palace, though a vast pile of stone masonry, is utterly devoid of symmetry; and is not only obscured in its lower story by the mud huts abutting upon its walls, but cannot be reached except by passing by means of stepping-stones over an open ditch, the receptacle of all sorts of filth and garbage. In like manner the so-called palace of the minister stands on the margin of a green stagnant pool reeking with pestilential abominations. Close to the suburbs on the W. are the Setabuldee Hills, where there is a small cantonment and the British residency is situated. They are celebrated as the scene of a desperate struggle, in which a mere handful of British troops, when treacherously attacked by the rajah Appa Sahib, in 1817, with a body of about 18,000 men, not only held their ground, but gained a signal victory. Many of the inhabitants are wealthy bankers; but the employment of the greater number is in manufacturing cotton and woollen cloths, and utensils of copper, brass, and other alloys. The population is estimated at 115,000.

NAGYAG, a tn. Austrian empire, Transylvania, circle and about 12 m. N.W. Broos, in a mountainous district; with a mining school, mines of gold and silver, and an extensive mining establishment. Arsenic and manganese are also found here. Pop. 2205.

NAHUN, a tn. India, capital of the petty state Sirmoor, stands on a hill of granuwaek formation, at the W. extremity of the Kyarda Doon, 3207 feet above the sea, in lat. 30° 34' N.; lon. 77° 21' E., and is a clean handsome place, consisting of small houses built of stone and lime, with flat roofs

covered with mud tempered so as to be waterproof, and so arranged on the uneven crest of a rocky eminence, that some of the streets are mere flights of stairs, while others more level are well paved. The bazar is large and well supplied; and the rajah's residence, which stands in the centre of the town, is a spacious stone structure, with a beautiful zenana, in an antique Hindoo style. The three temples which the place possesses are more remarkable for their fine sites than their architectural merits.

NAIN, a tn. Persia, 92 m. E.N.E. Ispahan, on a rugged part of a great plain bounded to the N. by mountains. It is inclosed by a dilapidated wall and ditch about a mile in circuit, and entered by five gates. The only buildings of any note are the principal mosque, with an ancient pulpit more than 500 years old; a ruined mud fort, and a small bazar. The environs are far from fertile, and yield only scanty crops of barley, wheat, and cotton. In the gardens some melons, grapes, and pomegranates are grown. Pop. about 2500.

NALANDÉ, a tn. Ceylon, in a beautiful country, where the road winds through wooded hills, 24 m. N. Kandy. It contains a R. Catholic church.

NALIELE, or NARIELE, a tn. S. Africa, in the Makololo country, cap. Barotse, l. bank Liambe or Zambesi; lat. 15° 24' 17" S.; lon. 23° 5' 54" E. It stands on an artificial mound, which Santura, the maker of it, used as a storehouse for grain, and consists of several distinct quarters or villages, each encircled with a wall of reeds. An earlier capital, 500 yards S. of the present, stood in what is now the bed of the river, and has entirely disappeared, with the exception of a small portion of the mound on which it was built. The site must have been very injudiciously chosen, since proper allowance was not made for the rise of the river, which, in consequence of the obstruction caused by the falls near Gonye some distance below, sometimes attains an extraordinary height. The present town will probably one day share the fate of its predecessor, and from the same cause, since the water occasionally comes so near the foundation of the huts that the inhabitants are cooped up, and cannot move beyond their reedy walls.

NAMA, a tn. Western Africa, 280 m. W.S.W. Timbuctoo. It stands at the foot of the hilly chain which encircles the whole valley or basin of El Hodh, and is substantially built of clay and stone. In a valley on its W. side there are several hundreds of palm-trees, and some tobacco is grown. Nama, which was founded little more than half a century ago, owes its origin to a civil war which broke out in Walata, and led to a considerable migration.

NAMAQUA-LAND, a vast territory, S. Africa, consisting of two distinct parts—Little and Great Namaqua-land. The former, lying between the Orange River on the N. and lat. 31° S., is now included in Cape Colony, and is described in the article under that head. The latter, lying between lat. 22° and 28° 30' S., is bounded N. by Damara-land, E.

the Kalahari desert, S. the Orange River, and W. the Atlantic; area about 148,000 sq. m.; pop. under 30,000, or rather less than five persons to the statute sq. m. The coast line is a long dreary sandy waste, extending backwards into the interior from 30 to 40 m., and sometimes even 100 m. With the exception of a few localities, this tract is uninhabitable. Of the rivers—which are few and of little importance—some, as the Kursip, fall into the Atlantic; but the greater part take an opposite direction, and flow E., chiefly to the Fish River; which, rising in the N. of the territory, intersects it from N. to S. to its junction with the Orange River. The characteristic feature of Great Namaqua-land is its immense tract of sandy desert, traversed by hill and rock, and thickly strewn with quartz, which reflects a dazzling and perplexing light. In the N. the dense thorny bush of Damara-land is continued for only a short distance across the frontier, and then succeeded by a waste, on which the vegetation consists of scattered stunted trees, varied occasionally by the ebony, and by a few mimosas along the water-courses. For more than six months the surface is scorched by a vertical sun; the periodical rains, always accompanied with heavy thunder, are very partial and uncertain; and the springs, often either hot or salt, are neither numerous nor copious. It is a general complaint among the natives, and may now be regarded as an ascertained fact, that less rain falls now than half a century ago, and that in the whole country north of Orange River a general process of desiccation is going on. The prevailing rock of the country is granite; but quartz occurs extensively, both in large veins filling up gaps and fissures, and in boulders scattered over the plains. Slate and sandstone also are not uncommon. The metals are tin, lead, copper, and iron. The first three, though known to exist, have not been proved by actual working, but the last, in the form of meteoric iron, is found in apparently inexhaustible quantities. Mr. Anderson says:—‘I have seen lumps of several hundredweights brought from thence, so pure and malleable that the natives converted it into balls for their guns, &c., with out any previous application of fire. The names Hottentot and Namaqua, by which the inhabitants are usually designated, are not found in the native tongue, and are therefore probably of European origin. The Namaqua Hottentots are divided into the two great branches of Topnaar and Oerlam. The former consider themselves the original inhabitants, and are very jealous of the latter, who are said to have come overland, and are therefore regarded as intruders. They form numerous sub-tribes, each under its own petty chief, who gives his name to the tract over which he rules. The principal sub-territories have the somewhat odd names of Jonker Africaner, Cornelius, Amral, Zwartbooi, Jan Boois, William Fransman, Paul Goliath, David Christian, and Boudel Zwartz. The Namaquas dwell in small round huts, formed of a framework of semicircular boughs, and covered with rush-mats. When they change their locality, they take down the huts, pack them on oxen, and carry them along with them. In addition to the ordinary scanty dress, they use a profusion of ornaments, consisting chiefly of beads of various colours, and articles of brass, copper, and iron. They also tattoo themselves, and besmear themselves with grease and powders, the latter obtained chiefly from the leaves of plants. For their original arms—the bow and arrow, the assegai, and an immense shield—they have generally substituted the musket. The chief employment of the Namaquas is the rearing of cattle, of which they have a breed of moderate size and very compact build. The other domestic animals are sheep, goats, and dogs. In respect of moral qualities the natives rank very low. Such is their apathy and laziness that they may be seen basking in the sun for days together, and can scarcely be aroused even by the pangs of hunger and thirst to make the necessary exertion for their relief. They are at the same time a selfish, hard-hearted, cruel race. The aged and disabled of their own people are left to perish; any of their slaves committing the least offence is instantly shot;

and in their predatory incursions into Damara-land, besides robbing the inhabitants of their cattle, they are often guilty of the most horrible atrocities. Their religious creed is so scanty that it has been doubted whether they have any idea of a Supreme Being and a future state. It seems, however, that they believe in a deity, goblin, or defiled ancestor, called Heitjeebib, who can grant or deny them prosperity, and is supposed to haunt the graves of the dead. They have also so much faith in sorcery that witch-doctors, male and female—called respectively *kaiab* and *kaiab*s—drive a very active and profitable trade in imposture.

NAMANTUGU, a vil. Western Africa, prov. Yagha, 310 m. W. Sokoto. It was once a place of considerable importance, and figures in the history of the Songhay empire, but is now destitute of attraction, consisting of a great number of very narrow huts forming several groups, and covering a large tract of ground. Cotton is extensively grown in the vicinity.

NAMEAUKAN, a river, British N. America, in Rupert's Land, lat. 48° 30' N.; lon. 92° 40' W.; which connects the great Nequawgon, or Pine Lake (Lac de la Croix), with Nameaukan Lake, at the S.E. extremity of Rainy Lake. The river flows in a N.W. direction, between high precipitous rocks, clothed with dense groves of pine and aspen, descending by numerous rapids and falls to the level of the Rainy Lake. Of these the most important are Crow Portage, with

NAMEAUKAN RIVER, GRAND FALLS.—From Hind's Canadian Exploring Expedition.

9-88 ft. fall; the Grand Falls Portage, 16 ft.; and the dangerous Nameaukan Rapids, between 15 and 16 ft., where the waters eddy and whirl among the jagged rocks with unceasing violence. At the debouchement of the river into Nameaukan Lake there is a grove of magnificent elms. The lake is upwards of 13 m. long, and is connected with the Rainy Lake by a narrow circuitous stream, without perceptible current, meandering through a reedy expanse, dotted with low willows. From Lake Superior it is distant by water 197 m.

NAMO, an isl. China, off the E. coast of prov. Quang-long. It is 12 m. long from E. to W., has a maximum width of 5½ m., and is separated from the mainland by a channel which is 3½ m. broad, and has depths varying from 3 to 6 fathoms. Its three peaks, one of which attains the height of 1900 ft., are the most prominent landmarks in the neighbourhood. Notwithstanding the general barrenness of its surface it is densely peopled, the fisheries affording ample means of subsistence. Baylis Bay and Clipper Road, both near its S.W. extremity, afford good anchorage, and used to be much resorted to by opium vessels during the N.E. monsoon.

NANAIMO, tn. and harbour, British (Western) N. America, E. side Vancouver Island, about 60 m. N.W. Victoria. The town stands upon a curious promontory, apparently rent by volcanic action, which has strangely twisted the strata. It derives its importance from being the place of shipment for coal, which is found in the neighbourhood suitable for engine purposes. A new wharf and improved shipping appli-

ances have recently been provided, and an extensive and profitable trade will probably be opened. Coal has also been found in Burrard Inlet, on the opposite side of the Gulf of Georgia.

NANGASAKI, or NAGASAKI [add.] From 1636 to 1858 the Dutch was the only European nation permitted to trade with Japan, and to establish a factory on the artificial island of De-sima, at this port. In the latter year Lord Elgin concluded a treaty of commerce between Great Britain and Japan, which opened the port to British subjects; and since then other European nations, besides the U. States of America, have ratified similar treaties with the Japanese government. The result is free intercourse and traffic between the foreigners resident at the port and the inhabitants; all transactions being subject to import and export duties, according to a fixed tariff. Instead of being confined to the limited area of De-sima, and the restrictions on Dutch trade, commerce is now extended to the mainland, where a considerable tract of ground is laid out as a foreign settlement to the left of the city, with a custom-house for the regulation of traffic. Here are many

sumed a pacific aspect, and foreign residents took up their abode at the settlement in perfect security, although few in number. At the commencement of 1866 the following comprised the population:—British subjects, 70; American citizens, 32; Dutch, 26; Prussian, 19; French, 14; Portuguese, 3; Swiss, 2; total, 166. Besides this resident population numbers of foreign residents in China cross over during the extremely hot months, to recruit their health, residing in bungalows built for their reception, on the picturesque hills already mentioned.

The principal exports are tea, camphor, cotton, tobacco, vegetable wax, and silk. Since the opening of the port their production has increased according to the demand for foreign trade, and their cultivation is still increasing. The quantity of tea exported in 1865 amounted to 2,239,839 lbs.; in 1861 it was 1,559,587 lbs.; showing a surplus of 680,252 lbs.; and this does not include the 'green leaf,' which the Chinese ship to their own country and prepare it there for the foreign market, the quantity being considerable, but impossible to ascertain. The export of silk has only recently commenced, but it promises to become a large item, and it may be added that in 1865, 160,000 cards of silkworm-eggs, valued at £21,721, were sent to Europe. The principal imports are cotton and woollen manufactured goods, such as gray shirtings, cambrics, camlets, &c. A very large business is transacted also in arms and ammunition, of which but a very small portion is reported to the custom-house. Indeed, the same may be said of almost every other article of import or export, in consequence of the extensive system of smuggling carried on at this port, through the connivance of native officials with foreign traders. This, added to the corrupt practice of low estimates on the value of merchandise and products to evade the duties, renders the customs returns so incorrect as data for the external trade of the port, that it has been calculated from 50 to 100 per cent. should be added in order to arrive at the truth. Some idea of this traffic may be gleaned from the shipping returns for 1863, as follows:—Arrived, British, 140 ships, tonnage 44,417; American, 48, and 14,397; Dutch, 42, and 12,819; French, 20, and 4656; Prussian, 13, and 3760; and one Portuguese vessel of 363 tons. An item of importance is the number of steamers and sailing ships sold at this port to the native princes, which realized £154,472 in 1865, of which £116,379 was British.—(Consular Reports; Mossman, MS. Notes.)

NAN-HIOUNG, or NAN-YANG, a tn. China, on the N. frontiers of prov. Quangtung, near the source and at the head of navigation of the Pekiang, 175 m. N.N.E. Canton. It is celebrated for its storehouses and its vast port, where all the junks coming up the river from Canton stop.

NANING, a small state of the Indian Archipelago, lying inland from Malacca, and subject to it. It has a mean length of 40 m., with a mean breadth of 10 m. Though it has belonged successively to the Portuguese, the Dutch, and the British, it is a poor unprofitable possession, covered mostly with jungle. Pop. 5881, composed almost entirely of Malays.

NANKIN, or NANKING (*nan*, south; *king*, court), [add.] Before the reigning Tartar dynasty established the Chinese emperor's court at Peking, the previous dynasties of the empire held their government, some occasionally, others permanently, at Nankin. Hence it was named the 'southern court,' in distinction from Peking, or the 'northern court;' but at no period have the Tartar emperors resided at, or even visited, this ancient city, which flourished with great splendour during the Ming dynasty in the 16th century. When the Taiping rebellion spread into the central provinces of China, it was the great aim of the leaders of that movement to capture Nankin, and establish the throne of the new 'Heavenly Kingdom of Great Peace' within its walls. This capture was effected in April, 1853, and the *Tien Wang*, or 'heavenly emperor,' held it with his forces against the Imperialists up to July, 1864, when the latter recaptured it, by springing a mine with 68,000 lbs. of gunpowder under the massive walls, and entering through the breach. When the conquering force reached the palace of the *Tien Wang* they beheld a gorgeous edifice literally glittering with gold. The entrance, or reception hall, was panelled in carved wood, and the pillars and ceiling superbly carved, painted red, and gilded. Gold

substantial stone-built warehouses and residences erected by the consulates and subjects of the treaty powers; with a breast-work of stone, which forms a convenient terrace by the water side, for landing merchandise, and a public promenade. At the back, the settlement rises up the wooded hills, where the foreign residents have built houses after the fashion of the Japanese, surrounded with beautiful gardens, and having the unrivalled prospect of the city and harbour of Nangasaki, with the most salubrious site for a residence of all the open ports in Japan or China.

A considerable influx of foreigners took place in 1860, chiefly from the open ports in China, the principal mercantile houses and banks establishing branches here. It was soon found out, however, that though the native traffic between Nangasaki and the ports in the Sea of Japan was important, yet its powers for foreign trade were limited, in consequence of the port being distant from the great producing districts. This desideratum was found at the more northern port of Yokohama, whither the chief portion of the foreigners migrated in 1861. Then followed three years of fluctuating commerce, caused by political agitation and the threatened expulsion of foreigners from Japan. In 1865 matters as-

seemed to have been spread on the place like mortar on an ordinary building, and, although to a European taste too gaudy, to the Chinese eye it seemed truly magnificent. It was surrounded by a wall 30 ft. high, inclosing a garden planted with trees, shrubs, and flowers in the highest art of Chinese gardening. Here the body of the Taiping chief was found, he having committed suicide by eating gold leaf, previous to which he hanged all the chief women of his harem on the trees in the garden. The palace was immediately sacked by the Imperialists, who dug up every nook and corner, and tore up the flooring, in search of treasure, which they found to the extent of about two millions sterling. Excepting this and a few other buildings, which had been tenanted by the secondary Taiping chiefs, the city, where it was habitable, presented a picture of desolation and ruin. The famous Porcelain Tower was levelled to the ground, the ornamental portions carried away, and only a heap of rubbish lies now where that beautiful edifice stood. Entering by the north gate a person may traverse a road for 8 m.; for the most part between cultivated fields; the place presenting simply the appearance of a large tract of land walled in. The only relics of its former greatness are the tombs of the Ming dynasty, with their colossal statues of men and animals, and a square tower 50 ft. high, on the top of which is a finely sculptured figure of a turtle, constructed of one solid block of marble. When Lord Elgin was sailing up the Yang-tze-kiang, which, in front of Nankin, is not more than 1000 yards wide, and lined with batteries on both banks, the British vessels were brought into collision with the insurgents, by an unprovoked attack of the latter in disregard of a flag of truce. Punishment immediately followed by a bombardment, which, begun on the afternoon of one day, and resumed on the following morning, silenced their batteries, and laid them in ruins. The insurgents, evidently astonished at the overpowering fire they had drawn upon themselves, replied very feebly, though one round shot nearly occasioned a public calamity, by cutting through a rope within 2 ft. of Lord Elgin's head, as he was standing on the bridge between the paddle-boxes of the *Furious*. A full apology having been offered by the insurgents for the outrage, part of his lordship's suite, on returning down the river, landed at Nankin, and visited the insurgent general.

Since the city has been reoccupied by the legitimate government some attempt has been made to restore the manufactures in cotton and silk, for which it was so justly famed, but with small success. The governor-general of the two Kiang provinces resides here, and has established a manufactory of ordnance, shot, and shell, under the superintendence of a British officer, who resigned his commission, and entered the Chinese service. The business part of the city is gradually being restored; but the new houses are not very substantial. A good deal of local trade is carried on, and the traffic through the west and south water-gates, where the canals penetrate into the interior of the country, is very considerable. But at the northern gates, opening on the Yang-tze River, very little traffic is carried on, and there is at present no prospect of its becoming a port to attract foreign trade. According to the treaty of Tientsin it became an open port, immediately the Taiping rebels were driven away from it; but no foreign trader has located himself there, neither have any of the treaty powers established consulates.—(*North China Herald*; Mossman, *MS. Notes*.)

NAN-TCHANG, a tn. China, cap. prov. Kiangsee, on the Kan-Kiang, about 30 m. before it enters Lake Poyang. It is one of the most important of Chinese provincial towns, is surrounded by walls about 6 m. in circuit, consists of large and tolerably clean streets, and contains many magnificent shops and extensive warehouses. Kiangsee being the province which has the largest porcelain factories, Nan-tchang, as its capital, is naturally the entrepôt for the articles produced at them, and is accordingly full of china and porcelain of every description.

NANTO, a tn. India, Rajpootana, state and 5 m. N.W. Kotah, contains a palace, which was built by Zalim Singh, and is a fine specimen of a Rajpoot baronial residence, having in front a spacious court surrounded by cloisters, and ornamented with orange-trees and other odoriferous growths, and a beautiful pavilion with a fountain.

NANTSIN, a tn. China, prov. Chekiang, on the Grand

canal, about 15 m. E. of Hoo-chow-foo. It has no walls, and is politically of little importance. It is, however, a large and wealthy place, extending for miles on each side of the canal and far back into the country, and containing many good streets and shops well stocked with valuable goods. Vegetables of all kinds, and fruits, particularly water-melons, peaches, and plums, are abundant and cheap; butchers' stalls groan under loads of fat pork; ducks, geese, and fowls are exposed for sale in hundreds; and in short everything tempting to a Chinese epicure. Frogs, which are eaten, abound in the shallow lakes and rice-fields, and are often very beautifully coloured. The vendors of them sit in the streets skinning them alive in the most unmerciful manner. The great staple of Nantsin is silk, in which it is supposed to do even a larger trade than Hoo-chow-foo itself.

NAPANEE, a tn. British America, Canada West, co. Lennox, on a river of same name, which falls into the Bay of Quinte, and on the Grand Trunk railway, 125 m. E.N.E. Toronto. It possesses five churches and a mechanics' institute and library association, and is a port of entry, from which large quantities of lumber and of flour and other agricultural produce are exported. Pop. about 2000.

NAPHA, a tn. on the S.W. shore of the island of Great Loo Choo, in the N. Pacific, nearly 3 m. S.W. of Shendi or Shui the capital, of which it is the port, is a large and important place, beautifully situated and embosomed among trees of dark green foliage. The suburb through which it is entered consists merely of winding lanes, but the town itself has a number of good streets, one of them a broad paved thoroughfare leading towards the capital, and said to be almost equal to the macadamized roads of Great Britain. It possesses a temple with a finely shaded courtyard, a large edifice which appears to be of the nature of a townhall, a school for proficients in Confucian lore, and a Christian mission belonging to the English church, and included within the diocese of the Bishop of Victoria. There are properly two harbours, an outer and an inner. The former, or what is called Napha-kiang road, is protected E. and S. by the land, and surrounded in other directions by a chain of coral reefs, which form a tolerable breakwater against the swell, but otherwise afford no shelter; the inner harbour has a depth of 2 to 3 fathoms, and is large enough to accommodate the fifteen or twenty junks and other coasting craft engaged in trading with the neighbouring islands.

NAPIERVILLE, a tn. British America, Canada East, cap. co. of same name, on a small river, 27 m. S.W. Montreal. It possesses a Protestant and a R. Catholic church, several schools, a tannery, and grist, saw, carding, and fulling mills. Pop. about 1500.

NAPO [add.], a river, S. America, Ecuador, which has its sources on the E. slopes of the volcano of Cotopaxi and Mount Senchologua, flows S.E., receiving on its left the Coca, Aguarico, Anguteros, Oritos, and Oregon, and on its right the Cararay and several minor streams, and after a direct course of about 350 m. joins l. bank Amazon, which here forms the boundary between Ecuador and Peru, in lat. 3° 40' S.; lon. 73° 20' W. A little below the confluence of the Coca, to which, a distance of about 220 m., it might be navigated by steamers, it is 500 yards, and at its mouth about 1200 yards wide. Its pure and crystalline waters may be distinguished from those of the muddy Amazon for nearly 100 m. below the point of junction. In the first part of its course it hurries along with the rapidity of a mountain torrent, but after receiving the Coca it becomes a placid and majestic stream, with flat alluvial banks, covered for the most part with a most luxuriant and gigantic vegetation.—(*Villavicencio*.)

NARBOROUGH, an isl. S. America, Ecuador, in the Pacific, belonging to the Galapagos group, lying about 600 m. W. of the continent; lat. 0° 25' S.; lon. 91° 35' W. It is a great volcano rising to the height of 3720 ft., and is separated from Albararle Island by a channel which is 2 to 3 m. wide, and 55 fathoms deep. Within this channel, on the Albararle side, is the anchorage of Tagus Cove, with 6 to 14 fathoms water. It is formed by an old crater, is well sheltered, free from dangers, and capable of containing six frigates.

NAROL, a tn. Austrian empire, Galicia, circle and 36 m. N.W. Zolkiew; with a strong castle surrounded by a deep ditch. Pop. 1129.

NAROO, a river, Sinde, which rises in lat. 27° 42' N.;

lon. 69° 4' E., a few miles E. of Roree, flows S., and is lost in the desert near Omerkote, about lat. 25° 23' N.; lon. 69° 34' E., after a course of nearly 185 m.

NARSAPOOR, or **NARSPŌOR**, a tn. India, presid. Madras, dist. and 47 m. S. by W. Rajahmundry, on the Vadhra, or W. branch of the Godavery, near its mouth. It consists partly of Narsapoor proper and partly of the remains of Maddapollam, which, before the East India Company ceased to trade, was famous for its cloths. The trade in this article has now greatly diminished, but the commissariat at Masulipatam still receives from this place tent cloth of superior strength and quality, said, however, to be made not here but in neighbouring villages of Rajahmundry. Narsapoor possesses an English and a vernacular school, supported by local subscriptions chiefly of the native inhabitants. There are likewise missionary schools for boys and girls, attended chiefly by the lower castes. The harbour, which was once resorted to by large British vessels, is now accessible only to native craft; but a great accession to its trade is anticipated, from the proposed removal of its bar, as one of the first and most essential improvements of the navigation of the Godavery, which even now has a depth of 40 to 50 ft. immediately opposite to the town. United pop. of Narsapoor and Maddapollam, about 8000.

NARWAR, or **NERWAR**, a tn. India, Scindia's Dominions, r. bank Sindh, 44 m. S. Gwalior. When taken by Sikandar Lodi, sovereign of Delhi, in 1506, it is said by Ferishta that it was 14 or 15 m. in circuit, and that the captor spent six months in destroying its temples and idols. At present its only object of interest is its fort, to which access is given by flights of 360 stone steps. The inclosure, about 1½ m. in circuit, is formed by a massive battlemented rampart, and contains a palace and many other fine buildings. Magnetic iron ore, abundant in the vicinity, is largely smelted.

NASACARA, a tn. Bolivia, prov. and 80 m. N.W. Oruro, with a bridge over the Desaguadero. It consists of a number of houses, several of which are large, substantial, and commodious. The prosperity thus indicated Nasacara owes to its position, in being the great toll or ferry over the river, and the point at which the transit of merchandise from Europe to Bolivia takes place.

NASHUA, a tn. U. States, New Hampshire, at the junction of the Nashua and Merrimac, and at the junction of several lines of railway, 29 m. N.W. Boston. It contains ten churches and a savings-bank, and, having an almost unlimited supply of water-power from the Nashua, which has here a fall of 65 ft. in 3 m., has rapidly acquired importance by its extensive cotton factories, which are chiefly in the hands of large companies. One of these employs 1000 persons, and produces annually between fifteen and sixteen million yards of cloth. The other manufactures are bobbins and shuttles, iron castings, edge tools, locks, watches, and card and fancy paper. Pop. (1860), 10,065.

NASHVILLE [add.], a tn. U. States, cap. of Tennessee, on the Cumberland, and at the common centre of five railways which radiate from it; lat. 36° 9' 33" N.; lon. 86° 49' 3" W. It stands chiefly on the S. side of the river, at the foot and on the slopes of a hill rising 200 ft. above the water, and is generally well built, having numerous elegant private dwellings and several imposing public edifices. Of the latter the finest is the new capitol, finely seated on a commanding eminence, and built of a beautiful variety of fossiliferous limestone, at a cost of above £200,000. It is approached by four avenues, rising from terrace to terrace by broad marble steps, adorned by columnar porticoes, and surmounted by a tower 206 ft. high. The other buildings and institutions of note are, a large new courthouse, situated on the public square; the state bank, a handsome Doric structure; twenty-seven churches; the university, accommodated in a handsome Gothic edifice, and attended in 1860 by 200 literary and 400 medical students; a female college, with 450 pupils; a historical society, with a good museum and library; a state library of 40,000 volumes, a R. Catholic theological seminary, two orphan asylums, a state asylum for the blind, and a state penitentiary, with about 400 convicts. The manufacturing establishments are not important, consisting chiefly of machine shops, and planing and flour mills; but the trade, both retail and general, is very extensive. The leading business of the town is in dry goods, hardware, drugs, groceries, and books. The staple exports are of cotton,

tobacco, wheat, Indian corn, bacon, hogs, and lard. The neighbourhood is famous for the rearing of stock-blood horses, mules, cattle, sheep, hogs, and Casulmere goats. Pop. (1860), 16,988.

NASQUAPEE, or **RIVIÈRE DES ESQUIMAUX**, a river, Labrador, falling after an easterly course into Hamilton Inlet, upon the N. side, about 30 m. from the mouth of the latter. It takes its source in Lake Meshikumau (Great Lake), and the river itself is, after the Indians' custom, called by them Meshikumau Shipu. About 2 m. from its outlet it passes through a long narrow lake bordered by high mountains. There is a canoe communication between this river and the Ashwanipi. The country drained by the river is rocky and destitute of trees, except a few clumps of pine, spruce, and stunted birch. Fifty miles up the surface is so undulating as to resemble billows of solid rock.

NASQUAPEE, a tribe of Indians, British N. America, Lower Canada, who roam over the interior, and subsist by fishing and fur hunting. They number about 2500, of whom 1000 are Christians; the pagan part of them acknowledge a superior being, to whom they sacrifice a portion of everything they kill. They are clothed altogether in furs and deer skins, and are described as being most filthy in their habits. Their only weapons are the bow and arrow. Of late years they have frequented the Seven Islands. Polygamy is said to be practised, and the horrible custom still obtains of killing their parents and relatives when old age leaves them incapable of exertion; and even cannibalism is not unfrequent. Famine and the fatal influences of the coast have rapidly thinned their numbers.

NASSICK, a tn. India, presid. and 92 m. N.W. Bombay, dist. Ahmednuggur, is the principal seat of Brahminism in the Deccan, and is as much venerated as Benares is in Hindoostan. It was a flourishing place when the Peishwa ruled at Poonah, but lost much of its prosperity when the Mahratta confederacy was finally overthrown. It still, however, continues to be important, contains numerous temples and Brahminical establishments, which attract crowds of devotees from all parts of the country. In the vicinity are numerous remarkable excavations, believed to have been made when Buddhism prevailed. Pop. estimated at 25,000.

NATASHQUAN, a river, British N. America, Lower Canada, falling into the Gulf of St. Lawrence, in lat. 50° 10' N.; lon. 61° 50' W. It runs from the N. through a mountainous region, thickly wooded with spruce, fir, and birch trees. Natashquan Point, at the mouth of the river, has a fishing settlement of about forty families, and is a great resort of seals on account of its gently sloping beach. In the rear of it the forest timber is of fair dimensions, and the soil about the harbour is pure sand; but when manured with fish and their offal, yields excellent crops of potatoes, &c. Wild peas and vetches grow in abundance a little distance from the shore, affording pasture for cattle. Close to the shore are low dunes thrown by the waves, in which fresh water is found at a small depth; the salt of the sea water being probably extracted by upward filtration through the sand. From April to November the fishermen of Natashquan, who own a few vessels, are engaged in catching seals, salmon, cod, herring, and mackerel.

NATHPORE, a tn. India, presid. Bengal, dist. and 50 m. N.W. Purneah, r. bank Coosy, near the S.E. frontier of Nepal. It consists of four market-places, and contains about 8000 inhabitants, who carry on a very extensive transit trade between Nepal and Hindoostan.

NATOOR, or **MADURA-OYA**, a river, Ceylon, which rises in a mountainous district near the S. frontier of the Eastern Province, flows first circuitously N., then E., and falls into the beautiful Bay of Venloos, below the town of Natoor. It has a wide and rapid stream, studded with numerous fertile islands, and is navigable by boats for a considerable distance westward.

NATSCHERADETZ, a tn. Austrian empire, Bohemia, circle Tabor, 36 m. S.E. Prague; with a deanery church, a castle, a townhouse, an hospital, and five mills. Pop. 1700.

NAUSSA, or **AGUSTI**, a tn. Greece, nomarch Cyclades, on a bay on the N. coast of the island of Paros; with a parish school, and a spacious well-sheltered harbour. Pop. 1300.

NAXOS, a tn. Greece, nomarch Cyclades, on a bay on the N.W. coast of the island of same name; is the seat of a R. Catholic archbishop, a Greek bishop, and a justice of

peace court; is defended by a strong castle, built by the Venetians; and has ten Greek and four R. Catholic churches, a lazaret, a Capuchin and an Ursuline monastery, a custom-house, and a parish school. Pop. 5000.

NAZAIRE (Str.), a tn. France, dep. Var, 9 m. W. Toulon, was a small fishing town scarcely known a few years since, but has become a considerable town, both as regards population and commercial animation, and has assumed the rank of a third seaport in the French empire. France a short time since did not possess a commercial port over an extent of 500 miles of coast washed by the Atlantic. The manufacturers in that part of France were therefore placed in a disadvantageous position, in consequence of having no seaport whence to ship their produce. But in 1857 a floating dock 38 acres in extent was opened to ships entering the port of St. Nazaire. This dock, though sufficient to accommodate 500,000 tons of shipping, shortly became overcrowded, and insufficient during one day in 70, according to official documents, to receive ships which presented themselves. Since that period the Transatlantic steam fleet has been built, which requires accommodation. The maritime traffic having greatly exceeded the accommodation, and that traffic progressively increasing, the construction of a second floating dock double the size of the first has been undertaken; and the traffic has so much increased that the construction of two more floating docks has become necessary. The population has kept pace with the traffic. It has increased tenfold within six years, and at present amounts to 15,000 souls. According to present appearances, St. Nazaire will shortly rival Havre and Marseilles. The value of ground has increased with the population. Ground, sold formerly for 6*l.* the square yard, is now worth almost £8.

NAZARETH, a vil. U. States, Pennsylvania, 60 m. N. Philadelphia. It was founded in 1739 by George Whitfield, who, before completing a school-house intended for African children, sold it to Count Zenzendorf. It now contains a church and a Moravian academy for boys. Pop. 781.

NEBRASKA [add.], a territory, U. States, bounded N. by British America; E. Dacotah, Iowa, and Missouri; S. by the 40° parallel, separating it from Kansas; and W. the Rocky Mountains, separating it from territories Utah, Oregon, and Washington; length, N. to S., 620 m.; average breadth, 541 m.; area, 335,882 sq. m. The pop. is mostly in a tier of settled counties fronting the Missouri from Kansas to the Niobrarah, a distance of about 200 m., and another tier along the Platte, following the stream westwards and upwards for nearly 300 m. The capital is Omaha. The surface may be considered as a vast plain, with a gentle rise from the Missouri towards the mountains, and consisting partly of flats along the banks of the rivers, and partly of undulating prairies which occasionally rise into low ridges. The principal river is the Missouri, which has all its head waters and upper branches within the territory. The most important of its affluents is the Platte, which divides the settled portions of the territory into two nearly equal sections. The lower portion of its valley has a soil of exuberant fertility, and the banks of many of the smaller streams are rank with vegetation. The Missouri valley, from 10 to 20 m. wide, between parallels 40° and 43°, is covered for about half the extent with a heavy growth of cotton wood, intermingled occasionally with hard wood, as oak, black walnut, elm, butter-nut, &c.; the other half, nearly destitute of timber, is covered with coarse grass. In the S. part of the territory limestone abounds, and in many places sandstone is seen cropping out; but the geological formations are yet very imperfectly known. Several rich salt springs have been discovered, and it is expected that more valuable minerals, including the precious metals, will be found as the Rocky Mountains are approached. The soil differs much in quality. In the valley of the Missouri, between lat. 40° and 43°, there is a tract of about 30,000 sq. m., which, as an agricultural and pastoral region, cannot easily be surpassed, but in the N. and N.W. the whole aspect of the country changes, and the arable land almost entirely disappears. In particular, a tract which has received the name of Mauvaises-Terres, and deserves it, is singularly desolate. This tract, which lies to the E. of the Black Hills, and occupies an area of about 90 m. by 30 m., sinks down abruptly from the surrounding prairies to the depth of nearly 300 ft., and is bare and sterile in the extreme, presenting an almost endless succession of

pinnacles, columns, and irregular masses of earth and rock, separated by winding passages, in which there is scarcely a vestige of vegetation. In the fertile districts all the ordinary cereals and root crops grow well; fruits also, particularly plums and grapes, are abundant. The climate is on the whole good. The winters are short and mild, and the summer heats, which are sometimes excessive, are tempered by prairie breezes. Ague, however, and other diseases of a malarious nature, are not uncommon. The settlers consist generally of citizens from the more northern states, with an intermixture of Germans and Irish. Before the territory was organized, almost the only inhabitants were Indians. They are still numerous, and considerable reserves and annuities have been secured to those among whom civilization has made some progress. Towards the N. and N.W. many of the tribes are still wild. Pop. (1860), 28,903.

NEDSHEFABAD, a tn. Persia, prov. of Irak-Ajemi, 18 m. W. Ispahan, is a considerable town, wearing an aspect of prosperity and wealth, the houses being well and tastefully built, and the streets laid out with some pretensions to regularity. Extensive and blooming gardens surround the town, the whole occupying an area of not less than 16 m. in circumference. The inhabitants are chiefly occupied in the cultivation of cotton, and in dyeing cloths. Pop. 15,000.

NEEMUCH, a tn. India, Seindia's Dominions, on the N.W. frontier of Malwa, in a well-drained plain, studded with a few small stony hills, 270 m. S.S.W. Agra. It consists of a town which has lost much of the importance which it possessed in earlier times, and of a fort which, though small, is stronger than usual in India, because British art has been employed in the construction of it. The place would now be little deserving of notice but for its military cantonment, intended to contain a portion of the troops of the Gwalior contingent, and rendered a complete scene of desolation during the late mutiny. On the 3d of June, 1857, the troops stationed there, consisting of the 7th and 72d regiments of infantry, the 1st regiment of cavalry, and the 4th company of artillery, broke out in open revolt, and committed many atrocities. The fort, however, gave a refuge to most of the officers and other European residents, and the mutineers, after a siege and ineffectual attempt at assault, were obliged to content themselves with a kind of blockade, which was not relieved till the end of Nov. of the same year, when a British force, under Brigadier Stuart, completely defeated the rebels at Mundisore, in the vicinity, and compelled them to decamp. The pop. of Neemuch is roughly estimated at 4000.

NEFSAUA, a dist. Africa, in the S. of Tunis, lying between the salt swamp of Sehott-Kebir on the W., and the country bordering the Gulf of Gabes on the E. It has been termed an archipelago of oases, and no fewer than 101 villages have been counted within its limits, though many of these have ceased to be inhabited. The whole tract is richly watered. Everywhere springs burst forth, and form either running brooks or large natural basins. In spring it may be said to form one great marsh, and becomes covered with luxuriant grass and other kinds of vegetation. The climate, however, from this very cause, is unhealthy, and fever rages every year from May to October. The inhabitants have generally the negro cast of countenance. They are industrious agriculturists, but suffer much from the extortion of their own rulers, and the depredations of the Arabs. The most important town of Nefsaua is Kebilli.

NEF-SCHEHR, a tn. Turkey in Asia, Karamania, 340 m. S.E. Constantinople, on a height with a deep ravine on one of its sides. The houses are almost all whitewashed, and present a very cheerful appearance; but there are no public edifices of any importance, and towers and minarets, which, considering the size of the place, might be expected, are altogether wanting. It was originally a village called Masch-kara, but one of its natives, Ibrahim Pacha, who rose to be grand vizier, and held the office from 1718 to 1730, took a pride in adding to its population and importance, and having conferred upon it the rank of a provincial city, gave it the name of Nef-Schehr, or 'New Town.' It is a place of great extent and importance, with a pop. estimated at 25,000 to 30,000, chiefly Greeks, with a considerable mixture of Turks and Armenians.

NEFUSA (JEBEL), part of the mountain-chain, N. Africa, in the S. of Tunis, which, at a distance from the coast, follows

the contour of the lesser Syrtis, extending E. of Tripoli to Cabes. These hills form the fringe or border of an immense plateau, which, rising abruptly above the neighbouring plain to an elevation of 1500 ft., is included in the Tripolitan Jebel, a rich fruit-producing district. The inhabitants form two distinct classes: the original Wahabees, belonging to the Berber race, and the Arabs, who are orthodox Islamites. Jebel Nefusa is said to have contained in the middle ages 300 villages and 235,000 inhabitants, now reduced to 64 villages and 47,000 inhabitants.

NEGOTINA, a tn. Turkey in Europe, Servia, cap. circle Kraina, on a stream of same name, forming part of the boundary between Servia and Walachia, 19 m. N.E. Widin. It is the seat of a court of justice, and the see of a bishop, and has a church, a gymnasium, an elementary school, and much-frequented yearly markets. Pop. 3261.

NEJ-NUDDIE, a river, India, which rises in Malwa, in lat. 25° 20' N.; lon. 75° 17' E., flows E. through Boondee for 100 m. and joins the Chumbul.

NE-KA-LOO, a tn. China, on the shores of the Bay of Hang-chu, on the N.E. shore of prov. Chekiang, near the terminus of a canal, on the l. bank of the Ningpo. Between the town, or rather village (as it is but a small place), and the bay there is a wide mud flat, about 3 or 4 m. in extent, having several wide and substantial embankments stretching across it parallel to the bay, and probably indicating the successive tracts which have been reclaimed from the sea, and converted into fertile corn-fields. Nearer the sea the flats become white with a crystalline substance, which proves to be salt, and is accordingly manufactured here to a great extent as a government monopoly, all the land, with the salt-mounds, boiling-houses, &c., belonging to government. Smuggling is, however, carried on almost openly, the officials having doubtless substantial reasons for conniving at it.

NELLORE [add.], a tn. India, presid. and 100 m. N. by W. Madras, cap. dist. of same name, S. or r. bank Pennar, about 20 m. above its mouth on the Coronand coast. It stands on a flat of red laterite somewhat raised above the surrounding country, and was surrounded by a rampart, and defended by a fort, both of which are now in ruins. It is irregularly built, and in some places crowded and confined, but it possesses several good streets, and for a native town is on the whole clean and airy. The principal public buildings are the civil dispensary, the hospital, and the jail. The last consists of a double range of buildings, forming two distinct squares, and is calculated for 800 prisoners. Tanks and cuts from the river affording ample means of irrigation, rice is extensively cultivated in the vicinity. Pop. about 20,000.

NELSON [add.], a prov. New Zealand, forming the N.W. portion of Middle Island or New Munster, is bounded N. by Cook Strait, W. the ocean, S. Canterbury, and E. the ocean and Marlborough; length, N. to S., 160 m.; greatest breadth, 80 m.; area, 8,000,000 acres. The coast-line, which has a sweep of about 300 m., is tolerably continuous on the W., but is deeply indented in the N., particularly by Blind Bay, on the S.E. shore of which Nelson the capital is situated. A large part of the W. half of the prov. appears to be a densely timbered alpine region, in which some lofty mountain summits are situated. It has as yet been very partially explored, but what is known goes to prove that its agricultural and pastoral capabilities are not great. It promises, however, to yield wealth of a different kind. Iron, copper, and coal are found in it, and it possesses a gold field which is actually worked. Pop. 11,000, of whom only 900 are natives.

NELSON [add.], cap. of the above prov., situated at the bottom of Blind Bay, on the margin of an excellent harbour, beneath a circle of precipitous hills, which rise like a wall above it, was founded in 1842. It consists of a number of spacious streets, only partially built, and of a central square; and contains two churches, an Episcopal and a Wesleyan, several schools, and a court-house and other public offices. One great objection to Nelson is the small quantity of land available for cultivation in its neighbourhood, but this objection will probably be overruled should its gold-field prove so extensive and valuable as is now confidently predicted. The principal agricultural districts in the neighbourhood are in the fine valley of the Waimea, a tract under high cultivation, and the Motueka in a pleasant district across the bay. Pop. 6000.

NELSON'S HEAD, a lofty and precipitous promontory forming the southern extremity of Baring's Land, Arctic Ocean, and lying nearly opposite to Cape Parry, a headland on the N. coast of America; lat. 71° 5' N.; lon. 123° W. It is of limestone formation, about 850 ft. in height, and rises almost perpendicularly from the water's edge. It received its name from the captain and officers of H.M.S. *Investigator*, who visited it in 1850.

NEMAUR, or NIMAWAR, a dist. India, between lat. 21° 28' and 22° 25' N.; lon. 74° 48' and 76° 45' E. It comprises a large portion of the valley of the Nerbudda and of the Vindhya Mountains, is about 130 m. long from E. to W., with an average breadth of 40 m., and has an estimated area of 2225 sq. m. It is partly native and partly British territory, the latter extending only to 269 sq. m., or about an eighth of the whole. Much of the soil is admirably adapted for cotton, which was extensively grown while the Indian cotton manufacture flourished. The prevalent geological strata, both in the bounding ranges and on the banks of the rivers, are basaltic, and are often broken into picturesque forms, which, combined with the wood usually clothing them, produce much fine scenery. Pop. about 250,000.—The town, of same name, situated on the r. bank of the Nerbudda, 90 m. S.E. Oojein, is an unimportant place.

NEMOURS, a vil. N. Africa, Algeria, prov. and 80 m. S.W. Oran, on the shore of the Mediterranean. It derives some importance from its proximity to the E. Morocco frontier, from which it is only 8 m. distant, and though its harbour is shallow and exposed, a large quantity of the produce of the neighbouring districts, consisting chiefly of corn and wool, is shipped at it. Pop. 985.

NERIAD, a tn. India, presid. Bombay, dist. Kaira, 35 m. N.W. Baroda, consists of clean, broad, and level streets, and occupies the heart of a country in which tobacco is very extensively grown. Pop. about 40,000.

NERTCHINSK [add.], a tn. and circle, Russia in Asia, Siberia, gov. and 540 m. E. by N. Irkutsk, in the Nertcha, near its confluence with the Schilka. The town, which lies so low as often to suffer from inundation, is built almost entirely of wood, and though possessed of several churches and schools, has nothing attractive in its appearance. Its inhabitants are chiefly engaged in the fur trade. Within the circle, among the Nerchinskoi Mountains, about 100 m. from the town, are the celebrated government mines, which are worked by convicts. Pop. of town, 6000; of circle, 120,000.

NETAGAMU, a river, British America, which has its mouth 1½ m. N.W. of a group of islands of same name, off the coast of Labrador, in the N. of the Gulf of St. Lawrence, towards the entrance of the Straits of Belle Isle. It is a large stream with a rapid current, over a rocky bottom, and with deep water both in its narrow entrance and within, till the navigation is terminated by falls, which descend perpendicularly 50 ft. on either side of an island into a basin ½ m. wide. These falls are partly visible from the sea.

NETHERLANDS (KINGDOM OF THE); [add.] The following statistics, as supplementary to those given in the *Gazetteer*, will furnish a useful comparison of the state and progress of the kingdom of Holland.

AREA and TOTAL POPULATION of each PROVINCE of the KINGDOM OF HOLLAND on Dec. 31, 1861, 1863, and 1865.

PROVINCES.	Area, geog. sq. m.	Pop. 1861.	Pop. 1863.	Pop. 1865.
Brabant	93·38	411,946	418,201	423,421
Gnederland	92·76	410,464	419,996	427,753
South Holland	55·32	635,193	651,885	672,267
North Holland	45·46	534,119	562,504	566,474
Zealand	30·20	170,131	173,160	176,169
Utrecht	25·01	163,933	168,429	172,787
Friesland	59·61	278,559	282,481	288,949

	504·55	3,372,652	3,461,621	3,529,108
Grand Duchy of Luxembourg	46·00	196,804	206,245	206,574
Total	641·15*	3,569,456	3,667,866	3,735,682

* 13,464·15 English sq. m.

The last census of religious professions in 1859 gave the following numbers:—

Protestants	1,942,387	Greeks	32
Lutherans	64,539	Jews	63,830
R. Catholics	1,234,486	Unknown	3,794

The population of the colonies in Africa, and in the East and West Indies, is stated as follows:—

AFRICA.

Coast of Guinea (1863)	120,000
----------------------------------	---------

EAST INDIAN COLONIES.

Java and Madura	Pop. 1864. 13,917,368	Borneo (W. Coast	Pop. 1864. 354,329
Sumatra (W. Coast)	1,107,703	(S. & E. Coast	610,679
Beukoelen	120,514	Celebes	298,222
Lampongs	93,019	Moluccas—Menado	180,418
Palembang	527,050	Ternate	92,291
Rhioh	80,683	Amboine	167,273
Banka	54,339	Bandia	111,586
Billiton	15,824	Timor	907,184
		Bali and Lombok	863,725

WEST INDIES.

	Pop. 1865.		Pop. 1865.
Curacao	19,864	Bonaire	3,579
Aruba	3,484	St. Eustatius	1,936
St. Martin	2,771	Saba	1,809
Surinam (1864)			61,760

The number of Europeans settled in the Dutch East Indies in 1864 amounted to 33,677, of whom 27,933 were born in the colonies, 4478 born in Holland, and 1266 born in other European countries. The number in Java and Madura was estimated at 27,105. These figures are exclusive of the army, which numbered 11,747. The Chinese in the same colonies reached the total of 235,535, Java having 156,192 of them.

Trade and Commerce.—The following table exhibits the shipping trade, and gives the number and tonnage of vessels entered and cleared, with cargoes and in ballast, at the principal and other ports in the Netherlands, in the year 1863:—

PORTS.	ENTERED.				CLEARED.			
	With Cargoes.		In Ballast.		With Cargoes.		In Ballast.	
	vessels.	tons.	vessels.	tons.	vessels.	tons.	vessels.	tons.
Amsterdam	1,788	375,582	9	1,246	1,340	273,011	479	123,089
Edam	123	80,752	—	—	1	436	109	27,111

The number of merchant vessels belonging to Holland on Dec. 31, 1863, was 2231, of 539,844 tons; of these 40 were steamers, of 13,994 tons.

The extent of the commerce of the kingdom of Holland is shown in the following statement of the imports and exports in each of the years 1861, 1862, 1863:—

	Imports.	Exports.
1861	£39,097,456	£22,800,942
1862	37,132,289	21,141,334
1863	36,869,909	23,956,634

The quantities and value of the principal articles of the import and export trade of Holland in the year 1863 are stated in the subjoined tables:—

IMPORTS.

ARTICLES.	Quantities.	Value.
Ashes	Fonds. 10,912,981	Gulden. 2,837,375
Chemicals	—	1,331,974
Coffee	69,908,346	30,759,671
Copper	2,568,032	5,147,902

The amount of the public debt of the kingdom of Holland was in 1862, £85,779,715; in 1863, £82,251,581; and in 1864, £84,602,423.

NEUDORF, or RYERGES-UJFALA, a tn. Austrian empire, Hungary, co. Gran, on the Danube; with 1470 inhabitants, who grow excellent wine, and have both coal mines and marble quarries. The Roman station Villa stood here, and many Roman coins are found near it.

NEUDORF, a tn. Austrian empire, Bohemia, circle and about 20 m. E.N.E. Eger; with a church, mineral springs, and 1500 inhabitants.

NEUDORFL, a tn. Austrian empire, Hungary, co. and 14 m. N.W. Oedenburg, on the Leitha, and on the railway to Vienna; with a mineral spring, and 1300 R. Catholic inhabitants, who are chiefly employed in preparing wood for matches.

NEUHAMMER, a tn. Austrian empire, Bohemia, circle and 24 m. N.E. Eger; with a church, manufactures of wire, and a mill. Coal is worked in the vicinity. Pop. 1500.

NEUMARKT, a tn. Austrian empire, Upper Austria, 26 m. W. Linz; with a town hospital, woollen manufactures, and 1200 inhabitants.

NEUMARKT, a tn. Austrian empire, Galicia, circle New Sandec, cap. dist. of same name, at the confluence of the Black and the White Dunajec, 38 m. S. Cracow. It has

an old church, which, though built of wood in 1219, is still in good condition; a high-school, and a considerable trade in wine and linen. Pop. 3459.

NEUSATZ [add.], a tn. Austrian empire, Banat, cap. circle of same name, l. bank Danube, opposite to Peterwarden, 76 m. S.W. Temesvar. It is a royal free town, is the see of a non-united Greek bishop, and the seat of a Protestant consistory, and has ten churches—two of them evangelical Protestant, one Armenian, five Greek, and two R. Catholic—a synagogue, a handsome townhouse, an under gymnasium, a brewery, and an important trade partly in wine and fruit. On 11th June, 1849, Neusatz was stormed by the Ban Jellachich, and suffered dreadfully. Pop. 15,822.

NEUSTADT, a tn. Austrian empire, Transylvania, circle and W. Kronstadt; with a Protestant church, large potteries, a trade in flax, and 2060 inhabitants.

NEUSTIFT, a tn. Austrian empire, Lower Austria, circle, Upper Wienerwald; with a parish church, iron and other mills, and 1200 inhabitants.

NEUTITSCHHEIN [add.] a tn. Austrian empire, Moravia, cap. circle of same name, in a beautiful and fertile country, 64 m. N.E. Brinn, on the Titsch, an affluent of the Oder. It consists of the town proper and five suburbs, is the seat of several important public offices, and has three churches—one of them a deanery church, built in the Byzantine style, and surmounted by two lofty towers; an ancient castle, a townhouse, a high and other schools, a town hospital, an infirmary, and an asylum for children. The manufactures consist chiefly of woollen and linen goods, plain and dyed, and there are four important yearly markets. Pop. 7907.—Old *Titschein*, about 2 m. off, contains an ancient parish church and two castles, one of them a ruin, and has 800 inhabitants.—The circle of *Neutitschein*, bounded N. by Austria, Prussia, and Silesia, E. Hungary, S. Hradish, and W. Olmutz, has an area of 927 geo. sq. m., and a population of 261,539, of whom 20,518 are Protestants, and 3363 Jews.

NEVADA, a territory, U. States, formed in 1861 out of the W. part of Utah and portions of California, is bounded N. by the parallel of 42° N., E. by the meridian of 116° W., S. by the parallel of 37° N. as far W. as the watershed between the valley of the Carson and the Pacific, and W. by this watershed as far as the parallel of 41°, and from thence due N. to the parallel of 42°. Its finest portion is the valley of the Carson, which is celebrated alike for its fertility and for its mineral wealth, particularly in silver. The gold and silver fields are also found stretching from the Washoe in the S.W. part of the territory across it from W. to E., and radiating N. and S. from the great central discoveries of Washoe. It was estimated, in August, 1862, that there were in Nevada 140 crushing-mills in operation. In some places boulders of quartz are said to lie upon the surface from 3 to 5 m. in extent, and to be rich in silver. Obsidian also, resembling coarse glass, is found upon the surface; and in some districts hollow boulders are coated inside with a stone resembling fine agate, of various colours. Bituminous coal and salt have been discovered; and the soil, which is in some districts extremely dry and barren, and covered with wild sage, contains much alkali. Besides its resources in the precious metals and useful minerals, the territory likewise possesses considerable agricultural capacities scattered throughout its mineral ranges. Carson city is the capital. The estimated area is 83,500 sq. m., and the estimated white population in 1863, 40,000.

NEVIANSK, a tn. Russia, gov. and 175 m. E.S.E. Perm, near the source of the Neva in the Oural Mountains, in a district which is almost a continuous forest. It is one of the oldest mining establishments in the Oural, having been founded about 1702 by the first Demidoff, who built its castle and made it the family residence, which it long continued to be. Extended by his successor, it grew into a magnificent mansion; and though much curtailed and partially demolished by the caprice of one of his descendants, still contains several splendid apartments. About 200 yards from the castle is a fine brick tower, much out of the perpendicular. At one time all the silver brought from the Altai was refined within it. The zavod and mines of Neviansk have belonged for nearly a century to the Yakovlif family. Very good bar-iron is made here from a mixture of common with magnetic iron ore. Large quantities of painted iron-

ware, sent to the fair at Irbit, find their way to every part of Siberia. Pop. of Neviansk, 18,000.

NEVREKOP, a tn. Turkey in Europe, cyalet and 78 m. N.E. Saloniki, on the Kara-su or Strymon, at the foot of the Arnaut Balkan. It is surrounded with walls, and has a pop. of 2500.

NEW ALBANY [add.], a tn. U. States, Indiana, cap. co. Floyd, on the Ohio, opposite to Portland, in Kentucky, and on the Louisville, New Albany, and Chicago railway, 10 m. N.W. Louisville. It stands on an elevated bank, is well laid out in wide paved streets, and contains 22 churches, a college, and a collegiate institute. The chief industrial establishments are steam-boat building-yards and foundries. At commodious wharves, made suitable for the largest steamers, an active and rapidly increasing trade is carried on. Pop. (1860), 12,647.

NEWARK [add.], two places, U. States.—1, A tn. New Jersey, cap. co. Essex, on the W. bank of the Passaic, on the Morris canal, and on lines of railway connecting it with New York, Philadelphia, and other quarters, 19 m. W. New York. It covers an area of nearly 5 sq. m., and consists generally of wide and airy streets, and of three spacious squares or parks. Broad Street, the principal thoroughfare, 2½ m. long and 132 ft. wide, is a handsome avenue, shaded with majestic elms and lined with numerous elegant mansions. The central park is in like manner embowered among towering elms, and surrounded by the residences of many of the wealthy inhabitants. The public buildings include 58 churches, of which no fewer than 12 are German; a custom-house and post-office, erected at the expense of the general government; a savings-bank, a high-school, an academy, two orphan asylums, and an almshouse. In the vicinity are several cemeteries, one of which occupies 40 acres, and is laid out in winding avenues, shaded by ornamental trees and flowering shrubs. The manufactures consist chiefly of leather, common, patent, and enamelled shoes, wheels and carriages, plated ware, jewellery, saddlery, tools, cutlery, locks, railings, mattresses, hangings, patent or enamelled cloth, hats, castings, brass and malleable iron, machinery, needles, buttons, type-metal and printing, cement and chemicals, ale, and lager beer. The trade is chiefly confined to the above articles of manufacture. The real and personal property of the place is estimated at £6,300,000. Pop. (1860), 71,941.—2, A tn. Ohio, cap. co. Licking, at the confluence of three branches of the Licking, on the Ohio canal, and on the Sandusky, Mansfield, and Newark, and the Ohio Central railways, 30 m. E.N.E. Columbus. It contains eight churches, and has in its vicinity quarries of sandstone, a coalfield, which is extensively worked, and a number of coal-oil factories. Pop. (1860), 4675.

NEW BEDFORD [add.], a tn. U. States, Massachusetts, one of the capitals of co. Bristol, on Buzzard's Bay, and on the New Bedford and Taunton and the Fairhaven branch of the Boston railway, 50 m. S. Boston. It is built along the W. side of the Acushnet, which is here crossed by a bridge communicating with Fairhaven; and contains 24 churches, a handsome city-hall in the Doric style, a custom-house, a lyceum, several excellent private academies, a public library of 13,500 vols., an orphans' home, a house of correction, and an almshouse capable of admitting 400 inmates. Most of the public edifices are built of granite, and not a few of the private houses are remarkable for elegance. The principal manufactures are cotton yarn and cotton cloth, hoop iron, oil, soap, candles, screws, rivets, castings, paper-hangings, and Prussian blue, but for a long period the whale fishery has been the staple business of the place. It began to be prosecuted here as early as 1755, and though prostrated first by the war of the Revolution, and subsequently by that of 1812, is still the centre of the whale fishery in the U. States. On the 1st of January, 1860, the number of vessels in the district of which New Bedford is the port of entry, was 547, measuring 151,473 tons. Of this number, 301, measuring 103,564, belonging to this place alone, were employed in the whale fishery, the aggregate products of which for the whole district were, in 1859, 2,236,438 gallons sperm-oil, valued at £575,093; 4,715,583 gallons whale-oil, value £509,315; and 2,010,882 lbs. whalebone, value £258,024. According to the valuation of real estate and personal property, New Bedford is the wealthiest community

in the U. States, in proportion to the number of its inhabitants. Pop. (1860), 22,300.

NEW BRITAIN, a post-borough and township, U. States, Connecticut, on the Providence and Fishkill railway, 10 m. S. Hartford. It contains six churches and a state normal school, and has extensive manufactures of stockinet goods, bank and safe locks, jewellery, hooks and eyes, cabinet hardware, harness trimmings, rules, plumbs, and levels. One of its establishments for the manufacture of locks, house trimmings, and general hardware, is the largest and most complete of its kind in the States. Pop. (1860), 5212.

NEWCASTLE, a tn. British America, Canada West, co. Durham, on the N. side of Lake Ontario, and on the Grand Trunk railway, 42 m. E.N.E. Toronto. It possesses two churches and an academy, marble-works, a tannery, a foundry, and a considerable general as well as lumber trade. Pop. about 1250.

NEWCASTLE, a tn. British America, New Brunswick, cap. co. Northumberland, on the Miramichi, about 15 m. above its mouth. It is agreeably and advantageously situated, contains a court-house and jail, two churches, and some other good buildings, and has nearly 6 fathoms water at its wharves. Pop. about 1000.

NEW-CHWANG, or **NEU-CHE-WANG**. See **YING-TSU**.

NEW GLASGOW, a tn. British America, Canada East, co. Terrebonne, on the Achigan, 30 m. N. Montreal. It contains a Protestant and a R. Catholic church, possesses several tanneries, and carries on a large trade in lumber. Pop. about 1800.

NEW HAMBURG, a tn. British America, Canada West, co. Waterloo, on the Grand Trunk railway, 65 m. W.S.W. Toronto. It contains two churches—a Church of England and a German Lutheran; and possesses a pottery, a tannery, a cloth factory, a brewery, and a distillery. The trade is, however, mostly local. Pop. about 1100.

NEW HARMONY, a tn. U. States, Indiana, on the Wabash, 50 m. above its mouth, 140 m. S.W. Indianapolis. It was built by the Harmonists under George Rapp, in 1815, and purchased from them, in 1825, by Robert Owen of New Lanark, who, after failing in an attempt to establish his so-called social system, sold it to a William Maclure, who converted it into a school of industry. This scheme, failing like the others, was abandoned at the end of six years, and the place began to decline. It is said to be again improving, and now contains an Episcopal and a Methodist church, a large schoolhouse, a working men's institute, a hall used as a theatre, three steam mills, and two distilleries. Pork and whisky are its principal exports. Pop. 825.

NEW LEBANON SPRINGS, a vil. U. States, New York, in the township of same name, 20 m. S.E. Albany. It contains two churches and a female seminary, and is noted for its thermal springs, which have at all seasons a uniform temperature of 73°, and contain as their chief ingredients chloride of sodium, chloride of calcium, and carbonate and sulphate of lime. The springs are so copious as not only to supply several baths, but to keep two or three mills running throughout the year. In the township is a large Shaker establishment of about 500 persons, owning about 4000 acres of land. Pop. 2187.

NEW LIVERPOOL, a tn. British America, Canada East, co. Levi, r. bank St. Lawrence, about 7 m. above Quebec. It contains a R. Catholic church, and carries on a very extensive trade in lumber. Pop. about 1800.

NEW LONDON, a tn. and port of entry, U. States, Connecticut, r. bank Thames, 3 m. above its mouth in Long Island Sound, and on the New London, Willimantic, and Palmer, and on the New York and Boston railways. It consists of two portions—an older, which possesses few attractions; and a more modern, which is regularly formed, contains many handsome residences, partly for the accommodation of summer visitors attracted by the beauties of the surrounding scenery. Among the public edifices are a handsome granite custom-house, city buildings containing also the post-office, court-house, and other county offices, ten churches, a female academy, a high-school, and a public library. The chief industrial establishments are cotton factories, steam saw-mills, foundries, and machine and nail shops. There is also a building yard, at which a few vessels are built. The

harbour, which is 3 m. long, 5 fathoms deep, well sheltered, and seldom obstructed by ice, is one of the best in the U. States. It is also well defended at its entrance by Fort Trumbull, which has been entirely rebuilt since 1840, mounts 80 pieces of heavy ordnance, and can accommodate a garrison of 800 men. The coasting trade and fisheries of New London are important. In 1860 the shipping of the district amounted to 37,490 tons, of which the whale fishery employed 13,066, the cod fishery 4957, and the coasting trade 15,000. Pop. (1860), 10,116.

NEWMARKET, a tn. British America, Canada West, co. York, on the Ontario, Simcoe, and Lake Huron railway, 26 m. N. Toronto. It contains four churches and a grammar school, and has manufactures of stoves and water pumps, and of copper, tin, and sheet-iron ware, a rope-walk, a tannery, and marble works. Pop. about 1000.

NEW MILFORD, a vil. U. States, Connecticut, S. bank Housatonic, and on the Housatonic railway, 30 m. N. by W. Bridgeport. It consists of wide and well-formed streets, and contains four churches, a cotton and two woollen factories, paper, fulling, and flour mills, and several tanneries. Pop. (1860), 3535.

NEW ORLEANS [add.] The close of the civil war, during which New Orleans was captured and held for a long time by northern troops, has relieved it from the prostrate condition to which it was reduced, and to a certain extent caused a revival of the trade which previously existed in it as a port. But it will necessarily be long before its staple trade in cotton can be fully restored. Previous to the war one-half of the total crop of cotton passed through the New Orleans market—namely, 1,849,312 bales, out of 3,699,926; but in 1865 the quantity in the market was only 271,015 bales. Two wants will have to be supplied to the cotton and sugar planters before the production can approach that previous to the outbreak of the war—the want of capital and the want of labour. With regard to the latter, it is said that the free negroes in many parts of Louisiana, Mississippi, and Texas are coming forward largely to make labour contracts, and in many instances are returning to their old masters. This is a hopeful sign. Many of the plantations are being let at low rents, and some have been sold or let to men from the northern states; but there appears to be a greater disposition to rent cotton than sugar plantations, the capital required for carrying on the cultivation of the former being much less than that necessary for the successful culture of sugar, and the sugar crop is attended with much more uncertainty than that of cotton. The experiment of white labour is being tried on a small scale by means of German immigrants, but it is considered doubtful whether white men can do field labour with effect in the summer months. The city of New Orleans itself has always been considered abroad as being unhealthy. Unhealthy seasons occur, and the summer climate is unsuited to some European constitutions; but many foreigners enjoy excellent health in New Orleans all the year round. The great scourge of the city has been the yellow fever; but it has been quite free from it for several years, owing probably in some measure to the quarantine regulations, which are strictly enforced from May to November, and have prevented this contagious disease from being introduced from the gulf ports.

The revival of trade in the year 1865 was characterized by quantities of goods being thrown into the market for distribution in the country districts, which had been for four years without supplies of foreign or northern merchandise, except such as they received through the blockaded ports. The principal part of this revived trade was in articles received from New York and Boston. The principal trade carried on in British vessels up to the time of the closing of the war, was almost confined to what is called the gulf trade. After that vessels arrived in some numbers direct from English and French ports, bringing principally salt, coal, and wine, and receiving in return cargoes of cotton. The number, tonnage, and crews of British vessels entered and cleared at the port in the year 1865 were as follows:—

ENTERED.			CLEARED.		
Vessels.	Tonnage.	Crews.	Vessels.	Tonnage.	Crews.
265	52,218	2552	270	43,831	2,352

The total number of vessels arriving at the port in the same commercial year (ending August 31) was 1449, besides 1481

steamboats from the interior. The export trade is that on which New Orleans principally relies, and of this cotton constitutes the most important article. The following table exhibits the cotton exports for the past ten years to various countries:—

	Great Britain.	France.	North of Europe.	South of Europe, Mexico, &c.	Coastwise.	Total.
	Bales.	Bales.	Bales.	Bales.	Bales.	Bales.
1856	986,622	244,814	162,675	178,812	222,100	1,795,023
1857	749,485	258,163	156,450	129,619	223,204	1,516,921
1858	1,016,716	236,596	116,304	125,454	164,637	1,659,707
1859	994,696	256,447	182,475	146,963	196,590	1,777,171
1860	1,426,966	313,291	136,135	129,270	208,634	2,214,296
1861	1,159,348	388,925	122,042	113,358	132,179	1,915,852
1862	1,312	472	—	21,571	4,323	27,678
1863	2,070	1,849	—	372	19,459	23,750
1864	1,155	4,023	—	307	122,645	128,130
1865	21,326	5,952	402	167	164,504	192,351

The following statistics will also be interesting as showing the effects of the war upon the other principal articles of the export trade of New Orleans during the five years ending August 31, 1865; it being premised that the tobacco export in the preceding year (1860) amounted to 82,680 hds.:—

	Tobacco.	Sugar.		Molasses.	
	hds.	hds.	brls.	hds.	brls.
1861	39,806	42,163	4,724	185	122,512
1862	2,224	56,372	4,773	—	78,878
1863	12,556	98,266	9,969	—	187,143
1864	799	39,481	2,071	—	83,533
1865	1,831	882	217	1	5,266

The subjoined comparative view of the prices per lb. of 'middling' cotton at New Orleans on the first day of each month in the same five years will also have its interest:—

	1860-1.	1861-2.	1862-3.	1863-4.	1864-5.

NEW PLYMOUTH, New Zealand, cap. prov. Taranaki, New Ulster, beautifully situated on the W. coast among gentle hills, and watered by numerous small streams, was a thriving settlement, with a granite church and chapels, and several stores, breweries, and mills. These still remain, but the rural beauties, which constituted one of its chief attractions, have almost disappeared amid the ravages of war. Many of its peaceful homesteads have been sacked and burned down by the natives; and the careful cultivation which caused it to be familiarly talked of as the garden of New Zealand, was necessarily abandoned while the settlers were obliged to concentrate all their efforts on the defence of the town.

NEWPORT, two places, U. States:—1, A tn. and port of entry, Rhode Island, cap. co. of same name, on Narraganset Bay on the W. shore of Rhode Island, 5 m. from the ocean. It has a fine harbour, safe, commodious, and of sufficient depth for the largest ships, and defended by two strong forts—Adams and Woolcut; the one on Benton's Point, and the other on Goat Island. The town, built on a declivity facing the harbour, is partly old, but interesting from its quaint appearance; and partly modern, with many large and elegant mansions. The principal buildings are a dozen churches, a state-house, custom-house, market-house, a public library, a masonic and an armoury hall. Both manufactures and trade are limited, and the place depends less on them than on its healthy climate, fine sea-beach, and beautiful scenery, which have made it one of the most popular summer resorts in the U. States. Its visitors during the summer season are counted

by thousands; and it is for their accommodation chiefly, and not from any permanent increase of population, that the modern town has been erected. Berkley, the celebrated Bishop of Cloyne, resided here for some time, and is said to have then written his well-known work entitled the *Minute Philosopher*. Pop. (1860), 10,508.—2, A tn. Kentucky, on the Ohio, just opposite to Cincinnati, on the Licking, here crossed by a fine suspension bridge. It stands on an elevated plain, commanding a fine view, and contains an academy, a U. States arsenal, and several rolling mills and foundries. Pop. (1860), 10,047.

NEW QUAY, a fishing-town in Cornwall, in the E. division, and parish of St. Columb Minor, about 21 m. N. Truro. This rising and busy place is picturesquely situated on the shore of the Bristol Channel, and has a small harbour, protected by a pier, enlarged a few years ago to meet the increase of the pilchard fishery. There are several large cellars or warehouses for curing the fish, which is exported to various ports in the Mediterranean. A mine of lead is worked, but with no considerable results; and stone of superior quality, somewhat resembling granite, is shipped here. The parish church is at St. Columb Minor, half a mile distant, but there are places of worship for Baptists and Wesleyans.

NEW RIVER, New Zealand. See *ORITE* in *Supp.*
NEWTON, a tn. U. States, Iowa, cap. co. Jasper, on the Mississippi and Missouri railroad, 35 m. E. by N. Des Moines. It contains a large court-house, a bank, five churches, and three schools. A mine of coal has been opened about 2 m. from it. Pop. (1860), 1617; in 1865, said to be 2000.

NEW ZEALAND [add.] New Zealand is now divided into nine provinces: Auckland, Taranaki, or New Plymouth, Wellington, and Hawke's Bay, in the North Island; and Nelson, Marlborough, Canterbury, Otago, and Southland, in the Middle Island. The South or Stewart's Island is at present unconnected with the organized provinces. By the constitution conferred upon the country in 1853, it is governed in the following manner:—The crown appoints the governor and four judges, but the general government of the colony is vested in the General Assembly, which holds its annual session at Auckland, and is composed of a Legislative Council, consisting of about twenty-five leading colonists nominated by the governor for life; and in the House of Representatives, which is made up of about fifty members elected by the people every five years. Every man owning a freehold worth £50, or being a householder at a rent of £5 per annum in the country, or £10 in a town, is qualified to vote for or to be a member of the House of Representatives. The governor is aided and advised by a ministry, comprising the chief officers of state, who are members of the General Assembly. Each of the nine provinces is governed for local purposes by a provincial council, consisting of a chief officer called the superintendent, and from ten to twenty provincial councillors chosen by the electors of the province every four years. Every provincial-council act has to receive the assent of the governor and the ministry before it becomes law. The civil and criminal laws are the same as those of England, and for judicial purposes the colony is divided into four districts; and assizes are held by the judges in the chief towns of the provinces. The number of criminal convictions in the supreme court for various offences in 1863 was 234. By the police, magistrates, and minor courts, 12,593 criminal cases were disposed of.

New Zealand, while displaying some fine open plains and many undulating champaign districts, may be described generally as a wooded highland country, clothed with luxuriant evergreen vegetation. It is of volcanic origin, several of the small elevations being extinct craters, and shocks of earthquake being still occasionally experienced. The country around Wellington, the S. portion of the North Island, is chiefly affected by them; but, though within the last twenty years two shocks have been severe enough to involve the loss of three or four lives, the inhabitants do not regard them with very much apprehension. Numerous wooded ranges of moderate elevation, and three snow-capped mountains, Rnapehu, Tongariro, and Egmont, are found in the

North Island, whilst a chain of rugged forest ranges, including Mount Cook, 13,200 ft. high, extends along the entire coast of Middle Island, from Dusky Bay to Cape Farewell. The North Island contains only two or three moderately extensive plains, but abounds in large luxuriant valleys, and in sheltered dells and dales. Middle Island, on its W. side, consists chiefly of wooded alpine regions, but on the E. displays fine plains and open tracts, admirably adapted for tillage and pasture. In climate New Zealand is temperate, though it is subject to violent winds and heavy rains; but though the rainfall is great, the number of dry days in the year is very large. The following table, compiled from meteorological observations made in 1853 and subsequent years, will show the character of the climate of New Zealand as compared with that of Great Britain:—

	Mean temperature of coldest month.	Mean temperature of hottest month.	Mean annual temperature.	Annual fall of rain in inches.	Dry days in the year.
Auckland . . .	51°	68°	59°	45	205
New Plymouth . . .	46°	64°	56°	59	240
Wellington . . .	45°	64°	55°	49	266
Nelson	45°	64°	55°	34	245
Christchurch . . .	40°	64°	53°	31	304
Otago	40°	58°	50°	30	235
London	37°	63°	50°	24	187
Edinburgh . . .	34°	59°	47°	40	205

The soil and climate of New Zealand produce in perfection every English grain, grass, fruit, and vegetable. Wheat, potatoes, onions, apples, plums, peaches, and their congeners are excellent in quality, and the peach bears profusely as a standard. The vine thrives in the open air a little, but only a little better than it does in England; while in the gardens of the warmer valleys fruits of a semi-tropical character, the pomegranate, citron, orange, and olive, might be raised. Maize, the taro, a native of the Sandwich Islands, and the kumera, a sweet potato, are partially cultivated by the natives in sheltered sunny spots of the North Island; but under common field cultivation maize will not ripen. Geraniums and myrtles, attaining a shrub size, and various plants, which require the greenhouse in England, flourish through the winter in the open air; and generally, the few fruits and plants which will grow in New Zealand, but not in England, are not those which require more summer heat, but those which require less winter cold. In the colder parts of Middle Island, ice and snow occur in winter; but in the North Island, except on the high mountain ranges, ice and snow are seldom if ever seen.

The natives of New Zealand, called Maories, a people of Malay origin, are supposed to have immigrated from the Sandwich Islands some centuries ago. Split up into numerous petty tribes, and wasting each other by internecine feuds, their numbers have been so reduced that they do not now exceed 56,000, all of whom, with the exception of a few hundreds, are located in the North Island. In personal appearance they somewhat resemble deeply-bronzed gipsies. By missionary efforts a great part of them have been converted to Christianity; many of the young can read and write their own language, and the Bible has been largely circulated amongst them. They have acquired in many instances considerable property, in stock, cultivated lands, coasting vessels, flour-mills, and specie; a few even have accounts at the banks, and others have taken shares in local companies. In the neighbourhood of the settlements they are adopting articles of European dress, but they cling to a great extent to their old degraded domestic habits.

In the animal kingdom New Zealand is singularly deficient. as it does not possess a single indigenous animal. With the exception of two or three harmless lizards, a small and now scarce rat is the only four-footed creature found in the islands. The pig, however, originally introduced by Captain Cook, and straying from the native villages, and breeding in the forests, has become a wild animal in some of the remote districts. The cat, too, and a few cattle have likewise some wild representatives. Pheasants, partridges, quails, and red and fallow deer have been introduced, and have so far thriven successfully. There are eighty-three species of native birds, of which the bell-bird and the tui are good songsters. Some

English small birds, and English poultry—the latter now abundant all over the colony—have been imported by immigrants. Insects are about as numerous as those in England; sand-flies and mosquitoes are found, but disappear before cultivation; the cicada, the weta, and the koeke, a flying grasshopper, are the three most peculiar species. The common garden bee, introduced with signal success, frequently swarms in the woods. River fish are scarce and poor, but sea fish are plentiful and good. With mineral wealth New Zealand is liberally supplied. Coal has been found in many parts of the country—in Blind Bay near Nelson, in Auckland, and of fine quality near the Buller River, on the W. coast of Nelson; while the whole of the mountainous peninsula, forming the N.W. corner of this province, appears to be stored with coal. Iron is found in many localities, and some of the rocks on the Otago shore are powerfully magnetic.

The beach at New Plymouth for several miles is formed of fine iron sand, which adheres to a magnet in crystallized particles. Copper has been worked on a small scale at the Kawau and Great Barrier Islands, near Auckland, and chrome and copper are derived from the Dun Mountain mine at Nelson. Gold has been found in the Coromandel country, near Auckland, and in Nelson province, as well as near the Buller River, on the W. coast of the same province. But the chief discoveries of the precious metal have been made in the province of Otago, in which vast districts have been found rich in auriferous deposits. The first discovery was made in June, 1861, and produced a rush of immigrants from Australia and elsewhere; Otago, the capital, suddenly became a large and populous place, and many thousands of gold-seekers rapidly spread themselves over the auriferous districts; in two years 700,000 oz. were obtained, worth nearly three millions sterling. In the year ending March 31, 1866, the returns showed the following amount of gold exported from the various ports in the colony:—

Auckland	4,008
Nelson	14,908
Havelock	2,672
Picton	2,334
Hokitika	331,840
Greymouth	103,429
Lyttelton	23
Dunedin	210,488
Invercargill	3,918
Total	674,490

Trade and Commerce.—The total value of the imports and exports from the colony, including bullion and specie, in the years 1861, 1862, and 1863, is thus given:—

	1861.	1862.	1863.
Imports	£2,493,811	£4,626,082	£7,024,674
Exports	1,370,247	2,422,734	3,455,405

The principal and other articles of which these imports and exports were composed, with the value of them, are stated in the following tables:—

IMPORTS.			
PRINCIPAL ARTICLES.	1861.	1862.	1863.
	£	£	£
Animals	223,773	422,516	633,810

Total at principal and other ports	596	197,986	813	301,365	1154	410,935	546	205,350	783	288,647	1094	394,665

Of these vessels entered in 1863, 990 of 347,485 tons, and cleared, 923 vessels of 319,479 tons, were British vessels.

The total amount of the gross revenue and expenditure of the colony is thus stated for the years 1861, 1862, and 1863.

	Revenue.	Expenditure.
1861.....	£691,464.....	No returns.
1862.....	1,186,009.....	£1,118,117
1863.....	1,380,836.....	1,757,092

The revenue of 1863 was derived from 'ordinary' sources, of which the customs duties (£592,051) were the principal—producing £743,272; and from 'territorial' sources—the sale of crown lands (bringing £384,039) being the principal—producing £524,405; the remaining £113,928 arose from 'incidental receipts and reimbursements.' The public debt in the year 1863 comprised £600,000 on account of the general government, and £689,750 on account of the provincial governments; making a total of £1,289,750, and involving an annual charge for interest and sinking fund of £68,635.

The area of New Zealand is calculated to be 106,259 sq. m.; and the population in 1861 was found to be 106,315, including 7294 military and 1117 half-castes; but exclusive of about 3000 gold miners, and of the Maories, who numbered 56,049. On Dec. 31, 1863, the estimated population was:—

	Males.	Females.	Total.
European.....	105,978.....	53,070.....	164,048
Military and their families..	9,521.....	1,788.....	11,309
Total.....	115,499.....	54,858.....	175,357

In December, 1864, the European population, exclusive of military, had risen to 172,158.

In 1861 the number of immigrants was 22,339; in 1862, 34,290; and in 1863, 45,730. Of the last number no less than 32,653 entered the gold-producing province of Otago (with Southland). Against this, however, must be set the number of those who left New Zealand during the same period; this number was in 1861, 6117; in 1862, 13,299; and in 1863, 10,610; the largest proportion in each case being from Otago.

A great obstruction to the progressive prosperity of the colony, has arisen in the disaffection of some of the native tribes, who, repudiating the sale of certain lands which they had made to the New Zealand Company, began to commit many acts of trespass and petty violence, and at length broke into open rebellion. The friendly tribes united with the

colonists and the military, and a long and desultory warfare ensued, the available troops being insufficient to effectually suppress the rebels. The settlers were driven from their holdings, and many left the country, and trade, immigration, and agriculture were stopped. More than once the insurrection appeared to be quelled, when fresh outbreaks occurred. The Waikato district in Auckland province, Taranaki, and several districts in Wellington and Hawke's Bay have been the most disturbed. But, after the native confederacies in these parts seemed to have been broken up, a fresh outburst took place in October, 1866, in the neighbourhood of Napier, in Hawke's Bay, which was terminated by a successful attack upon the rebels' pah or fort at Omarunui, on the Tutaekuri River; since which the country appears to have become generally pacified.

NEYRIZ, a tn. Persia, prov. Fars, on the road between Shiraz and Kerman, and about 7 m. from the E. extremity of the lake of same name, called also Lake Bakhtegan. It

occupies a considerable space with its gardens and houses, possesses three adjacent forts, a paltry bazar, and three caravanserais, and is inhabited by about 1500 families. Its trade is insignificant.

NGALA, a tn. Western Africa, Bornou, prov. Kotoko, near the S.W. extremity of Lake Chad. It stands on an elevated terrace, surrounded by clay walls, and composed of clay houses, among which stood forth imposingly the governor's palace, presenting, with its immense substructure and towering walls, all the appearance of a citadel. The town, however, tells only of a bygone prosperity and a present decay. Several of its quarters are in ruins.

NGAMI [add.], a lake, S. Africa, in the Batwana country, on the N. frontier of the Kalahari desert, between lat. 20° 23' and 20° 40' S., and lon. 22° 31' and 23° 6' E. It lies between E.N.E. and W.S.W., at the height of 3700 ft. above sea level, and is of somewhat irregular shape, narrow towards the centre, and thence bulging out on both sides, so as to form two nearly equal ovals; the one terminating at its W., and the other at its E. extremity. Its greatest length is 37 m.; its breadth near the centre, where narrowest, does not exceed 4 m., but towards the W., where widest, about 12 m.; making the average breadth about 6, the circuit about 70 m., and the whole area about 224 geo. sq. m. The N. shore is low and sandy, without tree or bush, or any other kind of vegetation; but about a mile behind the country becomes densely wooded, chiefly with various species of acacia indigenous to S. Africa, and an occasional baobab towering above them. The S. shore is so closely fringed along the water line by belts of reeds and rushes, as to be accessible only in a few places, or where the native cattle or other animals have broken through. Behind this fringe southwards the ground rises considerably. The W. shore is also somewhat raised. The greatest depth of water is towards the E. extremity; in other directions, and especially on the W., it is shallow. The principal, and indeed the only known feeder of the lake, is the Teoge, which enters it near its N.W. extremity; and though not more than 40 yards wide, is deep, and when in flood discharges a large volume of water. Its outlet is the Zonga, which issues from its E. extremity at Batwana town, so called because the chief of the tribe has there fixed his residence. Where it thus issues the Zonga is about 200 yards wide, and has a current so gentle that the eye is unable to perceive it.

NGAN-KING, a tn. China, cap. prov. Nganhoei, l. bank

Yang-tze-kiang, 145 m. S.S.W. Nankin. Its handsome pagoda of eight stories, rising out of a substantially built isolated stone fort, and its massive walls give it an imposing appearance from the river. When Lord Elgin passed up the Yang-tze-kiang this place was in the hands of the insurgents, while the imperialists were in the immediate vicinity. His lordship was anxious to move on peaceably; but the insurgents, either because otherwise disposed, or from mistake, as they afterwards alleged, fired a shot at the leading British vessel. This was at once resented; and the whole of the British ships, at once opening their fire on the fort, compelled its garrison to scamper out of it into the open country. Before the British reached the last angle above the fort, the insurgents repeated the offence in a more aggravated form, by firing two other shots in rapid succession. The only effect was to increase their chastisement by not only silencing the battery, but also throwing some balls and shells into the heart of the town. This unprovoked collision made it impossible for any of Lord Elgin's suite to visit the town, and hence our only knowledge of it is derived from the account of Lord Amherst's embassy. According to Mr. Ellis, who explored it in 1816, the shops are not so good as at Woo-hoo, and the streets are unusually narrow. The best shops he saw were those for the sale of horn lanterns and porcelain; and he would have had 'little difficulty in laying out a large sum in curiosities of all kinds—such as necklaces, old china, agate-cups, vases, ornaments of corundum and other stones, curious specimens of carved work in wood and metal.' The fort of Ngan-king, in fit hands, could easily prevent large vessels from passing it, as they are obliged, in order to find the deep channel, to come within sixty yards of the muzzles of the guns.

NGAUNDERE, a tn. Western Africa, Adamawa, 150 m. S. by E. Yola. It is surrounded by a low rampart, and consists entirely of huts of reed, with the exception of the governor's house and the mosque, which are unpretending buildings—the one of clay, and the other of reeds and clay. There is a daily market.

NGEGIMI, a tn. Western Africa, near the N.W. extremity of Lake Chad, is a far-famed place that has fallen rapidly into decay, and now consists of detached conical huts constructed without any regard to comfort. It has suffered much from its position on the boundary between Bornou and the Turiks. The king of the former, as if it were beyond its dominions, withholds from it the necessary protection, while the latter are continually making predatory incursions into it. Many of the inhabitants have been carried away into slavery; and the remainder, driven away by inundations, have built a new village on the slope of the adjoining sand hills.

NGORNU, a tn. Western Africa, Bornou, in the vicinity of the capital Kukawa. It consists of light but large and commodious huts; there not being a single clay dwelling, with the exception of a residence belonging to the sheikh. In the winter of 1854–5 more than half of the town was destroyed by water, and a deep open lake formed to the S., burying a large extent of what had formerly been a fertile plain. The most probable cause of the catastrophe was a subsidence of the plain to the extent of several feet.

NGURUTUA, a tn. Western Africa, Bornou, about 80 m. W. by N. Kukawa. It lies in an extensive plain, is well shaded with trees, and though once a large and celebrated place, shows symptoms of decay. Mr. Richardson the traveller died here, and is buried under a large, wide spreading fig-tree.

NIAMZO, or NYEMZU, a tn. Turkey in Europe, Moldavia, circle of same name, beautifully situated in a wild and romantic district, 62 m. W. by N. Jassy. It occupies a rugged height above the Nemz, an affluent of the Moldavia, contains the ruins of a fortress which belonged to the knights of Malta, and has in its vicinity a large monastery which is occupied by about 500 monks, and possesses a wonder-working image of the virgin in solid silver.

NIAS, or NIA [add.], an island, Indian Archipelago, about 35 m. off the N.W. coast of Sumatra; length, N.E. to S.W., about 65 m.; breadth about 17 m.; area, 1200 sq. m. The surface consists of ranges of hills, nowhere rising more than 800 ft. above the sea, and of intervening valleys. Though without any indication of volcanic origin,

it is subject to violent earthquakes, one of which in 1843 swallowed up a hill and a village. The inhabitants, of Malay extraction, and fairer than those of Sumatra, are a simple, mild, and primitive agricultural people. They are skilful in irrigation, and raise good crops of rice, cotton, and other useful products. Nias, though virtually independent, is included by the Dutch among their possessions. Pop. computed at 169,500.

NICHOLAS (Str.), a harbour, British America, 3 m. N.E. of the cape of same name, on the N. shore of the estuary of the St. Lawrence. It consists of a narrow inlet, only 150 yards wide at its entrance, and nowhere within exceeds 380 yards, but is so secure that a vessel might be laid on shore and repaired as if she were in dock. This security it owes to the granite hills of 500 to 700 ft. by which it is inclosed. Its greatest depth at low water is $9\frac{1}{2}$ fathoms; but, owing to a bar, not more than 12 to 17 ft. can be carried in at high water.

NICHOLSON (PORT), New Zealand. See WELLINGTON.

NICOLET, a tn. British America, Canada East, cap. co. and on the river of same name, 72 m. N.E. Montreal. It contains a Protestant and a R. Catholic church, a large R. Catholic seminary or divinity hall, several schools, a brewery, and some general trade. Pop. about 1000.

NICOPOLI [add.], a tn. Turkey in Europe, Bulgaria, eyalet and 95 m. E.S.E. Widin, at the confluence of the Osma with the Danube. It is picturesquely situated between steep mountain heights; and being surrounded by gardens, occupies a large space, extending partly along a hill which overlooks it, and is crowned by a castle, once of great strength, but now in a very dilapidated condition. From this hill the wall stretches downward till it reaches the Danube. Nicopoli is the see of a Greek bishop, and the great entrepôt for the goods brought from Walachia. An excellent wine is grown in its environs. A great and decisive battle was fought here, in 1396, between the Christians under Sigismund of Hungary and the Turks under Bayazid I. The former were defeated. Pop. about 12,000.

NIEGATA, a tn. Japan, on the W. coast of the island Nippon, nearly opposite to the island of Sado. It is one of the ports which by Lord Elgin's treaty with the Japanese were opened for trade in 1860. Scarcely anything is known of it; but from the number of masts of junks seen in its harbour, it is understood to be a place of extensive trade.

NIEMIROW, a tn. Austrian empire, Galicia, circle Zolkiew, 30 m. N.W. Lemberg; with a sulphur spring and a garden establishment in a fine park, a paper-mill, and extensive manufactures of linen. Pop. 1750.

NIEPOLOMICE, a tn. Austrian empire, Galicia, circle and 9 m. N.W. Bochnia, cap. dist. of same name, on the Vistula; with a castle, which was a frequent resort of the kings of Poland, and is now partly used as an hospital, and 3204 inhabitants.

NIESHIN, a tn. Russia, gov. and 35 m. S.S.E. Tchernigov, cap. circle of same name, on the Ostr. It contains a cathedral and nineteen other churches, a monastery, a lyceum and gymnasium, two circle schools (one of them for Greeks), many industrial establishments, and a large trade, chiefly in tobacco. Pop. 17,981, many of them Greeks.

NIKOLAIJEVSK, a tn. Russia, gov. and about 100 m. S.E. Samara, cap. circle of same name, on the Great Irgis. It has two churches, a circle school, and some trade in corn. Pop. 6350.

NIKOLAISTADT, a seaport tn. Russia, Finland, on a small bay in the Gulf of Bothnia, 355 m. N.W. St. Petersburg. It has a church of stone, infirmary, and high-school; manufactures of leather and pitch, and a trade in these articles, fish, and timber. Of late years the harbour has been much injured by the formation of shoals and sandbanks. The town was called Vasa or Vasa until 1856, when it received its Russianized appellation. Pop. 2700.

NIKOLAREVSKAIA, a tn. Russia, gov. Don Cossacks, r. bank Don; with a yearly market and 5691 inhabitants.

NIKOLAYEVSK, a tn. Russian empire, E. Siberia, on a wooded plateau above 1. bank Amoor, near its mouth in the N.W. of Mammia Strait, which connects the Gulf of Tartary with the Sea of Okhotsk. It was till lately supplanted by Sofyevsk, the most important Russian station on the river, is defended by four batteries, and consists chiefly of 250

dwelling-houses arranged in a main and three side streets. The houses are of wood, with strong doors and windows, and well arranged within. The principal public buildings, likewise of wood, are the church, with five steeples—one large and four small; the 'chancellerie,' governor's house, pay-office, police-office, hospital, and school for pilots' and soldiers' sons. About 2 m. W. of the town the governor has a country residence, seated on a prominent cliff commanding a very extensive view. Some Russian peasants established in the neighbourhood supply the town with eggs, poultry,

NIMAN, a river, Russian empire, Manchouria, formed by several streams from the Zeya Mountains, flows S.W., and is joined near Bureinsk by the Bureya, which it doubles in volume. After receiving the Nimakan, its principal tributary, it has a width of 160 yards. It flows through a valley bounded by hills which descend steeply towards it; but after its junction with the Bureya, the hilly country is succeeded by extensive swampy prairies.

NIMBERA, a tn. India, Rajpootana, cap. pergunnah of same name, 16 m. N.W. Neemuch, is surrounded by a rampart with towers, and has a court-house, a mosque, some small temples, and a remarkably fine well, with a noble staircase, and a verandah of rich Saracenic arches round the wall about half way down.—The pergunnah has an area of 172 sq. m. and an estimated revenue of £14,000.

NING-KANG-JOO, a tn. China, prov. Chekiang, on the Ningpo, above the town of this name, at the point where the boat-navigation ceases. It is a place of no great extent, but has a fair, which, being held at the time when Mr. Fortune visited it, is thus described by him: 'The streets of the town were now crowded with people, and the whole scene reminded me of the fair of a country town in England. In addition to the usual articles in the shops, and

NIKOLAYEVSK.—From the Illustrirte Zeitung.

and butter. The vicinity of Nikolayevsk being unfitted for agricultural pursuits, a Russian colony has been established in villages which extend about 70 m. below Mariinsk, and where oats, barley, rye, and especially vegetables, are cultivated with success. The trade of the port in 1859 amounted in imports to £96,075, forming the cargoes of eight vessels, carrying 1836 tons. Pop. (1858) 2552, of whom 1518 were soldiers and sailors, and only 369 females.

NIKOLSK, a tn. Russia, gov. and 150 m. N.E. Vologda, cap. circle of same name, on the Yug. It has two churches, one of them a cathedral; a circle and a parish school, and a charitable institute. The chief employments of the inhabitants, both of the town and circle, are barge-building and the felling of trees for fuel. A small haven at the confluence of the Yug and the Pushma is an important entrepôt for goods conveyed to and from Archangel. Pop. 1192.

NIKOPOL, a tn. Russia, gov. Ekaterinoslav, on the Dnieper; with a church, a parish school, a charitable endowment, several colonies of foreigners, and 5295 inhabitants.

NILES, a tn. U. States, Michigan, r. bank St. Joseph, and on the Michigan Central railway, 145 m. W. by S. Detroit. It stands in a pleasant and fertile agricultural district, and contains six churches and a number of mills and factories. Pop. (1860), 2826.

NILLAVELLI, or NILLAWALLA, a tn. on a lagoon on the N.W. coast of Ceylon, 6 m. N. by W. Trincomalee. It contains a rest-house, built on the model of one of those substantial edifices which furnish a memento of the former presence of the Dutch, and said to be timbered from the wreck of a ship stranded in the vicinity; and is the great station for the supply of salt to the eastern provinces. The salt-pans extend for a mile along the E. shore of the lagoon, and are formed simply by levelling and embanking the clayey soil, which is strongly impregnated with salt. The process of manufacture is simple. The sea-water, raised into one of the pans by a wooden scoop swung from a triangle, is run off successively into a second and third pan. When in this way it is supposed to have parted with all earthy ingredients, it is left to evaporate by exposure to the intense heat of the sun. The salt is of the purest description, and might be produced in quantity sufficient to supply the whole demand of India, did not policy require that salt should form an important source of Indian revenue. At present the pans of Nillavelli produce only about 25,000 bushels annually.

an unusual supply of fruits and vegetables, there was a large assortment of other things, which seemed to be exposed in quantity only on a fair-day. Native cotton cloths, woven by native handlooms in the country, were abundant; mats made from a species of juncus, and generally used for sleeping upon; clothes of all kinds, both new and second-hand; porcelain and wooden vessels of all sorts; toys, cakes, sweetmeats, and all the common accompaniments of an English fair. Various textile fabrics of interest were abundant, being produced in large quantities in the district; hemp, jute, China grass (so called), being the bark of the *Urtica nivea*, and the juncus already noticed. A great number of the wooden vessels were made of the *Cryptomania japonica*, which is remarkable for the number of beautiful rings and veins, which show to great advantage when the wood is polished. The staple summer crops of the district, the soil of which in the valleys is a light rich loam in the highest state of cultivation, are juncus, jute, China grass, and a gigantic species of hemp from 10 to 15 ft. high, which yield the textile fabrics mentioned above as sold at the fair; the staple winter crops are wheat, barley, the cabbage oil-plant, and other kinds of vegetables, among them a liliaceous plant, probably a *Fritillaria*, grown for its bulbs, which are used in medicine. Its flowers, of a dingy grayish-white, are not ornamental.

NINGPO [add.] Since the opening of this port in 1844, its internal and external trade has fluctuated, without much increase; and in 1861 all legitimate commerce was suspended during its occupation by the Taiping rebels. As the outport for the province of Che-kiang it commands a region rich in the Chinese staple products, tea, silk, and raw cotton. But in consequence of the defective water communication with the districts in which these articles are produced, only a portion of the quantity raised is shipped at this port, the bulk being forwarded to Shanghai. In 1865 the quantity of silk exported amounted to 1914 piculs, of 133 lbs., valued at £215,325; green tea, 70,662 piculs, £745,077, and cotton, 33,567 piculs, £216,697. Besides the usual imports of British and other manufactured goods into Chinese ports, rice, opium, and sugar form the principal items on the import sheet at Ningpo, as follows:—In 1864 rice was imported to the extent of 1,911,143 piculs, valued at £1,213,029; but this was exceptional, in consequence of the Taiping devastation of the province, so that the quantity was reduced in 1865 to only 558,442 piculs, valued at £245,970. In 1864 opium was

imported to the extent of 3011 piculs, valued at £508,146; and in 1865, 3380 piculs, of about the same value, in consequence of the price falling. On the other hand, sugar rose in price, but was less in quantity—149,924 piculs in the former year, and 136,847 piculs in the latter, the value respectively being £231,674, and £203,718. The foreign tonnage of the port decreased from 296,311 tons in 1864, to 258,247 tons in 1865.

Although some of the missionaries have their mission-houses within the precincts of the walled city, yet the bulk

of the foreigners are located in an old village on the opposite bank of the River Yung, facing Ningpo. Here are 21 mercantile firms, employing 36 persons, of whom, in 1864, 28 were British. The foreign maritime customs have 13 employés, of whom 11 are British; and the municipality have 17 constables. There are also British, French, and American consulates; and 5 mission establishments, two of which are English, two are American, and one French. In addition to these civil and religious foreign residents, there are two military contingents of native disciplined troops quartered in

the city under the command of English and French officers, numbering 17 of the former, and 6 of the latter; besides 4 British officers in a revenue cutter, making a total foreign population of 117 persons. Besides having suffered from the Taiping occupation, and intercourse with foreigners in contraband traffic, this port at its approach from the mouth of the river to the Chusan Islands is infested with pirates, who are bold enough to attack and plunder foreign ships even in the daytime. The Chinese government have tried ineffectually to suppress this maritime pest, and British gun-boats are always cruising on the station to protect peaceful traders of all nations. Notwithstanding these and other drawbacks to its prosperity, Ningpo is recovering rapidly from its depression; and the industrious inhabitants are increasing the products of the surrounding country.—(*Consular Reports; Mossman, MS. Notes.*)

NIO, a tn. Greece, nomarch Cyclades, cap. and on bay on the W. shore of the island of same name; with a justice of peace court, an Hellenist and a parish school, and a good harbour. Homer is said to be buried here. Pop. 2500.

NIOBRARA, or **RUNNING WATER**, or **L'EAU QUI COURT**, a river, U. States, rises among the Black Hills, Dakota, and flowing E. through the N. part of Nebraska, enters the Missouri at Niobrara; its total length is 450 or 500 m.

NIPISIGHT, a river, British America, which rises in the N.W. of New Brunswick, near the watershed between the basins of the Gulf of St. Lawrence and the Bay of Fundy, flows E.N.E. and enters Nipisight Bay, the largest of the arms of Chaleur Bay, after a course of about 60 m. It forms a basin about 3 m. long by 2 m. wide, and is well sheltered. At the head of this basin the town of Bathurst is finely situated. About $1\frac{1}{2}$ m. above this town the Nipisight, in consequence of rapids which prevent the farther advance of the tide, ceases to be navigable.

NISSA, or **NISH**, a tn. Turkey in Europe, in the N. of Turkish Servia, cap. eyalet and on a river of same name; lat. $43^{\circ} 24'$ N.; lon. 22° E. It is the birthplace of the emperor Constantine, and the seat of a general governor, is defended by a citadel, and contains eleven mosques and two Greek churches. There are thermal springs in the vicinity. Pop. 16,000, of whom 6000 are Mussulmans.

NIU-CHWANG, a tn. China, prov. Liautung, on the Liau-ho, about 20 m. above its mouth in the N.E. of the Gulf of Liautung. Scarcely anything is known of it, but it is reported to be of considerable extent and commercial importance. This is confirmed by the fact that its proper port, situated 2 or 3 m. within the bar of the Liau-ho, is itself a large place, and gives evident signs of the existence of an extensive and thriving commerce in quiet times. Its streets and roads are indeed masses of mud and filth; and its houses, mostly of one story high, and built of stone and unburned brick, with oiled paper as a substitute for glass in the windows, have nothing to boast of; but supplies are plentiful, and there are large quantities of grain stored in spacious inclosures. A large supply of hemp, it is said, can be always furnished; and coal may be procured at Niu-chwang, though 30 tons furnished to H.M.S. *Bittern*, when she anchored here in 1855, proved of very inferior quality. In the channel used by the large junks there is a depth of 4 to 5 fathoms over the bar of the Liau-ho. Niu-chwang is one of the future seaports open to European commerce. In the opinion of Captain Sherard Osborn, 'What Kurrachee is with respect to Beloochistan, Afghanistan, and Bokhara, the port of Niu-chwang will one day be to the great region of Manchooria and Eastern Tartary.'

NIZANKOWICE, a tn. Austrian empire, Galicia, circle and 9 m. S. Przemysl, cap. dist. of same name; with a castle picturesquely situated on an island in a small lake. P. 1200.

NOCHISTLAN, a tn. Mexico, state and to the W. of Oajaca, on the road from it to the capital. It stands in a beautiful district, in which wheat is largely cultivated, and was a thriving populous place till war laid it waste. The only remarkable building is a handsome church, which once belonged to a Dominican monastery. Pop. about 1200.

NOELGUNJ, a tn. India, Oude, 19 m. W. Lucknow, is a large walled place, with a bazar in a handsomer style than usual, and a considerable number of well-supplied shops. Though the walls, and many of the houses, give indications of decay, the inhabitants seem to be thriving.

NOGARA, a tn. Italy, Venetia, prov. and 20 m. S. Verona, on the Tartaro, has a dilapidated castle, an old parish church with three naves, and a modern church. Pop. 3460.

NOGAROLE, a tn. Italy, Venetia, prov. and 11 m. S. by W. Verona; with a church containing an altar-piece by Brusatorzi, and an old castle.

NOGOCS, a tn. Austrian empire, Hungary, co. Somogy, 20 m. N.N.E. Kaposvar; with manufactures of spirits, and a trade in corn, wine, and tobacco. Pop. 1195.

NOORABAD, a tn. India, Scindia's Dominions, on the r. bank of the Sank, here crossed by a stone bridge of seven arches, 11 m. N.W. Gwalior. Within the inclosure of a pleasure-ground in the vicinity is the tomb of Gonna Begum, celebrated for beauty, wit, and poetical genius. She was the wife of a vizier of two successive Mogul emperors. The inscription on the mausoleum is, 'Alas! Gonna Begum, 1180' (1775).

NORFOLK [add.], a tn. and port of entry, U. States, Virginia, on the N. bank of the Elizabeth, 88 m. S.E. Richmond. It lies low, and is irregularly laid out, but consists on the whole of wide streets, and houses substantially built of brick and stone. Among the principal buildings are the city-hall, with a cupola 110 ft. high; a court-house and jail, a new custom-house, fourteen churches, a military academy, and a mechanics' institute. The harbour, which is safe and easy of access, admits the largest vessels, and is defended by the two forts Calhoun and Monroe. The foreign commerce exceeds that of any other place in the state. A branch of trade which has become important of late years is the supplying of the northern cities with early fruits and vegetables. The average annual value of these is estimated at nearly £100,000. At Gosport, in the vicinity, there is a U. States navy-yard, with a dry-dock, constructed of granite, at an expense of £195,000, and also a marine hospital. There is also in the suburbs a cemetery, beautifully laid out, and adorned with cypress-trees. Pop. (1860), 14,605, of whom 3280 were slaves.

NORMAL, a vil. U. States, Illinois, co. McLean, on the Central railroad, where it is intersected by the Chicago, Alton, and St. Louis railroad, 61 m. N.E. Springfield. Here is the state university, a large and prosperous institution, with 450 students; the building cost £40,000, and it is endowed with a similar sum. Pop. 800.

NORRISTOWN, a tn. U. States, Pennsylvania, on the N. bank of the Schuylkill, and a railway connecting it with Philadelphia, from which it is 15 m. N.W. It consists of regular and well-paved streets, and houses neatly and substantially built of brick and native marble; and contains a new court-house, erected at an expense of £40,000; thirteen churches, four large public schools, a public library, a county jail, several large cotton and woollen factories, rolling-mills, foundries, furnaces, machine-shops, naileries, oil-mills, &c. The trade, furnished with new facilities by the improved navigation of the Schuylkill, is active and increasing. Pop. (1860), 8948.

NORTHAMPTON [add.], a vil. and township, U. States, Massachusetts, cap. co. Hampshire, on the Connecticut River railway, 70 m. W. Boston. It stands on elevated ground in a beautiful country, with two mountains fully in view; contains county buildings, seven churches, a collegiate institute and other excellent schools, cotton and paper mills, tool and silk factories. It is connected with Hadley by a fine bridge across the Connecticut. Pop. (1860), 6788.

NORTH CORNWALL, a tract or isl. British America, Arctic regions, lat. (W. extreme) 77° 39' N.; lon. 96° 15' W. Sir Edward Belcher, who discovered it, and gave it its name in honour of the Prince of Wales as Duke of Cornwall, had no opportunity of exploring it fully, but reached a station within it which had a height of not less than 800 ft., and was about 5 m. distant from its W. point. It is composed of friable sandstone and sand, interspersed on the surface with boulders of granite.

NORTH SAN JUAN, a vil. U. States, California, co. Nevada, near the Middle Yuba River, 12 m. N.W. Nevada city. Its principal resources are gold mines; grapes are also cultivated with success. Pop., including Chinese, about 1500.

NORTHUMBERLAND, a group of numerous islets, Australia, forming part of the Great Barrier reef, and extending along the E. coast of Queensland from 12 m. N.E. of Cape Townshend to about 18 m. N.N.E. Cape Palmerston. Pradhoe, the north-westernmost, and the largest of the group, is only 2½ m. long, and nearly as broad. It rises into two peaks, connected by a narrow low neck of swampy ground,

and is partly covered with long grass over loose stones, and a few stunted trees. The S. peak, the loftier of the two, rises to the height of 1025 ft.

NORTHUMBERLAND STRAIT, British America, separating Prince Edward Island on the N. from New Brunswick and Nova Scotia on the S., is 100 m. in length, and near its centre, where it is narrowed by the projection of Cape Tormentine, the S.E. extremity of New Brunswick, is only 5½ m. wide, though it widens out on either side to nearly 20 m. The navigation being considered dangerous, it is usually avoided by large ships.

NORWICH [add.], a tn. U. States, Connecticut, at the head of navigation of the Thames, and on the Norwich and Worcester and the New London, Willimantic, and Palmer railways, 30 m. S.E. Hartford. It consists of three distinct parts—Norwich proper or Chelsea Landing, the Town, and Greenville. The first is picturesquely situated on a steep hill between the Yantic and Shelucket, which here unite in forming the Thames; and consists of houses, which, being mostly white, and seated on terraces rising one above another, have a conspicuous and attractive appearance. The Town lies to the N.W. in a pleasant valley inclosed by hills; Greenville lies to the N.E. The principal buildings are seventeen churches, county offices, a free academy, built and endowed by voluntary subscription to the amount of £22,000; and numerous public schools, which, including the academy, were attended in 1860 by 2366 pupils. The manufactures consist chiefly of cottons, and to a less extent of woollens, paper, and machinery. The Yantic, about 1 m. above its mouth, is compressed into a narrow channel, and rushing over a rocky bed, makes a sheer descent of about 50 ft. Pop. (1860), 14,052.

NOSAREE, a tn. India, presid. Bombay, dist. and 18 m. S. Surat, l. bank Poorna, 8 m. above its mouth in the Gulf of Cambay. It stands in a pleasing and highly cultivated district, and contains about 15,000 inhabitants, many of whom are Parsee weavers, and others artificers in copper, brass, iron, and wood. The trade, coasting and foreign, in grain, coarse sugar, wood, and other articles, the produce of the country, is considerable.

NOSSI-BÉ, an isl. S. Africa, off the N.W. coast of Madagascar, belonging to France. It is in the form of an irregular parallelogram, about 14 m. long by 8 m. broad, has a mountainous surface, the culminating point, Loucoubé, near its centre, attaining a height of above 1800 ft., and evidently appears, both from its general structure and numerous extinct craters, to be of volcanic origin. It is well watered and well wooded, and so fertile as to maintain a population of 10,000 souls. The harbour, formed by the S. shore of Nossi-Bé, the N.W. shore of Nossi-Kumba, and the small island of Tani-Keli, has all the requisites of a complete harbour of refuge, being well sheltered, of sufficient depth to float the largest vessels, and capacious enough to receive whole fleets. The chief centre of population is Helleville, which stands upon a flat about 30 ft. above the sea, and is the seat of government.

NOTRE DAME DU PORTAGE, a tn. British America, Canada East, co. Temiscouata, r. bank St. Lawrence, 90 m. N.E. Quebec; with a R. Catholic church, schools, a plough-factory, and a flour-mill. Pop. about 1000.

NOVGOROD-VOLANSK, a tn. Russia, gov. Volhynia, cap. circle of same name, on the Slutch, 60 m. N.W. Zitimir. It has five churches, a circle and a parish school, a charitable institute, and various manufactures. At the village of Korktz, in the circle, there is a nunnery and a porcelain factory. Pop. 6355.

NOVI, a tn. Austrian empire, kingdom of Croatia and Slavonia, co. and 22 m. S.E. Fiume, cap. dist. of same name, on the shore of the Strait of Morlaca; with a collegiate church, a suppressed Pauline monastery, a castle, and a harbour at which some trade is carried on. The Bishop of Zengg usually resides here. Pop. 2290.

NOVIBAZAR, a tn. Turkey in Europe, Bosnia, on the S. frontiers of Servia, near the source of the Ibar, an affluent of the Morava. It is the seat of the kaimakan, possesses a citadel in a very dilapidated state, and thermal springs; has annual fairs, which are much frequented; and carries on a very extensive trade, being advantageously situated at the point where five roads meet. Pop. about 15,000.

NOVOI-USEN, a tn. Russia, gov. and 190 m. S.S.W.

Samara, cap. circle of same name, on the Great Usen. It is very irregularly built, and consists for the most part of wooden houses, occupied by inhabitants who are employed partly in fishing and agriculture, and partly in manufactures. To the latter belong tile-works and numerous tallow-melting houses. The annual fair, which lasts from two to three weeks, is sometimes attended by about 10,000 Kerghis of the Inner Horde. Pop. 6055.

NOVO-MOSKOVSK [add.], a tn. Russia, gov. and 20 m. N.E. Ekaterinoslav, cap. circle of same name, on the Samara. It has six churches, a circle school, two charitable institutes, and an important annual fair, which lasts nine days; and contains 9729 inhabitants.

NOVO-REDONDO, a Portuguese præsidium or fort, S.W. Africa, Kimbunda country, territory Sumbe, on the S. or I. bank of the river of that name, near its mouth in the Atlantic, 50 m. N. Benguela. It consists of a fort built at the end of last century, and of a village containing about 200 houses. The fort crowns the summit of a pyramidal hill in the vicinity of the sea, and is provided with nine guns, mostly brass six-pounders, of which, however, scarcely the half are fit for service. The walls are in good condition. The village lies to the E., stretching irregularly and in patches over steep hills and along deep valleys. Only a few of the houses are built of stone, and of two stories; and all of these, lying beyond the guns of the fort, receive no protection from it. The best edifice is the church. Among the inhabitants are a few Portuguese; but the majority consists of mulattoes and blacks, who devote themselves entirely to trade. This, while slaves formed its staple, is said to have been very profitable; but now that it is confined to ivory, wax, gum-copal, and orchil, yields such poor return that both the wealth and the population have rapidly declined.

NOVOSIL, a tn. Russia, gov. and 80 m. S. by W. Tula, cap. circle of same name, r. bank Susha. It has three churches, secular and religious schools for the circle and parish, a charitable endowment, and manufactures. Pop. 3042.

NOVO-SUTKOV, a tn. Russia, gov. and 75 m. N.N.E. Tchernigov, cap. circle of same name, on an affluent of the Sej. It has three churches, a circle school, a charitable endowment, and numerous manufactures; and 6819 inhabitants.

NOWAGORA, a tn. Austrian empire, Galicia, circle and 7 m. N.W. Cracow; with productive mines of calamine, and 1100 inhabitants.

NOWANUGGUR, a tn. India, Gujerat, peninsula Kattywar, on a creek on the S. shore of the Gulf of Cutch. It is a considerable place, near 4 m. in circuit; and has manufactures of fine cloths, which are celebrated alike for excellence of fabric and beauty of dye, and find a ready sale in the Arabian and African markets. To the N. of the tn. is an indifferent pearl-fishery.

NOWOSICHTZA, a little village, Bukowina, on the Pruth, remarkable as the point where the three states of Austria, Russia, and Turkey meet.

NUBLE, a prov. Chili, formerly part of that of Concepcion, but constituted into a separate 'intendencia,' or province, by decree of the general government, Feb. 2, 1848. It is bounded N. by the river Perquillanquen, S. by the Itata, which divides it from Concepcion, E. by the Andes, and W. by the great road leading to Santiago. This district is watered by numerous streams descending from the Andes; the chief of which are the Itata, also called the Chillan, and the Nuble—a deep and rapid river, which, after receiving the waters of the former, pursues a westerly course through deep ravines overhung with fine trees, and ultimately discharges itself into the Pacific, forming an almost impassable bar. The soil, as everywhere in the south of Chili, is of the best description and highly productive. Its principal products consist of grain, wine, and cattle, which are sent in large quantities by land to the north. The climate, somewhat drier than that of Concepcion, is equally healthy, and no wise inferior in its adaptation to the various branches of rural economy. Good roads and a larger population would soon render it a very rich district; for there is scarcely a limit to the productive power of the soil. Mining industry is of small amount, though in the early days of the Spanish occupation gold-seeking was almost the sole business of the

inhabitants. Small quantities are still gathered in the beds of the rivers; but for some time past the less exciting, but more profitable, pursuit of agriculture has been engrossing more and more the attention of the people. Within the limits of this province lies the great volcano of Chillan. The principal town of the province bears the latter name, and is 450 m. S. of Santiago. Part of it is modern; the ancient part of it was built by the Spanish conquerors. Chillan in former times was a place of some strength, and on many occasions served as an asylum to the early settlers when hard pressed by the Araucanians. This danger no longer exists, but still Chillan continues to be a military station. Pop. of province (1865), 123,598.—(*Guia de Chili; Repertorio Nacional.*)

NUDDEA [add.], a dist. India, presid. Bengal, between lat. 22° 49' and 24° 10' N.; lon. 85° 9' and 89° 11' E.; bounded N. by Rajeshaye, E. Pubna and Jessore, S. Baraset, and W. Hooghly, Beerbhoom, and Burdwan; length, N. to S., about 90 m.; breadth, 45 m.; area, 2942 sq. m. It lies wholly within the delta of the Ganges, and is traversed everywhere by its branches—chiefly the Podda, Jellinghee, Bhagruttee; the last two uniting to form the Hooghly, which is for 40 m. the W. boundary of this district. The soil, fertile, friable, and easily cultivated, produces in abundance rice, various kinds of millet, maize, pulse, oil-seeds, cucurbitaceous plants, sugarcane, indigo, tobacco, and hemp. The mulberry, for feeding silk-worms, is extensively cultivated. The capital of the district is Kishungar. Pop. 298,736.

NUDDEA, a tn. India, which, though giving its name to the above district, is situated in dist. Burdwan, r. bank Bhagruttee, 60 m. N. by W. Calcutta. It was once the residence of a Hindoo sovereign, and possesses an ancient Brahminical college in a state of decay.

NUERA-ELLIA, or NUWERA-ELLIA, an elevated plain, Ceylon, 64 m. E. by N. Colombo, at the height of 6222 ft. above the sea. It is inclosed by mountains; one of which, Pedrolallagalla, having a height of 8280 ft., is the culminating point of the island; and having been first made known, in 1826, by some English officers who had penetrated to it in pursuit of elephants, was immediately selected by government as a sanitarium. Barracks were accordingly commenced, and a village began to rise in the midst of its grassy and well-watered plain. According to Sir J. E. Tennent, 'Nuera-ellia, as a sanitarium, is little to be relied on in active ailments, especially such as are incident to the island,' but as a preventive of illness 'cannot be too highly valued.' To the hypochondriac and the valetudinarian 'the valley is a paradise; to the languid and exhausted dweller on the coast, this elevated region acts like the touch of his mother earth, strengthening him to wrestle with the heats below; and children, after rejoicing in the bracing breezes, descend as rosy and bright as on their first arrival from England.' The plain, formed of debris from the hills, has been largely productive of precious stones embedded in the alluvial deposit, and is still covered with pits sunk by the gem-finders. Visitors pursuing jewel-hunting as an amusement, frequently find small rubies, sapphires, and opazes.

NUFOOD, meaning 'dearth and destitution of provisions and water,' is the modern name given to one of the most extensive tracts of Arabia, occupying the whole centre of the N. part of the peninsula. Its W. boundary, commencing at the isolated mountain Hulwan, to the E. of Teima, is sharply defined by a range of hills, which, rising to a height of 100 to 200 ft., extends N. with an uninterrupted ridge of sand-hills resembling the wall of a mountain-chain, and separates it from the rocky Syrian desert. On the S. its boundary, commencing as before at Hulwan, curves eastward till it is met by the mountain-chain of Jebel Shammar. The E. boundary is very irregular, the sand-ridges extending unequally—some stretching so far down as to approach the Persian Gulf, while others are soon lost in the stony plain which lies between the Nufood and the sea-coast. The N. and N.E. limits are too little known to be exactly defined. Nufood, notwithstanding the destitution implied in its name, is on its whole extent one of the richest pasture-grounds in Arabia during the spring, when the rain gathers in ponds and pools; at other seasons, owing to the want of wells and springs, the nomade tribes do not frequent it.

NUGEENAH, two places, India:—1, A vil. N.W. Pro

vinces, dist. Geogaon, 65 m. S.W. Delhi. It contains a handsome bungalow for travellers, which was originally the country residence of Shums-u-din, Khan of Ferozepore, who was hanged, in 1836, for the murder of William Fraser, the British political agent.—2, A tn. Rohilcund, dist. Bijnour, about 80 m. N.E. Delhi. It is a large and stirring place, built chiefly of brick, and has been called the Birmingham of India on account of its extensive manufacture of gun-barrels and detonating locks for fowling-pieces. Pop. about 14,000.

NUJEEBABAD, a tn. India, N.W. Provinces, Rohilcund, on a low and swampy site, in dist. Bijnour, 31 m. S.E. Hurdwar. It is about three-quarters of a mile long, and consists of a number of broad regular streets, inclosed by barriers at different distances, and forming several distinct bazars. It has a thriving appearance, and carries on an active transit trade between Kumaon and the S. Outside the town are the remains of many considerable buildings; and about 2 m. S.E. is the large square brick-built fort of Puthurgarb, with bastions at the angles and the middle of each face.

NUN, a tn. W. Africa, on a river of same name; lat. 28° 30' N.; lon. 10° 11' W. It occupies a very uneven site, and consists of several long streets, so narrow that two camels can hardly pass in them. The houses, built of clay or mud, generally have a court attached to them, from which their only light is received, as the wall facing the street has no window or opening of any kind. The place is tolerably clean, except in the Jewish quarter; which is inhabited by about 100 families, and is filthy in the extreme. The trade is considerable, and consists chiefly of gum, goat-skins, camel's-hair, sheep's-wool, and ostrich-feathers. These the traders exchange for European goods, which are sent by caravans into the interior, and specially to Timbuktoo; from which the returns are gold, slaves, gum, ivory, and wax. A good deal of wheat and barley is grown in the vicinity of Nun, and date-palms are numerous, but seem only for ornament, as they bear no fruit.

NUSA-KAMBANGAN, an isl. Indian Archipelago, off the S. coast of Java, and only separated from it by a narrow channel, so shallow as to be navigable only by boats. It is about 15 m. long by 3 m. broad, has an elevated surface covered with forest, and is almost uninhabited. At the W. entrance of the strait occurs the only good harbour for vessels of burden along the whole of the S. coast of Java. The Dutch have of late years introduced the forced culture of coffee in this island.

NUSSEERABAD, three places, India:—1, A tn. presid. Bengal, cap. dist. Mymsing, r. bank Brahmapootra, 190 m. N.E. Calcutta.—2, A tn. presid. Bombay, Candeish, 79 m. E.N.E. Malligaum.—3, A British cantonment, dist. and 15 m. S.E. Ajmere. It stands at the height of 1486 ft. above the sea, on a vast plain of sand or gravel overlying primitive rock, and bounded N.W. by the mountains of Ajmere. The cantonments, laid out in wide and regular streets, are large and commodious. On 28th May, 1857, the 15th and 30th Bengal N. I., and a company of Bengal native artillery, broke into open mutiny, and committed great atrocities.

NUYTS [add.], an archipelago, S. Australia, contained in a large bight of the coast between Bell Point in lat. 32° 17' S., lon. 133° 5' E., and Westall Point in lat. 32° 52' 30" S., lon. 133° 59' E. The principal groups of the archipelago are those of St. Peter, lying near the mainland between Denial and Smoky Bays; of St. Francis, situated at 18 m. distance in the offing, and affording good anchorage in Petrel Bay; and of the Purdie Isles, which lie 3 or 4 m. from the shore to the eastward of Bell Point, and are rendered very dangerous by reefs and sunken rocks.

NYAMBORONDA, a hot spring, S.E. Africa, Portuguese settlements, nearly opposite Tette; lat. 15° 50' 35" S. It stands at the bottom of a high hill, about a mile and a half E. of Morosi, a small affluent of the Zambesi. A little spring bubbles up on one side of the rivulet Nyaonda, and a great quantity of steam rises from the adjacent ground, of which 12 ft. square is so hot that the natives with their bare feet could not stand upon it. The principal spring is in a hole about a foot in diameter and in depth. The steam feels acrid in the throat, but seems not to be inflammable. A thermometer plunged into the water of the hole stands steadily at 160°. The stones over which the water flows as it passes

from the spring are encrusted with a white salt, and some diggings have been made by the natives in order to obtain the salt on a larger scale. The prevailing rocks where the fountain-issues are syenitic porphyry in broad dykes, gneiss tilted on edge, sandstone in strata dislocated by hornblende rock and basalt, and partially converted into quartz, greenstone, and lava, with many specimens of half-formed pumice.

NYAMINA, a tn. W. Africa, on the N. or right bank of the Dhuiliba, which ultimately sends its waters to the Senegal, 450 m. S.W. Timbuktoo. It is a large and important place, with a market which supplies a great proportion of the inhabitants of the W. desert. To the W. of the town the river forms a large creek or backwater, which opens an extensive inland navigation.

NYANZA (ALBERT). See LUTA N'ZIGÉ in *Supp.*

NYANZA (VICTORIA). See VICTORIA in *Supp.*

NYASSA [add.], a lake, S.E. Africa, lying nearly due N. and S., lat. 10° 55' to 14° 25' S.; its S. extremity is in lon. 35° 30' E., and its N. end in lon. 34° 35' E.; its greatest breadth, in about lat. 12° S., is estimated at 60 to 65 m., and its total length about 250 m. It is drained by the river Shire into the Zambesi, and where the Shire leaves it at its S. extremity the depth along the W. shore is from 9 to 15 fathoms; but beyond Cape Maclear, a mountainous promontory 40 m. N.W., no bottom was found at 35 fathoms. Along the W. shore, which is a succession of bays, where the bottom is sandy near the beach, and to a mile out, the depth varies from 6 to 14 fathoms. In a rocky bay, about lat. 11° 40' S., there are soundings at 100 fathoms; but outside the bay none were found at 116 fathoms. The S. end of the lake is divided into two arms, from the south-eastern of which the Shire issues; this arm is about 30 m. long, and from 10 to 12 m. broad. Rounding Cape Maclear, the south-westerly arm stretches 18 m. towards the S., and is from 6 to 12 m. in breadth. These arms give the southern end a forked appearance, with some resemblance to the boot-shape of Italy; the narrowest part of the lake is about the angle, 18 or 12 m. From this it widens to the N., and lies as near as possible due N. and S. About two-thirds up the lake is the island Chizumara, which facilitates the crossing of the lake by the natives and Arab and Portuguese slave-traders. The lake appears to be surrounded by mountains, but the beautiful tree-covered heights on the W. side are only the edges of high table-lands. Like all narrow seas encircled by highlands, it is visited by sudden and tremendous storms. The temperature of the water was found to be 72° Fabr., its great depth preventing the sun from raising it to an excessive height. Lake Nyassa receives no large affluents from the W.; the five rivers seen on that side by Dr. Livingstone not appearing to bring in as much water as the Shire was carrying out. They were from 15 to 13 yards wide, and some too deep to ford; but possibly these, with others similar from the mountains on the E. and N., when swollen by the rains, may be sufficient to account for the rise of the lake without any large river. Distinct marks upon the rocks show that for some time during the rainy season the water of the lake is 3 ft. above the point to which it falls towards the close of the dry period of the year. The rains begin in November, and the permanent rise of the effluent Shire does not take place till January. The W. side of the lake, as mentioned before, with the exception of the arm W. of Cape Maclear, is a succession of small bays of nearly similar form, each having an open sandy beach and pebbly shore, and being separated from the next by a rocky headland, with detached rocks extending some distance outwards; the great S.W. bay would form a fine harbour. The land immediately adjacent to the lake is low and fertile, though in some places marshy, and tenanted by large flocks of ducks, geese, herons, crowned cranes, and other birds. In the southern part are sometimes rich plains ten or a dozen miles in extent, bordered by high ranges of well-wooded hills running nearly parallel with the lake. Northwards the mountains become loftier, and present magnificent views, range towering above range, until dim lofty outlines bound the prospect. Still further N. the plains become narrower, until they altogether disappear, and the mountains rise abruptly out of the lake, forming the N.E. boundary of what is described by the natives as an extensive table-land, well suited for pasturage and agriculture, and now only partially occupied by a tribe of Zulus, who came from the S. some

years ago. These people own large herds of cattle, and are constantly increasing in numbers by annexing other tribes. The country W. of the lake, about the parallel of lat. 13° S., consists nearest the lake of a rich well-cultivated plain, which is succeeded by highlands, undulating, stony, and covered with seraggy trees. Many banks of well-rounded shingle appear, traversed by the River Kaombe. Beyond it is a tract of upland vegetation—rhododendrons, proteas, the masuko and molompi. In front, westward, there is what appears to be the long slope of a range of mountains, but the foreground is a succession of tree-covered rounded hills; the cassava is here the chief food cultivated, and the castor-oil plant also is extensively grown for its oil. The mountain range just named is however only the edge of a western table-land, which, at first undulating, soon becomes smooth, with some isolated hills and slopes towards the centre of the country. In this table-land are the sources of the Loangwa, of the Maravi or Zumbo, which flows S.W., and enters the Zambesi at Zumbo; and of the Loangwa, which flows E., and is one of the principal affluents of the lake on its W. shore, in about lat. 12° 30' S. This table-land, on the meridian of lon. 33° E., appears to be the watershed of this part of the country.

The shores of the lake are densely populated. In the southern part is an almost unbroken chain of villages. 'On the beach of well-nigh every little sandy bay,' says Dr. Livingstone, 'dark crowds were standing gazing at the novel sight of a boat under sail, and wherever we lauded we were surrounded in a few seconds by hundreds of men, women, and children, who hastened to have a stare at the *chironbo*, "wild animals." The natives cultivate the soil extensively, and grow large quantities of rice and sweet potatoes, as well as maize, mapira, and millet. In the N. cassava is the staple product, and with fish kept till the flavour is high, constitutes the main support of the inhabitants. A singular kind of food is furnished them during a portion of the year. Vast clouds, as of smoke from miles of burning grass, but really of countless millions of minute gnats or midges, fill the air and swarm upon the water; the natives gather these minute insects by night, and boil them into thick cakes, to be used as a relish, millions of midges in a cake, which is very dark in colour, and tastes not unlike *caviare*, or salted locusts. Abundance of excellent fish is found in the lake, mostly of species peculiar to it. The finest in flavour, and of large size, is the *mpasa*, or sanjika, a kind of carp, which frequents the rivers to spawn, like salmon. The fish ascend the rivers in August and September, and furnish active employment to many fishermen. Weirs are constructed full of sluices, in each of which is set a large basket-trap; a short distance below the weirs nets are stretched across from bank to bank. The lake fish are caught chiefly in nets, but sometimes with the hook. A net with small meshes is used for catching the young fry of a silvery kind of pickerel, when they are about 2 in. long; thousands are often taken in a haul. In deep water some kinds of fish are taken by lowering fish-baskets, attached with long cords to a float, around which a mass of grass or weeds is often tied to allure the deep-sea fish. Fleets of fine canoes are engaged in the fisheries; the men, who are good sailors, using long paddles, and standing erect. The fibre of the buaze is prepared and made into long nets. Cotton cloth also is made in large quantities, and worn in many of the southern villages, affording much employment both in the

cultivation of the cotton and in its manipulation. An extensive manufacture also of a cloth from the inner bark of an undescribed tree, of the botanical group *Cassalpinia*, is carried on from one end of the lake to the other. The lake people are not well-favoured in looks; all are tattooed from head to foot, the figures being various and characteristic of the different tribes. The women use the *pelele*, or ring inserted in the upper lip, and some of them wear a second in the under lip. In disposition they are generous, but not unadicted to thieving. But the worst qualities appear among those who are in contact with the slave-trade, which is carried on by Arabs and others, who traverse the lake and country from the E. coast, chiefly from the slave-ports of Ibo and Kilwa. This traffic is the cause of constant feuds and marauding practices between the various tribes; the most powerful of which appear to be the Mazitu and the Ajawa, who have carried fire and desolation over a great extent of country, and deported the inhabitants for sale to the slave-buyers. Crocodiles are numerous on the shores of the lake; elephants too, surprisingly tame, are found in numbers even close to the villages, and hippopotami swarm in the creeks and lagoons, and herds of them are sometimes seen in the lake itself. Lake Nyassa was discovered by Dr. Livingstone in September, 1859, at its S. extremity. In the following November Dr. Roscher, a German traveller, came in sight of it somewhere in its N.E. portion, but he was murdered on his return journey, and his explorations did not come to light. Dr. Livingstone (if alive) is now (1867) examining the country about the upper part of the lake from the Rovuma River, and also its relation to the northern lakes, Tanganyika, Victoria Nyanza, &c.—(*Livingstone*.)

NYNEE TAL, a tn. India, N.W. Provinces, dist. Kumaon, 30 m. S.S.W. Almora. It is much resorted to as a sanitarium, contains a church, which was erected by public subscription in 1847, and has a market for the productions of the surrounding country.

NYOUNGOS and PAGAN-MYO, two tns. Burmah, 1. bank Irawadi, about 40 m. S.W. Ava. Though 3 m. apart, they extend so as to become contiguous, and may thus be considered as one. The area covered by them is thickly spotted with the ruined temples of Pagan, the ancient Burmese capital. The inhabitants are much employed in the manufacture of the enps and boxes made of varnished basket-work, commonly called lackered ware.

NYOUNG-YUWE, or NYOUNG-SHWÉ, a territory, town, and lake, Burmah. The territory, forming the most westerly of the Shan states, and one of the largest and most important, has suffered so much from Karen forays, Burman oppression, and civil discord, that it probably does not now contain above 1000 houses. Of these 150 are in the town, which stands near the N.E. extremity of the lake, 45 m. S.E. Ava. Appearances indicate that its site, a large alluvial basin 2500 ft. above sea-level, was once a lake. The actual lake of Nyoung-yuwé is remarkable for its multitude of floating islands. These are composed of the interlaced roots of a coarse grass or reed, loaded with a little soil. In dry weather the roots of the grass shoot down to the bottom of the lake, but in the rains many of them, owing to the greater depth of water, break loose and float. The inhabitants often use them as fishing stations, and even erect their huts on them, after anchoring them to the bottom by long bamboos.

O.

OAKLAND, a tn. U. States, California, co. Alameda, pleasantly situated on E. shore of San Francisco Bay, on the San Francisco and Alameda railroad, 7 m. from and opposite to San Francisco, the capital. It contains six churches, an institution called the College of California, a ladies' and a public school. Raspberries are grown in large quantities in the vicinity. Pop. (1860), 1543; in 1864, about 2000.

SUPP. IMP. GAZ.—VOL. II.

OAKVILLE, a tn. British America, Canada West, co. Halton, on the W. shore of Lake Ontario, at the mouth of Sixteen Mile Creek, 19 m. S.W. Toronto. It contains three churches, a grammar-school, and a ladies' select academy, and possesses an excellent and land-locked harbour, at which a number of first-class vessels is annually launched. There is also a considerable trade, Oakville being at once the wheat

market of the county, and the outlet for conveying flour and other produce to the American side. The Great Western railway has a station near the town. Pop. about 2000.

OBBO, a territory, Central Africa, intersected by the parallel of 4° N., and meridian of 32° 30' E.; lying between the Madi Mountains on the N. and E., the Bari tribe on the W., and the river Atabbi, an affluent of the Nile, on the S. The country is undulating and park-like, and has in general an elevation of 3600 ft. above the sea; to the S, although there are no actual mountains, the country distinctly rises. The drainage is to the W. and N.W., in which direction there is a very perceptible inclination. The vegetation of Obbo and the whole of the W. side of the Madi range is different from that on the E. side; the soil is exceedingly rich, producing an abundance of Guinea grass, with which the plains are covered. It produces nine varieties of yams, some of which grow wild in the forests; there are also many good wild fruits; a fine quality of flax grows spontaneously, and tobacco attains an extraordinary size. The climate would be healthy were the country more populous, but the rainfall continuing during ten months of the year, from February to the end of November, the increase of vegetation on the fertile soil is too rapid, and the mass of herbage and grasses 10 ft. high, with creeping plants and vines, becomes impenetrable by man, and forms a vast jungle, inhabited only by elephants, rhinoceroses, and buffaloes. The natives are entirely different from their northern neighbours, the Latookas, both in language and appearance. They are not quite naked, except when going to war, and then they paint themselves in stripes of red and yellow; their usual covering is the skin of an antelope or goat worn like a mantle. Their faces are well formed, with peculiarly fine-shaped noses. Their head-dress is remarkably neat, the woolly hair being matted and worked with thread into a flat form like a beaver's tail, and bound with a fine edge of raw hide to keep it in shape. The only articles of pottery are tobacco-pipes and water-jars; all other utensils are formed of wood or gourd shells.—(*Sir S. W. Baker.*)

OBERLIN, a vil. U. States, Ohio, on the Cleveland and Toledo railway, 30 m. S.W. Cleveland. It contains an Episcopal and a Congregational church, the latter capable of holding 3000 persons; and Oberlin college, which is attended by about 900 students, and combines manual labour with study. By its rules males and females are admitted without regard to colour. Pop. (1860), 2132, exclusive of students.

OBERPLAN, a tn. Austrian empire, Bohemia, circle and 22 m. S.W. Budweis, near l. bank Moldau; with a parish church, four very important yearly markets, and 1100 inhabitants.

OBERTYN, a tn. Austrian empire, Galicia, circle and N.N.E. Kolomea, cap. dist. of same name; with very important cattle markets. It was once fortified, and had a very strong castle. The Turks and Moldavians were signally defeated here in 1529 and 1532. Pop. 4300.

OBLIGADO, a tn. La Plata, prov. and 108 m. N.W. Buenos Ayres, r. bank Parana. Here the river contracts to less than half a mile.

OBVOS, a tn. Austrian empire, Hungary, co. and 22 m. E. Arad; with 1200 inhabitants, who grow maize, and rear goats and bees.

OCHRIDA [add.], a tn. Turkey in Europe, eyalet Rum-ili, cap. leva of same name, on the N. shore of Lake Ochrida, 65 m. E. by S. Durazzo, on the Adriatic. It is surrounded by walls flanked with towers, is the seat of a kaimakan or Turkish governor, and of a Greek archbishop; and carries on an important trade in dried fish, obtained from the lake, and sent into all the neighbouring parts of Albania and Macedonia. Pop. 8000.

OCONTO, a vil. U. States, Wisconsin, cap. co. and on river of same name, 2 m. from the entrance of the latter into Green Bay, and 30 m. N. by E. the city of Green Bay. The manufacture of pine lumber is the staple of the place, and 100,000,000 ft. of it are said to be shipped annually.

OCOSINGO, a tn. Mexico, dep. Chiapas, 65 m. S.E. Ciudad Real. It derives its chief interest from a series of remarkable aboriginal monuments in its vicinity. Pop. 4000.

OCOTLAN, a tn. Mexico, state and 18 m. S. Oajaca; had once a richly endowed Dominican monastery, and a pop. of about 12,000. After the destruction of the monastery it rapidly decayed, and does not now count above 400 families.

OCOSA, a tn. Austrian empire, Hungary, co. and 10 m. S.S.E. Pesth; with a church in the Byzantine style, which dates from the 11th century, and in purity of structure will not suffer by comparison with the best edifices of the same period in Italy and Germany. P. 2352, mostly Protestants.

ODERBERG, a tn. Austrian empire, Silesia, cap. dist. of same name, 23 m. E. Troppau, on the Oder, near the Prussian frontier, and a station on the Vienna and Oderberg railway. It is the seat of several public offices, has an hospital, and four yearly markets, and contains 1200 inhabitants.

ODOJEV, a tn. Russia, gov. Tula, pleasantly and healthily situated on both banks of the Klemenka, at its confluence with the Upa. It has five churches, a circle and a parish school, and several industrial establishments. Bees are extensively reared, and some coal is found within the circle. Pop. 3080.

ODRAU, a tn. Austrian empire, Silesia, cap. dist. of same name, 17 m. S. Troppau on the Oder and the Moravian frontier. It is the seat of several public offices, has a castle, manufactures of linen, woollen, and cotton goods, and four yearly markets, and contains 3643 inhabitants.

ODRZYKOW, a tn. Austrian empire, Galicia, circle and about 13 m. N.E. Jaslo; with a sulphur spring, and the ruins of an old mountain castle, which gave an asylum to the fugitive Hungarian king Zapolya, and figures in the early history of the country. Pop. 2250.

OELGUN, or DULCIGNO, a tn. Turkey in Europe, Albania, eyalet Rum-ili, on the shore of the Adriatic, a little N. of the mouth of the Boyana, and 16 m. S.W. Scutari. It is the see of a R. Catholic bishop, and possesses a harbour, at which there is some trade in oil and timber. Pop. 7000.

OELS, a tn. Austrian empire, Moravia, circle and 26 m. N. by W. Brünn, on the Bohemian frontier; with two churches, a small castle, and some cotton manufactures. Graphite is found in the vicinity. Pop. 1700.

OGDENSBURG, a vil. and port of entry, U. States, New York, r. bank St. Lawrence, at the mouth of the Oswegatchie, opposite to Prescott in Canada, and on a railway which connects it with Boston and New York. It contains a custom-house, town-hall, armoury, several churches, and an academy, and carries on an active trade. Pop. (1860), 7413.

OGOBEENDO, or BENDE, a tn. W. Africa, on the delta of the Kwara, from two to four days N. of Bonny. It is a large and important market-town, forming the principal mart of the district for palm-oil and provisions. During the foreign slave-trade it was in the zenith of its prosperity; and even since it has declined but little, as it still remains a central depot of the home slave-traders.

OHO-SIMA, two islands of the N. Pacific. 1, *Oho-Sima* or *Harbour Island*, called by the Chinese *Tatao*, is the largest of the chain of islands lying between Great Loo-choo and Japan. It stretches in a N.E. and S.W. direction for about 30 m.; having its N. extremity in lat. 28° 31' 40" N., lon. 129° 40' 12" E.; and its S. extremity in lat. 28° 6' 30" N., lon. 129° 22' E. It was partially surveyed by the American squadron in 1856, but has never been properly explored. From the little that has been learned respecting it, it appears to have a bold, rugged, and deeply indented coast, and a lofty, well-wooded, and well-cultivated interior. Two peaks near its S. end have the respective heights of 1674 and 1420 ft. The number of villages seen along the coast prove that it contains a large population.—2, *Oho-Sima*, *Oosima*, or *Vrie's Island*, situated in front of the Gulf of Yedo, in lat. (S.E. point) 34° 39' 30" N., lon. 139° 28' E., has an active volcano near its summit, which rises to the height of 2530 ft. It would seem, however, that though vapour and smoke rise from it at short intervals, and from different places along its crest, there is no discharge of lava or other destructive matter, as its slopes are extensively cultivated and dotted with towns and villages. The vapour, after ascending, sometimes condenses in masses on the mountain, and makes the island a good land-fall for vessels approaching this part of the coast of Nippon.

OIL CITY, a tn. U. States, Pennsylvania, co. Venango, on the Alleghany River, just below the mouth of Oil Creek, the E. terminus of the Franklin branch of the Atlantic and Great Western railroad, 8 m. E.N.E. Franklin. It is the principal market of the Venango county oil region, immense quantities

of petroleum procured in the vicinity being shipped here for Pittsburgh and elsewhere. The oil-wells are numerous, and one is said to have been flowing since 1861. Before 1860 the place contained only one store and one or two taverns; but so rapid has been its growth that it became an incorporated borough in 1862, and contains four churches, three banks, numerous oil refineries, twelve hotels, several warehouses, machine shops, and many stores. P. (1865), 12,000.

OJOGO, a tn. W. Africa, territory Keana, on the eastern extremity of a considerable island in the Benue, 120 m. above its confluence with the Kwara. It is a small but cheerful-looking place, in the immediate vicinity of which are dense forests containing magnificent oil palms. On the left bank of the river, opposite to Ojogo, there is a strange tribe called Mitshe, by whose quarrelsome disposition and predatory habits the inhabitants have repeatedly suffered. Crocodiles are very abundant in the Benue, near Ojogo.

OKANSK, a tn. Russia, gov. and 40 m. S.W. Perm, cap. circle of same name, on a lofty bank above r. bank Kama, has two churches, and two yearly markets. The rearing of bees is a principal employment. Pop. 1334.

OKINAWA-SIMA, two islands, Loo-choo group, lat. 26° N., lon. 128° E., in the N., and two in the S. connected by isthmuses formed by deep indentations of their opposite shores. The nucleus appears to be composed of gneiss and slate. On these the coral zoophyte has built its structures, which have subsequently been so upheaved that coral is found on some of the loftiest summits at the height of nearly 500 ft. above the sea. The soil, composed chiefly of coral detritus and decayed vegetable and animal remains, varies with the physical features of the surface, being comparatively poor on the mountain tops and their steeper acclivities, and rich and fertile in the valleys and plains. The climate, though subject to droughts and furious typhoons, is on the whole favourable to culture. It is also very healthy, as there are no stagnant marshes to produce miasma; and the heat, tempered by sea-breezes and the elevation of the land, is never excessive. One of the principal crops is rice, first sown in plots, and afterwards transplanted, and copiously supplied with water by means of artificial irrigation during the whole period of its growth. The other crops are taro or sweet potatoes, millet, sago, pulse, wheat, barley, sugar-cane, tobacco, and cotton. It has been estimated that of the 500,000 acres which the island is supposed to contain, one-eighth is under cultivation, producing annually about 200,000 bushels of rice and 50,000 bushels of wheat. In addition to the land thus occupied, 35,000 acres are under sweet potatoes, and 2000 acres under sugar-cane. The government seems to be an absolute despotism, with a system of administration resembling that of Japan, to which the island is tributary. The religion is the common Buddhism of the East, with a mixture of peculiar superstitions. The inhabitants congregate chiefly in the two cities of Shui or Sheudi, the capital, and Napha; and 36 towns, each averaging a pop. of 6000, are roughly estimated at between 150,000 and 200,000. They appear to be of the same original stock, but now form two distinct races—the Japanese and the Loo-chooan, properly so called.—(*U. S. Expedition to the China Seas and Japan.*)

OKNA, a tn. Turkey in Europe, Moldavia, near the Trotush, an affluent of the Sereth, 75 m. S.W. Jassy. It has an active trade with Russia, and possesses rich salt mines, which are worked chiefly by convicts. The mineral springs of Slanik are in the vicinity.

OLAHIFALU, a tn. Austrian empire, Transylvania, circle and 32 m. N.N.E. Udvarhely, in a bleak mountain district. It consists of two distinct portions, called Great and Little Olahfalu, and its inhabitants are chiefly employed in spinning hemp, flax, and cotton, making wooden articles, and carrying on a trade in wood. In the vicinity, in the valley of the Homorod, are ironworks, and much-frequented mineral springs. Pop. 3000.

OLAHPATAK, a tn. Austrian empire, Hungary, co. Gömör, on the Sajó; with a fine park with an English garden, large ironworks, and mines of iron, silver, and copper. Pop. 1000, mostly Lutherans.

OLBERSDORF, a tn. Austrian empire, Silesia, cap. dist. of same name, 19 m. N.W. Troppau; with several public offices, a castle, an hospital, a copper mill, and several yearly markets, chiefly for cattle. Pop. 2353.

OLD POINT COMFORT, a vil. U. States, Virginia, on James River, at the entrance of Hampton Roads, 12 m. N. Norfolk. It contains commodious hotels for the numerous visitors who come to it in summer for sea-bathing. On the Point, which is a low, narrow sandy neck of land, stands Fort Monroe, and about a mile S., on the opposite entrance to the roads, another fort has been erected on an artificial island formed upon a mud bank.

OLGA, or MICHAEL SEYMOUR, a bay, Russian empire, on the E. coast of Manchouria, in the Sea of Japan; lat. 43° 46' N.; lon. 135° 19' E. It is open to the S.E., but protected by high land on the N.W. and S.W. Within, in its N. part, there is shelter for a few vessels from all winds in 10 fathoms water, over a muddy bottom. In the N.E. a narrow channel leads into another harbour; which is well adapted for careening purposes, as there is little rise and fall; and the water, always smooth, is deep close to its S. bank. The Gilbert or Avvakum falls into the bay at its N.W. angle. Both sides of the entrance are bordered by abrupt rocks of granite, and all around the shores are mountains of rough-grained granite and red porphyry of coarse crystalline structure, with wooded slopes. A pass leads through the mountains to the Upper Usuri. This bay is now the chief naval station of the Russians on the coast of Manchouria. One reason for this preference is its almost entire freedom from ice. It abounds with fish.

OLIDEN, a tn. Bolivia, prov. Chiquitos, lat. 19° S.; lon. 63° 20' W. It stands on an elevated plain, overhanging the Tucubaca, and occupies the site of the old tn. of Corezon de Jesus, founded by the Jesuits.

OLOMUCZAN, a tn. Austrian empire, Moravia, circle and about 12 m. N. Brünn; with manufactures of stoneware and iron mines. Pop. 1000.

OLSCHAN, a tn. Austrian empire, Moravia, circle and 8 m. S.W. Olmütz, on the Blatta; with a well-built parish church. The large plain near the town, extending along the Blatta, has often been used as a field encampment. Pop. 1000.

OLTENITZA, a tn. Turkey in Europe, Walachia, l. bank Danube, opposite to Turtukai, at the confluence of the Argisch, 25 m. S.E. Bucharest. It has a quarantine establishment and a ferry, and is celebrated for the victory gained by the Turks over the Russians in 1854. Pop. 1485.

OMAHA, a tn. U. States, cap. Nebraska, pleasantly situated on W. bank Missouri, opposite the town of Council Bluffs, 125 m. W. by S. Des Moines; lat. 41° 16' N.; lon. 96° W. Its position is on undulating ground, between the river and the heights, which overlook a wide and rolling prairie. The streets intersect each other at right angles, and are well paved with stone and brick. The principal buildings are the capitol, the court-house, and ten churches; there are also three banks, and several schools. The staple trade of Omaha is the sale and transportation of goods to the plains, mines, and forts of the far west. A great number of emigrants going westward cross the river here, and procure their supplies. The Missouri is navigable both above and below by large steamboats. A military road connects Omaha with Fort Kearney, and a branch of the Pacific railroad to it, of which 50 m. are completed, is under construction. Limestone of good quality is quarried in the neighbourhood. Pop. (1860), 1883; in 1865, about 4500.

OMAN [add.], a kingdom, E. Arabia. The name is usually applied to the sea-coast dist. comprised between Ras Mesandum and Ras-el-Hadd the extreme eastern shoulder of the peninsula. Arabs give to Oman, however, a much wider range; extending it from Aboo Debee, a village on the E. limit of the territory now occupied by Benoo Yass, to the neighbourhood of Dofar, far down the S. coast, with whatever lands lie between these points. It thus touches Hadramaut on the S., and Katar or its immediate vicinity on the N., and forms a huge crescent, having the sea in front and the vast desert of S. Arabia for background. Politically, Oman has a yet wider acceptance, since it includes, besides the above-named territory, that also of Benoo Yass, Katar, the Akhaf, all the islands of the Persian Gulf from Bahreyn eastward, and the entire coast on the Persian side from Ras Bostanah to Djask; and its rule extends over a long strip of the African shore opposite to Zanzibar; while this island itself, and Socotra, and whatever adjoins them, are likewise subject to

the Omanee sceptre. The Arabian and Persian possessions of Oman are divided into thirteen distinct administrations, more or less dependent on the central government. Those least dependent are the following five:—1, Bahreyn, which pays but a small tribute and a doubtful allegiance; 2, Katar and the territory of Benoo Yass, whose union is a degree closer than that of Bahreyn; 3, Sharjah; 4, Ro'os-el-Djebal; and 5, Kalhoot—the last three being subject indeed, but in no friendly manner. The eight provinces which acknowledge a more strict subjection are:—1, The Persian coast from Cape Bostanah to Djask, with the adjacent islands—a region nearly 200 m. in length, by a breadth varying from 10 to 30 m., a long strip of harbours, and valuable on their account alone; 2, The Batinah, or the entire plain comprehended between the gorge of Kabaal'-Loha to the N., Barka and the Mascat Hills to the S., and the mountain-chain of Jebel-Akhdar to the W.; this province is of equal length to the former, but 40 or 50 m. in breadth, and the most fertile and densely peopled in Oman; 3, Jebel-Akhdar, which commences at Kataal'-Loha and reaches to Somad, the Batinah bounding it on the N.E., and Dahirah on the S.W.; the entire district is mountainous but well inhabited, and in it lies the main political and military strength of the kingdom; 4, The Dahirah; 5, The prov. of Mascat, from Barka to Ras Heyran; 6, The Belad Soor, from Ras Heyran to Ras-el-Hadd; 7, Djailan, which lies immediately behind it; 8, The tracts from Ras-el-Hadd to Dofar, thinly peopled principally by Bedouin or negro and African tribes. These eight provinces, with the exception of the last, constitute Oman in the strict geographical and political sense of the word. Owing to the extent of its coast-line, and its possession of the entrance to the Persian Gulf, it is essentially a maritime kingdom, in which commerce and sea trade are of the chief importance. But the land possessions of Oman proper—the province which gives its name to the entire empire—are the richest part of the Arabian peninsula both in agricultural produce and in mineral treasures; while its extent inland affords ample field for every kind of industrial labour. The inhabitants are said to be decidedly the best tempered and most hospitable of all the Arab race; and toleration exists among them for all races, religions, and customs; Jews, Christians, Mahometans, Hindoos—all are free to follow their own convictions and practices. Among their bad qualities, however, are a superstitious belief in sorcery, great immorality, and indulgence in the slave-trade. Negroes are imported from the coast of Africa in large numbers every year, and form so large a leaven of the population as to have seriously affected the character of the inhabitants for the worse. The working of gold and silver filigree, with which daggers, belts, cups, and pipes are often adorned in Oman, supports great numbers of families in the larger towns, and is of a perfection rarely to be met with in the workmanship of any other land. The gold thus employed is mainly brought from or through India, though this precious metal is said to exist in the interior of Oman itself, in the continuation of Jebel-Akhdar behind Bahilah. Copper mines occur in Oman, and are regularly worked; lead, too, is procured in the neighbourhood of Ras-el-Hadd; and traces of iron are observed in many localities. Salt mines are very common, and are much worked both for home consumption and for exportation; and the sea throws up amber in such abundance as to form a staple article of the royal revenue. This substance, with pearls, salt, and gold, are the only government monopolies.

The form of government of Oman is a limited monarchy, and 'Sultan of Oman' is the correct title of the ruling prince, and not 'Imaum of Muscat,' or Mascat, which is usually given to him by Europeans. The monarchy is limited, not by charters and acts, but by the co-existence of a powerful aristocracy, by hereditary privileges, and the prescription of popular rights. It is in fact less a kingdom than an aggregation of municipalities. Each town, each village, has its separate existence and corporation; while towns and villages are in turn subject to ancestral chiefs. The prerogatives of the crown consist in the right of nomination and deposition (upon complaint) of local governors, though the office always remains in the same family; in fixing and levying port and customs dues; in the exclusive management of the navy; the keeping up a small standing army of 600 or 700 men; and, lastly, the transacting of all foreign affairs for

alliance or treaty, peace or war. The administration of justice is in the hands of local royal judges, and is practically independent of the sovereign. The taxes levied on land or goods are fixed and immutable, except by local or municipal authority; the sultan enjoys, but cannot change them. The annual revenue of the government, derived from the pearl-fishery, commercial dues (including about ten shillings on every slave imported), land-taxes, and monopolies, is estimated at £1,065,000. This sum is expended upon the court of the sultan, the maintenance of the forts, army and navy, and government officials of all kinds.

The approximate population and military force of the several districts (that of Mascat being classed partly with Batinah and partly with Jebel-Akhdar, and not separately stated), is estimated as follows:—

	No. of Villages.	Population.	Military Force.
Bahreyn,	60	70,000	3,000
Katar,	40	135,000	6,000
Sharjah,	35	85,000	3,500
Ro'os-el-Djebal,	20	10,000	500
Kalhoot,	40	60,000	2,000
Batinah,	80	700,000	30,000
Jebel-Akhdar,	70	600,000	35,000
Dahirah,	40	80,000	20,000
Belad Soor,	35	100,000	4,000
Djailan,	50	140,000	8,000
Persian Coast, &c.,	—	300,000	—
Total,		2,280,000	112,000

To this population must be added the inhabitants of the adjacent desert and of the south-eastern Arab coast—probably an inconsiderable number.—(*Palgrave.*)

OMMATE, or NOMATE, a tn. W. Africa, Kimbunda country, territory Ganda; lat. 13° S.; lon. 15° E. It stands near the centre of Ganda, on a lofty height commanding a fine view of the surrounding forests, and the deep valley watered by a river of same name; is surrounded by a wall, which is built of stone without cement of any kind, like a dry stone dyke; and contains about 1500 inhabitants, whose robberies and depredations have made them notorious.

OMRO, or OMRT, a vil. U. States, Wisconsin, co. Winnebago, on Fox River, 32 m. N. Waupun, with which it is connected by railroad. It contains three churches, and several mills. Pop. 1400.

ONANIS, a vil. or permanent kraal of Hill-Damaras, S. Africa, Namaqua Land. The natives subsist chiefly on the wild roots in their sterile neighbourhood, but manage to raise a little tobacco and hemp, the latter for the seed, which when chewed intoxicates. When rain falls abundantly Onanis becomes one of the finest grazing localities in Namaqua Land, and is frequented by immense numbers of wild animals, among which lions hold a first place. On one occasion, when passing Onanis, Mr. Anderson started troops of lions among the broken ground, but they invariably fled, making it impossible for him to get a shot at them.

ONARGA, or ONARGO, a vil. U. States, Illinois, co. Iroquois, on the Illinois Central railroad, 86 m. S. by W. Chicago. It is surrounded by rich farm land, of which maize is the staple product; and contains three churches and a Methodist seminary. Pop. 1000.

ONDSHILA, a tn. S.W. Africa, Kimbunda country, territory Ambuim, to the S. of the Kupo, about 120 m. N.N.E. Benguela. It occupies a rocky eminence; and contains 2000 inhabitants, engaged in agriculture, and in an active trade carried on with the Portuguese settlements on the coast, the principal articles being gum-copal and orchil.

ONEIDA, a vil. U. States, Illinois, co. Knox, on the Chicago, Burlington, and Quincy railroad, 12 m. N.E. Galesburg. It is a shipping place for grain and stock; and has three churches, a school, and numerous stores and warehouses. Pop. 1500.

ONGKOR-WAT, or NOKORVAT, a prov. and tn. of Cambodia. The town, 15 m. N.N.W. Lake Thalesap (or Touli-sap), in lat. 13° 30' N.; lon. 104° E. nearly, is situated in an extensive and arid plain, barren of trees, but covered with long rank grass, which is bounded on the S. by the mountain-chain of Somrais, and E. by the picturesque Mont Chrome. This ancient capital of the once powerful kingdom of Cambodia,

or Khmer, which is said to have maintained an army of 5,000,000 soldiers, is now but a group of mean bamboo huts, encircled with the vast and interesting ruins that indicate its past magnificence. But for the antiquary and the philosopher these relics of antiquity possess an inexhaustible interest. The most noteworthy is the Great Temple, whose superb remains so excite the wonder of the modern Cambodians, that to all inquiries respecting their origin they content themselves with replying—'It was the work of Pra-Eun, the king of the angels;' or, 'They were built by giants;' or, 'They sprung from the earth of their own power.' None of the monuments spared by time and barbarism appear to have been intended for human habitations; they seem to have been wholly dedicated to the rites of Buddhism, or the ceremonies of government. The statues and bas-reliefs are exclusively devoted to civil and religious subjects. The

ONGKOR, Principal Entrance of the Wat.—From Mouhot's Travels in Siam.

temple already referred to stands upon a platform of immense stones, supported by massive walls, and ascended by four huge flights of steps. A sort of fosse or dyke incloses the area of the principal buildings. An immense quadrangular colonnade is first approached. This has a vaulted roof, crowned with five towers, of which the largest crowns the entrance, the others are placed at the four angles. Each tower is pierced at the base, like a triumphal arch. The temple itself is not unworthy of its approach. Lofty columns, hewn and chiselled, each from one immense block of stone; huge porticoes, sculptured capitals, domed roofs, in some places retaining their original gilding and colours—impress the mind of the spectator with awe and admiration. The particular edifice which we have engraved consists of two quadrangles of concentric galleries, crossed at right angles by avenues terminating at a central pavilion. This is the crown of the superb pile, the holy of holies, for which the architect seems to have reserved the most exquisite conceptions of his fancy. In this tabernacle, which stands on an artificial mound, is placed an image of Buddha, presented by the actual king of Siam, and ministered to by some poor talapoins, who are supported by the offerings of occasional pilgrims. Another temple, only inferior to this in the grandeur of its design and the richness of its details, crowns the summit of Mount Ba-Khèng, about 2½ m. N. The modern Ongkor-Wat does not contain above one thousand inhabitants, all employed in agricultural pursuits. It is commanded by a rude fort, or entrenched camp about a mile square, with a crenellated wall, constructed with huge blocks of ferruginous sandstone drawn from the neighbouring ruins.

ONITSHA, a tn. W. Africa, territory Ibo or Igbo, l. bank Kwara, about 145 m. above its mouth at Cape Nun in the Gulf of Guinea; lat. 6° 8' N.; lon. 6° 45' E. It stands on a height above the river at some distance from it, is approached along a road lying between extensive fields of maize, yams, and cotton, and is literally enveloped by woods com-

posed of large and lofty trees, chiefly the bombax and cocopalms. It is about 1½ m. long, and is traversed throughout its whole length from N.W. to S.E. by a broad street, dividing it into two distinct portions. On either side of the street, and at some distance from it, lie groups of houses, each group under the superintendence of a head of a family or a subordinate chief. The houses, which have clay walls, and are open in front, without any proper division into apartments, are very indifferent. In an open space, where the houses come close to the street, the market is held. The S. part of the town stands higher than the N., and appears to be better built. In the N. part of the town a mission-house has been erected, and on the N.W., near the bank of the river, an European factory has been established. The principal articles of trade possessed by the natives are sheep, goats, fowls, fish, kola-nuts, palm-oil, timber, ivory, straw-sacks, mats, and earthenware, which they exchange for iron, salt, and above all, tobacco. The pop. is roughly estimated at 13,000.

ONTONAGON, a vil. U. States, Michigan, on the S. shore of Lake Superior, at the mouth of a stream of same name, which is navigable for a short distance, and is one of the largest feeders of the lake on the S. shore, draining an area of about 1300 sq. m. It is a rising place, carrying on a brisk trade. There are valuable copper mines in the vicinity, and the ore of the dist. is shipped here, the quantity in 1864 being, it is said, above 10,000 tons. It has four churches, a school, and a copper-smelting furnace. Pop. (1860), 1188.

OODAPEE, or OODIPY, a tn. India, presid. Madras, dist. N. Canara, about 4 m. from the coast, and 33 m. N. by W. Mangalore. It contains three temples, and fourteen *matams* or convents for devotees. All of these are usually included under the name of the Krishna Deva pagoda, on the revenues of which the inhabitants, about 1200, almost all Brahmans, solely depend.

OODEYPOOR, or MEWAR [add.], a state, India, Rajpootana, between lat. 23° 46' and 25° 56' N.; lon. 72° 50' and 75° 38' E., is bounded N. by Ajmere; E. by the native states Boondee, Gwalior, Tonk, and Purtabghur; S. by Banswara, Dongurpore, and Myhee Caunta; and N.W. by Serohee, Godwar, and Ajmere; length, N. to S., 150 m.; breadth, 130 m.; area, 11,614 sq. m. A considerable portion of the territory is covered by the Aravulli range, which, after stretching over it S.W. from the town of Oodeypoor to the frontier of Serohee, turns N., and, passing through Komalmair towards Ajmere, separates Oodeypoor from Joodpoor. N. of Komalmair the range takes the name of Mairwarra, which varies in breadth from 6 to 15 m., and has in all ages been the abode of savage and predatory hordes of Mairs, Minas, and Bheels, who, after pillaging the surrounding districts, have found a secure asylum in its rugged valleys and gorges. After they had long been permitted to commit their depredations with comparative impunity, the device was fallen upon to raise a Bheel corps to maintain the peace of the district. This device, however unpromising it must have appeared at first sight, has succeeded, and those who used to take the lead in depredating the country are now acting as a kind of rural police for its protection. This Mewar Bheel corps is maintained at the joint expense of the British government and the state of Oodeypoor, which has agreed to assign £5000 of the revenues of Mairwarra for this purpose. The Rama of Oodeypoor, claiming a fabulous descent from a son of Rama, takes precedence of all other Rajpoot chiefs. Affinity with his family being thus courted as the highest honour, rival claimants for the hand of Oodeypoor princesses have repeatedly come to open hostilities, and many deeds of barbarism have ensued. The case of Kishna Kour, who died by poison administered with the consent of her father, as the means of terminating a war in which rival claimants had involved him, is well known. Pop. 1,161,400.

OODEYPOOR, cap. of the above state, 330 m. S.W.

Agra, stands on the low ridge of a valley or basin, closed by hills on all sides except the W., which opens upon a lake 5 m. in circuit. The town looks best from the E., and has then a striking appearance; viewed more closely the charm vanishes, and it is found to be very indifferently built. The only building deserving of particular notice is the palace, a noble pile of granite, 100 ft. high, seated on the crest of a rocky ridge overlooking the town, the lake and the valley stretching far beyond it. The lake, which is the finest feature in the picture, is artificial, being formed by the damming up of a small stream by means of a magnificent dyke, which rises 37 ft. above the water, is faced with marble, and embellished with numerous sculptures, small temples, and other structures. The pop., once above 100,000, does not now exceed 15,000.

OODUNG, or UDUNG, a tn. cap. Independent Cambodia, on the r. bank of a river of same name, an affluent of the Mekong or Cambodia, is inclosed by a wooden palisade, 600 yards square and 20 ft. high, and consists of a straggling collection of thatched houses, the residences of the nobles, with a low brick wall in the centre, surrounding the palace, mint, and arsenal. Everything bespeaks poverty and the recent ravages of war. At Pina Loo, below the town, the R. Catholics have a missionary establishment. The river, which issues from the S. side of Smith's Lake or Tali-ma-poki, apparently a continuation of King's Lake or Tale Sab, is throughout a broad and majestic stream.

OOMRAWUTTEE, or AMRAWUTTEE [add.], a tn. India, in one of the ceded districts of the Nizam's Dominions, 173 m. N.E. Aurungabad. It is a place of great commercial importance, and perhaps the most important cotton mart of the Deccan. Several considerable firms are established here, and most of the great mercantile houses of Upper India, as well as those of Bombay, have either correspondents or branches. The cotton, when picked in the district where it is grown, is immediately brought hither, and lodged in large warehouses built for its reception till it shall be cleaned and repacked for exportation from Bombay or Calcutta. The advantages of Oomrawuttee as an entrepôt must be great since it continued to be thus employed, notwithstanding the excessive and capricious transit-duties levied by the Nizam. Now that British rule has been substituted for his oppression and caprice, there is every reason to expect that the transit-trade of the place will be largely increased.

OORCHA [add.], a tn. India, Bundelcund, cap. principality of Oorcha or Tehree, l. bank Betwa, 142 m. S.E. Agra. It stands on a rocky eminence, surrounded by a wall built of unhewn stones without cement, and about 3 m. in circuit. It is entered by three lofty gateways, and is, moreover, defended by a fort situated within it, and containing two palaces, one of which belonged to the Mogul emperor Jehangir, and the other the residence of the rajah. The only building of note in the town is a temple, surmounted by lofty spires. The territory of which Oorcha is the capital has an area of 2160 sq. m., and a revenue of £60,000. The rajah of Oorcha claims to be the head of the Bondela race, of Rajpoot origin. Pop. of ter. 192,000.

OOTACAMUND, a tn. and sanitary station, India, presid. Madras, dist. and 32 m. N.N.W. Coimbatore, in an extensive valley almost in the very centre of the Neilgherry Hills, at an elevation of 7300 ft. above the sea. It has wide and clean streets, and well-supplied bazars, but, as yet, the only portion of it which can well be called a town is that occupied by the natives. There the houses are tolerably compact, whereas the residences of the Europeans are widely dispersed along the slopes of the valley. The most conspicuous object and greatest ornament of the station is an elegant church.

Oovah, a dist. or ancient principality, Ceylon, towards the S.E. of the Central province. It consists of an upper and a lower portion, the former belonging to the mountain zone, and the latter to the lowlands.—*Upper Oovah* is finely diversified by mountain and valley, and contains some of the most magnificent scenery in Ceylon.—*Lower Oovah* consists generally of fertile fields and grassy plains. The fields are well cultivated, and yield good crops of rice, in the management of which the inhabitants particularly excel, Indian corn, millet, yams, and cassava. Among subordinate products are materials for the preparation of curry, turmeric, capsicums, onions and garlic, cardamoms and pepper. The grassy plains afford better pasturage than any others in the lowlands,

and feed great numbers of oxen and buffaloes. Vegetable oils are expressed from numerous plants; madder, sapan-wood, and arnotto furnish dyes; and the hills were celebrated for growing the finest coffee long before European settlers had established themselves around Kandy. The climate is salubrious, and nothing is wanting but enlarged means of communication with the capital and the coast to make Oovah, as it is already one of the richest, also one of the most frequented and prosperous districts of Ceylon. Its capital is the beautifully situated and thriving town of Badoola.

OPPATOWITZ, a tn. Austrian empire, Moravia, circle Upper Wienerwald, on the Ybbs or Ips, 73 m. S.W. Vienna. It has manufactures of scythes and sickles, steel and other iron works, and several saw-mills. Pop. 1300.

OPPONITZ, a tn. Austrian empire, Lower Austria, circle Upper Wienerwald, on the Ybbs or Ips, 73 m. S.W. Vienna. It has manufactures of scythes and sickles, steel and other iron works, and several saw-mills. Pop. 1000.

ORAN, N. Africa, the most westerly of the three provs. into which Algeria is divided, is bounded N. by the Mediterranean, W. by Marocco, and E. by prov. Algiers. The S. limits descending into the Sahara are scarcely defined; area, of which about two-thirds belongs to the Sahara, 39,800 sq. m. The surface consists of the two chains of the Atlas, the plateau between them and their two slopes, the one N. to the Mediterranean, and the other S. towards the desert. The only stream of any consequence except the Shelif, which forms part of the boundary between Oran and Algiers, is the Sebka, which flows northwards, and falls into the Gulf of Arzew. The principal agricultural products, in addition to cereals, are grapes, olives, cotton, madder, walnuts, dates, and various plants from which essences and perfumes are extracted. The forests are extensive, and contain many magnificent trees. The administrative division is, as in the other provinces, into military and civil—the former consisting of five subdivisions, and the latter forming the arrondissements of Oran and Mostaganem, together with the districts of Arzew, Mascara, Sidi-Bel-Abes, and Tlemcen. European pop., including 18,902 French soldiers, 63,011; and native, about 480,000.

ORAN [add.], a tn. N. Africa, Algeria, cap. of above prov. and at the bottom of the bay of same name, 220 m. S.W. Algiers. It rises in the form of an amphitheatre on a somewhat rugged site between the slopes of Mount Santa Cruz and the plateau of Oran, and is a place of considerable strength, being not only surrounded by a wall flanked with towers, but defended by a castle, and by four forts, two of which command the bay, while the other two command the easterly plain. A deep ravine, forming the bed of a torrent, divides the town into two distinct portions, both of them containing well-formed streets lined with handsome buildings. One of the portions, forming the new or maritime quarter, possesses a fine quay, a custom-house, and an extensive range of magazines; the other portion forms two quarters. One of these, called La Blanca, is inhabited mostly by Spaniards, and besides being well shaded with trees, possesses a fine esplanade in front of the old castle, a bridge which spans the ravine, a handsome church, a fine minaret, and a military hospital. The other, or third quarter, built along the face of the ravine, contains the town-house and prefecture, with fine terraced garden. Outside the walls are two suburbs, one near the Mascara gate, inhabited by natives, who seem to be of negro origin; and another where an important market is held. Between this last and the walls there is a Place d'Armes, or parade-ground, and a caravanserai, apparently of Moorish architecture. The industry of Oran is largely developed, and includes among its establishments water and steam mills, foundries, tanneries, tobacco factories, vermicelli factories, and numerous breweries. Its trade, for which, in consequence of the badness of its own harbour, Mers-el-Kebir is the shipping port, is carried on chiefly with Spain and Marocco, and consists of corn, hides, tobacco, tallow, cattle, and raw sugar, exchanged for articles of European manufacture. In the extent of its export and import trade it ranks next to Algiers, and has progressed with greater rapidity than any other of the Algerian ports. The environs add much to its beauty and attraction as a residence, being covered with handsome villas in the midst of vineyards, orchards, and well-cultivated fields. The population is estimated at 29,606, of which not more than 8187 are natives.

ORANIENBURG, or RANENBURG, a tn. Russia, gov. and 90 m. S. by E. Riazan, cap. circle of same name, at the confluence of three streams, affluents of the Voronej. It has three churches, a circle and a parish school, a charitable endowment, manufactures, chiefly of soap, and a large trade in corn. Pop. 3932.

OREGON, one of the U. States, between lat. 42° and 46° N.; lon. 116° 40' and 124° 25' W.; bounded N. by Washington territory, from which it is separated by the Columbia for half the distance; E. Nebraska; S. Utah and California; and W. the Pacific; length, E. to W., 320 m.; breadth, 280 m.; area, about 80,000 sq. m. A large part of the surface is mountainous, a prolongation of the Rocky Mountains traversing it in the E., the Blue Mountains in the centre, and the Cascade Mountains in the W. This last range, which is a continuation of the Californian Nevada, stretches nearly due N. across the whole territory, and has summits varying from 4000 to 10,000 ft. Its culminating point, Mount Hood, in lat. 45° 20', has the still loftier height of 13,000 ft. The E. slope is bare, but the W. is covered nearly up to the limit of vegetation with coniferous trees. To the W. of the Cascade Mountains, a subordinate and nearly parallel range, which, from its proximity to the sea, has received the name of the Coast Range, attains a maximum height of about 4000 ft., and is generally well wooded. The whole state belongs to the basin of the Pacific, and is watered chiefly by the Columbia and its affluents, particularly the Snake, which, entering it on the S.E., flows circuitously across its centre in a N.E. direction; and the Willamette, which flows N. at no great distance from the coast, and nearly parallel to it. The course of these rivers has not been so thoroughly explored as to test their navigable value, but what is known of them cannot be considered favourable. The Columbia, though 4 m. wide at its mouth, and for nearly 18 m. above it, is encumbered by a bar, on which the water at low tide is not above 18 ft., and has a channel so narrow and intricate, and so subject to gusts of wind and obscuration by fogs, that mariners are justly shy of entering it. Once inside there is no want both of width and depth, but about 130 m. from the ocean the navigation is completely interrupted by falls, which have a descent of 40 ft. in 5 m. The Willamette only, at its mouth, admits vessels drawing 12 ft., and shallows shortly after, first to 6 and then to 4 ft., which it maintains as far up as Salem. The valley of this river, about 120 m. long by 30 m. wide, contains land available for tillage. The soil is for the most part a gravelly clay, covered with a rich sandy loam. Western Oregon has extensive valleys, well adapted to the growth of fruit, especially apples, pears, plums, and shrub fruits; considerable tracts of it are also suitable for cereals; the mountain slopes form excellent pasture lands; and much of this country is valuable for raising sheep and cattle. Eastern Oregon is also adapted for grazing, and though but little rain falls E. of the Cascade Mountains, except during the autumn, yet the bunch-grass (*Festuca*) forms abundant and excellent pasturage. The produce of wool in the state in 1861 was 444,000 lbs. The prevailing geological formations of Oregon are tertiary sandstone in the W., granite in the Cascade Mountains, and trap and other eruptive rocks in the E. Among the minerals are iron, copper, platinum, iridium, and osmium. Eastern Oregon, especially that part traversed by the Blue Mountains, is rich in minerals. Gold is abundant, and easily mined on the Salmon and other tributaries of the Snake River; and rich mines were opened in 1861 and 1862 on the John Day and Powder Rivers. The product of the Oregon mines in 1862 was estimated at \$12,000,000. Silver, lead, copper, and iron have also been found. On the shores of Coose or Cahoes Bay, about lat. 43° 30', large beds of tertiary coal have been discovered. The climate in the W. is moderate, neither cold nor heat being ever in extreme. Its greatest drawback is excessive humidity, in consequence of which drizzling rains and thick fogs prevail during a large portion of the year, and the sun is often hidden for a month at a time. This humidity, however, adds greatly to the luxuriance of the vegetation, which is displayed in dense forests of the most magnificent pines, with a tangled undergrowth of ferns and shrubs. In the E., which has an entirely different climate, the thermometer has a very wide range, rising in July to 80°, and falling in winter to 20°; and the vegetation is so scanty, that one might travel for days in the

valley of the Snake without seeing a tree. The principal indigenous animals are the black and grisly bear, the panther, the gray wolf, the mountain sheep, the elk, the antelope, the vulture, the bald and golden eagle, the swan, the goose, and different species of albatross and pelican. The only reptile deserving of notice is the rattlesnake. The rivers near the coast abound with several varieties of salmon. Pop. (1860), 52,464, exclusive of Indians, estimated at about 10,000.

ORETE, or NEW RIVER, New Zealand, in the S. of Middle Island or Munster, flows S. through a low rich grazing country, and falls into Foveaux Strait a little to the W. of Bluff Harbour. It has an exposed and shifting bar, but in moderate weather may be entered by vessels drawing from 12 to 15 ft. It has been ascended for a distance of 25 m. The settlement of *Invercargill* (which see), established in 1856, is situated 8 m. within its entrance.

ORGEJEV, a tn. Russia, gov. Bessarabia, cap. circle of same name, on the Reub, an affluent of the Dniester. It has three churches, a school for the circle, and contains 4674 inhabitants.

ORIZABA [add.], a tn. Mexico, dep. and 70 m. S.W. Vera Cruz. It lies in a basin surrounded by limestone hills, at the height of 4000 ft. above the sea; and possesses six churches, various schools, a large cotton-spinning mill, manufactures of saddles, several saw-mills, and a considerable trade. There is much picturesque scenery in the environs. Pop. nearly 15,000.—The volcanic mountain of Orizaba, about 6 m. N. of the town, has, according to Baron von Müller, who ascended it in September, 1856, an absolute height of 17,045 ft., and is therefore the culminating point of N. America. The crater is in the form of an irregular ellipse, of which the greater axis, lying between W.N.W. and E.S.E., measures about 3000 yards, or a mile and three-quarters, and the minor axis only 550 yards, considerably less than the third of a mile. The entire circuit of the crater is roughly estimated at about 4 m. Many parts of its internal sides have a yellow covering of sulphur, and hot vapour is said to issue occasionally from the sides of the mountain; but as snow lies unmelted within the crater itself the volcano seems to be extinct.

ORLATH, a tn. Austrian empire, Transylvania, circle and 16 m. W. Hermannstadt, at the confluence of the Schwarzwasser with the Zibin; has two paper-mills, a copper-mill, and limekilns. Pop. 1650, mostly R. Catholics.—*Guraro*, on the opposite or right bank of the Zibin, has 2474 inhabitants, and a mill for-spinning worsted.

ORLEANS [add.], an isl. British America, Canada East, in the St. Lawrence, 3 m. below Quebec. It is in the form of an irregularly elongated oval, 18 m. long from N.E. to S.W., with an extreme breadth of $4\frac{2}{3}$ m., is alike beautiful and fertile; and forms a distinct county, divided into six parishes, which, with their churches and the villages around them, form conspicuous and interesting objects as the island is approached. Its strata consist of grauwacké and slate-rocks, dipping generally at a high angle to the S.E.; and its surface, rising gradually from steep banks, attains a central elevation of 350 to 400 ft. A good road carried round the whole island gives easy access to every part of the interior. At the W. end of Orleans the Quebec basin commences, and extends for 3 m. to the wharves in the immediate vicinity of the town. Nothing can be more strikingly beautiful than the view which suddenly bursts upon a stranger ascending the St. Lawrence, and entering the Quebec basin, as the vessel opens the falls of Montmorency on the one hand, and the city of Quebec on the other.

ORLEANSVILLE, a tn. N. Africa, Algeria, prov. and 105 m. S.W. Algiers, on the l. bank and near the centre of the plain of the Shelif. Though built among ruins, indicating the site of an ancient Roman town, it owes its present existence entirely to the French, and consists of spacious handsome streets, with solidly constructed barracks and hospitals. Its inhabitants, about 2700, carry on an active trade in corn and wool. One of the most important markets of Algeria is held here.

ORMUZ [add.], an isl. Persian Gulf, belonging to Oman, and situated on the N. side of the entrance to the gulf; lat. 27° 5' N.; lon. 56° 30' E. The distance to the mainland on the N. is barely 10 m.; to the W. the island of Djishm, to the S. that of Larej, are full in view; and Cape Mesandum,

on the opposite side of the entrance, is also visible. The general appearance of the island indicates an extinct volcano; the circumference consists of a wide oval wall of steep crags, firework and ragged, inclosing a central basin, in which grow shrubs and grass. The basaltic slopes of the outer barrier run in many places down into the sea, amid splinter-like pinnacles and fantastic crags of many colours. Between W. and N. a long triangular promontory, low and level, advances a considerable distance, and narrows into a neck of land, terminating in a few rocks, and a strong fortress, the work of Portuguese builders; so solid are the walls, and so compact the masonry and well-cemented brickwork, that they still, after 300 years, remain uninjured by the action of the sea. The greater part of this promontory is covered with ruins; upon it once stood the thriving town, now a confused extent of desolate heaps, among which the vestiges of several fine buildings, baths, and a large church, may yet be clearly traced. A pharos-tower of octangular form, and of graceful construction, rises about 100 yards from the end of the promontory. Close by the fort cluster a hundred or more wretched hovels, the abodes of fishermen and of shepherds, whose flocks find pasture within the crater; a single shed, where dried dates, raisins, and tobacco are exposed for sale, is all that now represents the trade of Ormuz. The harbour consists of two bays, one to the W. the other to the E. of the promontory, with tolerably good anchorage.

OROVILLE, a tn. U. States, California, cap. co. Butte, on the Feather River, 75 m. N. Sacramento, and connected with Marysville by the California Northern railroad. It has productive gold mines, and in 1863 possessed numerous stores, and two banking offices. Pop. in 1864, about 2000.

OROW, a tn. Austrian empire, Galicia, circle and 22 m. S.E. Sambor; with ironworks, and 1930 inhabitants.

ORSOVA (NEW), a tn. Turkey in Europe, Servia, circle Kraina, on an island of the Danube, opposite to Old Orsova in Transylvania, 95 m. E. Belgrade. Being important for the communication between Hungary and Turkey, it is defended by a castle, and otherwise fortified. The celebrated defile, known by the name of the Iron Gates, formed by the contraction of the channel of the Danube between rocky banks, and a consequent increased rapidity in its current, here presents the greatest difficulty and danger to those navigating the river. In the time of the Romans it appears to have been avoided by means of a canal which ran along the Servian side.

ORTH, a tn. Austrian empire, Lower Austria, circle Lower Manhartsberg, on the Danube; with an imperial palace, manufactures of cloth, and a trade in fruit and sheep. Pop. 1220.

OSACCA, or **OSAKA** [add.] According to the treaty of Yedo, ratified by the Mikado or hereditary Emperor of Japan, in November, 1865, this becomes an open port in January, 1868. It is the seaport of the imperial city of Kioto, otherwise Miacoo, signifying the 'metropolis,' where the Mikado resides; about 50 m. distant from Osacca, on the same river, which runs through both cities, dividing them nearly equally. Osacca stands at the head of Isumi Bay, 35 m. from its S. entrance between Awadsi Island and the mainland. The anchorage in the bay is an open roadstead, unsheltered from S.W. gales; and the entrance to the river is obstructed by a rock that renders navigation somewhat dangerous, while the channel leading to Kioto is full of shoals, over which only the native flat-bottomed boats can pass. In consequence of these obstructions and drawbacks, making the port unsuitable for foreign shipping, the treaty powers have arranged with the Japanese authorities to open the port of Hiogo on the W. side of Isumi Bay, about 12 m. distant from Osacca, should that anchorage prove dangerous to foreign vessels. In establishing a foreign settlement at this port, Europeans come into direct intercourse with the people of the imperial city; but neither Kioto nor Osacca can compare with Yedo, the great capital of Japan, in extent, grandeur, or population, although the former ranks higher in the estimation of the Japanese as the residence of the hereditary emperor and his court.

In 1611 a Dutch embassy passed through Osacca on their way to Kioto, with presents to the emperor, and to enter into a treaty that the port might be open for foreign trade, which was not acceded to. A detailed narrative, embellished with

engravings of these cities, was published at the time, setting forth their grandeur and importance; and how the city of Osacca was visited by an earthquake in 1585, so that all the finest edifices built of stone were destroyed, and many people killed.—(*Blue Books on Japan*; Arnoldus Montanus, *Dutch Embassies to Japan*.)

OSDOLA, a tn. Austrian empire, Transylvania, circle and 33 m. N.E. Kronstadt. Fine rock-crystals, known by the name of Transylvanian or Siebenburgen diamonds, are found in the vicinity, in a stratum of fine clay-slate. Pop. 2198.

OSERI, a tn. Austrian empire, Hungary, co. Honth, about 10 m. N.E. Ipoly-Sagh, in a mountainous and by no means fertile district; with 1150 inhabitants, mostly Lutherans, who are partly employed in glass-making. There is an old castle in the vicinity.

OSHAWA [add.], a tn. British America, Canada West, co. Durham, and 2½ m. from Sydenham Harbour on Lake Ontario, and on the Grand Trunk railway, 30 m. N.E. Toronto. It contains five churches and a central school, and has extensive manufactures of agricultural implements, furniture, in demand not only within the district, but in many distant parts of Canada; rotary steam-engines, and other machines, edge-tools, ropes and twine, pumps, bricks, &c.; and carries on an extensive trade, particularly in flour, which is celebrated as being of a very superior brand. Pop. about 3000.

OSHKOSH, a tn. U. States, Wisconsin, cap. co. Winnebago, on both sides of the Neenah or Fox, at its mouth in Lake Winnebago. It consists of two portions, connected by three bridges across the river, containing three churches, an iron foundry, and planing and saw mills; and carries on an active trade in lumber. Pop. (1860), 6086.

OSHMIANA, a tn. Russia, gov. and 30 m. S.E. Vilna, cap. circle and on a stream of same name. A battle was fought here in 1831 between the Russians and the Poles. There are ironworks within the circle. Pop. 4103.

OSIEK, a tn. Austrian empire, Galicia, circle Wadowice, 26 m. W.S.W. Cracow; with a fine baronial castle, and extensive mulberry plantations. Pop. 1900.

OSKALOOSA, a tn. U. States, Iowa, cap. co. Mahaska, between the Des Moines and the Skunk, 60 m. S.W. Iowa city. It stands in a healthy, fertile, and well-timbered district, and contains several churches, a state normal school, and two steam-mills. Pop. (1860), 4393.

OSMANBAZAR, a tn. Turkey, Bulgaria, eyalet and 76 m. S.S.E. Silistria. It stands on a plateau, and has two mosques, a Greek church, and a pop. of 4000.

OSSAMARE, a tn. W. Africa, l. bank Kwara, 130 m. above its mouth. It stands on a flat close to the river, and becomes in wet weather particularly muddy and filthy. As the shipping place of an extensive district, it is the entrepôt for a considerable quantity of palm-oil brought from the interior. It has also some trade in ivory. Pop. about 1500.

OSTARIA, a tn. Austrian empire, Military Frontiers, Croatia, dist. Ogulin, about 25 m. S.S.W. Karlstadt; with the remains of a large and a very beautiful Gothic church, and thermal springs, which were much frequented by the Turks. Pop. 2230.

OSWEGO [add.], a tn. and port of entry, U. States, New York, on both sides of the Oswego, at its mouth in Lake Ontario, on the Oswego canal, and on the Oswego and Syracuse and on the Syracuse and Binghamton railways. It is built on a regular plan, in streets 100 ft. wide, and crossing at right angles, and contains a fine edifice, erected by the general government for a custom-house, post-office, and U. States court-room. The other principal buildings are a city-hall, a courthouse and jail, an hospital, an orphan asylum, a city library, and thirteen churches. The harbour is one of the best on Lake Ontario, and, combined with other commercial advantages, secures to the place a large and increasing trade. Large quantities of western produce, and a considerable proportion of the agricultural exports of Canada West, pass through this port to the S. and E.; while the manufactures of the east, and the produce of the Onondaga salt-works, pass through it to the W. On the canal the total tonnage for 1860 was 944,144 tons. The manufactures are also important. In particular, a starch factory, established in 1848, employs 200 hands, and a capital of £90,000; and eighteen

four mills grind at the rate of 10,000 barrels a day. In 1863 the receipts of grain at Oswego from Lakes Michigan, Huron, and Erie amounted to 13,840,961 bushels, of which 8,785,425 bushels were of wheat. The harbour is defended by Fort Oswego. Pop. (1860), 16,816.

OTAGO, a prov. New Zealand, occupying the southern part of New Munster or Middle Island, is bounded N. by the prov. of Canterbury; E., W., and part of the S. by the sea; and on the rest of the S. by the prov. of Southland, which was detached from it in 1861; extreme length, 150 m.; breadth, 180 m.; area, 17,000,000 ac. The western part of this large territory consists chiefly of a rugged alpine country covered with forest, and offering little or no land for pasture or cultivation; but the E. and central portions possess well-watered agricultural and pastoral districts of great fertility. Its coastline is much indented on the W., and still more on the S., where Foveaux Strait separates it from Stewart Island; but is nearly continuous on the E., where it can only boast of the fine harbour of same name, at the bottom of which Dunedin the capital stands. A large portion of the surface is covered by mountains, three of which, one near the N.W. extremity, a second in the N.E., and the other near the centre, exceed 6000 ft., while at least a dozen more exceed 4000 ft. The intervening valleys, however, watered by fine streams, contain extensive tracts of fertile land, well adapted both for agriculture and grazing. At present, however, Otago derives its importance from its gold-fields, which, upon their discovery in 1861, immediately attracted large numbers of miners, and suddenly raised it to a wealthy and populous colony. The principal gold districts as yet known and worked, are in the northern part of the province around Dunstan; in the neighbourhood of Lake Wakatipu, in the centre; and in the S.E. part, around the river Tuapeka. The precious metal is likewise found widely dispersed in greater or less abundance in other directions. In seven months of 1863 the Wakatipu field sent by escort to Dunedin 191,825 oz. of gold, Dunstan sent 185,736 oz., and the Tuapeka district 116,637 oz. But this by no means represents the total produce of the gold mines of Otago. In the year ended July 31, 1863, 514,385 oz. were exported from the port of Dunedin, and 9240 oz., the produce of Otago, from other ports of New Zealand. To these amounts must be added 23,657 oz. lodged in the Dunedin treasury, in excess of the balance on hand at the end of the previous year. The ascertained total of the year's produce, therefore, was 547,283 oz., of a gross value of £2,188,932. The weight exported in the previous year was 458,448 oz., making a total estimated value of £4,042,080 for the two years.

Recently published statistics show the effect of this discovery of gold in Otago. In the year 1857 the population of the province was 4631, and there were 79 females to every 100 males. That disproportion was rapidly increased on the discovery of gold; and in 1861, the population having risen to 27,163, there were only 28 females to 100 males. This was the result of the first rush for the diggings. Three years afterwards, at the census of 1864, this enormous difference had been reduced, and there were 50 females to 100 males. The immigration into Otago from the United Kingdom in the period here embraced, reached its highest point in 1863, when it comprised 2171 males and 1868 females; the largest additions to the population of Otago have been from Victoria, whence there arrived, in 1863, 20,150 males and 2822 females. There have been many departures also from Otago in the last few years, or the population would be much larger than it is. This is shown in the following figures:—

	Immigrants into Otago.	Emigrants from Otago.	Excess of Immigrants.
1861.....	19,221.....	5,065.....	14,156
1862.....	26,657.....	12,082.....	14,575
1863.....	28,482.....	8,171.....	20,311
Total.....	74,360	25,318	49,042

In Dec. 1864, the European pop. amounted to 184,131; and on Dec. 31, 1865, to 201,712—126,894 males and 74,818 females.

OTAVALO, a tn. S. America, Ecuador, 40 m. N.N.E. Quito, on a picturesque site surrounded by beautiful gardens. It consists of straight streets, and houses formed of adobe, with tiled roofs, and contains two fine churches and a chapel. The inhabitants, about 8000, are industrious, and manufacture ponchos and similar articles.

OTTAWA [add.], formerly *Bytown* (see *Gazetteer*), a tn. British America, Canada West, on the Rideau canal, at the mouth of the Rideau River, and r. bank Ottawa, 87 m. above its confluence with the St. Lawrence, 100 m. W. Montreal. The canal, which is crossed by a massive stone bridge, and is afterwards continued to the Ottawa through nine magnificent locks, divides the place into two parts, called respectively the Upper and the Lower Town. Both are well laid out in wide, regular, and uniform streets, which for the most part intersect each other at right angles. The principal quarters are supplied with gas. The churches, six in number, belong to the following denominations:—Church of England, Church of Scotland, Free, Episcopal, Methodist, Wesleyan, and R. Catholic. The last, which makes some pretensions to architectural display, ranks as a cathedral. The principal educational, literary, and benevolent institutions are the R. Catholic college, the Canadian Institute, the Mechanics' institute and athenæum, the Bible society, the General hospital superintended by the Sisters of Charity, and the Protestant hospital. The manufactures, though numerous and not unimportant, are in a great measure eclipsed by the lumber trade, which forms the mainstay of the place, and the material of which is furnished to a greater extent by the surrounding district than by any other locality in Canada. The supply furnished here forms almost the entire cargoes of the spring and fall fleets when they return to Europe, and yet leaves a considerable surplus for the American market, in which a large and increasing demand for Canadian sawn timber has sprung up. Besides its advantageous position for commerce, Ottawa is famous for attractions of another kind. At its W. extremity are the celebrated Chaudière Falls—in some respects rivalling, and at all events surpassed on the N. American continent only by those of Niagara. At its N.E. extremity are two other falls, where the Rideau leaps over a precipice into the Ottawa. While nature has thus formed scenery of singular beauty and grandeur, art has done something to heighten the effect by the erection of a suspension bridge, which spans the chasm of the Chaudière Falls, and thus unites the two provinces of Canada East and Canada West. Ottawa sends one member to the legislative assembly, and has been designated the cap. of Canada, in the event of the confederation of the provinces of British America. Pop. (1861), 14,696.

OTTYNIA, a tn. Austrian empire, Galicia, circle and 14 m. S.S.E. Stanislaw; with a fine castle. Pop. 2566.

OVALLE, a tn. Chili, prov. Coquimbo, cap. dep. of same name, on the N. bank of the Rio de Barraza; with two churches, two schools, and 12,288 inhabitants. Copper mines are worked in its vicinity.

OVAMBO, or OVAMPO, a people, S. Africa, inhabiting a territory of which only a very narrow tract has yet been explored, but understood to lie between lat. 17° and 19° S., lon. 12° and 17° E., and to be bounded N. by the Cunene, W. the Atlantic, S. the Bushmen's country and Damara Land, and E. several independent tribes. Nangoro, the residence of the king or chief, and therefore entitled to rank as the capital, is in lat. 18° S. and lon. 16° 25' E. The Ovambo are of very dark complexion, tall and robust, and though remarkably ugly, have looks which bespeak determination and independence. The women when young possess very good figures, but lose them as they grow older, and become exceedingly stout and ungainly. The hair of both sexes is short, crisp, and woolly. The men often shave it off, leaving the crown untouched; but the women besmeer and stiffen it with a kind of red paste, in the manner practised in many other parts of Africa. Some of the so-called ornaments are particularly preposterous. Among others are iron anklets, some of which weigh two or three pounds, and a pair of them is placed on each leg. The other principal female ornaments are a profusion of cowries and other shells, and beads of every size and colour, so arranged as to hide a considerable part of the person, and thereby so far supply the deficiencies of a dress which both in the men and women is very scanty. Their staple food is a kind of grain like Caffre corn, converted into a coarse stir-about, which is always served hot either with melted butter or sour milk. The houses are of a circular form, and resemble gigantic beehives, with a circuit of 16 ft. and a height not much exceeding 4 ft. These huts, arranged in groups, are inclosed by strong palisades, across

which a passage, intricate as a labyrinth, leads to the abodes of the master and his servants, open courts, granaries, byres, pig-sties, &c. The domestic animals thus accommodated are oxen, sheep, goats, pigs, dogs, and poultry. The arms consist of bows and arrows, the latter usually tipped with bone or iron but seldom poisoned, assegais, and knob-kerries. In addition to these there is usually a dagger kept in a leather sheath, which is tastefully ornamented with thin copper wire. Though thus provided with weapons offensive and defensive, the Ovambo are peacefully disposed and remarkably industrious. In tilling the ground, which seems to contain an alternation of sand above and blue clay beneath, and to be on the whole very fertile, all, male and female, bear their part. Apparently the only implement used is a rude species of hoe. The task of cleaning the growing crop, reaping it, and afterwards grinding the grain by means of a stout pole in a mortar or hollow wooden tube, falls chiefly on the women; but the men in the meantime are not idle, being employed either in tending the cattle (of which they possess vast numbers), or in making trading excursions to the neighbouring tribes, with whom they exchange cattle and ivory (procured from elephants taken in pitfalls) for beads, iron, copper, shells, &c. Though neither iron nor copper is indigenous, the Ovambo have the art of smelting the ores, and making some rude articles of hardware from the metals. In point of morals they do not suffer by comparison with any S. African tribe. They are hospitable, strictly honest, affectionate, humane, particularly to those of their kindred who from disease, age, or any other bodily infirmity, require nursing, and have a strong love of their native soil. They are also decided monarchists, making it a boast that they are ruled only by a single chief, while the neighbouring tribes are usually subject to many masters. Their morality in private life suffers much from the prevalence of polygamy. A man may not only take as many wives as he pleases, but treat them as saleable commodities, disposing of them to others as often as caprice, avarice, or poverty prompts him. On the subject of religion it is difficult to say what are the ideas of the Ovambo, but there can be no doubt that they are meagre in the extreme.

OVRATSCH, a tn. Russia, gov. Volhynia, cap. circle of same name, on the Norina, 76 m. N. Zitomir. It has six churches and a charitable institute. Pop. 3483.

OWEN SOUND, a tn. British America, Canada West, cap. co. Grey, at the mouth of the Sydenham, in the sound of same name, on the S. side of Georgia Bay, Lake Huron; with six churches, several schools, brick-kilns, tanneries, and some general trade. Pop. about 2000.

OWOSSO, or OWASSO, a tn. U. States, Michigan, co. and on both sides of the river Shiawassee, on the Detroit and Milwaukee railroad, 78 m. N.W. Detroit, and connected with Lansing, 28 m. distant, by the Amboy, Lansing, and Traverse Bay railroad, the machine shops of which are located here; consequently it is a very important depôt. It is pleasantly situated on undulating ground, and contains six churches, a bank, school, and public library. The river affords abundant water-power, which is utilized in driving flour, saw, planing, and other mills. The chief articles of export are wheat and wool. It was incorporated in 1859. Pop. (1860), 1160.

OXFORD, two places, U. States:—1, A vil. Ohio, on Four Mile Creek and the Cincinnati and Indianapolis Junction railway, near the Indiana boundary, 30 m. N.W. Cincinnati. It contains the Meami university, a female college capable of receiving 150 boarders, a female seminary, and a female institute. Pop. (1860), 2413.—2, A tn. Mississippi, cap. co. Lafayette, on the Mississippi Central railway, 150 m. N. Jackson. It contains two churches, and the state university, which in 1860 had ten professors, 140 students, and a library of 5000 vols.

OZAUKEE, or PORT WASHINGTON, a tn. U. States, Wisconsin, on the W. shore of Lake Michigan, 105 m. N. by W. Chicago. It possesses various iron foundries, breweries, and other industrial establishments, and carries on an active trade. Pop. 5000.

OZMAN-BAZAR, a tn. European Turkey, 35 m. W.S.W. Shumla, in the midst of orchards and vineyards. It is a large and thriving place, with several mosques and baths and a Turkish fountain, and is inhabited by 700 Turkish and 100 Bulgarian families.

P.

PABUR, a river, India, which issues from Lake Charamai, close to the Burenda Pass, in Bussahir, at the height of 13,839 ft. above the sea, in lat. 31° 22' N.; lon. 78° 12' E., and flows S., descending for the first 10 m. at the extraordinary rate of 545 ft. per mile, and for the next 10 m. at the rate of 254 ft. per mile. Having thus reached Chergaon, it turns S.W., pursues its course through a beautiful, fertile, and highly cultivated valley, forming the finest part of Bussahir, and finally joins the Tons. Its total length is about 60 m.

PACHETE, a dist. India, presid. Bengal, between lat. 22° 56' and 23° 54' N.; lon. 85° 46' and 87° 10' E.; is bounded N. by Rangurh and Beerbloom, E. Bancoora, S. Paraha, Barabhoon, and Singbhoon, and W. Chota Nagpore; length, N.E. to S.W., 105 m.; breadth, 95 m.; area, 4792 sq. m. The surface, so far as can be judged from the scanty information furnished, is much diversified; being in some places covered by hills of moderate height overrun with forests and jungle, in others intersected by plains or open vales, and in others (particularly in the S.W.) presenting a perfect maze of mountains and ravines connected with the adjacent highlands of Chota Nagpore. The strata seem to be generally composed of granite, gneiss, and syenite, but in the N. both coal and iron ore have been found. The principal rivers are the Dammoda, the Soobunreika, and the Kosai. In the plains and vales rice is the staple crop; but cultivation is in a very backward state, and it even appears that much land which was formerly cropped has been allowed to return to a state

of nature. This is said to be owing in a great measure to the absurd and ruinous practice of scourging the land, so long as it yields any return, till it is completely exhausted; and then leaving it for a series of years to recover itself as it best can.—*Pachete*, the reputed cap. of the above dist., 135 m. N.W. Calcutta, is a ruined town, which must once have been a place of some consequence; since its fort, though a mere wilderness of jungle, had an area some miles in extent, and was surrounded by a treble labyrinth of moats and mounds.

PACHITAN, a dist. or prov. Indian Archipelago, on the S. side of the island of Java; bounded E. by Kadiri, S. Madeyan, and W. Pajang. Its chief town, situated at the head of a small and ill-sheltered bay, is in lat. 8° 15' S.; lon. 113° 18' E. The chief product is rice. To this the Dutch have recently added the forced culture of coffee, black pepper, and cinnamon. Its area is 773 sq. m.; and its pop. 88,278—all Javanese, except 30 Europeans and 100 Chinese.

PADIVIL, an immense tank, Ceylon, N. province, 38 m. N.W. Trincomalee. As it originally existed, it was the basin of a broad and shallow valley formed by two lines of low hills, inclosing a space of from 12 m. to 14 m. in length. By constructing an enormous embankment across the mouth of this valley, the drainage of a large extent of country was confined and accumulated into one great tank or lake, by means of which fertilizing streams were diffused over tracts which must otherwise have been almost barren. It is difficult now to give exact measurements, as the embankment (having been allowed to fall into disrepair) gave

way. The whole of the surrounding country was in consequence inundated; and the water, pursuing its resistless course, burst into the sea at the town of Kokelai, and converted the fertile plain, previously covered with rice-fields, into an extensive lagoon. The level at which the water stood when the embankment was entire has been obliterated by a recent overgrowth of wood and jungle. The breach in the embankment is a chasm 200 ft. wide and 100 ft. deep. In its bottom the water continues to issue in a stream so large as to deserve the name of river. The embankment itself, judging from the part of it still entire, must have been a prodigious work—nearly 11 m. long, 200 ft. broad at the base, 30 ft. broad at the top, upwards of 70 ft. high, and faced throughout its whole extent with layers of squared stone. The quantity of water still confined within the valley, and therefore to be regarded as forming no longer an artificial but a natural lake, is very considerable; and when Sir J. E. Tennent saw it, it covered an area of 10 m. in diameter. That it abounds in fish may be inferred from the prodigious number of water-birds—pelicans, flamingoes, herons, egrets, storks, ibises, &c.—which not only resort to it occasionally, but roost and build their nests on the surrounding trees. The description given by Sir James of what he justly calls 'an extraordinary scene' which unexpectedly presented itself when he arrived near the centre of the tank, is not unworthy of quotation:—'A sheet of still water, 200 or 300 yards broad, and about half a mile long, was surrounded by a line of tall forest trees, whose branches stretched above it. The sun had not yet risen when we perceived some white objects seated in large numbers on the tops of the trees; and as we came nearer, we discovered that a vast colony of pelicans had formed their settlement and breeding-place in this solitary retreat. They literally covered the trees in hundreds; and their heavy nests, like those of the swan, constructed of large sticks, formed great platforms sustained by the horizontal branches. In each nest there were three eggs, rather larger than those of a goose, and the male bird stood patiently beside the female as she sat upon them.'

PAHANG [add.], a virtually independent state, Indian Archipelago, on the E. side of the peninsula of Malacca, bounded with very undefined limits by Johore on the W. and Tringanu on the N. Besides the mainland, along the shores of which it stretches for about 80 m., it possesses two chains of islets, which lie parallel to the coast at the distance of about 30 m. It is well watered, chiefly by the Pahang and the Indau, and has many spacious bays and fine sandy beaches; but its interior is for the most part rugged and mountainous, though none of the summits rise higher than 3221 ft. Its rocks consist of granite, sandstone, and clay-schist. The vegetable products of economical value are timber, ratans, gutta percha, and damar; and the minerals, iron, gold, and tin—the two last obtained by washing. Among the wild animals are the elephant, two species of rhinoceros, the tapir, the tiger, the leopard, the buffalo, the wild ox, and several species of deer and monkey. The bulk of the population consists of Malays, tolerably civilized. Pahang is nominally subject to the sultan of Johore, who is now a British pensioner, and usually resides at Singapore.

PAHLUNPORE, a petty state, India, in the N. of Gujerat, between lat. 23° 57' and 24° 41' N.; and lon. 71° 51' and 72° 47' E; and bounded N. by Serohae, E. the Guicowar dists. Keyralla and Daunta, S. dist. Pattum, and W. the petty state Thuraid. Towards the N. and W., in the direction of the Runn, the surface is level, and covered with jungle. In the neighbourhood of the capital it is diversified by a succession of sand-hills and small valleys. The only range descending of the name stretches from N. to E., separating Gujerat from Joodpoor. The soil in the N. and W. is light and sandy; in the S. and E., towards the hills, is a rich black mould; both soils depend for their productiveness on the rains and on artificial irrigation, the means of which is obtained from wells 40 ft. deep. The principal crops are wheat, rice, and bajree. The sugar-cane thrives well on the black loam under the hills, and is cultivated to some extent; but instead of being made into sugar, is merely sold in the stick or converted into gour. Only a little cotton for home use is grown near the villages. Much of the jungly land is well adapted for grazing. The revenue of the state amounts to £50,000. Pop. about 130,000.

PAHLUNPORE, cap. of the above state, 210 m. N. by W. Surat. Both its manufactures and trade are of some importance. It is surrounded by a wall, and contains 30,000 inhabitants, many of them artificers and shopkeepers.

PAINESVILLE, a vil. U. States, Ohio, cap. co. Lake, on Grand River, here crossed by a stone viaduct of four arches, and on the Cleveland, Painesville, and Ashtabula railway, 3 m. from the best natural harbour on Lake Erie, 23 m. N.E. Cleveland. It contains a courthouse and jail, six churches, a large union school, a female seminary, two flour mills, two tanneries, two foundries, and two engine factories. The business portions having been destroyed by three disastrous fires, have been entirely built anew of brick within the last three years. Pop. (1860), 2676.

PAISANDU, a tn. S. America, Banda Oriental, I. bank, Uruguay, 15 m. above Concepcion. It is a forlorn place, with deserted houses, and gardens overgrown with weeds. This unhappy state of matters is owing to the civil war, which ravaged the country, and destroyed its prosperity. Pop. 2388.

PAKALONGAN. See PEKALONGAN.

PAK-CHAN, a river, E. side Bay of Bengal, running between the Tenasserim Provinces (British Burmah) and Siam. It is about 2 m. wide at its entrance, and contracts but very little for 10 m., affording ample room and deep water for vessels of the largest burden, with well-sheltered anchorage. About 15 m. up the river is a mile wide, and the banks are steep and densely wooded, the depth of water being 5 or 6 fathoms.

PAKLAT, a tn. Siam, r. bank Menam, about 9 m. above its mouth. Immediately above Paklat the river winds round in a manner so remarkable, that the distance by land across the isthmus, between the extremities of the bend, is only half a mile, while it is 10 m. by water. At this point the depth in the channel is sufficient for the largest ship. Paklat has an estimated pop. of 7000, consisting principally of natives of Pegu, who, during the war between Siam and that country, were led off into captivity.

PAKNAM, a tn. Siam, on the Menam, about 3 m. above its mouth. It is a place of some importance, being the seat of a governor, and not only surrounded by battlemented walls, but defended by batteries and other fortifications, erected on a sandbank which rises out of the water near the W. or right bank of the river.

PALAMACOTTAH, or PALLAMCOTTAH, a tn. fort, and military station, India, presid. Madras, dist. and 3 m. S.E. Tinnevely, and equidistant 88 m. S. by W. from Madura and S.W. from Ramnad.—The town stands on an extensive plain, 1 m. E. of the Tamburavurny, here crossed by a good bridge. Within the town are the old hospital and jail, and the place of arms for the native troops.—The fort, built on a naked rock of mouldering granite, contains the European officers' houses, forming an oblong square on its S. face, and the European artillery barracks, formerly the residence of the commandant. The new hospital has been built on a rising ground outside the fort, and between the latter and the bridge stands the church of the Church Missionary Society, a plain structure, with a handsome tower and spire 110 ft. high. Near the church is the printing establishment.

PALAMOW, a dist. and tn. India, presid. Bengal.—The dist., between lat. 23° 12' and 24° 22' N.; lon. 83° 18' and 84° 31' E., is bounded N. by Behar and Ramgrh, E. Ramgrh, S. Chota Nagpore, S.W. Sirgoojah, and W. Mirzapore; area, 3468 sq. m. It has a rough and irregular surface, traversed in the rainy season by numerous torrents, which carry the drainage chiefly to the Koel, an affluent of the Sone, and extensively covered with forest or jungle. Wild animals are very numerous, and include among others the gour, a bovine quadruped, much larger than the ordinary ox, but apparently of too untameable a nature to be ever domesticated. Lions are only occasionally seen, but tigers abound, as do also bears, leopards, wolves, and snakes. Among the last are the bo-constrictor, of enormous size, and the cobra-de-capello. The minerals, not yet fully examined, promise to be valuable. At Singra, on the right bank of the Koel, coal and iron ore are known to abound.—The town, of same name, cap. of the above dist., standing in a mountainous tract among seams of coal and iron, 135 m. S.S.W. Patna, is an insignificant place.

PALAVERAM, a military cantonment, presid and 12 m.

S.W. Madras, dist. Chingleput, at the W. foot of a range of hills of same name, and nearly 4 m. from the Coromandel coast. The cantonment, which is exclusively for native troops, is about a mile long by half a mile broad. The officers' houses, arranged in four rows, are well built of brick and chunam, a few with terraced roofs, but most of them tiled. The barracks and hospitals are substantial buildings, with arched roofs and granite floors. The site, however, is so flat, and the Adyar, which drains it, so sluggish, that in the rainy season the ground becomes swampy up to the officers' houses, and the huts of the men have been occasionally washed down. As a remedy, lines situated near the bazar, on the right of the cantonment, have been substituted for the huts. Both lines and bazar are kept clean and dry.

PALGHAUT, or PALGHAT, a tn. India, presid. Madras, dist. and 30 m. S.S.W. Coimbatore, beautifully situated in the great depression of the W. Ghats, on the direct line of communication between the Coromandel and the Malabar coasts, and on the N. or right bank of the Palaar, an affluent of the Ponany. It consists of a fort, in the form of a square of about 200 yards, inclosed by a wet ditch, and walls of rough granite flanked with bastions; and of a large straggling town, tolerably well built, and containing a Protestant and a R. Catholic church, and a number of insignificant pagodas. The manufactures consist chiefly of towelling, coarse cloths, woven mats, and brass and copper ware. The position of the town gives it considerable commercial importance as an entrepôt, the merchants transmitting areca-nut, rice, and cocoanut oil from the coast; and also, besides engaging in the timber trade, acting as agents for the transmission of Salem, Madura, and Timnevely cloth, Coimbatore ghee, chillies, cotton, &c. Pop. about 9000.

PALLANKA, a tn. S.W. Africa, territory Galangne, near the S. frontiers of the Kimbunda country; lat. 13° 35' S.; lon. 17° 30' E. It stands on an open plain, nearly equidistant from the Kubango on the E. and the Kunene on the W., is inclosed by a palisade and a ditch, and has a pop. of 2500.

PALLEE, a tn. India, Rajpootana, state and about 70 m. S. Joodpoor, was once surrounded by a wall, which is said to have been demolished at the special request of the inhabitants, because its strength only made the possession of the place an object of keen contest during the civil wars of Joodpoor. The ruin thus produced gives the place a somewhat desolate air; but it still contains nearly 50,000 inhabitants, and is so advantageously situated at the intersection of the great commercial routes from Cutch to the N. provinces, and from Malwa to Bhawalpore and Sind, that it is the principal mart of W. Rajpootana, and carries on a very extensive trade, of which the principal articles of home product are salt, woollens, coarse cottons, and paper, the two last made in Pallee.

PAMALOMBE, a small lake, S.E. Africa, formed by an expansion of the Shire, about 10 m. from its exit from Lake Nyassa. It is 10 or 12 m. in length, and 5 or 6 m. broad, and is nearly surrounded by a broad belt of papyrus, so dense that when beaten down it supported the small temporary huts of the natives. The papyrus plants, 10 or 12 ft. high, grow so closely together that air is excluded, and so much sulphuretted hydrogen gas evolved, that Dr. Livingstone's boat was blackened in one night's exposure to it.

PANDERMA [anc. *Panormus*], a tn. Turkey in Asia, Anatolia, on the coast, near the peninsula of Cyzicus, which projects from the S. shore of the Sea of Marmora, and is connected with the mainland by a narrow isthmus, about 60 m. S.W. Constantinople. It consists of about 1000 houses, inhabited chiefly by Greeks; has a regular communication by steam with the Turkish capital, and carries on an active trade. On the peninsula part of the walls and many other remains of the ancient Cyzicus are still found.

PANEPUT, or PANIPUT, a dist. India, N.W. Provinces, between lat. 28° 50' and 29° 48' N.; lon. 76° 40' and 77° 16' E.; is bounded W. and N. by Sirhind; E. the Jumna, separating it from Mozuffernuggur and Meerut; and S. Delhi; length, N. to S., 65 m.; breadth, 30 m.; area, 1279 sq. m. The surface is level, and where not irrigated by the Jumna, or the Delhi canal and its branches, has generally a barren and repulsive appearance, consisting in many places of a mere waste of undulating sand, with a scanty growth of stunted shrubs and coarse herbage; and in others, of a soil so full of saline ingredients, that the efflorescence lies on the surface

like snow. On some fertile tracts a good deal of sugar-cane is grown. The jungles, extending sometimes as far as the eye can reach, abound in game, especially hares, quails, partridges, and pea-fowl. Pop. 283,420.

PANEPUT, cap. of the above dist., in a fertile tract finely diversified by clumps of trees, 52 m. N. by W. Delhi, is surrounded by ancient walls and ramparts, built at different times and in different styles, and of very irregular shape. The houses, built for the most part of brick, and in some instances of two stories, are usually provided with balconies, and occasionally surmounted by cupolas. Within the town are numerous temples, the cupolas and spires of which, with their white and polished surfaces, have a pleasing and striking effect when viewed from a distance; and two large caravanserais, which seem to be the great centres of resort and commercial activity. The environs are overspread with ruined tombs, some of which must originally have been splendid structures. Paneput is famous for two great battles. The one, fought in 1526, between Baber, at the head of 12,000 men, and Ibrahim Patan, king of Delhi, with an army of 100,000 men and 1000 elephants, established the Mogul dynasty in the person of the former; the other, fought in 1761, between the Afghans, under Ahmed Shah Durrane, and the Mahrattas, under Sedusheo Rao Bhao, proved most disastrous to the latter, who fled completely routed, and lost nearly the whole of their army, and many of their most distinguished leaders in the battle or the flight. Many of the houses are said to be untenanted, but the pop. is still estimated at 16,870.

PANETJEN-KERNY, a salt lake, Ceylon, near its E. coast, 34 m. S.S.E. Trincomalee. It is 6 m. long by 3 m. broad, and, together with the vast saline marshes which surround it, supplies the whole district with salt. It is usually covered with myriads of wild fowl, including flamingoes, white paddy-birds, wild ducks, curlews, snipe, &c. According to tradition Panetjen-Kerny was once the site of a royal residence, and was reduced to its present state by a subsidence of the land followed by an irruption of the sea. The locality, now wild and desolate, is not without indications confirmatory of the tradition.

PANGANI, a tn. on the E. coast of Africa, on a bay and at the mouth of a river of same name, to the N.W. of Zanzibar. It is surrounded by thick thorny jungle, which, though important for defence, is not without its disadvantages, as numerous leopards make it their lair; and consists of about twenty stone houses and a number of cadjan huts, each with its large mat-encircled courtyard, where all affairs are transacted. Plantains, arecas, and coconuts grow in the town, and betel, papaws, and the jamli, an Indian fruit, in the environs; while in the surrounding fields holcus, maize, sesamum, and other grains, are extensively cultivated. Pangani drives a thriving trade with the Ngruru, Chuga, and Masai countries. Pop., including that of three adjoining villages, about 4000. Of these a large proportion are female slaves.

PANGANI, a river, E. Africa, which is supposed, as it has never been explored to its source, to be formed by several streams from the lofty range to which the snowy mountain of Kilimandjaro belongs, about lat. 3° S.; lon. 36° 30' E.; flows first circuitously S., to about lat. 5°, then E.S.E., and at Pangani falls into a bay of same name, in the Indian Ocean, to the N.W. of Zanzibar, in lat. 5° 25' S.; lon. 39° 4' E. At Kohode, 36 m. of direct distance above its mouth, it is about 80 yards broad, and flows deep and strong under high banks of stiff clay, reddened, especially after rain, by the rich loam of the hills; and abounds in hippopotami and crocodiles. At its mouth it is about 200 yards broad, but having a depth of not more than 8 ft., is navigable only by country craft. Even to them, when the strong current is met by wind and tide, the navigation is dangerous.

PANGASINAN [add.], a prov. of the island of Luzon, in the Philippine Isles, bounded N. by Ilocos, W. Zambales, S. Pampanga, and E. a mountain chain, inhabited by wild tribes; length, 78 m.; breadth, 44 m.; area, 1240 geo. sq. m. It consists almost entirely of a beautiful and well-watered valley of remarkable fertility, producing in abundance rice, maize, pulse, and sugar-cane. The mountains yield sulphur and arsenic, and many of the inhabitants find employment in washing the sands of the streams for gold. On the sea-coast large quantities of bay-salt are made for export. The natives

consist of two distinct races, speaking different languages. Lingayen is the capital. Pop. of prov. 224,180.

PANGRAGRAMONE, a vil. Ceylon, Central Province, a little to the W. of Bintenné, on the highroad to Kandy. It consists of mud-houses, built under tamarind-trees of great age and prodigious size, and, from being situated in a hollow, suffers much by the rains. The inhabitants, chiefly if not exclusively Moors, have erected a small mosque of the humblest pretensions. The adjoining district was in ancient times so famous for its fertility, that it received the name of *Wel-laksya*, or 'the Hundred Thousand Rice-fields.' It still retains the name, but believes it by the miserable cultivation which prevails.

PANG-TSE, a tn. China, picturesquely seated among hills, on the Yang-tze-kiang, a little above the point where the river quits the province of Kiangsi to enter that of Nganhoi. It is surrounded by a wall, which not only incloses the town proper, but also a large area of barren hill and valley, obviously with the view of converting the ridges themselves into barriers of defence. Unfortunately within the theatre of the civil war, Pang-tse has been so severe a sufferer that only a few of its buildings remain.

PANJANG (PULO), an isl. Indian Archipelago, off the E. coast of Sumatra, from which it is separated by a strait which bears its name. It has a flat alluvial surface, and produces the best crude sago, which is exported by the Malays to Singapore and Malacca, to be refined by the Chinese. It is inhabited chiefly by wild tribes of Malay origin.

PANKOW, a vil. Prussia, prov. Brandenburg, gov. Potsdam, and so near Berlin that it may be regarded as one of its suburbs. It has a handsome church completed in 1859, and a Pestalozzi institute, and is a favourite pleasure resort of the Berlin citizens. Niederschönhausen, containing a royal palace and fine gardens, is connected with it by a beautiful avenue. Pop. 1100.

PANKRATZ, a tn. Austrian empire, Bohemia, circle Bunzlau, near the frontiers of Prussia; with lime-kilns and extensive limestone and sandstone quarries. Pop. 1100.

PAO-TING-FOO, a tn. China, prov. Pechele, cap. dist. of same name, on an affluent of the Peiho, 80 m. S.S.W. Peking. It stands in a fertile country, and as the residence of the governor of the province takes rank next to the capital.

PAPAL STATES [add.] In the insurrectionary movements which attended the Austro-Italian war in 1859, the Romagna detached itself from the Papal rule, and in 1860, at the time of Garibaldi's revolutionary advance, the Marches and Umbria followed, and were incorporated with the kingdom of Italy. By these changes the territory of the sovereign pontiff, which, previous to 1859, embraced an area of 17,218 sq. m., with 3,124,668 inhabitants, was reduced to 4891 sq. m., and 692,106 inhabitants. Of the former twenty legations and delegations into which the territory was subdivided, only five remain: viz. Rome and the Comarca, pop. 326,509; Viterbo, pop. 128,324; Civita Vecchia, pop. 20,701; Velletri, pop. 62,013; and Frosinone, pop. 154,559. The city of Rome had 180,359 inhabitants in 1858, and 194,587 in 1861. No account is published of the revenue and expenditure of the Papal government. But, according to statements in the Italian press, the revenue in 1864 amounted to 4,500,000 scudi, besides 1,500,000 scudi in 'Peter's pence,' and the expenditure to 10,000,000 scudi. Another account gives the budget of 1865 as representing an income of 6,353,993 scudi, and an expenditure of 11,947,270 scudi; leaving a deficit of 5,593,277 scudi. The large yearly deficiencies are partly supplied by contributions from Roman Catholics in all countries, and partly by loans. The loan thus contracted in 1865 was of 10,000,000 scudi. The total amount of the public debt is unknown. The pontifical army is raised by enlistment in foreign countries, as well as in the Papal States. At the commencement of 1866 it numbered 9588 men, including 8000 infantry and 550 cavalry. The foreign trade of the Papal States is very small, and chiefly carried on through the excellent port of Civita Vecchia. With the United Kingdom the trade in the five years 1861-5 is thus stated:—

	Imports from United Kingdom.	Exports to United Kingdom.
1861.....	£82,567.....	£1,356.....
1862.....	46,991.....	957.....
1863.....	26,868.....	1,099.....
1864.....	72,589.....	2,626.....
1865.....	12,888.....	23,921.....

There are four lines of railway in the Papal States:—1, Rome to Ceprano; 2, Rome to Civita Vecchia; 3, Rome to Corese; 4, Rome to Frascati and Albano; the total length being 84 m. The traffic upon them is small; on the Frascati line there is an annual loss, and on the others but little profit.

Since 1860 the authority of the Papal government has been maintained by a French garrison in Rome; but in September, 1864, the emperor of the French entered into a treaty with the king of Italy, that the garrison should be withdrawn before the end of the year 1866. The articles of the treaty were as follows:—1. Italy undertakes not to attack the present territory of the pope, and to prevent by force any external attack. 2. France will withdraw her troops gradually, as the army of the pope becomes organized; the evacuation will nevertheless be accomplished within two years. 3. The Italian government will not protest against the organization of a papal army, even composed of foreign R. Catholic volunteers, sufficient to maintain the authority of the pope, and tranquillity both at home and on the frontier of the Papal States; provided that this force does not become a means of attack against the Italian government. 4. Italy declares herself ready to enter into an arrangement for assuming a proportional part of the debt of the former States of the Church. In accordance with the terms of the treaty, the withdrawal of the French garrison from Rome commenced in November, 1866, and has since been completed.

PAPUGNY, a river, S. India, which rises in the N.E. of Mysore, flows N.E. into dist. Cuddapah, and after a course of about 90 m. joins the Penna on its l. bank. At Appiappulla, 3 m. above the point of junction, it is 800 yards wide.

PARAD, a tn. Austrian empire, Hungary, co. Heves, at the foot of the Matra Hills, in a beautiful valley; has glass-works, copper and silver mines, and mineral springs, with a large and much-frequented bathing-establishment. P. 2000.

PARAIOOR, a vil. India, presid. Madras, Poodoocottah or Tondiman's Country, on the Vellar, 30 m. S.S.E. Trichinopoly. It possesses a beautiful pagoda, with a well within it cut in a rocky bottom. This well, according to the natives, has a very remarkable property. Once every year, within the months of February, March, or April, when the water dries up to a certain mark, the sound of music is heard below, and continues during 3½ hours. The Rajah Tondiman, and a large concourse of people, annually assemble to listen with devout astonishment to this thinly disguised Brahminical trick.

PARANA, or **BAJADA** [add.], a tn. La Plata, and seat of its government, prov. Entre-os-Rios, r. bank river of same name; lat. 31° 42' 54" S.; lon. 60° 32' 39" W. It stands on a plateau, which is evidently a continuation of the high land on the opposite bank, is regularly built in the form of a quadrangle, subdivided by streets crossing each other at right angles; consists of houses partly old, of indifferent appearance, and partly new, all of brick, plastered and whitewashed; and has among its public buildings several churches, a governor's residence and government offices, houses of legislature, and a theatre. Its gardens, numerous and well arranged, add much to the comfort of the inhabitants, and give the whole place a cheerful appearance. The chief industrial establishments are extensive tanneries and lineworks. The trade in the produce of the country is as yet imperfectly developed; the imports are rapidly increasing. Pop. 8000, mostly coloured persons of divers stocks.

PARATSCHIN, or **PARATYX**, a tn. Turkey in Europe, Servia, circle Tschupria, on the Zrniza, a little above its confluence with r. bank Morava, 75 m. S.S.E. Belgrade. It has a church, a school, and a pop. of about 3163.

PARBUTTY, two rivers, India:—1, *E. Parbutty*, which rises close to the town of Sipree, in Scindia's Dominions, lat. 25° 31' N.; lon. 77° 46' E., flows first N. for about 40 m., then E. for about 50 m., and joins the Sinde on its l. bank; lat. 25° 47' N.; lon. 78° 21' E.—2, *W. Parbutty*, which rises in Malwa on the N. side of the Vindhya range, lat. 22° 45' N.; lon. 76° 33' E., flows successively N.E. and N.W., and joins the Chumbul on its r. bank, after a winding course of 220 m. It is a shallow stream, easily fordable everywhere in the dry season.

PAKIKIA [anc. *Paros*], a tn. Greece, nomarch Cyclades, cap. and on a bay on the W. coast of the island of Paros. It occupies the site of the ancient city, is the seat of a justice-of-

peace court, and owes the beauty of some of its public buildings, particularly its castle and its church, to their having been mainly constructed out of the ancient ruins. In the vicinity is Mount Elias, or Marpessa, which rises to the height of 2500 feet, and is celebrated for its quarries of white marble.

PARIS, a tn. British America, Canada West, co. Brant, on the Grand River and Smith Creek, and at the junction of the Buffalo and Lake Huron with the Great Western railway. It has three churches, and a considerable trade in flour and lumber. Large quantities of gypsum are quarried in the vicinity, and ground for agricultural purposes. Paris is a port of entry. Pop. about 2000.

PARKANY, a tn. Austrian empire, Hungary, co. and 26 m. E. Komora, on the railway from Presburg, and l. bank Danube, opposite to Gran. The Turks were defeated here on their retreat from Vienna in 1683. Pop. 1280.

PARMAGUDI, a tn. India, presid. Madras, dist. and 21 m. W.N.W. Madura, on the S. or r. bank of the Vigay. It consists of upwards of 1330 houses, arranged in dirty and very irregularly formed streets, and occupied chiefly by weavers. It contains several ranges of bazars and a large stone pavilion, with an adjoining chuttrum, where alms are daily distributed among twelve poor Brahmins, or other travellers. The manufactures consist of superfine cloths, silks, muslins, silk carpets of great value, vestures, turbans, &c.

PARRAL, a tn. Chili, prov. Maule, on a swampy plain, between the Longavi and the Perquilaquen, 160 m. S. by E. Valparaiso. Its streets, following the direction of the trunk road from N. to S., are somewhat tortuous. Its only public building worth notice is its church. Pop. 2200.

PARRAS, a tn. Mexico, state Coahuila, near a lagoon of same name, 90 m. W. Saltillo. It is a well-built town, with several good streets lined with old but handsome houses, a large square, and a fine public walk or alameda. The inhabitants are chiefly employed in the culture of the vine, for which the limestone ridges in the vicinity appear to be admirably adapted. The wine produced has a pleasant flavour, and resembles the hotter Spanish wines. Pop. 9000.

PARRAVOOR, or **PURRAUR**, a tn. India, presid. Madras, dis. Travancore, 13 m. N. Cochín. It was a place of importance, but having suffered much from the cruelty and rapacity of Tippoo Sahib, has become comparatively insignificant. It contains two churches, a pagoda, some small *cotarums* or native palaces, and a few buildings of European architecture, now chiefly used as storehouses for tobacco, pepper, salt, &c. The celebrated lines of Travancore, the forcing of which by Tippoo led to the first war with him, ran for $3\frac{1}{2}$ m. through the district of Parravoor.

PARRY, a cape on the N. coast of America, Arctic Ocean, lat. $70^{\circ} 6' N.$; lon. $123^{\circ} 48' W.$ It is from 400 to 500 ft. in height, and nearly opposite to Nelson's Head, the southern extremity of Baring's Land.

PASIR, a state on the E. side of Borneo. Its principal town, in lat. $1^{\circ} 44' S.$; lon. $116^{\circ} 26' 30'' E.$, stands about 45 m. above the mouth of a stream, navigable only by boats, and consists of about 400 houses. The products are edible swallows'-nests, bees' wax, rattans, damar, and a little gold-dust. Pop. of state about 20,000, consisting of Malays, Bugis, settlers from Celebes, and several wild tribes.

PASSAIC, a river, U. States, which rises at Mendham, in New Jersey, flows successively S., N.N.E., and S., and after a very devious course of 90 m. enters Newark Bay. It is navigable a short distance for sloops, and higher up, at Paterson, has a fall of 72 ft., which furnishes immense water-power. The beauty of its scenery attracts many tourists.

PASTRENGO, a town, Italy, Venetia, prov. and N.W. Verona, r. bank Adige, is memorable for conflicts between the Austrians and Piedmontese, 29th and 30th April, 1848.

PATANI, a native state, Indian Archipelago, on the E. side of the Malacca peninsula, between Kalanten and Sungora, the latter forming the most southern province of Siam. The chief town, or rather village, since it consists only of about 200 huts on the banks of a shallow stream, is in lat. $7^{\circ} N.$; lon. $101^{\circ} 35' E.$ The pop., which was computed at 90,000 in 1780, was said to have declined to 54,000 in 1832. This great decrease, assuming it to be real, was accounted for by an invasion of the Siamese, who carried off several thousands of the inhabitants as captives, and formally annexed the state

to Siam. This annexation is one of the greatest obstacles to the prosperity of Patani, where two native dynasties are said to have reigned for nearly four centuries.

PATAPSCO, a river, U. States, which rises in the N.W. of Maryland, flows successively S. and S.E., and enters Chesapeake Bay 14 m. below Baltimore. At this city, up to which it is navigable for large vessels, it expands into a broad estuary. Its total length is 80 m.

PATASSA, a river, S. America, Ecuador, which, formed by several streams which have their most distant source in the volcano of Cotopaxi, begins to flow under its own name, after forming the cascade of Agoyan, and after a course of about 200 m., the latter part of which is nearly due S., joins the Amazon on its l. bank, at Chego Antigua, close to the meridian of $76^{\circ} W.$ After leaving the cascade it is navigable by canoes, and lower down it might be navigated by steamers. Its banks and islands are finely wooded, and present much beautiful scenery.

PATIENCE, a cape and bay, Russian empire, on the E. coast of the island of Saghalin:—The **CAPE**, the most prominent and most eastern point of the island, is a low promontory formed by a double hill which terminates abruptly. It is surrounded by a rocky shoal, which extends to a considerable distance from the land.—The **BAY**, formed by the above cape on the E., and Cape Soimonof, a high promontory, on the W., has mountainous shores and a craggy beach on the N., but on the W. the shores are low and shelving. The Ty or Neva, which enters the bay in lat. $49^{\circ} 15' N.$; lon. $143^{\circ} 33' E.$, has at its mouth a width of about 30 yards, and a depth of 7 ft. At a short distance inland it communicates with a lake. The land along the shore has in some places a deep covering of mud, and in others a rich black soil, but the trees, mostly of the thorn kind, are stunted.

PATN, a tn. India, Nepal, on a rising ground in a valley about 2 m. S.E. Katmandoo, which it is said to surpass both in antiquity and in neatness, having been built by the Newars, who held the country previous to the Ghoorka invasion, and possessing a number of handsome edifices.

PATNA, a dist. India, presid. Bengal, between lat. $25^{\circ} 3'$ and $25^{\circ} 38' N.$; lon. $84^{\circ} 45'$ and $86^{\circ} 10' E.$; is bounded N. by the Ganges, separating it from Sarun, Tirhoot, and Monghyr; N.E. and S.E. Monghyr; S. Monghyr and Behar; and W. and N.W. the Sone, separating it from Shahabad; length, E. to W., 85 m.; breadth, 45 m.; area, 1828 sq. m. It consists almost entirely of a rich alluvial tract, both fertile and well cultivated, and producing in abundance rice, the staple for which it is celebrated, wheat, barley, &c. In the W., about Muneer and Pholwarree, much fine opium is produced. Orchards and groves of fruit-bearing trees abound. Pop. 1,200,000.

PATOOAN, an isl. in the Somerset River or Victoria Nile, Central Africa, a few miles above and E. of the Murchison Falls, is one of the numerous masses of rock that choke the river between Karuma Falls and the Great Murchison Cataract. The rock is entirely of gray granite, from the clefts of which beautiful forest trees grow so thickly as to quite shade the island. In the middle of it is a considerable village. A succession of similar islands continues eastward from Patooan to within a march of Karuma Falls.

PATOOK, or **PATUCA**, a river, Central America, which is formed near the centre of dep. Olancho, in Honduras, by the junction of the Jalan, Tinto, Guayape, and Gualambre, flows N.N.E., and falls into the Carribean Sea by two mouths. The smaller mouth is in a lagoon, and will not admit vessels drawing more than 6 ft.; the larger opens directly into the sea, and is encumbered by a bad and shifting bar, over which the depth is not more than 10 ft. Within it, the channel, passing through deep alluvium, is navigable for 60 m., but beyond a series of rapids occurs, rendering further navigation impossible. The total length of the Patook is about 150 m.

PA-TOUNG, a tn. China, on the Yang-tze-kiang, at the point where it quits prov. Seehuen to enter that of Houpé. It is a small place, with nothing entitled to special notice except its *kao-pan* or literary institute, an extensive range of building, in which the competitive examinations are held. According to M. Huc these examinations are little better than a sham. The rules to prevent fraud, and ascertain the true merit of the candidates, are extremely stringent, but a rich

man can always find out beforehand the subjects that will be proposed for examination; the judges sell their votes to the highest bidder; and any candidate, conscious that in his own person he must fail, has only to go with a sum of money in his hand to some poor graduate of the requisite ability, who personates him, and brings him back the diploma.

PATRAS [add.], a tn. Greece, Morea, cap. nomarch Achaia and Elis, on the N.E. shore of the gulf of same name, leading into the Gulf of Lepanto. It rises on the side of a hill in the form of an amphitheatre; and though laid in ruins by Ibrahim Pacha in 1821, during the war of independence, has been rebuilt in an improved style, and is now one of the finest towns in Greece. It is the seat of an archbishop, and of several courts and public offices; and has a gymnasium, a Hellenist and four parish schools, a lazaret, &c. The acropolis in its vicinity is well fortified. Its advantages, position, and the fertility of its district make it the most important centre of trade in the Morea; and its population, which previous to its destruction did not exceed 10,000, is now nearly 20,000.

PATUN, a petty state, India, Rajpootana, between lat. 27° 31' and 27° 56' N.; lon. 75° 48' and 76° 12' E.; is bounded N.W. by Shekawuttee, N.E. Jhujhur, E. Ulwar, and S.E. and S. Jeypoor; length, N. to S., 30 m.; breadth, 20 m. It consists of an alternation of barren hills and tolerably fertile valleys, and is inhabited in the most inaccessible parts by Minas, who used to carry their depredations into the surrounding districts; but have of late been so much curtailed in their sphere of operations, and so severely punished for them by the vigilance of the British government, that many of them have at last betaken themselves to agriculture.

PATUN, cap. of the above state, 100 m. S.W. Delhi, occupies a strong position at the foot of a hill crowned by a fort, and is a rather considerable place. On the hill, about half way between the base and the summit, stands the palace of the rajah, as well as a magnificent temple founded by his family; but the town belongs (together with two-thirds of the pergunnah) to Scindia, who persists in retaining it, though strongly solicited to cede it for an equivalent.

PAUK PUTTEEN, a tn. India, Punjab, about 10 m. W. of the Ravee, and 14 m. from Mamoke Ghat—a much-frequented ferry over the river; lat. 30° 17' N.; lon. 73° 25' E. It occupies the site of an ancient fort, on the summit of a lofty eminence, rising from a perfectly level plain; and is supposed to possess peculiar sanctity from having been many years the residence and containing the tomb of a celebrated Mussulman saint, Sheikh Farid-u-Din, whose miracles form the subject of many legends. As those who rub their foreheads on the saint's grave suppose themselves safe from perdition, and access to it is given only during the Mohurrum, the crowd of visitors at that season is immense, and the crush enormous. Pank Putteen is conjectured to be the spot where Alexander the Great erected colossal altars to mark the E. limit of his conquests.

PAUL (Str.), an isl. British America, on the E. entrance of the Gulf of St. Lawrence, 18 m. N.E. Cape Breton, and 50 m. S.W. Newfoundland; lat. (N. end) 47° 13' 55" N.; lon. 60° 8' 20" W. It is about 3 m. long by 1 m. broad, and is composed of primary rocks, principally mica-slate, dipping S. at an angle of not less than 45°. Its N.E. point, which is properly a detached islet, separated by a very narrow channel from a peninsula, is from 300 to 400 ft. high, and is, as well as the peninsula, so precipitous as to be nearly inaccessible. The rest of the island, also steep and precipitous towards the sea, is traversed by two parallel ranges of hills, of which the more eastern and elevated attains a height of 450 ft. The surface is partially wooded with stunted and scrubby spruce-trees. The only inhabitants are two men, in charge of a depot of provisions for shipwrecked persons.

PAUL (Str.) [add.], a tn. U. States, Minnesota, cap. co. Ramsey, l. bank Mississippi, 9 m. below the Falls of St. Anthony. It stands on a plain about 80 ft. above the river, and partially encircled by hills; and has fourteen churches, a college, and two female seminaries, a female academy taught by the Sisters of Charity, several other schools, a fine state-house, an extensive public market, lumber and flour mills, various other industrial establishments, and a considerable trade, partly in furs. Pop. (1860), 10,401.

PAUL (Str.) [add.], an isl. in the S. of the Indian Ocean, nearly equidistant from the S. extremity of Africa on the W. and the S.W. extremity of Australia on the E.; lat. 38° 42' 45" S.; lon. 77° 34' 9" E. It is in the form of a triangle, with its base facing the N.N.E. and its vertex pointing S.W.; has a coast-line of little more than 6 m., and rises precipitously into a cone, the summit of which is about 860 ft. above the sea. It is of volcanic formation, and has on its E. side a conical crater, which, though several ft. above the sea in 1696, when the island was first discovered by the Dutch navigator Van Vlaming, now communicates with it on the E. by an opening 600 yards wide, and deep enough to allow large boats to enter the basin. Within the crater, which is two-thirds of a mile in diameter, the depth of water varies from 16 to 20 fathoms. The inhabitants, who are few in number, have formed terraces on which they are enabled to cultivate patches of ground, laid out for the most part in gardens, each about 50 square yards in extent. Their chief employment, however, is fishing, for which there is a regular establishment belonging to a merchant of the Isle of Bourbon. The fish caught are mostly different species of cod. Seals and sea-elephants, which once abounded, are now seldom seen.

PAUL'S (Str.), a tn. Austrian empire, Tyrol, circle Brixen, near Botzen; with a beautiful Gothic church of the 16th century, and 1400 inhabitants.

PAUMBEN, or **PAUMBAUM**, a tn. India, presid. Madras, dist. Madura, on the W. extremity of the island of Ramiseram, forming the E. side of the narrow strait or pass of Paumben, which connects Palk's Strait with the Gulf of Manaar. It consists of about 250 houses, generally built of stone and mud, with tiled roofs, and placed in narrow irregular streets. The inhabitants, about 1200, are actively engaged in traffic, or as pilots and boatmen to the dhonies and vessels in sailing through the pass. This pass, which was at one time tortuous in the extreme, and had only a depth of about 5 ft., has been recently improved at the expense of government, and is now 10½ ft. deep, and nearly straight. The consequence is that not only dhonies without keels, but keeled vessels of nearly 200 tons burden, can pass through, and the trade of the place has very largely increased. There is a lighthouse at Paumben, the light of which—a fixed red—is visible about 10 m. at sea.

PAVILLON, a tn. British Columbia, l. bank Fraser, 120 m. N.E. New Westminster. It stands upon a lofty terrace above the river, and is important as the head-quarters for the miners and mule-trains that diverge here to the gold-diggings at Alexandria, Cariboo, Kamloops, &c. The land adjacent is adapted for agricultural purposes, and produces abundant crops of grain and vegetables.

PAVILLON, a lake, British Columbia, about 10 m. S.E. of the tn. of same name. It is 6 m. long and 1 m. wide; on its S. side is a mountain 3000 or 4000 ft. high, topped by a remarkable peak, not unlike a watch-tower. The hills are of limestone, and rise abruptly from the water's edge.

PAVLOGRAD, a tn. Russia, gov. and 38 m. E. by N. Ekaterinoslav, cap. circle of same name, on the Vollsia, an affluent of the Dnieper; with two churches, a circle school. a charitable institute, several industrial establishments, and 6929 inhabitants.

PAVLOVO, a tn. Russia, gov. and 50 m. S.W. Nijnei-Novgorod, circle Gorbato, r. bank Oka. It has nine handsome stone churches, and manufactures of steel and hardware, bellows, soap, candles, and leather; and contains upwards of 6000 inhabitants.

PAWTUCKET, or **NORTH PROVIDENCE** [add.], a tn. U. States, Rhode Island, co. and 4 m. N. Providence, beautifully situated on both sides of the Pawtucket, here crossed by a stone bridge. Until 1861 it was partly in Massachusetts, but a recent arrangement has given the whole of it to Rhode Island. It contains eleven churches, a public library, two public halls, and three savings-banks; and possesses numerous industrial establishments, among which are thirteen cotton mills, one of them established in 1790, and historically interesting as the first erected within the States; machine shops, brass and copper foundries, an extensive calico printfield, nut, bolt, and tool factories, a manufactory of fire-engines famous throughout the country, and other manufactories of belting, leather, cabinet ware,

hair-cloth, &c. These manufactures have the advantage of immense water-power from the river, which has here a fall of 50 ft.; and ample means of transport are afforded by the Boston and Providence and the Providence and Worcester railways. Pop. (1860), 11,818.

PAYTA, a tn. Peru, and the most northerly haven which it possesses, is situated at the base and on the side of a hill, which descends abruptly to the S.E. shore of a small bay of same name; lat. 5° S.; lon. 81° 30' W. It consists partly of two narrow streets leading to a square, on which the cathedral—a large but ugly structure—stands, and partly of several other equally narrow streets, which surround the square, and contain a number of very indifferent houses, among which the barracks are conspicuous, together with a second church totally devoid of interest. The only building with any pretensions to elegance is the custom-house, which is constructed of iron, and was made in the United States. Payta, as the port of the province Piura, carries on a considerable trade, receiving American and European manufactures in return for cotton, bark, and hides. Pop. about 5000.

PAZARISTE (UPPER and LOWER), two nearly contiguous places, Austrian empire, Military Frontiers, Croatia, dist. and S.W. Ottochtatz or Otoczac. *Ober*, or *Upper Pazariste*, had once an important trade, but now contains only 1000 inhabitants, and has an old ruined castle perched on a rocky summit.—*Unter*, or *Lower Pazariste*, contains 1470 inhabitants, and has a curious old structure built by Bela III. in 1235.

PAZCUARO, or **PASQUARO**, a tn. Mexico, state Michoacan, near the S. shore of a picturesque lake of same name, 20 m. S.W. Morellia. It stands at the height of 7000 ft. above the sea, is regularly built in spacious streets, has a parish church, a superior school or college, a nunnery and three monasteries, and contains 6000 inhabitants engaged in mining, sugar refining, and trade.

PEARL, a group of islands, or rather archipelago, S. America, on the E. side of the Bay of Panama, extending over an area of about 450 sq. m., and consisting of sixteen islands and several rocks. *Isla del Rey* is the largest; next to it, but much smaller, are San José, Gonzales, Casaya, Saboga, and Pacheca. They are low and wooded, contain numerous cocoa-nut groves, have a fertile soil not much cultivated, and are inhabited by about 1941 persons, who occupy from thirty to forty fishing villages, and are chiefly engaged in the pearl fishery. Most of the islands belong to Panama merchants, who cultivate them by means of negroes, and only visit them occasionally.

PE-CHILI, or **PECHELK**, a gulf in the N.E. of China, separated from the Yellow Sea by the Miau-tau group. It trends first S.W. for 50 m. and then bends round W.N.W. and N. to the mouth of the Peiho, which may be considered as forming the limit between it and the Gulf of Liau-tung. The coast is low and flat, and shoal water extends to some distance from the shore, rendering it necessary for vessels to approach it with caution. In no part of the gulf is much depth attained, but the navigation in a N.W. direction from Miau-tau Strait to the mouth of the Peiho gives a safe and nearly uniform depth of 8 to 10 fathoms. The principal rivers which enter the gulf, in addition to the Peiho, are the Li-tsin and the San Ho. The climate appears generally to be very good; but during the winter, which lasts from November to April, both the rivers and the gulf, to the distance of 3 or 4 m. from the shore, become frozen.

PECSKA (MAGYAR and OLAH), two places, Austrian empire, Hungary, co. and 11 m. W. Arad, on the Maros. They are contiguous, containing an aggregate pop. of 14,026, and have a distillery.

PECZENIZYN, a tn. Austrian empire, Galicia, circle and 7 m. W. Kolomea, cap. dist. of same name, with a spring of rock-oil. A Basilian monastery which stood in the neighbouring forest was suppressed by the emperor Joseph II. Pop. 4185.

PEDENA, a tn. Austrian empire, circle Istria, in a district rich in oil and wine, 38 m. S.S.E. Trieste. It has a castle, which was at one time the residence of a bishop, and contains 2100 inhabitants.

PEDRO (SAN), a tn. La Plata, prov. and 100 m. N.W. Buenos Ayres, r. bank Parana, just above the point where one of its great arms branches off. It stands on an argillio-

calcareous plateau, and is indebted to the Jesuits for a fine church. As it is accessible only to very small craft, it has never obtained much commercial importance. Pop. 2000.

PEEL, an isl. N. Pacific, the largest of the three which form the central group of the Bonin Islands; lat. 27° 5' N.; lon. 142° 13' E. It is 6 m. long by about 3 m. broad; is deeply indented, particularly on its S.E. and its W. sides, on the latter of which is the fine harbour of Port Lloyd, and presents a bold and mountainous surface, composed of rocks evidently volcanic. Its soil is very fertile, and maintains a luxuriant vegetation. Among the trees is the palm, which yields the sago of commerce. The position of the Bonin group in the direct line of navigation to Japan having attracted attention, Captain Beechey visited it in 1827, and took formal possession of it, and more especially of Peel Island and its harbour of Port Lloyd, in name of the British crown. The Americans were disposed to dispute this claim chiefly on the ground that the S. cluster of the group had, previous to Captain Beechey's arrival, been visited by Captain Coffin, the master of a whaler, who, it was assumed, must from his name have been an American citizen. Subsequent inquiry having proved that Coffin was an Englishman, the American claim was necessarily abandoned, and Peel Island, along with the rest of the Bonin group, belongs nominally to Great Britain, with an understanding that its port is free to the vessels of all countries. It is the only one of the Bonin Islands which has any inhabitants. Their number amounts only to about 30, consisting partly of emigrants from the Sandwich Islands.

PEGASUS, a bay and port, New Zealand.—The **BAY**, situated on the E. coast of Middle Island or Munster, to the N. of Banks Peninsula, is 40 m. in extent from N. to S., and 15 m. in depth. Across the entrance the depth is 20 fathoms, and gradually shoals to 6 and 7 fathoms a mile from the sandy beach. Five rivers fall into the bay. Of these the most important are the Courtenay, navigable by large boats, and the Avon, navigable by vessels drawing from 8 to 10 ft. water.—The **PORT**, situated on the S. of Stewart Island, extends 7 m. between N.E. and S.W., and is divided into two distinct portions, a N. and a S., connected by a narrow strait. Three islands lying in its entrance, form the same number of ship-channels. The general depth of the N. arm, 20 to 25 fathoms, is inconvenient for anchorage; the S. arm is more moderate in depth, and has several coves where vessels may anchor in 8 to 10 fathoms. Over the S. arm are three bare granite cones, from 1000 to 1400 ft. high.

PEHTANG, a vil. China, prov. Pe-chili, at the mouth of the San Ho, 90 m. S.E. Peking. It is a place by no means of the first class. The houses are strongly built with walls of mud and chopped straw, resting on layers of reeds introduced about a foot from the ground between the upper part of the wall and the foundation, and intended probably to preserve the house from the deleterious effects of the saline quality of the earth. The roofs are generally of rushes and mud, though some of the better ones and the temples have tiled roofs. The streets are narrow, and have an offensive gutter on either side. It was occupied by the allies on the advance to Peking in 1860. Near it is a fort built of logs of timber, plastered with a mixture of mud and flax or chopped straw, and having embrasures for twelve guns.—(Swinhoe's *N. China Campaign*.)

PEIHO, or **TIEN-TSIN-HO**, a river, China, which, rising in a mountainous district in the N.W. of prov. Chili, not far from the Great Wall, flows S.E., and enters the Gulf of Pe-chili. Peking, the capital of China, is situated on its banks, and to this, much more than to its magnitude, it is indebted for its great commercial and political importance. It pursues a tortuous course through a flat country, scouring out for itself a narrow channel by the velocity of its stream rather than its volume of water; and, decreasing instead of increasing in depth as it approaches the sea, discharges itself over an area several miles in extent. The bar thus formed has only a depth of 2 ft. at low-water springs, but at high water attains a depth which allows vessels of 11 ft. draught to cross it. Junks, carrying from 300 to 500 tons burden, are thus enabled to ascend as far as Tien-tsin, a direct distance of 30 m., and an indirect of 50 m. Here the river is only 200 ft. wide, and contracts and shallows so rapidly, that the *Kestrel*, drawing only 6½ ft. water, could not even with the help of the tide ascend

more than 6 m. The banks, which at the entrance present the appearance of a dreary mud-flat, improve much toward the interior. 'Signs of agriculture,' says Captain Sherard Osborn, 'multiplied on either hand; fields of Indian corn, millet, bearded wheat, lettuces, and radishes followed in rapid succession. The villages were embosomed in fruit orchards, or hid their ugliness in groves of handsome trees. I counted at one time no less than twenty-five villages in sight from the mast-head, and often ten or fifteen were visible. They were none of them in ruined condition, and all appeared full of inhabitants.' Though the navigation of the Peiho ceases at Tien-tsin, the water communication is maintained by means of boats and rafts to within 10 m. of the capital.

PEKIN, or PEKING (*pe*, north, *king*, court) [add.] According to the terms of the treaty of Tien-tsin, English and French ministers were allowed to reside at the Chinese capital, and subsequently the same privilege was granted to America and some other nations. Foreigners generally are also allowed to visit the city, but they must be provided with a passport from the ambassador or consul of the nation to which they belong, and on no account is any individual allowed to carry on trade. Previous to the ratification of that treaty Russia was the only foreign power privileged to have a resident embassy, which comprised four persons. In addition to these are the members of the British legation, comprising nine persons, besides a police escort and English servants; the French *établissement diplomatique*, six persons; and the American legation, eight persons. Besides these civil establishments there are six religious missions—four British, one American, and one Russian—conducted by twelve persons. Of the native population a more correct estimate has been obtained since our countrymen have had free intercourse with the inhabitants; at the same time it is only approximate, in the absence of a native census. In 1861 the Tartar section of the city was calculated to contain 800,000 civilians and 110,000 soldiers, of the Tartar Banner corps; and the Chinese section, about 400,000 persons; making a total in round numbers of 1,310,000. The Pekinese have more of the Tartar element among them than any of the more southern cities of China; still the Chinese predominate, and they are gradually superseding their fellow-subjects by their greater industry and wealth. Even the old Tartar Banner corps is being dispersed, on account of their poverty, and inability to follow industrious pursuits to add to their scanty pay. There are no manufactories at Pekin of any importance, beyond those necessary for making articles of luxury for the resident aristocracy and gentry; consequently it is not famous for its skilled workmen and artisans.

As a place of residence for Europeans, Pekin is by no means so unhealthy as the more southern cities, although the range of temperature is much greater. This arises from the comparative dryness of the site, so that, although the thermometer falls to 10° below zero in the winter, and rises to 110° in the shade in summer, less inconvenience is felt than in Shanghai, where intense humidity prevails at a lesser range. A rude system of drainage intersects the city, but not sufficient to carry off the effluvia of the sewage, which even pervades the dust in summer, exhaling a disagreeable odour. The water supply is abundant, and a very complete fire brigade uses it to advantage in quenching the frequent conflagrations that take place. These and other matters are under the management of a governor of the city, irrespective of the central administration, which holds its offices in the imperial quarter of the Tartar section.

During the war in 1860 between the British and French allied forces, and the Chinese, Pekin was invaded by western troops for the first time in the history of the empire. An army, some 20,000 strong, appeared under the walls, and were preparing to bombard the city on the 13th October, when the Anting gate was opened, and the allies marched in, taking possession of 2 m. of the wall, on which field-guns were mounted; and the position was placed in a state of defence, to resist any treacherous attack from within the city. This want of confidence in the Chinese was enhanced by an act of treachery committed by the commanders of their army, on the 18th September, when twenty-six British and twelve French subjects were made prisoners while protected by a flag of truce, and carried into the city, where they were cruelly tortured, and twenty of their number died in agony.

On the entrance of the allies the survivors were delivered up, but the remains of four only could be found of those who had succumbed, which were buried in the Russian cemetery. As an act of retribution for this horrible piece of treachery, Lord Elgin, the British plenipotentiary who accompanied the expedition, sanctioned the proposals of the English and French generals, to let the troops sack and destroy the emperor's palace of Yuen-ming-yuen. This famous imperial residence and grounds are outside the walls of Pekin, about 4 m. N.W. of the north gate, and contained not less than thirty distinct palaces, built by different emperors, with gardens, parks, and lakes, extending over an area of 60,000 acres. On the 18th of October the first division of the British, and a contingent of the French army, proceeded to the work of destruction and plunder. In the palaces, the accumulation for centuries of jewels, gems, articles of vertu, and gorgeous furnishings were found stored away. Among other things the presents brought by European ambassadors from their sovereigns to the emperor, were preserved. These and all the costly ornaments in gold and silver, presented by tributary states, together with the valuable porcelain vases, and cabinets inlaid with gems, and furniture of the emperor and his court, were seized by the avenging foreign troops, or broken up and burned if they were too bulky to carry away. The work of demolition and plunder continued for two days, when the palaces were given to the flames, and the walls razed to the ground. It was estimated that the value of the plunder was not less than a million and a half sterling, and that of the articles destroyed exceeded two millions, exclusive of the buildings. This material act of vengeance had more effect on the Chinese mind than all the diplomacy of ambassadors or even the demonstrations of naval and military force. By it the unapproachable sanctity of the emperor and his residence was completely broken down, and he fled, as a fugitive, to his palace of Zehol or Gehol, in the fastnesses of the Tartarian Alps; where he died ten months afterwards, in August, 1861, a prey to the rigid climate, and mental chagrin at being the first monarch of this vast empire who had to succumb to the 'barbarian.' After the demise of Hien-Foong—the reigning title of that emperor—his son, Toong-Chee, a minor, succeeded to the throne, under the regency of the empresses-dowager, who now take up their abode chiefly at the imperial palace, in the centre of the Tartar city. This palace is an imposing structure, with brilliant yellow tiles of porcelain on the roof, and surrounded by pleasure grounds with picturesque temples. Close to the southern wall of the imperial quarter the English legation is established in a spacious palace, formerly the residence of a Chinese duke, who has let it in perpetuity to the British government, at an annual rental of £500. Beyond this are the buildings of the Russian embassy, and nearer the wall that divides the Chinese from the Tartar portion of the city, stands the French legation. Viewed from this wall, 50 ft. high, a comprehensive glance may be had of the extent of Pekin; but the low roofs of the houses are so hid by the number of trees, that it has more the aspect of a park, especially in summer, than a great city, except where the palaces, temples, and towers rise above the foliage.—(Rennie, *Peking and the Pekinese*; Mossman, *MS. Notes*.)

PEKIN, or PEKINE, a tn. Turkey in Europe, Albania, eyalet Rum-ili, r. bank Shkumbi, about 10 m. above its mouth in the Adriatic; and 20 m. S.S.E. Durazzo. It stands on a densely wooded height, but is said to be rendered unhealthy by the extensive rice-grounds of the plains below.

PELOMPING, a tn. Independent Cambodia, on the r. bank of the Oodung, at its confluence with the Mekong or Cambodia. It stands on the borders of Cochinchina, and has some trade in raw silk, iron, dried fish, &c. Immediately below the town the Mekong turns E. at a right angle, and has a breadth of not less than 2 m.

PELORUS, a sound, New Zealand, on the N. coast of the Middle or Munster Island, in Cook's Strait, between Guard Bay and Admiralty Bay. It extends about 25 mi. in a S. direction, branching off on the E. and W. into numerous arms and creeks, and embracing a coast-line of not less than 250 m. The depth of water varies from 45 to 16 fathoms. Within the sound there are at least thirty bays or anchorages, mostly land-locked, and safe in any winds, though the gusts in bad weather are very furious. Fish may be caught in abundance.

The country around, except toward the head of the main branch, is mountainous, rising precipitously to 2000 and 3000 ft., and clothed with dense forests. The geological formation is soft clay-slate, with frequent veins of quartz an inch thick.

PELSÜEZ, a tn. Austrian empire, Hungary, co. Gömör, on the Sajo, 8 m. S.S.W. Rosenau; with ironworks, a trade in produce, and 1500 inhabitants.

PEMBA, an isl. E. Africa, about 18 m. from the mainland, and 25 m. N.N.E. of the island of Zanzibar. It is about 50 m. long from N. to S., has a low surface, is well wooded and fertile, and maintains a large population. Among the principal products are rice and bread-fruit. Great numbers of cattle and goats are reared for export. The channel between Pemba and the continent is so deep that it is said to give no soundings.

PEMBINA, a vil. N. America, so close to the boundary line between British America and the U. States, as to attract more notice than it deserves. It is situated on the Red River North, and has been described as the town and port of Pembina, sometimes with the addition of a U. States garrison: but, though the ruins of several good houses formerly occupied by a R. Catholic mission are still seen, the actual Pembina consists of only a few log-houses. About a day's journey to the W. of it, and about 7 m. S. of the boundary, a place, called St. Joseph, is springing up, and promises to become of some importance. It was founded by the Red River half-breeds, who removed to it to escape the floods from which they had previously suffered, and is already much used as a dépôt for the articles of trade brought by the citizens of the U. States from St. Paul. The country around Pembina is very fertile, and so free from undulations that the low range of the Pembina Mountains, 30 m. distant, are seen in a clear day.

PENNSYLVANIA [add.], one of the U. States. The discovery of petroleum has given a sudden accession of wealth and importance to this state. The deposits of oil lie at a depth varying from 300 to 1200 ft. below the surface; the oil region of Pennsylvania lying principally in its N.W. part, in Venango, Crawford, Clarion, and Warren cos. This district is usually known by the name of the Venango county oil region. The first discoveries of petroleum were made on Oil Creek, which flows through the most productive part of the district, and along the course of which, through Venango co., a distance of 20 m., oil-wells are abundant. The district about French Creek, which enters the Alleghany in Venango co., and its tributary Sugar Creek, is also productive. Petroleum has been found also in considerable abundance in Fayette and Green cos., in the S.W. of Pennsylvania, and probably exists in many other places of the western part of the state. It is believed that this oil region extends into Western Virginia, indications of oil having been found in the Panhandle and other places S. of the Pennsylvanian boundary. But the great oil territory of W. Virginia lies on the Little Kanawha and Hughes river, and their numerous affluents in Pleasants, Ritchie, Wirt, and Wood cos. This last territory has been only imperfectly explored, but the oil found is of a superior quality. There is also an oil region in the S. part of Ohio, continuous of the W. Virginia tract. Petroleum is found in several other parts of the U. States. The total exports of the oil from the U. States to foreign countries in 1862-5. amounted to the following quantities:—

	Gallons.
1862	10,887,330
1863	28,250,721
1864	31,872,972
1865	28,775,111

PEÑON DE VELEZ DE LA GOMERA, a tn. N. Africa, Morocco, on a lofty promontory, or rather island, of the Mediterranean, washed on all sides by the sea. It consists of only two streets, which rise in the form of an amphitheatre, and possesses a series of defensive works of considerable strength, and in good repair. Its principal buildings are the commandant's house, perched on a rocky point overhanging the town, an hospital, and large bomb-proof magazines. It belongs to the Spaniards, who use it partly as a state prison. Its harbour is too shallow to admit large vessels.

PENSACOLA [add.], a tn. U. States, cap. Escambra, co. West Florida, on the N.W. side of a bay of same name,

in the Gulf of Mexico, in a sandy and almost sterile district; lat. 30° 24' N.; lon. 87° 10' W. Till lately it had a somewhat decayed appearance, consisting of unpaved streets, with only wooden sidewalks, and houses built in the old-fashioned Spanish style, while little commercial activity was anywhere manifested. In this respect a considerable change has taken place, in consequence of the completion of the Alabama and Florida railway, and both trade and population have begun to increase. The harbour, which is admirably sheltered, admits vessels drawing 21 ft., and is capacious enough to admit any number of them. The principal public buildings are five churches and an academy. In the rear of the town are the remains of some Spanish forts. The defence which they gave to the harbour has been far more than supplied by other forts, and more especially by Fort Pickens, erected near the entrance of the bay, on the island of Santa Rosa. Pensacola became the scene of important military operations between the Federals and the Confederates, in the early part of the civil war. On 12th January, 1861, immediately after Florida had declared its adhesion to the latter, a body of 500 volunteers took possession of Forts Barrancas and M'Rea, the navy yard, naval hospital, and military barracks. The U. States officer in command had previously removed to Fort Pickens, which was invested and captured by the Confederates. Pop. (1860), 2876.

PENTEACOST, a river, British America, which flows S.S.E., and has its mouth on the N. shore of the estuary of the St. Lawrence, near Sproule Point. Its entrance, which is only 30 yards wide, has a depth of 7 ft. at low water, but at high water 16 ft. can be carried in, so that small schooners as well as boats can find shelter in its channel. Its banks for 2½ m., the utmost distance to which it is navigable, are steep cliffs of sand and clay. A fine bold sandy beach extends from its mouth to English Point, situated 7 m. to the S.W.

PEORIA, a tn. U. States, Illinois, cap. co. of same name, r. bank Illinois, here crossed by two long bridges, at the outlet of Peoria Lake, on the Illinois and Michigan canal, and at the common point of junction of these railways, 123 m. S.W. Chicago. It is laid out with great regularity, in spacious streets, lined with well-built houses, and contains twenty-four churches, several educational institutions, and county buildings. The value of its manufactures in 1860 amounted to £1,343,400. It is also a port of entry, and carries on a considerable trade. There is a large coalfield in the vicinity. Pop. (1860), 14,045.

PEPIN, a lake, U. States, Minnesota, about 30 m. below St. Paul, lies in the direct course, and is, therefore, properly nothing more than an expansion of the Mississippi, about 25 m. long by 5 m. broad. It is remarkable for its romantic scenery. A series of lofty calcareous cliffs with conical peaks bound it on the right. On the left, towards the N.E., is a lofty promontory which juts into the lake. It is about 400 ft. high, and bears the name of the Maiden's Rock, because an Indian girl, of the name of Winona, denied the lover to whom she had pledged her faith, leaped from it sooner than be forced into another marriage. On the prairie adjoining the lake are some conical mounds, apparently artificial.

PERADENIA, a botanic garden, Ceylon, about 4 m. S.W. of Kandy, the road from which leading to it passes through a continuous suburb, in which almost every house is surrounded by a little garden of cocoa-nut palms, bread-fruit, and coffee trees. It overlooks the Mahawelli-ganga, which encircles it on three sides, covers an area of nearly 150 acres, and is entered through a noble avenue of india-rubber trees (*Ficus elastica*). A group of palms, including nearly all that are indigenous to the island, stands near the entrance, and is said to be unsurpassed in variety and grandeur. The garden was established about 40 years ago, and has been productive of the greatest benefit. European and other exotics have been largely introduced; cloves, nutmegs, vanilla, and other valuable products of the Indian Archipelago have been acclimatized; foreign fruits without number—mangoes, durians, lichees, loquats, granadillas, and the avocado pear—have been propagated and diffused over the island; and the tea-plant, the chocolate, arrowroot, tapioca, W. India ginger, and many others, have been domesticated.

PERAK [add.], a state, Indian Archipelago, on the W. side of the peninsula of Malacca, bounded N. by Queda, E. Tringanu and Parhang, S. Salangore, and W. the ocean. It

extends about 100 m. along the shore, and 50 m. back from it, and seems hence to have an area of 5000 sq. m. In addition to this mainland, it possesses the Diuding and Sambilan islands. It is well watered by a river of same name, which, pursuing a very tortuous course, in a shallow channel, is navigable only by boats. The whole interior is little better than a vast jungle, with a few villages interspersed in it. The chief cultivated product is rice, but the staple article of trade is tin, of which 500 to 600 tons are annually exported to Penang. The other articles are ivory, rhinoceros' horns, bees' wax, ratans, and some perfume and dye woods. The pop. has been computed, by a very rough approximation, at 20,000.

PERCÉ, a tn. British America, Canada East, cap. co. Gaspé, on a bay of same name, on the W. shore of the Gulf of St. Lawrence, and at the foot of Mount Percé, called also the Table Roulante, which rises to the height of 1230 feet above the sea. It contains a R. Catholic church, a court-house, jail, and other requisite buildings, and has a pop. of about 1500, chiefly engaged in the fisheries. The bay is formed by White Point on the S. and Percé Rock on the N. The latter, which is narrow, and one-third of a mile long in a S.E. direction, is an outline to the range of cliffs on the S.W. side of Mal Bay, and is remarkable for two large holes which have been perforated in it by the waves, and through one of which a boat can pass at high water.

PERECSEN, a tn. Austrian empire, Transylvania, circle and 4 m. E. Szilagy-Somlyo, on the Kraszna, with a Greek united church, and 1700 inhabitants.

PERG, a tn. Austrian empire, Upper Austria, dist. and 16 m. E. Linz, on the Naarn; with a town-hospital, three large millstone quarries, and a large trade in millstones and earthenware. Pop. 1000.

PERIM, or **MEKUN**, an isl. at the entrance of the Straits of Babelmandeb, of a somewhat circular shape, and about 3 m. in diameter. In itself it is little better than a bare rock, without fresh water, and almost entirely without vegetation, but its position, and a haven on its S.W. side with from 7 to 8 fathoms water, and of dimensions sufficient to contain a fleet of ships of war, have given it a strategical importance which it would not be easy to overrate. The Red Sea is entered by two channels, called the Great and the Little Straits, the former on the W. side of Perim, passing along the mainland of Abyssinia, and the latter on the E. side, between Perim and the mainland of Arabia. The width of the Great Strait between Perim and Abyssinia is about 10 m., but much of it, owing to rocks and other dangers, is not easily navigated, and hence ships, whether passing by the Great Strait, which is little used, or by the Little Strait, which, though less than 2 m. wide, possesses advantages which have made it the ordinary thoroughfare, must pass so near Perim as to be completely commanded by any fortifications erected upon it. Great Britain, during the invasion of Egypt by Napoleon I., took possession of the island, and has recently asserted her right to it. This circumstance, taken in connection with the proposed navigable canal across the Isthmus of Suez, has attracted considerable notice, and been the subject of diplomatic correspondence. The impression is that Great Britain intends to fortify the island, but the matter is in abeyance, as the only thing resolved upon at present is the erection of a lighthouse upon it.

PERIM, an isl. India, off the W. shore of the Gulf of Cambay, on the coast of Gujerat. It is about 2 m. in length and $\frac{1}{2}$ m. in breadth, and is separated from the mainland by a narrow but very deep channel. Its strata consist generally of conglomerate, overlaid by sandstone. The chief interest attaching to it is derived from its numerous antiquities. Among these are the remains of a considerable fort, a temple containing an image of Buddha and two elephants cut out of the solid rock. The island is also interesting to geologists from the great number of organic remains found in the strata.

PEROTE, a tn. Mexico, so called from the volcano of same name in its vicinity, lat. 19° 35' N.; lon. 97° 14' W. It is a small place, but derives importance from its military school, and from the fort in its vicinity, which occupies a commanding position on the high-road to the capital, and has been much used as a state prison.

PERTHOLZ (GREAT), a tn. Austrian empire, Lower Austria, circle Upper Manhartsberg, at the source of the

Lainsitz; with a paper-mill and numerous manufactures. Pop. 1370.

PERU, two places, U. States:—1, A tn. Indiana, cap. co. Miami, on the Wabash River and canal, and on the Toledo and Wabash, and the Peru and Indianapolis railways. It possesses six churches, a handsome court-house and jail, a woollen factory, a distillery, and two foundries, and carries on a considerable trade. Pop. (1860), 2506.—2, A tn. Illinois, co. La Salle, at the head of navigation of the Illinois, and on the Chicago and Rock Island railway, 82 m. W. Chicago. It stands amid fine scenery, contains six churches, a number of manufactories, a large ship-yard and dry-dock, and carries on a very extensive trade, exporting large quantities of grain, flour, lumber, and coal, the last obtained from an extensive coalfield in the vicinity. Pop. (1860), 3134.

PESCANTINA, a tn. Italy, Venetia, prov. and 7 m. W.N.W. Verona, l. bank Adige, with 3529 inhabitants, mostly employed in the navigation of the river.

PESPIRÉ, a tn. Central America, Honduras, dep. and 80 m. N.N.W. Leon, on a plain near the Nacoome. Its streets are regularly laid out, and well paved. Among the mass of its houses, which have all red-tiled roofs, the buildings which stand out prominently are the church, the parsonage, and the cabildo, all formed of adobe. The inhabitants carry on an active trade, Pespiré being the connecting link in the traffic between the mountain city of Tegucigalpa and the ports of Amapla and La Union. Pop. 2000.

PETALI, or **PETALIE**, a group of islands, Greece, off the S.E. coast of the island of Negropont, in the entrance to the channel of Egripo. It consists of ten islands, of which Megalo and Xero are the largest. These are well wooded and partially cultivated, producing corn, olives, olive-oil, wine, cotton, and figs. Most of the others are mere islets, which, however, serve the important purpose of sheltering the roadstead lying between the largest island and Negropont, and thus rendering it one of the best harbours in the Archipelago.

PETALUMA, a tn. U. States, California, cap. co. Sonoma, on the creek of same name, 10 m. from San Pablo Bay, and 45 m. N. by W. San Francisco. It contains six or seven churches, a banking office, large school, warehouses, and three steam flour-mills. Corn and dairy products, including large quantities of butter and cheese, are the chief articles of trade. Steamboats ply daily to and from San Francisco. It was founded in 1851. Pop. (1860), 1505; in 1865, 2500 to 3000.

PETER (Str.), a tn. Austrian empire, circle Upper Wienerwald, 80 m. W. by S. Vienna. It is an industrial place, with an oil and two saw mills, and 1690 inhabitants.

PETERSBURG, a tn. and port of entry, U. States, Virginia, co. Dinwiddie, on the Appomattox, 12 m. above its junction with the James, and on several lines of railway connecting it with Richmond, Memphis, and Mobile, 25 m. S. Richmond. It stands on a slope descending gradually to the river, and affording excellent natural drainage, is well-built, and contains fourteen churches, four of them for coloured people, a custom-house and post-office, a court-house, mechanics' hall, and public library. The annual value of the manufactures is estimated at upwards of £700,000, and the export trade, consisting chiefly of cotton and tobacco, is very extensive. The town had a conspicuous part in the later episodes of the civil war, being invested by the Federal armies under General Grant, and several times bombarded and assaulted; but it was never captured until the surrender of Richmond. Pop. (1860), 18,275.

PETERSDORF, or **PERCHTHOLSDORF**, a tn. Austrian empire, Lower Austria, on the S. railway, 7 m. S.S.W. Vienna, has a remarkable parish church with a lofty tower, a ruined castle, a townhouse, a town hospital, and a bathing establishment. It is an ancient place, and suffered much during the invasions of the Turks. Much wine is produced in the district. Pop. 2500.

PETERSDORF (GREAT), a tn. Austrian empire, Hungary, co. Eisenburg, about 6 m. E.S.E. Steinamanger; with famous cattle markets, and 1370 inhabitants.

PETO, a tn. Mexico, state Yucatan, 70 m. S.E. Merida. It is a regularly built and apparently prosperous place, with a church and a monastery, the buildings of which form an enormous pile.

PETROPOLIS, a tn. Brazil, prov. and 30 m. N. Rio de

Janeiro, finely situated on a mountain 2000 ft. above the sea. It was founded by a German colony, and Germans still continue to form a large proportion of its inhabitants; but its pleasant site, healthy climate, and proximity to the capital of Brazil, have raised it rapidly to importance, and covered it with elegant hotels and splendid mansions. Among the latter stands conspicuous the palace, in which the imperial family regularly reside during the hottest months of the year, extending from December to April. This example is naturally followed by all the inhabitants of the capital whose means enable them to do so, and Petropolis has acquired all the characteristics of a fashionable watering place. Its permanent population is estimated at 7000.

PETSCHAU, a tn. Austrian empire, Bohemia, circle and about 23 m. E.N.E. Eger, cap. dist. of same name, r. bank Tepel; with a parish church, two castles, an hospital, a brewery, and four mills. Pop. 2276.

PEUERBACH, a tn. Austrian empire, Upper Austria, circle Hausruck, on the Ledererbach, about 24 m. W. Linz. It is surrounded by walls with two gates, and has a fine parish church with a lofty tower, an old and spacious castle, a statue of St. John of Neopomuk, erected in the market-place, an hospital, and other benevolent institutes. Pop. 1200.

PFRUMBERG, a tn. Austrian empire, Bohemia, circle Eger, at the foot of a mountain of same name, about 34 m. from Pilsen; with a parish church, a townhouse, a ruined castle seated on a rocky height, and 1000 inhabitants.

PHALGOO, a vast torrent, India, presid. Bengal, dist. Behar, formed by the junction of the mountain streams Mehance and Lilajun, near Gayah, about lat. 24° 44' N.; lon. 85° 3' E. During the rainy season, particularly in the latter part of it, it carries an enormous volume of water, rushing with great velocity between high and rocky banks, and filling its channel, which is from 500 to 800 yards wide. After passing through Behar and Patna, and reaching lat. 25° 25' N.; lon. 85° 30' E., about 180 m. from its remotest source, it takes an easterly direction, and retains it till it joins the Ganges on its right. It sends out numerous branches, which form a kind of network across the country, and lay it partially under water. The lower part of its course sometimes is called Mehance.

PHARSALA, or SATALDSHÉ, a tn. Turkey in Europe, eyalet and 95 m. S.S.W. Saloniki. It is the seat of a Greek archbishop, and is defended by a turreted castle, situated on a commanding height. The famous battle of Pharsalia, between Julius Cæsar and Pompey, was fought at a short distance to the N.W. Pop. 5000, almost all Greeks.

PHILIPPOPOLIS, or ФИЛИП (anc. *Trimontium*) [add.], a tn. Turkey in Europe, Roumelia, in a wide plain extending from the foot of Mount Rhodope to that of the Balkan, and watered by the Maritza, 95 m. W.N.W. Adrianople. Among the public buildings are eight Greek churches, and the palace of the Greek archbishop, an Armenian and a R. Catholic church, a Jewish synagogue, and several religious houses belonging to the Turks, a superior Greek central school, four other schools, one of which, for girls, was attended in 1860 by 160 pupils; and a Bulgarian school, with 50 pupils, partly from the town, and partly from the neighbouring villages. The trade is so extensive that the place ranks as one of the most commercial in Roumelia. A little to the W. are three villages beautifully situated, and mostly occupied as summer residences by the wealthier classes. It is one of the most populous places in Turkey, having a population of about 60,000, of whom four-sevenths are Christians, a small sprinkling of Jews, and the remainder Turks.

PITHIOTIS [anc. *Phocis*], a nome or prov. of Livadia, in northern Greece, bounded by Turkey N.; on the S. by the Gulf of Corinth; E. by Attica and the Talarita Channel; W. by Acarnania and Etolia. The surface is hilly, relieved by deep and fertile vales; the soil is good, but cultivation has done little for it. The principal products of the province are corn, wine, and olive-oil. Large flocks of goats are depastured on the green summits of the hills. The capital is Lamia.

PIULOWDEE, a tn. India, Rajpootana, state and 70 m. N.W. Joodpoor. It stands on a rising ground, and was once surrounded by a wall, of which a ruinous portion still remains. It is defended by a stone fort, on which a few guns are mounted, and contains several lofty well-built houses, belong-

ing to wealthy Jain merchants; three Jain temples, and several Hindoo pagodas, all built of a deep red sandstone. Pop. about 15,000.

PIATKOWA, a tn. Austrian empire, Galicia, circle and about 10 m. N.N.E. Sanok; is remarkable as the scene of a battle between the Poles and Russians in 1265, and contains 1550 inhabitants.

PIATRA, a tn. Turkey in Europe, Moldavia, cap. circle Niamzo, on the Bistritza, 63 m. W.S.W. Jassy. It is the seat of a court of justice, possesses a handsome church and a normal school, has a manufacture of paper, and carries on an active trade in wood sent to Galatz. Pop. 4000.

PIAZZOLA, a tn. Italy, Venetia, prov. and 11 m. N.N.W. Padua, near the Brenta; with a beautiful Centurini palace, manufactures of silk, and 4313 inhabitants.

PICTOU, a tn. British America, on the N. coast of Nova Scotia, cap. co. of same name, on the N. shore of a creek or bay, forming the best harbour which the north portion of the province possesses. It consists of houses, which are crowded together on a flat, or along the declivity of a ridge, which rises to the height of 200 ft., and contains three churches with steeples, several other places of worship, and an academy. These are all built of wood, though some of the ordinary dwellings are of stone. Opposite the town the harbour expands into three large arms, at the head of which are the East, Middle, and West Rivers. The channels of the two last are little used, except by very small craft; but the East arm is navigable for 2½ m., to the terminus of a railway, which conveys coal from the Albion mines, situated about 6 m. to the S. The working of these mines has greatly contributed to the prosperity of Pictou, and to that of the surrounding country, which is becoming well settled. There is much beautiful scenery in the vicinity of Pictou, particularly toward the W., where Rogers Hill rises to the height of 546 ft., and Mount Dalhousie to that of 950 ft. above high water. Pop. upwards of 2000.

PIERAWARTH, a tn. Austrian empire, Lower Austria, circle Lower Manhartsberg, on the Weidenbach; with two chalybeate springs, which attract many visitors, and 1210 inhabitants.

PIESTING (LOWER and UPPER), two vils. Austrian empire, Lower Austria, 36 m. S.S.W. Vienna.—*Lower Piesting*, situated in a beautiful valley of same name, has a pitch refinery, two iron mills, and a seam of lignite; and contains 1300 inhabitants.—*Upper Piesting*, in the same vicinity, with only 240 inhabitants, has two saw-mills, and manufactures of wooden ware.

PIEVE, a tn. Austrian empire, Tyrol, circle and S.E. Brixen, on the frontier of Venetia. It has a parish church built in the Gothic style, and adorned with three statues by Molling. On a lofty precipice in the vicinity is the old feudal castle of Andraz. Pop. 1300.

PILLAR, a cape, S. America, forming the N.W. extremity of Terra del Fuego and the W. point of entrance to Magellan Strait; lat. 52° 42' 50" S.; lon. 74° 43' 20" W. It is a remarkably bold cliff, which rises at its extremity to the height of 1750 ft. above the sea. A current at the rate of 1 to 2 m. an hour sweeps round the cape towards some dangerous clusters of rocks.

PILLEEBHEET, a tn. India, Rohilcund, cap. pergunnah of same name, dist. and 30 m. N.E. Bareilly, l. bank Gurrak. It is of considerable extent, and is the centre of an important trade between the Terai of Kumaon and Chinese Tartary. The rice, which bears the name of Pilleebheet, and is much prized throughout India for its whiteness, firmness, and fine flavour, is produced in the fertile valley of the Kosila, in Kumaon. Pop. 25,157.

PILNIKAU, a tn. Austrian empire, Bohemia, circle and 22 m. N.E. Gitschin; with a parish church, a townhouse, an hospital; manufactures of cotton, and a quarry, from which grindstones and whetstones are obtained. Pop. 1000.

PILOT KNOB, a vil. U. States, Missouri, co. Iron, on the St. Louis and Iron Mountain railroad, 87 m. S. by W. St. Louis. There is here a remarkable ironstone hill, variously stated to be 450 and 580 ft. high, containing iron of superior quality; indeed it is said to be almost a solid mass of iron.

PINDUR, a river, India, which issues from three snow beds on the W. side of the summit of the Himalaya, 22,491 ft.

high, in Kumaon, flows circuitously S. for 45 m. to Cherenga, then N. for 30 m., and joins the Alukuunda at Kurprag.

PINGEH, a tn. Cochin China, on a branch of the Mekong, about 27 m. from the sea. It is defended by many new fortifications constructed on European principles, possesses docks and arsenals for the building and supply of ships of war, is the residence of a provincial governor, and has a large population, and a considerable trade. It is 3 m. below Saigon, of which it is sometimes regarded as the port or suburb.

PING-HOO, a tn. China, in the S. of prov. Kiangsoo, at no great distance from Shanghai. It stands on the banks of a central canal, and contains a wild and unruly population, owing partly to the large number of boatmen, and partly to its having seldom been visited by foreigners. It is surrounded by walls, has a main street running from the E. to the W. gate, besides a number of minor streets, some of them very narrow, and is said to count among its inhabitants many retired wealthy people. The shops are in general poor, and there seems to be no particular branch of manufacture carried on to any extent. Outside the W. gate are extensive nursery gardens.

PING-SHAN, a tn. China, prov. Sechuen, l. bank Kincha-kiang, regarded by some as the proper continuation of the Yang-tze kiang. It stands at a considerable distance above Su-chow, and not far from the N. frontiers of Yunnan, and is a small place surrounded by walls, which have lately been improved and strengthened by traverses and a banquette, as a means of defence against the western rebels, who attacked it in 1861, apparently in a very inefficient manner, the very day when Colonel Sarel, in pursuing his exploration of the river, succeeded in reaching it. With the exception of about 80 m. between Quachow and Ichang, the Yang-tze-kiang is navigable from Ping-shan to its mouth. The country around Ping-shan is hilly and fertile, producing silk in considerable quantity, maize, rice, sugar-cane, &c. In the rice-fields eels and water-serpents are taken, and used as food by the boatmen and peasants.

PINGUENTE, a tn. Austrian empire, circle Istria, 23 m. S.E. Trieste; with a millstone quarry, and a seam of lignite. Pop. 1000.

PIRIATIN, a tn. Russia, gov. and 100 m. N.W. Poltava, cap. circle of same name, on the Udal, an affluent of the Sula. It has three churches, a circle and a parish school, and two charitable endowments. On a lake within the circle stands the beautiful village of Yagotin, belonging to Prince Repuin, and containing a church, and a fine castle, with a tolerably good library, and an excellent collection of paintings. Pop. 3543.

PISCO [add.], a tn. Peru, about 1 m. from the E. shore of a bay and to the S. of a river of same name, 130 m. S.S.E. Lima. The inhabitants distil a spirit known by the name of Pisco or Italia, and export it in large quantities to different parts of the coast. Sugar also is an article of trade. The place, after having greatly declined, has recently received a new impulse from the frequent calls of steamers, and the supply of several hundred large merchant vessels, which, while lying off the Chincha Islands to take in their cargo of guano, draw their provisions chiefly from Pisco. One of its greatest drawbacks is the bad landing, which, though managed by launches built for the purpose, is sometimes impracticable. The bay, which is of great extent, is formed by the peninsula of Paracas on the S. and the Ballista and Chincha Islands on the W., and may be said to have four entrances, one called the Boqueron de Pisco, between the above peninsula and the island of St. Gallan, a second between St. Gallan and the Ballista Islands, a third between the large Ballista Island and the Chincha Islands, and a fourth between the Chinchas and the N. mainland. Pop. about 3000.

PISTYN, a tn. Austrian empire, Galicia, circle and 10 m. S. Kolomea, on an affluent of the Pruth; with a cold-water-crete establishment, and 2926 inhabitants.

PITESTI, a tn. Turkey in Europe, Walachia, cap. circle and on the river Arjish, 66 m. N.W. Bucharest; is the seat of a court of primary jurisdiction, and has a church and a normal school. Pop. 8500.

PIT-HOLE CITY, a new tn. U. States, Pennsylvania, co. Venango, 5 m. N. the Alleghany River, and 10 m. N.E. Oil City. It has several banks and hotels, and numerous oil-

wells, discharging from 6000 to 8000 barrels of petroleum daily. It has grown up rapidly, and is said to contain a pop. of 10,000.

PITTEN, a tn. Austrian empire, Lower Austria, 35 m. S. Vienna. It was once the capital of a duchy, and a place of some importance in the 11th and 12th centuries; but now depends chiefly on the ironworks employed in smelting and manufacturing ore, obtained from mines worked in the vicinity. It has also a paper-mill, and some trade in fruit, which is largely grown in the district. Pop. 1400.

PLACERVILLE, a tn. U. States, California, cap. co. El Dorado, 2 m. S. of south fork of American River, and on the overland mail route, 50 m. E. by N. Sacramento. It stands in the midst of a mountainous district, in which are productive gold mines. In 1863 it contained four or five churches, a school, and numerous stores. A railway connecting it with Sacramento is nearly completed. Pop. in 1864, about 4000.

PLANIAN, a tn. Austrian empire, Bohemia, circle Czaslan, 27 m. E. Prague; with a deanery church, a mill, and 1000 inhabitants.

PLANKENSTEIN, a tn. Austrian empire, Lower Austria, circle Upper Wienerwald, at the source of the Munkbach, 51 m. S.W. Vienna. It has several saw-mills, lime and charcoal kilns, and gypsum and sandstone quarries; and contains 1100 inhabitants.

PLETERNICA, a tn. Austrian empire, kingdom of Croatia and Slavonia, co. and 4 m. S.S.W. Posega, on the Orlyava; with cavalry barracks, and 1000 inhabitants.

PLOYESHITI, a tn. European Turkey, Walachia, cap. circle Prahova, on an affluent of the Yalomitza, 33 m. N. by E. Bucharest. It lies embosomed among trees and gardens, is the seat of a court of primary jurisdiction, and has a normal school. Pop. 24,400.

POAKE, a tn. S.W. Africa, Kimbunda country, on the l. bank of the Coanza, lat. 10° 20' S.; lon. 18° E.; with about 3000 inhabitants.

POALHO, a tn. S.W. Africa, Kimbunda country, territory Sambe, 75 m. N.E. Benguela. It stands on the r. bank of the Sambe, at the foot of a steep hill commanding a splendid view. It contains about 1500 inhabitants, who raise large quantities of agricultural produce, and dispose of it to the European factories on the coast.

POCSALY, a tn. Austrian empire, Hungary, co. N. Bihar, 20 m. S.S.E. Debreczin. It has in its vicinity four ancient castles, and contains 2552 inhabitants.

PODBJEL, a tn. Austrian empire, Hungary, co. Arva-Thurocz, about 42 m. N.N.E. Neusohl, on the Arva, in a fertile district, with the remains of an old castle, and 1000 inhabitants.

PODHAJCE, a tn. Austrian empire, Galicia, circle and 15 m. W. Brzezan, cap. dist. of same name. The Tartars here sustained a bloody defeat from the Poles in 1667. P. 4419.

PODHORODCE, a tn. Austrian empire, Galicia, circle and about 32 m. W.S.W. Stry, has a fine baronial castle, and contains 1300 inhabitants.

PODIEBRAD, a tn. Austrian empire, Bohemia, circle and 20 m. N.N.W. Czaslau, on r. bank Elbe, here crossed by a chain bridge, and on the Vienna and Prague railway, with a deanery church, several public offices, a poorhouse, two hospitals, a high-school, and manufactures of alcohol, rosoglio, and liqueurs. Pop. 3311.

PODOLSK [add.], a tn. Russia, gov. and 26 m. S.S.W. Moscow, cap. circle of same name, on a series of heights on both sides of the Packra. It has two churches, a circle school, a charitable establishment, and cotton-mills. Within the circle lies the parochial village of Dubrovitz, distinguished by its beautiful cathedral, which was built by a contemporary of Peter the Great. In the same locality is the village of Lopasnia, situated on the lake of same name, and so well built as to have all the appearance of a handsome town. Pop. of Podolsk, 1640.

POHOONJ, a river, India, which rises near the S.W. boundary of Bundelcund, 20 m. S.W. Jhansi, pursues a winding course generally N.E. for 125 m., and joins the Sinde on its r. bank in lat. 26° 6' N.; lon. 78° 25' E.

POINTE AUX TREMBLES, two places, British America, Canada East:—1, *Pointe aux Trembles en Bas*, co. Portneuf, l. bank St. Lawrence, 22 m. W.S.W. Quebec. It

is much resorted to for summer residence, possesses building-yards, where vessels of large dimensions are built, and carries on a very extensive trade, chiefly in flour and lumber.—2, *Pointe aux Trembles en Haut*, co. Hochelaga, on the island, and 10 m. from city of Montreal, with a Protestant and a R. Catholic church, a Protestant institute, and some trade in flour. Pop. about 1000.

POINTE CLAIRE, a tn. British America, Canada East, cap. co. Jacques Cartier, contiguous to a station on the Grand Trunk railway, 15 m. E. Montreal, with a R. Catholic church, and two R. Catholic academies—one for boys, and the other for girls. Pop. about 1500.

POINT LEVI, a tn. British America, Canada East, co. Levi, on the St. Lawrence, opposite to Quebec, and on the Grand Trunk railway. It is a large and flourishing place, with a trade so extensive that in this respect it is surpassed only by Montreal and Quebec. Pop. about 4000.

POINT PEDRO, a tn. situated near a rocky cape of same name, forming the N. extremity of the island of Ceylon. Its streets are regular and well kept, its houses more substantial and commodious than usual, and its Hindoo temple and tank are on a scale which attests the wealth and liberality of its devotees. Its harbour, sheltered by a coral reef, affords tolerably secure anchorage, and though 20 m. N.E. from Jaffna, continues to be its principal port. In its immediate neighbourhood village cultivation is carried to its highest perfection. Every field is fenced, and every cottage has its garden, which, for the skill and care bestowed upon it, would not suffer by comparison with the best-managed market garden in the suburbs of London.

POKHURN, a tn. India, Rajpootana, state and 80 m. N.W. Joodpoor, on the great commercial routes between E. Rajpootana and Sinde. It consists of about 3000 houses, surrounded by a wall of uncemented stone, and defended by a fort, inclosed by a deep narrow ditch faced with masonry, and a wall 35 ft. high. Within the fort the residence of the chief is so isolated as to form an interior citadel capable of separate defence. The transit trade is very extensive. Close to Pokhurn are the ruins of a deserted city.

POKROV, a tn. Russia, gov. and 52 m. S.W. Vladimir, cap. circle of same name, on the Shitka, with two churches and a charitable institute. The inhabitants of the circle deal largely in wood, and wooden articles, and number 1694.

POKUR, a tn. India, dist. and 5 m. N.W. Ajmere, cap. pergunnah of same name, in a low and swampy valley, and on the borders of a lake which Hindoo superstition regards with the utmost veneration. The town, renowned for its gardens and vineyards, contains many good houses, but owes the celebrity which it possesses chiefly to its temple of Brahma, which Tod declares to be the only one he ever saw or heard of in India 'dedicated to the One God.' It was built not many years ago by a wealthy Mahratta, a minister of Scindia. Ghauts of stone give access to the water, which is visited every full moon by great numbers of pilgrims. At the same time business is not neglected, and a fair is held for camels, horses, and kine, as well as for various wares. In the environs are many shrines and cenotaphs belonging to many of the great families of India. The surrounding mountains, composed in many places of rose-coloured quartz, and presenting abrupt precipices and bold pinnacles, make the scenery striking and picturesque.

POLANGEN, a tn. Russia, gov. Courland, near the Baltic Sea, and close to the Prussian frontier, 110 m. S.W. Mitau. It has a R. Catholic church, a synagogue, a frontier custom-house, and a considerable trade. A truce between the Russians and the Poles was agreed to here in 1831. It contains 853 inhabitants, the majority of whom are Jews.

POLANY, a tn. Austrian empire, Galicia, circle and about 22 m. S. Jaslo, near the frontiers of Hungary; with glassworks, and 1300 inhabitants.

POLAU, a tn. Austrian empire, Moravia, circle and 23 m. E. Znaim, at the foot of a mountain of same name, in a picturesque district, contains an old ruined feudal castle, and carries on a trade in red wine. Pop. 1100.

POLENSHAW, a tn. India, Nizam's Dominions, in a green and fertile valley, about 4 m. wide, and inclosed by lofty hills, 150 m. E. Hyderabad. The town, nearly 2 m. in circuit, and said to be very populous, consists almost entirely of mud huts. The fort is a square of about 300 yards, in-

closed by a dry ditch, and a rampart faced with masonry, with a tower at each corner. The chief building within it is the residence of the rajah, which has nothing remarkable.

POLGAR, a tn. Austrian empire, Hungary, co. N. Bihar, between marshes not far from the Theiss, and 30 m. W.N.W. Debreczin; with important yearly markets, and 4440 inhabitants.

POLOMKA, a tn. Austrian empire, Hungary, co. Gömör, on the Gran, in a mountainous district covered with forests. It contains 2343 inhabitants, who rear sheep and cattle, work an iron mine, and fell and saw timber.

POLYKANDRO [add.], an isl. Greece, nomarch Cyclades, nearly equidistant from Milo on the W. and Nio on the E. It is of irregular shape, 9 m. long from N.W. to S.E., with breadths varying from 1 to 3 m.; has an area of 16 geo. sq. m., and contains 4000 inhabitants, who produce some wheat, wine, and olives. The town, of same name, on the N. coast, lies at the foot of a hill on which the ancient town stood, and has an Hellenist and a parish school, and a pop. of 1300. There is a stalactite cave on the island.

POMORZANY, a tn. Austrian empire, Galicia, circle and 12 m. S. by E. Zloczow; with an old castle, which is still inhabited, though its outer works were destroyed by the Tartars, into whose hands it fell in 1695. The year before, the Tartars had sustained a severe defeat from the Poles at the neighbouring village of Hodow. Pop. 3573.

PONGA [add.], a river, W. Africa, Senegambia, which acquires some magnitude in the interior, but on approaching the flat coast divides into several branches, and forms a considerable delta. The principal branches are the Mud Bar on the N., and the Sand Bar, about 7 m. to the S.E. of it. The Mud Bar is two-thirds of a mile wide, and may be entered at three-quarters flood by any vessel not drawing more than 14 ft. The Sand Bar at low tide looks formidable, from the number of shallow spots which give the appearance of an almost continued line of breakers; but as there is a rise of 9 ft. at full flood, any vessel not drawing more than 15 ft. may venture in. Once within the river, there is sufficient depth up to the town of Bangaloug.

PONIEVETZ, a tn. Russia, gov. and 60 m. N.N.E. Kovno, cap. circle of same name, on the Nevesha. It has three churches and a circle school. There are sulphur springs in the circle. Pop. 4522.

PONTRESINA [anc. *ad Pontem Sarisivanam*], a well-built village, Switzerland, can. Grisons, 30 m. S.E. Coire or Chur, in the Upper Engadin and valley of its name, 5720 ft. above sea-level. It lies on one of the two main roads between Italy and the Engadin Valley, and is an entrepôt of some importance for goods crossing the Bernina Pass. The church is an edifice of some architectural pretensions. The inhabitants are Protestants, the doctrines of the Reformation having been introduced in the sixteenth century by Paul Vergerio, Bishop of Capo d'Istria. In the vicinity are the glaciers of Roseg, Bernina and Monte del Oro. Pop. 269.

POODOOCOTTAH, a tn. India, presid. Madras, cap. dist. Poodoocottah, or Tondiman's country, on a low site surrounded by thick jungle, through which there is access only through three guarded entrances, 28 m. S.S.E. Trichinopoly. It is nearly in the form of an exact square, divided into four regular main streets. The houses in these are large and commodious, partly with terraced, but mostly with tiled roofs. In the centre of the town stands the rajah's palace, a terraced edifice of two stories, covering a large area inclosed by a wall. Outside this inclosure, on the W., is another similar structure, and on the S.E., a grand mosque. There is also a handsome pagoda. In the suburbs, where there are many gardens, there is a fine choultry, with a reservoir. The place owes its regularity and generally splendid appearance to the rajah, by whom it was recently rebuilt.

POONAH, a dist. or collectorate, India, presid. Bombay, between lat. 17° 58' and 19° 26' N.; lon. 73° 20' and 75° 10' E.; is bounded N. by Ahmednuggar, E. Ahmednuggar and Sholapore, S. and S.W. Sattarak, and W. Tannah; area, 5298 sq. m. It is intersected by numerous ridges and spurs, which proceed eastward from the W. Ghauts, and finally sink down into the plains in the Nizam's Dominions, and is watered chiefly by the Beema and its affluents. The climate at all times, except during the W. monsoon, is extremely arid. This is particularly the case in easterly winds, during which

the lips and exposed parts of the skin are cut, and become harsh and scaly. The soil partakes of the same aridity, and hence, in June, the whole country often assumes the appearance of a parched waste. A few days' rain, however, suffices to cloth it anew with verdure. The principal crops are the ordinary cereals and potatoes, which are extensively grown in the N., and find a ready market at Bombay. Cotton is grown only to a limited extent, and the growth of the mulberry, after a full and careful trial, has been pronounced a failure. The sugar-cane appears to have shared the same fate. Pop. 666,006.

POONAH [add.], cap. of the above collectorate, 80 m. S.E. Bombay, on the Moota, immediately above its confluence with the Moola. It stands in a treeless plain, terminating westward in the Ghauts, which, at the distance of a few miles, rises to the height of 1000 ft. above its level. Originally it was ill-built, with irregular streets and mean bazars, but recent improvements have entirely changed its appearance, and made it almost a European town. The old bridge across the Moota-Moola has been replaced by one of stone; another of the same material has been built across the Nagjurree Nullah; the streets and thoroughfares of the whole E. portion of the town have been macadamized, and between 1841 and 1846 no fewer than 400 houses were erected. An ample supply of water, long felt to be a want of primary importance, has at last, after several failures and a heavy expenditure, been secured, by means of a dam thrown across the Moota-Moola, and adequate water-works. Poonah being the headquarters of a division of the British army, adequate cantonments have been provided. They occupy an elevated site about a mile W. of the town, and are among the most extensive and best arranged in India. The most remarkable building is the palace of the old peishwas. It is a large structure, containing a handsome quadrangle, surrounded by cloisters of carved wooden pillars, and is now used as a prison, an hospital, and a lunatic asylum. The principal educational establishment is a government school, which has been amalgamated with the previously existing Sanscrit college, and now consists of three departments—a Sanscrit, an English, and a normal—attended in the aggregate by nearly 500 pupils. A native school for girls has also been established, with flattering prospects of success. During the Mahratta rule Poonah had extensive manufactures of piece goods, and was famous for jewellery and precious stones. These have almost entirely disappeared, and the only manufacture worth mentioning is paper, to a very limited extent. The trade is confined almost entirely to grain and the raw products of the country. Pop. about 80,000.

POONAMALLEE, a tn. India, presid. and 15 m. W.S.W. Madras, dist. Chingleput. It consists of a native town containing about 7000 inhabitants, of an old square fort, inclosed by a wall 18 ft. high, flanked with bastions, and now used partly as store-rooms and partly as a prison, and of a cantonment, which is half a mile square, and has barracks well ventilated and drained.

POONPOON, a river, India, presid. Bengal, which rises in Ramgurh, among the mountains, on the N. frontier of Behar, about lat. 24° 30' N.; lon. 84° 20' E, flows somewhat circuitously N.E., and joins the Ganges at Futwa, after a course of about 130 m.

POONRUTY, or PONARUTTEE, a tn. India, presid. and 110 m. S.S.W. Madras, dist. S. Arcot, possesses a good public bungalow, and used to be much frequented by native merchants, but its trade has recently declined. Pop. 3427.

POORAKAAD, a tn. India, presid. Madras, dist. Travancore, on the Malabar coast, 39 m. S. by E. Cochin. It has lost much of its importance in consequence of the rise of Alleppey, which has carried off a large part of its trade, but it is still a populous place, with a broad street of bazars, and a number of narrow streets, or rather lanes, branching off to the right and left. The principal buildings are a palace of the rajah of Travancore, another palace, now used as a tobacco depot, a large pagoda, and a Roman Syrian church. Several of the merchants have spacious residences. The sea appears to have made large encroachments here, as it covers the ground which was occupied by a Portuguese fort and factory, the ruins of which are still visible at low water.

POORUNDHUR, a tn. India, presid. Bombay, dist. and 20 m. S.E. Poonah. The town is an insignificant place, and

the only thing particularly deserving of notice is the hill fort, situated on a mountain of same name, which rises 1700 ft. above the plain below, and 4472 ft. above the sea. The fort, or rather two forts, an upper and a lower, are situated from 300 to 400 ft. beneath the summit, and consist of a series of curtains and bastions surmounting the natural defences of perpendicular rocks, and inclosing a considerable area. Its chief importance is derived from its commanding an important pass through the Ghauts. Sivajee, by securing the possession of it at an early period in his career, may be said to have laid the foundation of his future conquests. A treaty, which subsequent events rendered abortive, was concluded here in 1776 between the British and the Mahrattas, and is known in Indian history by the name of the Treaty of Poorundhur.

POPO (GREAT and LITTLE), two tns. W. Africa, on the Slave Coast, in the Gulf of Guinea, 200 m. E.N.E. Cape Coast Castle:—1, *Great Popo* lies behind a sand ridge, which makes it impossible to see it from the offing. This position was probably chosen as a means of facilitating the traffic in slaves, in which it long possessed a guilty pre-eminence. The means used for the suppression of this traffic having in a great measure destroyed the profits derived from it, most of the inhabitants are now better employed in collecting and preparing palm-oil.—2, *Little Popo*, situated about 13 m. W. of the former, presents an imposing front of beach storehouses, and signal poles, one of which marks the residence of the native chief. The town proper, which is about a quarter of a mile inland, is separated from the storehouses by the creek of an adjoining lagoon. The trade in palm-oil and ivory is extensive.

POPPITZ, a tn. Austrian empire, Moravia, circle Brünn; with a trade in fuel and excellent wine, and 1300 inhabitants.

PORCIA, a tn. Italy, Venetia, prov. Udine, near the railway, 2 m. S.W. Portenone; with a parish church, a paper-mill, and 2991 inhabitants.

PORCSESZD, a tn. Austrian empire, Transylvania, circle and about 7 m. S.S.E. Hermannstadt; with a large trade in leather. Chalk, and many remarkable petrefactions, are found in the vicinity. Pop. 1810.

POREBA, a tn. Austrian empire, Galicia, circle New Sandec, 20 m. S.S.E. Cracow, in an alpine district; with glass-works, and 1100 inhabitants.

PORTAGE, a tn. U. States, Wisconsin, cap. co. Colombr, on the river Wisconsin, and on the La Crowe and Milwaukie railway, 85 m. N.W. Milwaukie. It contains five churches, two large breweries, brick-kilns, a pottery, and a foundry, and carries on a considerable trade in lumber. Pop. (1860), 2879.

PORT BURWELL, a tn. British America, Canada West, co. Elgin, on the N. shore of Lake Erie, 95 m. S.W. Toronto. It is a port of entry; and having a good harbour, promises to become a place of importance. Pop. about 900.

PORT CANNING. See CANNING (PORT) in *Supp.*

PORT DALHOUSIE, a tn. British America, Canada West, co. Lincoln, at the mouth of the Welland canal, in Lake Ontario, with two churches—Church of England and Free—a superior school, a boat-building yard, and a large trade in flour. The harbour is one of the best on the lake. Pop. about 800.

PORT FRANCO, or CHARLOTTE AMALIE, cap. of the W. India island of St. Thomas, belonging to Denmark, lies among hills at the head of a spacious harbour, and is a clean, well-built place. The principal street, facing the sea and traversing the whole town, contains a number of excellent houses, a spacious hotel, and extensive stores. The trade is very important, and a great accession has been made to it by the selection of the harbour as a principal station of the British steam-packets to the W. Indies.

PORT HOOD, a vil. British America, on the W. coast of Cape Breton Island, is well situated, contains a court-house of stone, and a church with a spire, and has the only safe anchorage on this side of the island. The harbour, however, was once much more secure than at present, as it was protected by a peninsula attached to the mainland by a range of sandhills. These the waves have entirely washed away, and the peninsula has in consequence been converted into what is now known as Smith's Island, which is about 2 m. long and 210 ft. high, and has much fertile land under good cultivation.

PORTLAND, a tn. U. States, Oregon, cap. co. Multnomah, on l. bank Willamette, 15 m. from its mouth, 50 m. N. by E. Salem, and 642 m. (by sea) N. San Francisco; lat. $45^{\circ} 30' N.$; lon. $122^{\circ} 27' 30'' W.$ It is the most populous and commercial town of Oregon, and contains several churches, an asylum for the insane, a bank, numerous stores, two assay-offices, and the Oregon ironworks. Pop. (1860), 2874; in 1865 about 4500.

PORT LYTTTELTON, a seaport town, New Zealand, Middle Island, prov. Canterbury, to which it forms the chief

or only entrance, 8 m. S.E. Christchurch, and at the head of Port Victoria harbour. It is a neat town, presenting an air of regularity and completeness, with fairly metalled streets, a jail, hospital, and three churches; and is surrounded inland by a belt of precipitous volcanic hills, from 2000 to 6000 ft. high, beyond which lie the vast Canterbury Plains. Communication with Christchurch, the capital, is maintained by means of steamers plying from the harbour up the river Avon, by a railway tunnelled through the hills, and by telegraph. It exports a very large quantity of wool, and carries on a

PORT LYTTTELTON—Panoramic View from the Bridle-path to Christchurch.

considerable trade otherwise. The harbour is a fine land-locked inlet, on the N.W. side of Banks' Peninsula, and the town stands upon a small bay at the head of it, and about 4 m. within the entrance, which is 1 m. wide. The depth between the heads, which are bold and steep-to, is about 8 fathoms; this decreases to $3\frac{1}{2}$ fathoms at the anchorage opposite Lyttelton. Pop. about 2000.

PORT MONTE, a tn. S. America, Chili, at the head of Reloncavi Sound, which branches off from Ancud Gulf, on the N.E. of the island of Chiloe, lat. $41^{\circ} 30' 30'' S.$; lon. $72^{\circ} 58' W.$ It was founded by the Chilian government in 1853; and being only 15 m. S. of the flourishing German colony of Llanquihue (of which it is the port), has made rapid progress. The colony was settled here under the patronage of the Chilian government; and such is the fertility of the soil and the salubrity of the climate, and so great are the advantages offered to emigrants, that in ten years the population has increased to a total of 15,000 souls. The harbour of Port Monte is deep and perfectly sheltered from all winds, and the trade carried on at it is already very extensive, including, in addition to the direct traffic of the colony, a large export of deals of the alera—a species of pine of which an unlimited supply is obtained in the adjoining mountains. The number of persons employed in sawing and felling the timber is computed at 1200. As yet the number of houses in the town amounts only to 150, of which about 18 are of two stories. An abundant supply of good water is procured from two streams that rise in the neighbouring hills. Spaces have already been marked out for public buildings; and from the excellent position of the settlement, there is little doubt that it will eventually become one of the most prosperous places in the republic. The permanent population of Port Monte, in which the wood-cutters are not included, amounts to 610, of whom upwards of a half are natives, and the remainder chiefly Germans, with a sprinkling of French, Spaniards, British, and North Americans. The Pacific Company's mail steamers call here once a month.

PORTNEUF, a tn. British America, Canada East, cap. co. and at the river of same name where it joins the St. Lawrence, 36 m. W. Quebec; with a Protestant church, flour, saw, paper, flax, and carding mills. There are two light-houses in the vicinity. Pop. 750.

PORT NICHOLSON, New Zealand. See WELLINGTON.

PORTOBUFFOLÉ, a tn. Italy, Venetia, prov. and about 18 m. N.E. Treviso, on the Livenza, which is here navigable for vessels of nearly fifty tons. It contains a parish church and a civil hospital, and has a considerable trade.

PORTO NOVO, a tn. India, presid. and 120 m. S. by W. Madras, on the Malabar coast, at the mouth of Vellaur or Vadista. It was formerly a place of great trade, but has never recovered the disasters which Hyder inflicted upon it during his invasion of the Carnatic in 1780, though Hyder himself paid the penalty in a signal defeat by Coote, on the 1st of July, 1781. The harbour is so shallow that large vessels are obliged to discharge and take in cargo outside the bar. Owing to this and other causes the place had greatly declined, when a new source of prosperity was opened to it by the establishment of extensive ironworks by the East India Iron Company. The supply of a very pure iron ore found near the surface is unlimited, and iron and steel of a superior quality are produced. Hitherto, however, the speculation has not proved very remunerative, and the old has been succeeded by a new company, which it is hoped may be more successful. Pop. about 12,000.

PORTORÉ, a tn. Austrian empire, kingdom of Croatia and Slavonia, co. and about 6 m. E.S.E. Fiume, at the entrance of the Bay of Baccari. It has a spacious free haven defended by two castles, a lazaretto, an infirmary, a building-yard, and an important fishery, and contains 2912 inhabitants.

PORTO VIEJO, a tn. S. America, Ecuador, cap. cant. of same name, 135 m. S.W. Quito. It stands on the banks of a river of same name, in a beautiful plain, which contrasts pleasingly with the surrounding sandy district, but has nothing else in its appearance deserving of notice. The houses are built of wood, without any regard to regularity; and a college which it was proposed to found, has not been commenced. Meanwhile, as a kind of substitute for it, there are two primary schools—the one for boys and the other for girls. The chief manufactures of the district are straw hats, horsecloths, and cotton goods, plain and figured.

PORT SAN ANTONIO, S. America, on the N.E. shore of Patagonia, is the best harbour on this part of the coast, and the best place of resort for a large ship in want

of serious repair. Being only 30 m. distant from the Rio Negro, it is well situated for commercial intercourse with the interior, and only wants a proper development of its resources to become a place of importance. It is perfectly sheltered from every wind, and possesses localities in which dry docks might be built for vessels of any size. The rise of the tide varies from 18 to 30 ft.

PORT STANLEY, a tn. British America, Canada West, co. Elgin, on the N. shore of Lake Erie, and on the London and Port Stanley railway, communicating with the Great Northern and the Buffalo and Lake Huron railways, 112 m. S. W. Toronto. It possesses Church of England, Free, and Wesleyan churches, and is the entrepôt of a large trade in the surrounding fertile and well-cultivated districts, shipping from its harbour for exportation considerable quantities of flour, grain, and other commodities.

POTR ST. LUCIA, a small seaport on the S. E. coast of Africa, Zulu country, lat. 28° 26' S.; lon. 32° 26' E. It is the natural port of the Zulu country, through which imports of various kinds, and in considerable quantity, are introduced into the Orange River free state, and the Transvaal Republic.

PORUMBACH, a tn. Austrian empire, Transylvania, circle and 15 m. S. E. Hermaunstadt; with glassworks and 1700 inhabitants.

POSHAREVATZ, or **PASSAROWITZ**, a tn. Turkey in Europe, Servia, cap. circle of same name, at the foot of a mountain crest, 35 m. E. S. E. Belgrade. It is the seat of a court of justice, and has a church and a school. A treaty of peace between Austria and Turkey was concluded here in 1718. Pop. 5166.

POSINA, a tn. Italy, Venetia, prov. Vicenza; with 2937 inhabitants, who are chiefly employed in making nails.

POSTYEN, a tn. Austrian empire, Hungary, co. Upper Neutra, on the Waag, 22 m. N. N. E. Tyrnau; with a court of justice, a beautiful castle, and much-frequented yearly markets. Teplitz-Postyen, situated about 2 m. S., in a beautiful and fertile valley, is famed for its thermal sulphur springs and elegant bathing establishment. Pop. 5358.

POTISAT, a tn. Independent Cambodia, about 60 m. N. W. Oodung, in lat. 12° 15' N.; lon. 105° E. It has quarries of alabaster, and a large deposit of antimony is found in its vicinity.

POTOLYCYZ, a tn. Austrian empire, Galicia, circle Zolkiew, 23 m. N. W. Lemberg; with manufactures of stone-ware, and 2459 inhabitants.

POTOMAC [add.], a river, U. States, which is formed on the N. frontiers of Virginia by the junction of two branches—a N. and a S. The N. branch rises in the Alleghanies in the N. of the state, the S. branch in the Shenandoah range near its centre. From the point of junction, about 20 m. S. E. Cumberland, the united stream flows in an irregular curve, first N. E. and then generally S. E., till it reaches Washington. Here, changing its direction to S. and S. W., it expands into an estuary from 6 to 8 m. wide, flows for 50 m., then resumes its direction of S. E.; and continuing it for about 70 m., falls into Chesapeake Bay on its W. shore, about 75 m. from the ocean. Its entire length is about 400 m., and during nearly the whole it forms the boundary between Virginia and Maryland. Its principal tributary is the Shenandoah, which joins it immediately W. of the Blue Ridge. In the upper part of its course it forms a number of falls, and passes through much magnificent scenery, particularly where it passes the Blue Ridge at Harper's Ferry. The tide reaches Georgetown, a short distance above Washington, to which the largest vessels can ascend.

POTOOR, a tn. Ceylon, on the peninsula which forms the N. extremity of the island, about 7 m. N. E. Jaffna. It contains one of the fine old churches which were erected by the Portuguese, and which has been restored for the use of the Wesleyan missionaries, who have a successful station in the vicinity; but its most remarkable object is a well, which forms one of the wonders of the peninsula. It is about 30 ft. in diameter, and has been sunk to the depth of 144 ft. in a bed of stratified limestone so hollow that in riding over it the horse's hoofs sound as if striking on an arch. The water on the surface is fresh, lower down brackish, and at the bottom highly fetid, giving off bubbles of sulphuretted hydrogen gas. A still more remarkable fact is, that the surface rises and falls

a few inches every twelve hours, but never overflows, and never sinks below a fixed point, how large soever the quantity of water that may be withdrawn. The cause of these phenomena is still unknown. The native belief is that the well communicates by a subterranean channel with the Kierematie, near Kangesen-torre—a distance of 7 m. In 1824 government, with the view of making this apparently inexhaustible spring available for the perpetual irrigation of the surrounding districts, caused a steam-engine with three pumps to be erected at the well. It proved a failure, not from any deficiency in the supply of the water, but in its quality—the fields irrigated by it yielding no increase, but, as if they had been poisoned, barely returning the seed. Nothing can exceed the perfection to which horticulture is carried in the gardens around Potoor.

POTOSI, a tn. U. States, Wisconsin, on the Grant, 2 m. above its junction with the Mississippi, 75 m. S. W. Madison. It stands in a deep and narrow valley, in the midst of lead mines, the produce of which constitutes its principal trade. Pop. (1860), 2034.

POTSCHATEK, a tn. Austrian empire, Bohemia, circle and 26 m. S. E. Tabor, on the frontiers of Moravia. It is the seat of several public offices, contains a deanery church, an hospital, a brewery, a much-frequented mineral spring, and 2991 inhabitants.

POTSCHEFSTROOM, or **MOOI-RIVER-DORP**, a tn. S. Africa, Transvaal Republic, on the Mooi or Klokne—an affluent of the Vaal or Likna, 275 m. N. W. Port Natal. It stands on a plain almost as flat as a bowling-green, from 6 to 10 m. in diameter, and surrounded by hills, and is laid out on a large scale in erven or lots of 100 yards square. It has a very pleasing appearance, though as yet the houses—all of unburned bricks and thatched—do not exceed 100. The water, brought from 3 to 4 m. up the river, seems not to be over abundant, as the inhabitants are only supplied by turns for irrigation. Lions are still numerous in the vicinity, seven having been killed during a hunt in one day.

POTTENDORF, a tn. Austrian empire, Lower Austria, near the frontiers of Hungary, on an area of the Fischa and a canal communicating with the Leitha, has a castle belonging to Prince Esterhazy, ancient waterworks with three massive towers, a Gothic chapel, a picture gallery, a beautiful parish church, a fine park, an hospital, a poor-house, and a cotton-mill, which is said to be the largest in the Austrian dominions. Pop. 3200.

POVENETZ, a tn. Russia, gov. Olonetz, cap. circle of same name, on Lake Omega, near its N. extremity, 75 m. N. N. E. Petrozavodsk. It contains only 780 inhabitants, who are chiefly employed in fishing on the lake, or hunting wild animals for their fur.

POYANG, a lake, China, in the N. of prov. Kiangsee. It is formed mainly by the Kan-kiang, which it receives near its S. W. extremity, and discharges itself into the Yang-tze-kiang, near its N. extremity, by a channel which is about 3 m. long by 1 m. broad. On its eastern shore, at the point of outlet, stands Hoo-kow, or the "City of the Lake's Mouth." This city is perched upon a precipitous rock, while opposite to it Mount Leu-shan rears its crest majestically to the height of 5000 ft. In the distance, far to the S., the Takoo-shan, or "Great Orphan Rock," is seen rising in solitary grandeur from the bosom of the lake. Poyang and its romantic scenery furnish the subjects of many poetic legends current among the people.

PRACSEVGAJ, a tn. Austrian empire, Serbian Banat, Military Frontiers, on the Nera, 42 m. E. N. E. Belgrade; with a Greek non-united parish church, and 1970 inhabitants.

PRADNIK, a tn. Austrian empire, Galicia, circle and 3 m. N. Craeow; with a castle in which King Sigismund Augustus died in 1572, and the false Demetrius, the pretender to the Russian throne, resided in 1605. Pop. 700.

PRELOG, a tn. Austrian empire, kingdom of Croatia and Slavonia, circle and 12 m. E. N. E. Warasdin; with four mulberry plantations, a trade in silk, and 3000 inhabitants.

PREMIDI [add.], a tn. Turkey in Europe, S. Albania, eyalet and 45 m. N. N. W. Yanina, on the Voyussa. It stands between hills clothed with vineyards, contains three mosques with minarets, and has a pop. of about 3000.

PRERAU, a tn. Austrian empire, Moravia, circle and 12 m. S. E. Olmütz, in a fertile plain on the Betschwa, and

at the junction of the Prague and Olmitz with the Lundenburg and Oderberg railway. It is the seat of several public offices, and has three churches, a synagogue, a castle with a lofty tower, a townhouse also with a tower, manufactures of cloth, and cattle and other annual markets. Pop. 5419.

PRESCOTT, a tn. U. States, cap. Arizona, and seat of justice for Yavapai, picturesquely situated among the Pine Mountains, 140 m. E. the Colorado River, and 500 m. S. Salt Lake City; lat. 34° 7' N.; lon. 112° 20' W. It was founded in 1864, is built of wood, and inhabited mostly by immigrants from California and Colorado. There are mines of gold and silver in the vicinity.

PRESERVATION, a small island in the E. of Bass Strait, situated in Armstrong Channel, which separates Barren Island on the N. from Clark Island on the S., and belonging, like them, to the Furneaux group. It contributes, with Rum Island, to protect the excellent anchorage of Hamilton road in the above channel, and is frequented by flocks of sea-birds, including the barnacle goose and a few black swans. In point of numbers, however, they are all surpassed by the sooty petrels, which burrow in the ground like rabbits, and then lay two enormous eggs, and bring up their young. Of these birds Captain Flinders remarks—'A little after sunset the air at Preservation Island used to be darkened with their numbers coming in from sea; and it was generally an hour before their squabblings ceased, and every one had found his own retreat. These birds are about the size of a pigeon; and when skinned and dried in smoke, we thought them passable food. Any quantity could be procured by sending people on shore in the evening. The sole process was to thrust in the arm up to the shoulder and seize them briskly.' In 1842 this island was inhabited by an old sailor of the name of James Monro, another man, and three or four native women. They lived in rude huts, on a bleak flat, and had a number of dogs, goats, and fowls. Monro had spent twenty-three years in this desolate spot.

PRESETSCH, a tn. Austrian empire, Bohemia, circle Chrudim; with a Protestant and a R. Catholic church, a townhouse, a mill, and 1100 inhabitants.

PRIMISLJIE (UPPER AND LOWER), a tn. Austrian empire, Military Frontiers, Croatia, dist. and 12 m. S.E. Ogulin. *Ober*, or *Upper Primisljje*, has a German trivial school, and contains 1270 inhabitants.—*Unter*, or *Lower Primisljje*, has only 680 inhabitants. There are two remarkable grottoes in the vicinity.

PRINCE OF WALES, or MOORALUG, an isl. Australia, and the largest in Torres Strait, being 11 m. long from N. to S., by 10 m. broad. The N.W. coast, consisting of rocky points and small bays, with wooded valleys descending between ridges of hills to the shore, is rendered difficult of access by numerous shoals and sand-banks; the N.E. coast is fronted by a narrow coral reef. The interior is high and rocky, but comparatively little is known of it. In many parts it is well wooded, and has a fair proportion of good soil. It also appears to be the only island of the immediate neighbourhood which is permanently inhabited, though many of the others are occasionally visited by the natives.

PRINCE OF WALES, a strait, Arctic Regions, separating Baring Island from Prince Albert Land, and extending S.S.W. to N.N.E.; lat. (N.E. extremity) 73° 25' N.; lon. 115° W. It is one of the communications by which the N.W. passage between the Atlantic and Pacific Oceans may be effected, as ascertained in 1850 by Captain Sir R. M'Clure, of H.M.S. *Investigator*, who entered it, but was unable to force his way through owing to the masses of ice.

PRINCESS ROYAL, a group of isls. in Prince of Wales Strait, Arctic America, between Baring Island and Prince Albert Land; lat. about 72° 44' N.; lon. 117° 35' W.; were so named by Captain Sir R. M'Clure, of H.M.S. *Investigator*, which wintered a little to the N. of them in 1850-51. They consist of a larger and a smaller island, the former of which attains an elevation of about 500 ft., and extends a mile nearly due north and south, with an average breadth of 600 yards. Both islands are barren in the extreme, the surface consisting of small stones and pebbles.

PRISREND, or PERSERIN [add.], a tn. Turkey in Europe, Albania, eyalet Rum-III, on a mountain of same name, which leads through the Sharbagh, 75 m. E.N.E. Scutari. It is surrounded by walls, and defended by a castle,

which was once the residence of Serbian kings, and is partly built in the form of an amphitheatre on a slope of the Shar. It is the seat of the Greek bishop of N. Albania, and contains ten mosques, and a Greek and a R. Catholic church. Pop. 26,000.

PROBEN (DEUTSCH), a tn. Austrian empire, Hungary, co. Lower Neutra, 28 m. N.N.W. Schemnitz; with 2720 inhabitants, the greater part of whom are tanners, shoemakers, or cutlers.

PRONA (TORU), a tn. Austrian empire, Hungary, co. Arva Thurcoz, 20 m. N.W. Neusohl, in a pastoral and wooded district. It has a chateau and a mineral spring, and contains 1100 inhabitants, of whom a majority are Lutherans.

PRUSKUROV, a tn. Russia, gov. Podolsk, cap. circle of same name, at the confluence of the Ploskaia with the S. Bug, 50 m. N. Kamenetz; with four churches, a circle school, a charitable institute, and several industrial establishments. At the village of Yarmotitzu, in the circle, there is a large annual market. Pop. 7350.

PROVO, a tn. U. States, Utah, cap. co. Utah, on the Timpanogos or Provo River, 2½ m. E. of its entrance into Utah Lake, at the base of the Wasatch range, and 45 m. S.S.E. Salt Lake City. It has a church, school, townhall, flour and saw mills, tanneries, &c. The river furnishes abundant water-power. Pop. (1860), 2030; in 1865, about 3300.

PRUCKNIK, a tn. Austrian empire, Galicia, circle and 12 m. N.N.W. Przemysl; contains a fine baronial castle, and 2200 inhabitants.

PRUN, a tn. Italy, Venetia, prov. and about 9 m. N.W. Verona; with four parish churches, and the *Ponte di Vecja*, a remarkable natural bridge, which has a span of 157 ft., and is 90 ft. high and 20 ft. thick. Pop. 2214.

PRUSHANU, a tn. Russia, gov. and 80 m. S. Grodno, cap. circle of same name, on the Mukavetz. It has three churches, a circle and a parish school, and two charitable institutes. Part of the circle is still occupied by the almost impenetrable forest of Bielovesha. Pop. 4636.

PRUSSIA [add.] The result of the war with Denmark in 1864, and with Austria in 1866, has been to materially aggrandize the kingdom of Prussia, and to raise it to the foremost place in Central Europe. The Prussian territory now comprises the following constituent parts:—

	Area, sq. m.	Pop. 1864.
The Kingdom of Prussia, as previous to August, 1866.....	108,003.....	19,304,843
The Kingdom of Hanover.....	14,848.....	1,923,492
Electoral Hessen.....	3,673.....	737,283
Free City of Nassau.....	1,810.....	466,014
Free City of Frankfurt.....	34.....	89,837
Duchy of Schleswig-Holstein.....	6,809.....	960,996
Parts of Bavaria (Caudsdorf, Gersfeld, and Orb).....	214.....	32,976
Parts of Grand Duchy of Hessen (Hessen Homburg, Amt Homburg, and Amt Meisenheim).....	423.....	75,102
	135,904	23,590,543
Increase of Prussia.....	27,811	4,285,700

The kingdom of Prussia has thus been augmented by the incorporation for ever of Hanover, Electoral Hessen, Nassau, Frankfurt, Schleswig-Holstein, and ceded portions of N. Bavaria and the Grand Duchy of Hessen; and the space upon the map separating the smaller western part of Prussia (the Rhine Provinces) has been filled up, and the boundaries, formerly intricate and confused, have been simplified.

The Germanic Confederation has been dissolved, and the states which composed it, with the exception of Austria, now entirely excluded, have been ranged in two groups—North Germany, consisting of twenty states under the sole and absolute leadership of Prussia; and South Germany, numbering six states, ostensibly under the ascendancy of Bavaria, but by a secret treaty really allied with Prussia.

Not included in either North or South Germany, but nominally still belonging to the German empire, are the duchies of Luxemburg and Limburg, of an area of 1886 sq. m., and a pop. of 413,831. The following table gives the area and population of the several states of the new confederations, according to the census of 1861:—

STATES—NORTH GERMANY.	Area, sq. m.	Pop. 1864.
1. Prussia	135,904	23,590,543
2. Saxony	5,777	2,343,994
3. Mecklenburg-Schwerin	5,188	552,612
4. Oldenburg	2,428	301,812
5. Brunswick	1,424	292,708
6. Saxe-Weimar	1,403	280,201
7. Mecklenburg-Strelitz	1,052	99,000
8. Saxe-Meiningen	956	178,065
9. Anhalt	1,026	193,046
10. Saxe-Coburg-Gotha	759	164,527
11. Saxe-Altenburg	510	141,539
12. Waldeck	433	59,143
13. Lippe-Deimold	438	111,336
14. Schwartzburg-Rudolstadt	374	73,752
15. Schwartzburg-Sondershausen	332	66,189
16. Reuss-Schleiz	320	86,472
17. Schaumburg-Lippe	171	31,382
18. Reuss-Greiz	145	43,924
19. Hamburg	136	239,941
20. Lubeck	127	50,614
21. Bremen	74	104,066
22. Ober Hesse	1,268	225,696
Total of North Germany	160,245	29,220,922

Finance.—The revenue, expenditure, and public debt of the kingdom of Prussia for the years 1862–5, are thus stated:—

	Revenue.	Expenditure.	Public Debt.
1862	£20,478,511	£20,986,261	£41,151,355
1863	20,661,622	20,976,622	40,499,578
1864	21,200,060	21,575,000	41,651,707
1865	24,537,009	25,389,043	42,112,275

Trade and Commerce.—At the ports of Dantzic and Stettin the imports and exports in 1863–4, are stated as follows:—

	Imports.		Exports.	
	1863.	1864.	1863.	1864.
Dantzic	£775,588	£609,602	£3,501,584	£2,481,633
Stettin	7,053,432	3,398,810	3,968,206	1,957,509

The number and nature of the mines in Prussia, with the amount of their produce in the year 1863, the number of miners employed in the working of them, together with that of their families, are thus stated:—

Principal Mines.	No. of Mines.	Produce.		Miners.	
		Quantity.	Value at place.	No. employed.	No. of their families.
		Centner.	Thalers.		
Coal	409	286,091,502	23,361,065	71,592	128,908
Peat	453	80,524,076	3,647,151	11,715	25,244
Iron	790	27,410,048	2,500,549	15,150	27,369
Zinc	61	5,712,273	1,681,642	10,060	14,016
Lead	142	1,133,403	2,728,445	10,594	16,206
Copper	66	2,569,651	868,489	5,082	9,006
Total of principal and other mines, &c.	2,229	404,565,209	35,128,263	126,481	225,754

The states of South Germany, viz. Bavaria, Wurtemberg, Baden, the part of Grand-ducal Hesse S. of the Main, and Lichtenstein, are at liberty to enter into a national alliance with the North German Confederation, with an independent existence.

The constitution of the northern confederacy was laid down by a treaty, ratified by all the members of it at Berlin, in September, 1866, and is based upon the following principal terms:—'The several governments enter into a mutually defensive and offensive alliance, for the preservation of their integrity and independence; the objects of this alliance are to be insured by certain fundamental principles laid down by Prussia, and with the co-operation of a national parliament, to be convened jointly by the allied powers. The military forces of the allied governments are placed under the supreme command of the King of Prussia, and their several services in time of war shall be regulated by special agreement.' By the law for the election of representatives for the North German parliament, passed by the Chamber of Deputies and the Upper House of Prussia, in September, 1866, 'every man blameless in the sight of the law, who is a citizen, and of the age of twenty-five years, is to have a vote. One deputy is to be elected for every 100,000 of the population, and any surplus of 50,000 or more is to be reckoned equal to 100,000; the voting is to be in public, and every vote is to be given personally, by means of a voting card without signature, inclosed in an envelope, and placed in an urn; and the election is to be decided by the absolute majority of votes.'

As the Prussian constitution will not come into operation in the incorporated territories until October 1, 1867, and as no statistics of the kingdom in its enlarged condition can be furnished collectively for some time, the following information will be applicable to it only in its previous form; the latest particulars relating to the several subjected territories being given under their respective heads. The population, then, of the several provinces of Prussia, as it was before the war of 1866, together with the principal religious divisions, was as follows, on December 3, 1864:—

The number and tonnage (in lasts) of sailing and steam vessels, belonging to the ports of Prussia, on January 1, 1864 and 1865, were as follows:—

PORTS.	Sailing.		Steam.		Total.	
	Vessels.	Lasts.	Vessels.	Lasts.	Vessels.	Lasts.
Dantzic	117	32,799	13	601	130	33,400
Stettin	169	27,165	46	2399	215	29,564
Stralsund	167	21,489	2	62	169	21,551
Memel	89	20,773	8	368	97	21,131

PRUSSONOWITZ, a tn. Austrian empire, Moravia, circle and 16 m. S.W. Neutitschin; with a Protestant and a R. Catholic church, and 1200 inhabitants.

PRZEMISLOWITZ, a tn. Austrian empire, Moravia, circle and about 14 m. W.S.W. Olmütz, pleasantly situated, has an ancient parish church, and contains 1200 inhabitants.

PRZEMYSL [add.], a tn. Austrian empire, Galicia, cap. circle of same name, 53 m. W.S.W. Lemberg, on both banks of the San, here crossed by a long bridge, the oldest in Galicia. It is the seat of several important public offices, and the see of a R. Catholic and a Greek United bishop, and has several fine Gothic churches, particularly the R. Catholic cathedral, adorned with fine paintings and ancient war trophies; an ecclesiastical seminary, an upper gymnasium, and a high-school, a convent of Minorites, founded in 1254, Benedictine and Franciscan monasteries, a civil hospital, and an institute for the poor. The manufactures consist chiefly of linen, leather, and various articles in wood. On a neighbouring height are the ruins of a castle, in which the independent princes of Przemysl were wont to reside. The town was founded by Casimir the Great in 986, was pillaged by Boleslaus the Great in 1018, and soon after passed to the Russians, but was restored to Poland by Boleslaus the Bold in 1070. Pop: 9806.

PRZIBISLAU, a tn. Austrian empire,

PROVINCES, &c.	Pop. 1864.	Protestants.	R. Catholics.	Greek Church and other sects.	Jews.
Prussia	3,014,595	2,111,012	809,232	21,073	39,574

Of the total population the military altogether numbered 279,421.

Bohemia, circle and 26 m. S.S.E. Czaslau, cap. dist. of same name; with a parish church, a castle, a townhouse, an hospital, a brewery, manufactures of fustian and other articles, and 2330 inhabitants.

PRZIBRAM [add.], a mining tn. Austrian empire, Bohemia, circle and 32 m. S.S.W. Prague, on a stream of same name. It is an open town, with neither walls nor suburbs, and has several important offices connected with mining, a deanery church, and other deanery buildings, with two conspicuous towers; a townhouse, mining and other schools, and an archbishop's palace in a dilapidated condition. The mines, which are wrought on the Birkenberg in the vicinity, yield silver and lead, and are very productive. Pop. 7700.

PUBNA, a dist. India, presid. Bengal, between lat. 23° 34' and 24° 36' N.; lon. 88° 55' and 89° 48' E.; is bounded N. by Bogra or Bagura, N.E. Mymensing, S.E. Dacca Jelapore, S. Jessore, and W. and N.W. Nuddea and Rajeshalye; area, 2606 sq. m. A large part of the surface is occupied by water, in the form either of jheels or watercourses, which intersect it in all directions. The soil is in general of the richest description, and nothing can be more beautiful than the rural scene which presents itself to the eye of the traveller as he passes along one of its navigable streams, and beholds its fields of green corn, its natural meadows covered with cattle, and its plantations of cotton, sugar, and pawn, backed with magnificent peipul, banyan, bamboo, and cocoa trees. Pop. 600,000.—PUBNA, the capital, situated 110 m. N.E. Calcutta, on a stream of same name, an offset of the Podda, or great E. branch of the Ganges, is an insignificant place.

PUCHBUDRA, a tn. India, Rajpootana, state and 60 m. S.W. Joodpoor, stands in a fertile but partially cultivated country, and contains about 5000 inhabitants, who are chiefly employed in the manufacture of coarse cloth, or in the salt-works, which derive their supply from extensive salt marshes situated about 3 m. to the S. The revenue derived by the rajah of Joodpoor from his salt monopoly is specially allocated to the maintenance of his zenana.

PUDROWNAN, a tn. India, N.W. Provinces, dist. and 36 m. E. Goruckpore, stands in a beautiful and well-wooded district, and consists of a few tiled houses of two stories, with a far greater number of wretched huts. Pop. about 3000.

PUEBLA (LA), DE LOS ANGELES, or LA PUEBLA [add.], a city, Mexico, cap. prov. of same name; lat. 19° 5' N.; lon. 98° W.; 75 m. E.S.E. of Mexico, on the Tlascalala or Papagallo, in a fertile, extensive, and populous plateau of the Mexican Cordilleras, 7500 ft. above sea-level. The climate is genial, dry, and salubrious; the soil of the surrounding country exceedingly fertile and prolific, needing but little cultivation. Streams, descending from the neighbouring mountains, irrigate the entire plain, and also supply the inhabitants of La Puebla with an abundance of excellent water. Puebla is the third city in Mexico in point of size, and only—if at all—inferior to the capital in the regularity of its streets, the handsome appearance of its houses, the wealth of its depôts, and the splendour of its ecclesiastical edifices. The principal streets run due E. and W., crossed by others from N. to S., thus forming square blocks of houses, locally called *manzanas*. They are broad and well kept, and the pavement, being composed of vari-coloured stones of different sizes, artificially disposed so as to form lozenge-shaped figures, present a curious and attractive spectacle. The houses are usually three stories high, having flat roofs, and covered galleries open at the side running round an interior court or quadrangle. The principal square is the Plaza Mayor, which contains, on opposite sides, the cathedral and the government palace, as well as the exchange, an extensive building completed in 1700. The principal market is held in this square. The sixty churches of Puebla are profusely adorned with sculptures and paintings, carvings, and ornaments of gold and silver. A similar magnificence distinguishes the nine monasteries and thirteen nunneries which the city contains. The church and monastery of San Domingo may be cited as an example. The high altar is wholly composed of silver, and two dogs of the same metal, life size, are mounted on either side on pedestals of silver and gold. The sacristy is enriched with colours, gilding, and carved work. In the centre stands the tabernacle, 30 ft. high, consisting of marble and the precious metals. The balustrades are of solid silver, and the cloister-walls glow with richly painted representations of the

miracles of the Saviour. A peculiar and well-endowed foundation is attached to the church of San Felipe Reri. Persons of either sex desirous of preparing themselves for the sacraments, or devoting themselves to religious exercises, are received therein, and maintained for eight days without charge. Other noticeable buildings are the bishop's palace, containing a library of several thousand vols.; the mint, the theatre, and the hospital. There are also twenty-one collegiate houses or higher theological schools, besides numerous educational establishments for children of either sex. As the principal town between the seaport of Vera Cruz and Mexico the capital, Puebla enjoys an extensive trade. Its manufactures are certain tissues converted into scarfs and shawls, confectionery, porcelain, and a red pottery distinguished by the elegance of its forms, glass, earthenware, hides, and soap. In the environs there is a quarry of beautiful alabaster, which, when sawn into thin plates, becomes so transparent, that several monasteries have employed it as a substitute for glass. During the French invasion of Mexico it acquired considerable notoriety from the resistance it offered, for two months, to the French arms [May, 1863]. Pop. 71,631.

PUGWASH, a vil. British America, Nova Scotia, co. Cumberland, on the N.W. coast, near the mouth of a river in a bay of same name in Northumberland Strait. It is well situated, the river expanding into a small lake with islands and promontories, forming scenery of considerable beauty, and contains a small wooden English church. The harbour, which stands at the head of the bay, is small, and somewhat difficult of access, but is quite secure, and has depth enough for any vessel able to cross the bar, on which there is 14 ft. at low-water in ordinary spring-tides. A great deal of lumber used to be shipped here, but the supply has become deficient. In the vicinity are quarries of limestone, which, though unfit for building, is extensively worked for agricultural purposes, supplying lime to Prince Edward Island, as well as the neighbouring country.

PUL, a tn. Russian empire, E. Siberia, on the Amoor, about 100 m. below Mariensk, and about 150 m. above its mouth; lat. 52° 30' N.; lon. 140° 20' E. It has acquired some celebrity as the place where the hunters and traders assemble from all quarters at stated seasons. Tunguz hunters from the Zeya and Yablonoï bring the produce of their rifles; Gilyaks, from the shores of the Sea of Okhotsk, come with furs; and the Mangoons and Goldi with skins from the Usuri and Gorená. Here they are met by Manchóor merchants with wares from China, and even by the Japanese, and an important barter takes place.

PULICAT, a tn. India, presid. and 22 m. N. Madras, at the S. extremity of one of the islands lying at the entrance of the lake or lagoon of Pulicat. It once belonged to the Dutch, who established an important factory here in 1609. It is now a decayed place. The lagoon appears to have originated in a breach made by the sea through a low sandy beach, and the consequent flooding of the adjoining lands. It is nearly 50 m. long from N. to S., and varies in width from 2 to 11 m. The tide has a free entrance, and the water is consequently brackish. A canal, about 14 m. long, excavated between Madras and a narrow breakwater which stretches S. from the lake, gives a continuous navigation, and greatly facilitates the importation of charcoal, firewood, vegetables, and other articles of daily consumption, to the Madras markets.

PULLICONDAH, or PALICONDA, a tn. India, presid. and 120 m. W.S.W. Madras, at the base of a lofty hill of syenite, near r. bank Palar. It is the chief town of the Vellore talook; and contains two pagodas, one handsome, and the other, in front of it, supported by four lofty pillars.

PULUQUI, an isl. S. America, off the coast of Chili, the largest of those which lie between the Chaco Narrows and Reloncavi Sound, about lat. 41° 30' S.; lon. 72° 58' W., is 7 m. long, is thickly wooded, and rises gradually from its S. point to a ridge which is about 300 feet high, and traverses the island from N. to S. With Cullen, which is opposite to it, and only 2 m. distant, it forms the entrance to Reloncavi Sound, which stretches N. for 20 m., and is about 12 m. across from E. to W.

PUNA, a tn. S. America, Bolivia, prov. and 55 m. S.S.W. Chuquisaca, near one of the sources of the Pilcomayo. It is of very pleasing appearance, and has a good *plaza* and church,

and a number of shops well supplied with fruits and other necessities or luxuries. The Indians of the district are industrious, and with very imperfect tools manufacture large quantities of earthenware.

PUNGO-ANDONGO, a fort, W. Africa, Portuguese Settlements, prov. Angola, 170 m. S.E. Loanda; lat. $9^{\circ}42'14''$ S.; lon. $15^{\circ}30'$ E. It stands amid a group of curious columnar-shaped rocks, each upwards of 300 ft. high, composed of a conglomerate of a great variety of rounded pieces in a matrix of dark red sandstone. Several streams run among the rocks, and nearly in the centre stands the village, so completely environed that a handful of men could hold it against an army. It was long the stronghold of the Jinga, the original possessors of the country, who now live in independence at some distance to the N. In former times Pungo-Andongo was considered so unhealthy that banishment to its black rocks was the punishment inflicted when the judges meant the sentence to be particularly severe. It is now ascertained to be the most healthy part of Angola.

PUNIAR, a tn. India, Scindia's Dominions, 12 m. S.W. Gwalior, remarkable as the scene of a victory gained by the British, on 29th Dec. 1843, the very same day when a still more important victory was gained at Maharajpore. The result was to place the court and interests of Gwalior entirely at the mercy of the British government.

PUNNAGHUR, a tn. India, Saugor and Nerbudda territory, 190 m. S.S.W. Allahabad. It is an ancient place, containing a great number of Hindoo temples, and, among other striking objects, is a curiously sculptured bull, placed on a lofty stone altar; but is very poorly built, most of the dwelling-houses being merely composed of mats coated with mud.

PUNNAH, a tn. India, Bundelcund, cap. territory of same name, 117 m. S.W. Allahabad. It stands on the N.E. slope of a barren range of hills, close to a very extensive jheel, formed by embanking the extremity of a deep valley, and though now in ruins, was once a well-built place, most of the houses being constructed of squared sandstone, and covered with tiles. The streets, with a pathway of large flags in their centre, are well formed and commodious, but many of them are tenanted only by monkeys, which are seen seated on the roofs or at the windows. The principal buildings are the rajah's palace, a large and beautiful, but dilapidated structure, embellished externally with numerous carvings, and surmounted by lofty and elegant kiosks; several Hindoo temples, in a mixed style of architecture, partly Saracenic; and a number of mausoleums, many of them of striking appearance. Punnah derived its prosperity from its diamond mines, consisting of a seam of ferruginous gravel and reddish clay, in which, after careful washing, the diamonds are found. They are still worked, but not to much profit, as the stones are not only rare, but small, and of indifferent quality.—The territory, situated between lat. $23^{\circ}52'$ and $25^{\circ}5'$ N.; lon. $79^{\circ}50'$ and $80^{\circ}45'$ E., has an area of 688 sq. m., a revenue of £80,000, and a pop. of 67,000.

PUNTENANG, a tn. Independent Cambodia, on the r. bank of the Oodung, a little below the point where it issues from Smith's Lake, and about 30 m. above the town of Oodung. It is a large place, celebrated for its pottery, with which it supplies the whole country.

PURIFICACION, or **VILLA DE LA PURIFICACION**, a tn. Mexico, state Jalisco, 122 m. S.W. Guadalaxara, at the foot of the W. slope of a mountain range, on a small stream which flows S. to the Pacific. Pop. 4000.

PURKERSDORF, a tn. Austrian empire, Lower Austria, on the Vienna and the W. railway, 7 m. W. Vienna, is the seat of several important public offices, and has an ancient castle, and a trade in the fruit of the district. Pop. 1100.

PURNEAH, a dist. India, presid. Bengal, between lat. $25^{\circ}9'$ and $26^{\circ}37'$ N.; lon. $86^{\circ}48'$ and $88^{\circ}23'$ E., is bounded N. by Nepal and Sikhim, E. Dinagore, S. Maldah and Bhagulpore, and W. Bhagulpore; length, N.E. to S.W., 117 m.; breadth, 105 m.; area, 5878 sq. m. It is covered for the most part with an alluvium so deep that the calcareous rock lying beneath it appears above the surface only at a single spot, and so low and level that nearly a half of the whole surface is annually inundated. Owing to this flooding, the soil, particularly along the banks of rivers, differs much from year to year according to the kinds of deposit left upon it, what was fertile

in one season becoming converted in the next into an almost barren sand, and *vice versa*. The drainage is carried to the Ganges directly, or by its affluents, of which the principal are the Cosy with its tributary Gogaree, and the Mahanunda. Among wild animals, none are so numerous and noxious as snakes, by whose bites it has been calculated that upwards of 100 persons and a great number of cattle annually perish. The most valuable domestic animals are buffaloes, kine, goats, and sheep. The staple crop is rice; next to it are maize, millet, wheat, pulse, and oil-seeds. Tobacco and indigo, particularly the latter, are the most important commercial crops. The manufactures, greatly declined from what they once were, consist chiefly of coarse woollen, cotton, and silk goods, and some articles in metal. The only external commerce is with Nepal. Pop. 1,600,000.

PURNEAH, cap. of the above dist., 230 m. N. by W. Calcutta, consists of the town proper, and a series of straggling suburbs. The town incloses a space of about 3 m. sq., much of it however occupied by plantations, gardens, and open places. The best part, situated on the l. bank of the Little Cosy, consists of three parallel streets, one of them about $\frac{1}{2}$ m. long, wide, tolerably straight, and lined with houses which are generally well built and tiled. Among the inhabitants, estimated at nearly 50,000, are a number of wealthy capitalists engaged in banking.

PURROOAH, or **PARRUA**, a tn. India, presid. Bengal, dist. Maldah, 180 m. N. by W. Calcutta. It is an ancient place, now nearly covered with ruins, the extent and character of which attest its former grandeur. The principal street, which may still be traced in a direction from N. to S. for 6 m., contains numerous buildings, most of them constructed of materials drawn from the still more ancient and extensive city of Gaur, situated about 12 m. farther S., and long the capital of Bengal. Among the more perfect structures still existing are the Adinah mosque, an immense pile surrounded by colonnades, and surmounted by numerous domes; and the Golden Mosque.

PURTABGURH, two petty territories and tns. India:—1, A TERRITORY, Rajpootana, between lat. $23^{\circ}14'$ and $24^{\circ}14'$ N.; lon. $74^{\circ}27'$ and $75^{\circ}E.$, bounded N. and N.W. by Mewar or Oodeypoor, E. Mundisore, Jowra, and Rutlam, and S. and S.W. Banswara; area, 1457 sq. m.; revenue, £17,500; pop. 145,700.—The town, capital of the above, 95 m. N.W. Oojein, is a place of considerable size, but contains nothing particularly deserving of notice.—2, A TERRITORY, Oude, lying between lat. $25^{\circ}40'$ and $26^{\circ}15'$ N.; lon. $81^{\circ}40'$ and $82^{\circ}5'$ E., and bounded N.E. by Sultanpoor, E. Joonpoor, S. Allahabad, and W. Ahladganj and Salou; length, N.E. to S.W., 45 m.; breadth, 20 m.—The town, cap. of the above dist., 32 m. N. Allahabad, occupies a rather elevated site in a sandy district, and is surrounded by a mud wall, and defended by a fort, both in a dilapidated state. The inhabitants, almost all cultivators, are estimated at 10,000.

PUSILAWA, a dist. Ceylon, Central province, about 15 m. S. Kandy. It is by far the largest and most productive coffee district of the island, having 6900 acres under cultivation, and yielding on an average of two years (1855, 1856) 40,000 cwt. of coffee. The number of coolies required as labourers in crop time is 10,000. The district consists chiefly of a valley, overhung on its S.E. side by a chain of wooded hills. Of these, Moonera-galla, or the "Peacock Rock," rises to the height of 4000 feet above the sea, commands a prospect of almost unrivalled beauty and magnificence, embracing, far and wide, mountains, forests, rivers, cataracts, and plains. The plantations extend up its sides to its very summit. The tea-plant has been tried, and found to thrive amazingly, but the want of skilled labour has hitherto been an insuperable obstacle to any regular attempt to cultivate it.

PUTNA, a tn. Austrian empire, duchy Bukowina, dist. and S.S.W. Czernowitz. It contains a Basilian monastery, founded by the Moldavian prince Stephan the Great, in 1466, and possessing several interesting tombs of the Dragomir house. In the vicinity there is a cavern, apparently artificial, and once occupied by a hermit, who was much consulted during the war which was carried on by the Moldavians against the Turks.

PUTTIALAH, a native state, India, Sirhind, forming one of the Cis-Sutlej protected states, has an area of 4448 sq. m.

It is the largest and most fertile territory in Sirhind, and exports large quantities of grain across the Sutlej to Umritsir and Lahore. The present rajah distinguished himself greatly during the mutiny, by his fidelity under trying circumstances, and important services both in furnishing troops and keeping open the communication between the Punjab and the besieging force at Delhi. Pop. 662,752.

PUTTIALAH, cap. of above territory, 125 m. N.N.W. Delhi, is a neat, clean, and compact place, built chiefly of brick, densely peopled, and containing the rajah's residence, and a small fort of no great strength.

PUTTUN, or ANHULWAR PATTAN, a tn. India, Gujerat, on the Saraswati, 63 m. N.W. Ahmedabad. It stands close to the ruins of the ancient city of Anhulwara, whose walls, in the form of an irregular trapezium, about 5 m. in circuit, can still be traced, and is surrounded by a wall, the lower part of which, composed of materials drawn from the ruins, contains

many fragments of palaces, temples, and fountains, while the upper part is merely a flimsy rampart of brick. The inhabitants, about 30,000, have manufactures of silk and cotton goods, fine pottery, and sword cutlery.

PYHRA, a tn. Austrian empire, Lower Austria, 30 m. W.S.W. Vienna; with a gypsum and several saw mills, and a considerable trade in wood. Pop. 2240.

PYRGOS, or LUTRINI, a tn. Greece, Morea, nomarch Aclah and Elis, a little N. of the mouth of the Rufia in the Gulf of Arcadia. Before it was ruined by the Turks in 1825 it was the finest town in the Morea, and contained 10,000 inhabitants. At present their number does not exceed 1000, and their chief employments are fishing, cultivating the vine, and carrying on an active trade with the Ionian Islands.

PYRGOS, a tn. Greece, nomarch Cyclades, on the island of Teno; with a civil court, two parish schools, a harbour, and a pop. of 5300.

Q.

QUAICHOW, or KOEI-CHOO-FOO, a tn. China, not far from the E. frontiers of Sechuen, 1. bank Yang-tze-kiang, about 1200 m. W.N.W. Shanghai, and 85 m. from Ichang. It seems to have no trade, and only a few boats are at anchor in its vicinity. The river is here encumbered by rapids, and runs with a very strong current; the navigation is however effected by native boats, 120 feet long by 15 broad, and drawing not more than 3 feet water.

QUALISCH, a tn. Austrian empire, Bohemia, circle and 28 m. N.E. Gitschin; with limckilns, stone-quarries, coal mines, and 1100 inhabitants.

QUANGA, a tn. W. Africa, situated in a mountainous region, forming part of the Kong Mountains, 287 m. N.E. Monrovia, in Liberia. It is surrounded by walls a mile and a half in circuit, and has five gates, with roads leading from them to the principal towns of the surrounding districts. Besides fine cattle, sheep, and goats in abundance, horses, which are said not to live in Liberia, appear to thrive well, and form an article of trade. Sierra Leone English is understood by some of the inhabitants, who are in general extremely industrious, and besides raising crops of rice and corn, weave cotton cloth, and work in iron and other metals.

QU'APPELLE LAKES, British America, situated in the valley, and really expansions of the river, of same name, are eight in number, and form a chain of long narrow troughs, stretching from W. to E., with depths varying from a few feet to eleven fathoms. The most westerly, situated at what is called the Height of Land, from occupying the highest level, may be considered to belong equally to the Qu'appelle and the Saskatchewan, since the valleys of the two rivers here unite, and the water issuing from its two extremities take opposite directions, that from the W. extremity flowing W. to the S. branch of the Saskatchewan, and that from the E. extremity flowing E., and forming the true source of the Qu'appelle River. Proceeding E. along the deep narrow trough which the river has excavated to the depth of 250 ft. below the general level of the surrounding prairie, we arrive in succession at Sand-hill Lake, containing brackish water; Buffalo Pound-hill Lake, 16 m. long, and so called from the number of buffaloes taken in its vicinity; Long or Last Mountain Lake, formed by an expansion of an affluent of the Qu'appelle, and lying from N. to S., nearly at right angles to the ordinary direction; and a nearly contiguous series of four lakes, to which, from the number of fish caught in them, the name of Fishing Lakes has been given. They have an aggregate length of 22 m., and an average mean depth of 40 ft. Between the two most westerly, which are contiguous, and the two most easterly, a space of about 2 m. in length intervenes, and is traversed by a rapid stream. On this stream stands the Qu'appelle mission, which belongs to the Church of England, and was established only in 1858, though

a catechist had been labouring in the locality several years before. It is finely situated, having on the S. a vast level prairie, fertile but treeless, on the N. a country studded with groves of aspen, and on the W. and E. the four lakes, fringed with belts of timber, among which are seen ancient elms, with long drooping branches bending over their waters, and ash-leaved maples loaded with the most luscious fruit.

QU'APPELLE or CALING RIVER, British America, the most important affluent of the Assiniboine, issues from a series of lakes of same name, in the country occupied by the Plain Cree Indians, about lat. 50° 45' N.; lon. 106° W., flows circuitously E., and after a course of about 270 m., joins the Assiniboine on its r. bank at Fort Ellice. At the Qu'appelle Mission, in lon. 104°, 119 m. from the Assiniboine, the river is 48 ft. wide, and 6 ft. deep in the channel, and has a current of 1 m. an hour. Here, too, its valley is 1½ m. broad, and 250 ft. below the level of the prairie, which stretches N. and S. from its abrupt edges as far as the eye can reach. At its mouth the stream is 88 ft. broad and 12 ft. deep, and has a current of 1½ m. an hour. Its valley, which joins that of the S. branch of the Saskatchewan, has a total length of 269 m.

QUEEN CHARLOTTE, a sound, New Zealand, in the N. of Middle Island or Munster, in Cook Strait. It is formed on the S. by Cape Koamoro, which has a con-shaped hummock at its extremity, and on the S. by Cape Jackson, a long elbow-shaped point, and runs first S.S.W. for 14 m., and then S.W. by W. for 11 m. to its head; its only drawback as an anchorage is its inconvenient depth, varying from 20 to 25 fathoms. It is indented on either side by numerous bays, which, like itself, are secure, and singularly free from dangers. The land is high, and in general thickly wooded to the water's edge, rising on the N. side 1500 ft. to 2000 ft., and on the S. side, in Mounts Robertson and Treble, to 3000 ft.

QUEENSLAND, a British colony, erected in 1859, and comprehending the whole of the N.E. portion of Australia; lies between lat. 11° and 29° S.; lon. 141° and 153° 40' E.; and is bounded S. by New South Wales; W. by South Australia, and the large unsettled district called Stuart's Land, extending N. from this colony to the Gulf of Carpentaria; N.W. by this gulf; N. by Torres Strait; N.E. by the Coral Sea; and E. by the S. Pacific. In addition to the mainland, all the adjacent islands are included in the colony, which has an area of 678,600 sq. m., nearly four times that of France, and twice that of Canada at the present time. Exclusive of the outlying stations of enterprising stock and sheep farmers, which are rapidly extending in number, the actual settlement has extended over an area at least three times as large as the United Kingdom. Brisbane is the capital. The capabilities of Queensland have been rapidly developed by its erection

into an independent colony. Towards the W., indeed, a large portion of the surface is included in the region which is known by the name of the 'stony desert,' and which, though proved by recent explorations to be by no means so hopelessly barren as was at one time supposed, presents comparatively few attractions to the settler. Toward the E., however, and for a long stretch along the coast, this forbidding character entirely disappears, and boundless plains admirably adapted for sheep-walks, and lofty ranges of hills generally well wooded and intersected by fertile valleys, form the general characteristics of the country. Along the coast, and among the numberless islands which skirt it, are tracts on which cotton of excellent quality, and in almost unlimited quantity, may be grown. The coast-line presents features of greater interest than any other portion of the Australian continent. The interior is chiefly composed of a succession of alternate flats and ridges, well covered with grass and finely timbered, or spreading into extensive plains of luxuriant herbage. About 60 or 70 m. from the shore, mountain ranges run parallel to the coast-line, with spurs extending in the direction of the sea. They add an agreeable variety to the aspect of the country, and originate a series of rivers and streams, some of which are broad and navigable for a considerable distance inland. Along their banks the best alluvial soil is found; it is excellently grassed, and often heavily covered with timber. Most of the rivers have a bar at the entrance, but there is little doubt that these obstructions can be easily removed by dredging. The coast is indented with many noble bays, having capacious natural harbours, which already have been brought into practical use as the outlets for the produce of the adjacent districts, and in time will become the seats of a vast coasting and foreign commerce. Moreton Bay, at the head of which Brisbane, the capital of the colony, is situated, is about 60 m. long and 20 wide; the soil on its banks is rich, and admirably adapted for agriculture. The bay is dotted with islands, whilst five navigable rivers empty themselves into it—the Brisbane, the Arrowsmith, the Logan, the Pine, and the Caboolture. The bar at the mouth of the Brisbane is rapidly being removed by dredging, and when this obstruction is done away, the river will afford a capacious harbour, with many miles of natural wharfage for vessels of any ordinary tonnage. The other chief estuaries are Keppel Bay, Hervey's Bay, Port Curtis, Port Bowen, Port Denison, Rockingham Bay, and others. These ports afford easy access to the interior, and thus diminish the cost of carriage and shipment. Beyond the range of mountains, the watershed of the eastern coast-land, the country and climate assume a different character; and the higher elevation renders the temperature much cooler than in the low lands in the same latitude. These table-lands spread over an immense extent of country, commencing about the 28th parallel, and extending for several hundreds of miles in a succession of magnificent downs, covered with nutritious herbage, and well supplied with water. First come the Darling Downs, then succeed the Calvert Plains, Fitzroy Downs, Mantuan Downs, and the rich pastoral country of the Dawson, the Peak Downs, and the fine grassy plains of the Burdekin, extending away northward and eastward towards the Plains of Promise, which stretch along the shores of the Gulf of Carpentaria. Besides its internal resources the geographical position of the colony furnishes it with great facilities for entering the leading ocean thoroughfares, and carrying on an extensive foreign trade. The climate is generally healthy, though the thermometer has a great range; and it appears to be exempt from the hot winds of other parts of Australia. Sheep as well as cattle are found to thrive well up to lat. 18° S., and besides the rich grass, they feed upon the salt-bush, native leeks, carrots, and cucumbers. The number of cattle in the colony in 1864 was 882,073, and of sheep 5,665,334. Cotton is cultivated, and to the list of staple products sugar and tobacco have been added. Wool is the chief article of export, the value of that sent to the United Kingdom in 1863 was £225,775, and in 1864 £324,348. Agriculture is not largely followed, owing to the high cost of labour, and the difficulty of conveying the produce to market; hence it is found better to import agricultural products than to grow them. In 1864, 12,006 acres were under cultivation. Live-stock and its produce are the most profitable interest of the colony. But as facilities for commerce are extended the resources of the colony will also

be developed. A line of ports has been opened along the E. coast from Keppel Bay to Cape York, a distance of 1000 m. Port Burkstown on the Albert River, so named after the unfortunate traveller, had 300 inhabitants in 1864; Bowen, cap. of Port Denison, had a pop. of 1000; Rockhampton, on the Fitzroy River, had between 5000 and 6000; and Somerset, near Cape York, in lat. 11° S., recently founded, promises to be completely successful. The following table of the imports and exports from 1860 to 1865 shows that in the six years the total commerce of the colony had been increased nearly threefold:—

	Imports.	Exports.
1860.....	£742,023	£523,476
1861.....	967,950	709,508
1862.....	1,323,509	748,519
1863.....	1,713,263	888,381
1864.....	2,267,954	1,247,054
1865.....	2,505,550	1,153,464

Of the exports in 1864 wool constituted £1,037,663 of the amount; gold dust, £83,292; tallow, £33,009; hides and skins, £24,999; cotton, £4186. To promote the growth of cotton, for which many districts of the colony are specially adapted, a bonus of 10 acres of land has been offered by the government for every bale of Sea Island cotton weighing 300 lbs. In 1863, 2021 acres were planted with cotton. There are several coal mines in the colony, some of which are worked. Gold, also, is believed to exist in large quantities. The public income and expenditure of Queensland during the first six years of its existence are thus stated:—

	Revenue.	Expenditure
1860.....	£178,589	£180,103
1861.....	238,239	299,606
1862.....	346,431	367,317
1863.....	390,823	404,402
1864.....	502,456	439,034
1865.....	631,432	617,996

The greater part of the revenue is derived from customs duties (£195,540 in 1865), land sales (£110,996 in 1864), and rents of public lands. The chief expenditure is upon works of general utility, and for assisting emigration. The number of emigrants from the United Kingdom in 1865 was 12,551, of whom 1469 were conveyed at the expense of the colony. The population, which numbered 24,870 in 1860, had risen to 61,467 in 1864, the proportion of males to females being as three to two. At the end of December, 1865, the population had increased to 87,775. The aborigines number from 10,000 to 15,000; they are by no means deficient in intelligence, but unable to settle down to a permanent residence or any regular occupation; in the neighbourhood of the towns or large stations they make small earnings by cutting wood, drawing water, &c. Many of the men are endowed with great physical strength, and their stature increases as the equator is approached.

QUESNELLE, two lakes, British Columbia, 30 m. E. the Fraser, in lat 52° 30' N.; lon. 121° 30' W. One of the lakes runs E. and the other E. for some distance and then N.E. till it nearly meets the head-waters of Canoe River; the first is estimated at 70 m. in length, the other at 100 m. Gold is found, and largely worked around them.

QUILLOTA [add.], a tn. Chili, prov. and 30 m. N.E. Valparaiso, cap. dep. of same name, near the S. bank of the Aconagua, which here sometimes receives the name of Quillota. It lies on a wide flat, with huge bare mountains on either side, and the famous Campana or Bell Mountain in the background. It sustained a shock of an earthquake in 1822, but suffered less damage than some of the neighbouring towns. Quillota, when it first becomes visible from some of the heights around it, presents a very beautiful appearance. First, in the foreground, are seen fine evergreen forest-trees, in the mountain ravines; then green open lawns, separated by small valleys, each with its rivulet; and lastly, little square gardens, crowded with fruit-trees and every variety of vegetables. In the midst of all this loveliness rise the white walls and steeples of the town itself. There is little or no trade; and the gold-mines of the valley, long celebrated for productiveness, are no longer worked. It contains nearly 10,000 inhabitants, who are chiefly employed in cultivating the luxuriant fields in the vicinity.

QUILLOTA, or ACONAGUA, a river, Chili, which, de-

iving its waters from the melting snows of some of the highest peaks of the Andes, descends in two streams, each of them watering and fertilizing the beautiful valley of its name. After their junction it flows W., and falls into the Pacific, in lat. 32° 55' S.; lon. 71° 20' W., about 10 m. N. of Valparaiso. Though it has a course, including windings, of about 140 m., and is fed by so lofty sources, it never acquires much volume, scarcely exceeding 50 yards in width and 2½ ft. in depth. It has of course no navigable importance, but so fertilizes the valleys through which it passes, that they are at once the most productive and the best cultivated in Chili.

QUILON, KOLUM, or COULAN [add.], a tn. India, presid. Madras, dist. Travancore, in a bight on the Malabar coast, 186 m. N.W. Cape Comorin. It is said to have been founded above one thousand years ago, and is a populous place, with an extensive range of bazars, and several Parsee shops, well supplied with articles from Bombay. The cantonment, situated E. of the town, contains barracks and other buildings sufficient for three or four battalions of native and one of European troops, a Protestant church, and several officers' bungalows. On the N. of the cantonment, the British residency, a large and conspicuous building, occupies a commanding site. Near it is an antique pagoda. The dewan's catcherry and the appeal court were kept here till 1829, when they were removed to Trivandrum; about the same time the number of troops was reduced to one native regiment. The place has thus lost some of its main sources of prosperity. The chief vegetable products and articles of trade are timber, cocoa-nuts, coir, pepper, cardamoms, ginger, betel-nuts, and coffee. Estimated pop. 20,000.

QUINCHAO, an isl. S. America, Chili, in the channel between Chiloe on the W. and the mainland on the E. It is the largest of the group, lying in the bay to the S. of Tenon Point on the Chiloe shore, and is nearly 18 m. long between E.S.E. and W.N.W.

QUINTO, a tn. Italy, Venetia, prov. and about 4 m. N.N.W. Verona, at the entrance of Val Pantena; with a church, containing fine paintings by Farinato.

QUIRIHUE, a tn. Chili, prov. Maule, cap. dep. Itata, near the Cerro Coiquen, the oozing springs from which make its site little better than a swamp, 180 m. S. Valparaiso. Though containing only 1500 inhabitants, its houses are arranged in four longitudinal and six transverse streets. Its public buildings are a church and a market-house, in the latter of which one of its two schools is kept.

QUISAMAS. See **KISSAMA** in *Supp.*

QUITO [add.], a tn. S. America, the capital of Ecuador, on the E. slope of Mount Pichincha, at the height of nearly 10,000 ft. above sea-level, and 100 m. E. from the shores of the Pacific; lat. 0° 13' 18" S.; lon. 83° 25' W. Owing to the inequalities of the ground on which it stands, there is

some want of regularity in the formation of its streets, though most of them are laid out in straight lines, and intersect each other at right angles, or open into squares. Most of the houses are of two stories, and are built either of brick or of adobe. They are all roofed with tile, and not a few have ornamental fronts and iron balconies. The principal buildings are situated in the Plaza Mayor, near the centre of the city, and consist of the government-house, a modern structure; the archbishop's palace, also modern; the cathedral, and the municipality. The buildings which formerly belonged to the Jesuits are considered the finest in the place. The church, which has a stone front, is adorned with statues, columns, and sculptures of considerable merit: the college accommodates various public establishments, part being used as a university, with a seminary, a museum, and a library of 15,000 vols., part as a mint, and part as a guard-house, with an armoury. The monastery of St. Francis has a richly decorated façade, but is chiefly remarkable for the large space which it covers. The monastery of San Buenaventura is used partly as a public prison and partly as a police-office. The only other buildings deserving of notice are the monasteries of St. Dominic, St. Augustine, and Mercy, all of them adorned with handsome stone façades, and surmounted by lofty towers, among which that of the last-named monastery is most conspicuous, and contains the public bells. The charitable establishments include two hospitals, one for male and another for female patients, and an hospicio, or poor-house, occupying the old Recoleta or Retreat of the Jesuits, and partly used as a lunatic asylum. To the N. and S. of the town are two beautiful plains, laid out in ornamental grounds and gardens; and from the surrounding hills magnificent panoramic views are obtained, embracing the snowy cones of the volcanic mountains of Cayambi, Antisana, Cotopaxi, Sincholagua, Corazon, Ilinisa, Pichincha, and Cotocachi. The valley of Chilllo, situated at a short distance to the S., is a delicious spot, covered with elegant villas and country-seats; in the same locality are several extensive cotton factories; the only other manufactures of any consequence are woollen goods, bricks and tiles, and straw hats. Pop. 80,000. —(Villavicencio, *Geografía de la Republica del Ecuador.*)

QUITTA, a tn. W. Africa, Slave Coast, lat. 5° 55' 6" N.; lon. 59° 55' E. It consists partly of a dilapidated fort, which belonged to the Danes, till they sold it with their settlements in W. Africa to Great Britain, but chiefly of a large native town, occupying a narrow strip of sand on the W. side of the fort, and containing a number of square inclosures and narrow streets, lined with huts, which are built principally of clay, and neatly thatched with long grass. Both the town and fort are embosomed in a large grove of lofty cocoa-nut trees. To the E. of Quitta there is a large lagoon, about 30 m. long; its S. bank is mere sand, almost sterile, but its N. bank is loamy and very productive.

R.

RAAB, a tn. Austrian empire, Upper Austria, circle of the Inn, cap. dist. of same name, 30 m. W. by N. Linz. It has a castle, a large brewery, and numerous looms. There is a thermal spring in the vicinity. Pop. 1400.

RAAT, or RAUT, a tn. India, dist. Humeerpoor, 40 m. S. by W. Calpee, on a site rendered almost pestilential by malaria from the tanks, swamps, and rank vegetation which surround it. It is an industrious place, with a well-supplied bazar, and a pop. of 8616.

RABENSBURG, a tn. Austrian empire, Lower Austria, circle Lower Manhartsberg, on the Thaya; with 1670 inhabitants, who are of Slavonian origin, have a walk and several saw mills, and carry on a considerable trade in wine and cattle.

RABENSTEIN, a tn. Austrian empire, Lower Austria, circle Upper Wienerwald, on an affluent of the Danube, 42 m.

S.W. Vienna. It has an old castle in ruins, manufactures of potash, saw-mills, sandstone quarries, and 1380 inhabitants.

RACINE [add.], a city, U. States, Wisconsin, cap. co. Racine, is situated on the W. shore of Lake Michigan, at the mouth of the Root River, 25 m. S. by E. from Milwaukee, and 70 m. N. from Chicago. It is the second city in the state in point of commerce and population, and has one of the best harbours on the lake, formed by the mouth of the river, and admitting vessels of considerable tonnage. Racine is built on a plateau about 40 ft. above the level of the lake. Laid out in regular blocks of wide and handsome streets, containing many large public buildings, it presents to the stranger an agreeable and imposing aspect. Several newspapers are published here. There are twelve Protestant and two R. Catholic churches, a college, a bank, and central high-school. The trade of Racine is extensive, and annually increasing.

There are three ship-yards, several furnaces, machine factories, and flouring-mills, and railroad-cars are extensively made. It was first settled in 1835, and incorporated in 1848. Pop. (1860), 7822.

RACLAWICE, a tn. Austrian empire, Galicia, circle and about 12 m. S.S.W. Jaslo; with 1500 inhabitants, partly Germans, and mostly weavers.

RADOMISL, a tn. Russia, gov. and 52 m. W. Kiev, cap. circle of same name, at the confluence of the Myka and Teterev. It has two churches, a circle school, and a charitable institute, and contains 4505 inhabitants.

RADSEGH, a tn. Austrian empire, Hungary, co. Presburg, on the Little Danube; with 1900 Maygar inhabitants, who trade in wood and in cane.

RADYMNO, a tn. Austrian empire, Galicia, circle and 11 m. N. Przemysl, cap. dist. of same name; with manufactures of cordage and packsheeting, a considerable trade in fruit, and 1350 inhabitants.

RADZIECHOW, a tn. Austrian empire, Galicia, circle Zloczew, cap. dist. of same name, 42 m. N.E. Lemberg; with a baronial castle, and 2686 inhabitants.

RAEGANJ, a tn. India, presid. Bengal, dist. and 32 m. W. Dinajepore. It consists of about 1000 houses, ranged in narrow, irregular, and filthy streets, and engrosses the traffic of a large extent of rich country. Many wealthy merchants have stores here, and it has been calculated that during eight months in the year 5000 loaded oxen on an average arrive daily.

RAGOGNA, a tn. Italy, Venetia, prov. and 19 m. N.W. Udine, near the Tagliamento. It has a seam of coal among the hills that border the river, and contains 2789 inhabitants.

RAGUSA-VECCHIA, or **OLD RAGUSA**, a tn. Austrian empire, Dalmatia, circle and 6 m. S.E. Ragusa. It is the ancient Greek Epidaurus, and has a Franciscan monastery and a harbour with some trade. In the vicinity there is a remarkable stalactite cavern, in which, according to tradition, Cadmus, the ruler of Thebes, found an asylum when he fled from the Argives. Pop. 1000.

RAGUYEVATZ, a tn. Turkey in Europe, Servia, cap. circle of same name, in a spacious valley near the Servian Morava, 62 m. S.S.E. Belgrade. It is the seat of a court of justice, and has a church, a gymnasium, and an elementary school. In the vicinity there is an old castle, where several of the Servian princes used to reside. Pop. 3480.

RAHOVA, a tn. Turkey in Europe, Bulgaria, eyalet and 54 m. E.S.E. Widin, at the opening of a valley on the Danube. It has eight mosques, and a pop. of 2000.

RAIDROOG, or **РАЙДРООГ**, a tn. India, presid. Madras, dist. and 31 m. S. Bellary. It consists of an old citadel, seated on a lofty granite hill, of a lower fort, and of a town inclosed between them, and arranged in regular streets. According to the old inhabitants, it formerly contained 3000 houses, but the number at present does not exceed 700; and the revenue, said to have amounted to upwards of £50,000, now falls short of £13,000. On the ascent to the citadel, about half way up, appear the remains of the palace of the Raidroog poligar. In the same locality are two Hindoo temples. The rock on which the citadel stands has an apparent height of 1000 ft., and forms the S.E. extremity of a wild and rocky range, the jungly recesses of which are infested by leopards, wolves, and hyenas.

RAIGERN, a tn. Austrian empire, Moravia, circle and 7 m. S. Brünn, on the Schwarza, and on the railway from Brünn to Vienna. It has a Benedictine abbey, which, dating from 1048, is the oldest in Moravia; a remarkable church, a library with 20,000 volumes, manufactures of beet-root sugar, and three yearly markets. Pop. 1000.

RAINE [add.], an island, Australia, Queensland, in the centre of the opening between the N. extreme of the Great Detached Reef and the projecting point of the Great Barrier Reef. It is of coral formation, and very insignificant dimensions, being scarcely three-quarters of a mile in circuit. Its position, however, makes it of great importance. On each side of it is a clear channel—a S. which is $3\frac{1}{2}$ m., and a N. which is nearly 2 m. broad. These channels form the most eligible entrance to Torres Strait from the outer route, and Raine Island has been selected as the proper site for a searank to guide the navigation. With this view a substantial

beacon of stone was erected in 1844 on its S.E. point. It is in the form of a circular tower, 30 ft. in diameter at the base, and surmounted by a wooden dome with a ball at the top. It is painted with alternate red and black vertical stripes, and being 64 ft. in height, or 74 ft. above low-water mark, is visible in clear weather from the deck of a vessel at the distance of 8 or 9 m., and from the masthead of 10 or 12 m. An ample supply of provisions for the relief of shipwrecked and other distressed persons is from time to time lodged in the chambers of the beacon, and an iron tank, capable of containing five tons, has been placed at its base to collect the rain-water from the roof. Turtle deposit their eggs, and seabirds in incredible numbers frequent the island.

RAINCHWITZ, a tn. Austrian empire, Moravia, circle Neutitschin, about 35 m. S.E. Olmütz; with manufactures of cloth and earthenware, a paper-mill, and 1100 inhabitants, partly Protestants, partly R. Catholics.

RAINY LAKE, or **LAC LA PLUIE**, British America, 85 m. S.E. of the Lake of the Woods, and 225 m. W. of Lake Superior, is 50 m. long, $38\frac{1}{2}$ m. broad, and 294 m. in circuit, measured by canoe route. It is formed by three nearly equal troughs, with deep lateral indentations—the main trough running in an E and W. and the other two in a N. direction. The canoe route is through the main trough, from the mouth of the Nameaukan River, a feeder of the lake, in lat. $48^{\circ}30'N.$; lon. $92^{\circ}40'W.$, to its outlet by the Rainy River at its S.W. extremity. Rainy Lake is about 500 ft. above Lake Superior, and 1100 ft. above the sea. Its shores, generally low, often consist of naked shapeless masses of rock, with marshy intervals, or rise gradually in ridges which at a short distance become hills 300 to 400 ft. high. The islands, about 500 in number, are tolerably wooded, but the timber on the marshes is small and scanty, the ridges and hill flanks are absolutely sterile, and the general aspect is on the whole forbidding. The lake freezes about the 1st December, and is open about the 1st May.

RAINY RIVER, forming part of the boundaries between the U. States and British America, issues from the S.W. extremity of Rainy Lake, and flows nearly due W. to its mouth in the Lake of the Woods. The direct length of its course is 60 m., the indirect 80 m. At its point of issue it is a broad and rapid stream, with low alluvial banks, clothed with a rich second growth, the original forest having long since been stripped of its finest trees by the occupants of the old North-west and the present Hudson's Bay Company's fort Francis, which stands 2 m. from the head of the river, just below the Chaudière Falls. These magnificent cascades have a descent of 22-88 ft., and immediately beneath them is a famous fishing-ground, where the Indians obtain an abundant supply of their staple food. The river in its course receives numerous affluents, both on the l. and on the r. bank. Some of the former are large, all the latter are mere outlets to the swamps occupying the region north of Rainy River valley. The main obstacles to extended cultivation along the Rainy are the Lac la Pluie Indians, who are not only numerous, but very independent, and jealous of intruders.

RAIREE, or **YESWUNGTURH**, a fort, India, presid. Bombay, S. Concan, on the coast of Rutnagherry, at the mouth of a small river navigable for boats of considerable size. It was built by Sivajee in 1662, and passing to the rulers of Sawuntwarree, became a stronghold for pirates. The British, provoked by their depredations, captured it in 1765. It was restored next year, but finally became a British possession in 1819.

RAISEEN, a fort, India, Malwa, territory and 25 m. E. Bhopal, on an elevated tract at the E. extremity and near the summit of a sandstone hill. It is a conspicuous object for many miles around, and being a place of much strength, was often an object of contention, both during the ascendancy and during the dismemberment of the Mogul empire. In this latter period it was seized by the Mahrattas, but shortly after wrested from them by the Nabob of Bhopal, to whom it still belongs.

RAJAN, a river, which, rising in a mountainous district of Borneo, flows E. to its W. coast, and falls into the sea by six mouths. It has been described as the finest, and perhaps the largest river of the island. Its principal mouth is of easy access even by large vessels, as at low-water its bar has a depth of 3 fathoms, which is increased 10 feet by the rise of

the tide. Within the bar the depth is from 8 to 10 fathoms, and affords an easy navigation for nearly 100 m. as far as the tide reaches. Coal and iron ore are found in its upper course, but these are at present inaccessible in consequence of a series of rapids.

RAJEPOORAH, a tn. India, Sirhind, 130 m. N.N.W. Delhi. It stands in a level and fertile country, and owes its existence to a palace built here by one of the Mogul emperors. The town, situated opposite to it, is surrounded by a high brick wall, with only one entrance, and possesses a large caravanscrai, with numerous turrets and bastions, and a massive round tower, used as a prison for convicts employed on the roads. The bazar is well supplied.

RAJGHEER, or **RAJAGRIHA**, a tn. India, presid. Bengal, dist. Behar, 40 m. S. Patna. It is situated among the Rajagriha Hills, near their N.W. extremity, and on the huge and massy rampart of an old fortress, which is in the form of an irregular pentagon, and incloses a considerable space, within which are numerous large mounds, understood to be the ruins of the ancient palace of the sovereigns of Magadha or Berar. In the vicinity is a broad mound, about 4 m. long, which dams up the inundation of the periodical rains, and forms an artificial lake. The number of modern houses in the town is about 800.

RAJGURH, numerous places, India, particularly—1, A fort, Sirmour, at the height of 7115 ft. above the sea, in lat. 30° 52' N.; lon. 77° 23' E. It stands on a natural terrace jutting out from the side of a mountain, and is of a square form, with a tower at each angle. The whole structure is of slate rock, neatly cut and bound together by large beams. It was nearly demolished by the Ghoorkhas in 1814, and is in a very ruinous condition.—2, A tn. Rajpootana, state Ulwar, 76 m. S.W. Muttra, on an eminence which rises abruptly from the bottom of a valley, and is crowned by a large fort.—3, A vil. dist. and 10 m. S. Ajmeer, beautifully situated on a small lake in the immediate vicinity of a ruined fort, which is surrounded by a massive rampart of rough stone, and incloses a large area.

RAJPEEPLA, a petty state, Rajpootana, Rewa Caunta, division of Gujerat, between lat. 21° 23' and 21° 59' N.; lon. 73° 5' and 74° E., and bounded N. by the Nerbudda, E. Akraquee, S. Wusræe and Surat, and W. Broach; area, 1650 sq. m.; revenue about £22,000. The lowlands, inhabited chiefly by the Koonbees, an industrious agricultural race, are in general well cultivated, but most parts of the highlands are in the possession of a wild race, composed partly of Rajpoots and Bheels. Nandode, the capital, stands on the Kurgun. Within this territory are the celebrated cornelian mines, producing the fine pebbles which are sent to Cambay, and there cut into the various ornaments for which this town is famous. The revenue from this source, once considerable, does not now exceed £100 a year. Pop. 122,100.

RAJULDESIR, a tn. India, Rajpootana, state and 75 m. E. Bikaner, stands in a sandy district, is defended by four towers, and supplied with water from six wells 100 ft. deep, and contains a pop. of about 1500.

RAKOS (UPPER and LOWER), two nearly contiguous places, Austrian empire, Transylvania, circle and about 20 m. S.E. Udvarhely. Upper Rakos has 880 inhabitants, and a mineral spring; Lower Rakos 910 inhabitants, and an iron mine.

RAKOVICA, a tn. Austrian empire, Military Frontiers, Croatia, dist. Ogulin, about 20 m. S. Karlstadt; with a trivial school. Peter Zrine defeated the Turks here in 1649. Pop. 1950.

RAMGURH, or **HAZAREEBAGH**, a dist. India, presid. Bengal, between lat. 23° 20' and 24° 50' N.; lon. 83° 50' and 86° 38' E., is bounded N. by Behar, N.E. Mongheer, S.E. Pachete, S. Chota Nagpore, S.W. and W. Palamow; length, E. to W., 175 m.; breadth, 90; area, 8524 sq. m. Its surface is well diversified by hills and undulating plateaux, one of the most extensive of which, situated near its centre, has an elevation of 1800 ft. above the sea. Many of the rocks are composed of granite, quartz, and gneiss, but in other parts a later formation prevails, and both coal and iron are found. Lead and antimony have also been discovered. In the vicinity of the town of Hazareebagh mica is quarried in blocks, which are easily split into transparent laminae, and used as a substitute for glass, and for various ornamental

purposes. The rivers are numerous, and carry the drainage to the Ganges. Much of the surface is occupied by forests, which yield fine timber, but are infested by numerous wild animals, particularly tigers, which often commit dreadful ravages, and serpents, among which the boa-constrictor and the cobra-da-capello are prominent. Civilization is said to be at a very low ebb, and many of the inhabitants are in a half-savage state. Pop. 372,216.

RAMGURH, several places, India:—1, A tn. which, as it gives its name to the above dist., may be presumed to have been one of some importance, though it is now insignificant. It is in lat. 23° 42' N.; lon. 85° 30' E.—2, A tn. Rajpootana, territory Ulwar, 95 m. S.S.W. Delhi. It consists for the most part of wretched huts, but has a pop. bordering on 10,000.—3, A fort, Hindoor, which stands on a steep and lofty ridge overhanging the l. bank of the Sutlej, at the height of 4054 ft. above the sea, in lat. 31° 5' N.; lon. 76° 51' E. Ochterlony, having succeeded in capturing it in the beginning of the Ghoorkha war in 1814, demolished its defences.

RAMNAD [add.], a tn. India, presid. Madras, dist. and 60 m. S.E. Madura, on the Vigay. It consists of a fort and a town. The former occupies a square area measuring about half a mile each way, and is inclosed by a ditch and a loop-holed wall, 27 feet high and 5 feet thick. It is said to have been constructed in the 17th century. Within it are a large reservoir or artificial lake, a spacious palace somewhat Gothic in its style of architecture, a small but handsome Protestant church with a burying-ground adjoining, a R. Catholic chapel, an hospital, and a dispensary. The fort, which is laid out in narrow irregular streets, lined with houses generally built of mud and covered with thatch, has alone a pop. of 5000.

RAMOS, or **REAL DE RAMOS**, a tn. Mexico, state and 75 m. N.W. San Luis Potosi, on an elevated plain, 7000 ft. above the sea. It is a well-built place, telling by the number of its large and handsome dwellings, and extensive mining establishments, of a prosperity which once existed, but has now passed away. Pop. 2300.

RAMTEAK, a tn. India, territory and 24 m. N.E. Nagpore, on an elevated site composed of rocks of granite or gneiss. There is little in the town itself to attract notice, but to the E. of it is a steep hill, 500 ft. above the adjoining plain, crowned with a group of Brahminical temples, to which access is given by a broad flight of steps solidly constructed of gneiss, and provided at intervals with suitable resting-places. The principal temple and accompanying buildings are dedicated to Rama, and at the annual festival, which lasts ten days, are visited by about 100,000 devotees from all parts of Nagpore, and those parts of the Nizam's Dominions lying N. of the Godavery.

RANCAGUA, a tn. Chili, prov. Santiago, 90 m. S.E. Valparaiso. It is very prettily situated on an elevated plain, rather more than a mile N. of the Cachapual, and nearly midway between the Andes and the W. Cordilleras, contains a number of streets intersecting each other at right angles, contains some large and substantially built houses, all of them however without glazed windows; and has a fine alameda and a large plaza, on which stand two churches, a prison, and a guard-house. Pop. (1865), 5508.

RANCO, the largest lake in Chili, situated in the prov. and about 70 m. E. of the town of Valdivia. It is of a very irregular shape, with numerous projections and indentations which make it difficult to form even an approximate estimate of its area. Its greatest length is about 32 m., its breadth about 18 m. It receives its feeders from the neighbouring Cordilleras, and discharges its water by the Bueno. A little E. of this lake is a mountain ridge, forming part of the watershed between the Pacific and the Atlantic.

RANEENGUNGE, a tn. India, presid. Bengal, dist. Bancoora, on the Damooda, and a branch railway from Burdwan, 105 m. N.W. Calcutta. It owes all its importance to its coal-field, which is now successfully worked to a considerable extent.

RANGITIKI, a river, New Zealand, in the S.W. of North Island or Ulster, has its mouth in Cook Strait, between the mouths of the Manawatu and the Wanganni. It is accessible at high-water by coasters drawing 6 ft., and is navigable by boats or canoes for 50 m., but at low-water becomes fordable a mile above the entrance. The land around is

among the best in New Zealand, being level and clear of wood, with excellent pasturage for cattle. The natives in the vicinity clean some flax for export.

RANIPETT, a tn. India, presid. and 70 m. W. Madras. It owes its existence to the cantonment of Arcot, having grown up within the last half century in consequence of its establishment, and containing a pop. composed in great part of pensioned native officers, and sepoy of cavalry, and the numerous classes who have congregated to find a living in ministering to their wants. The cantonment stands on elevated ground about half a mile from the l. bank of the Palur, and descending towards it with a gentle slope. It is capable of accommodating a regiment of European and two regiments of native cavalry, but for some time there has never been more than a single regiment of native cavalry, and lately even this has been withdrawn, leaving the cantonment to be occupied only as the head-quarters of a battalion of native veterans.

RAPEL, a river, Chili, between provs. Colchagua and Santiago. It is formed by the junction of the Tingurica and Cachapual, which, fed by melting snows, descend from great elevations, and flows W.N.W. to the Pacific. It is nowhere navigable, but being much used for irrigation contributes greatly to the fertility of the districts through which it passes.

RAPID RIVER, or **LITTLE SASKATCHEWAN**, British America, rises in the S. slope of Riding Mountain, near lat. 51° N.; lon. 100° W., and after descending from its densely wooded flanks flows first S. through a narrow excavated valley, filled with balsam poplar, and an undergrowth of cherry and dogwood, then E. among groves of ash-leaved maple, then S.S.W. through an open undulating country attractive and fertile, and finally S.E. through a sandy district, covered with boulders to its junction with the Assiniboine, about lat. 49° 50' N.; lon. 99° 40' W. Its whole course, in a current so rapid as to give it a good title to its name, is about 100 m. It abounds in fish.

RAPTEE (**BURHA**), or **OLD RAPTEE**, a river, India, which rises in Oude, about lat. 27° 34' N.; lon. 82° 10' E., flows S.E. to the frontier of Goruckpore, then E., forming part of the boundary between this district and Oude, then S.E., and finally joins the Raptee on its l., in lat. 26° 58' N.; lon. 83° 17' E., after a course of 184 m. It is much used for floating down timber, but is not otherwise of navigable importance. There is a tradition among the natives that this stream owes its name of *Burha* or Old Raptee to its having once been the main channel of the Raptee, though it has now no communication with it except at the confluence.

RASDORSKALA, a tn. Russia, gov. Don Cossacks, r. bank Don, 35 m. N.E. Novo-Teherkask, with an annual fair. The vine is largely cultivated in the vicinity. Pop. 5555.

RASHKOW, a tn. Russia, gov. Bessarabia, circle and not far from Belzi; with two churches, a parish school, and a pop. of 2022.

RATTENBERG, a tn. Austrian empire, Tyrol, circle and 28 m. N.E. Innsbruck, r. bank Inn. It was a place of some strength till 1782, when its fortifications were destroyed, and possesses a handsome parish church, with fine wood carvings, a town-school, a female industrial school, and a Servite monastery. Pop. 1100.

RAWA, a tn. Austrian empire, Galicia, circle and 13 m. N.W. Zolkiew, cap. dist. of same name, situated between hills on the Rata, an affluent of the Bug. It has a Franciscan monastery, and an hospital for the poor. Here in 1690 Peter the Great and Augustus II. concluded an alliance against Charles XII. of Sweden. Pop. 4639.

RAY BUBA, a tn. W. Africa, Adamawa, cap. of the country of the Dama, a family of the Fali, 125 m. S.E. Yola. It is situated on the Chubi, a southern tributary of the Benuwe; has a wall with four gates, and is said to derive much importance from the strength of its fortifications.

RAYCZA, a tn. Austrian empire, Galicia, circle Wadowice, r. bank Sola, about 38 m. S.W. Cracow; with ironworks. In the vicinity there is a mountain pass, 5000 ft. high, leading from the valley of the Sola into that of the Kiszueza. Pop. 1700.

REAL DEL MONTE, or **MINERAL DEL MONTE**, a tn. Mexican Confederation, state and 62 m. N.N.E. Mexico, in a

deep and narrow valley at the height of 9000 ft. above the sea. It is irregularly built, and has two churches and a newly-erected house of correction, the inmates of which work in the mines. Extensive amalgam works have been recently erected in the vicinity. It contains 4000 inhabitants, who are chiefly engaged in mining operations.

REALEJO [add.], a seaport, Central America, Nicaragua, dep. Occidental, on a bay of the Pacific, 10 m. W. Leon. The port, the only one which the state possesses, is formed by the three islands of Castanon, Cardon, and Assuadores, is both well sheltered and of good depth, and has recently attracted attention as the W. terminus of a proposed navigable canal to unite the Atlantic and Pacific Oceans. The town, situated some miles above the port, is a decayed place, with about 3000 inhabitants, many of whom live in miserable hovels. The most conspicuous edifice, the convent of San Francisco, is in ruins, and the only existing building possessed of any architectural merit is the church of San Benito. The climate is very unhealthy, and the inhabitants generally have a yellow sickly hue. Realejo figures much in the history of the Buccaneers.

REBAT KERRIM, a tn. Persia, 28 m. S.W. Teheran. It is a flourishing place, and being on the highroad to Hamadan, is a station for caravans, for which it has provided good accommodation. Pop. about 1500.

RED BAY, British America, on the E. coast of Labrador, nearly in the centre of the Strait of Belle Isle, is a beautiful little harbour, sheltered from every wind. It is formed by Saddle Island, which has a hill at each end about 100 ft. above the sea. The hills of the mainland are close to the shore, and to the N.W. of the island are of reddish granite, nearly 500 ft. in height. At the head of the bay the hills are also high, and partially wooded. Within the bay there are properly two harbours, an outer and an inner. The outer harbour, which at its entrance is about 200 yards wide, is from 6 to 9 fathoms deep, over a mud bottom, and has inside a space for anchorage about 800 yards long by 400 wide. The inner harbour, immediately N.E. of this anchorage, is a capacious basin, nearly $\frac{3}{4}$ m. in diameter, with 16 or 17 fathoms water. Any number of vessels might safely winter in it. Red Bay, however, has one great disadvantage. Though it is easily entered with a leading wind, nothing larger than a schooner of 150 tons burden can beat in or out.

RED BLUFF, a tn. U. States, California, cap. co. Tehama, on the Sacramento River, at the head of navigation, 240 m. above Sacramento City, and 145 m. by road. It contains a church, school, sash and door factory, &c.; and grain and wool are shipped from the adjacent country, which is well adapted for wool growing. Steamboats ascend the river at all seasons. Pop. in 1865, about 1500.

RED DEER RIVER, British America, rises in the Rocky Mountains, between Mount Murchison on the W. and Palliser Range on the E., near lat. 52° N., lon. 117° W., flows first N.E. to a point where it is joined by the outlet of Buffalo or Bull Lake, and then, making a sudden turn, flows S.E. to its confluence with the south branch of the Saskatchewan at Chesterfield. In lat. 52° 12' N., lon. 113° W., an extensive coalfield has been discovered. One group of three beds, with partings of carbonaceous clay between, has a total thickness of 20 ft., of which 12 ft. are pure coal. At one place the coal is on fire, and, according to the Indians, has been so as long as they can remember. In consequence a heavy sulphureous and limy smell pervades the air for miles around. The extent of the coalfield in the line of the river is 14 m., sandstone cliffs succeeding it at its upper, and white marls and sands, with beds of calcareous grit, at its lower extremity. It is navigable by canoes.

RED RIVER. See *ASSINIBOIA in Supp.*

RED RIVER OF THE NORTH [add.], N. America, has its source in Ottertail Lake, Minnesota, U.S., lat. 46° 24' N., and flows W. through an undulating country, till it reaches lat. 46°, when it makes a great bend to the N., and meanders through a boundless prairie, which gradually slopes down into a vast level plain, only about 2 ft. above the river at its ordinary height in June. In lat. 46° 23' 30" a belt of timber sets in, and continues with some interruption to skirt the banks on one side or the other as far N. as Pembina, near the American frontier. Within the American territory Red River is joined by some important tributaries—on its left

bank by the Shayenne, which sweeps round the N.E. flank of the Grand Coteau de Missouri, and has its mouth in lat. 47° 3', and on the right bank by the Red, which issues from Red Lake, and has its point of confluence in lat. 47° 50'. After entering the British territory it still continues its N. course through a vast expanse of level prairie, and arrives at Fort Garry, where it receives its most important affluent, the Assiniboine, coming from the W. Now nearly doubled in volume it flows N.N.E., and enters the S. shore of Lake Winnipeg by a network of branches and mouths, lat. 50° 28' N.; lon. 96° 50' W. Within British territory its most important affluents on the right are the Roseau and German Creeks. Its whole course, measured by the windings of the stream, is 665 m., of which only 140 are in British America, and the remainder in Minnesota. About 4 m. above its mouth its banks become fringed with oak, elm, and maple, which soon give way to aspen, and then to open prairie land, the trees of larger growth appearing at intervals on the points and on the insides of the bends. The rapids and whirlpools, which occur in several parts of the stream, do not present any serious obstacle to its navigation by canoes. On its banks, particularly towards the W., are immense fertile tracts, on which settlements have already been made.

RED WING, a vil. U. States, Minnesota, cap. co. Goodhue, on r. bank Mississippi, just below the mouth of Cannon River, 6 m. above Lake Pepin, and on the Milwaukee and St. Paul railroad, 45 m. by land, and 55 m. by water below St. Paul. It contains an institution called Hamline University, a good courthouse, seven churches, a bank, steam saw-mills, &c., and ships a large quantity of wheat. Pop. (1860), 1251.

REDWOOD, a tn. U. States, California, cap. co. San Mateo, near the Bay of San Francisco, and on the railway connecting San José with San Francisco, 26 m. S. of the latter. It possesses many country-seats of wealthy citizens of the capital, and contains a church, public library, several shops and warehouses, and a flour-mill. Lumber, firewood, and grain are shipped in small vessels which reach the town by the inlets of the bay. Pop. about 1000.

REEN (SAXON), a tn. Austrian empire, Transylvania, circle and 25 m. S.E. Bistritz, on the Maros, cap. dist. of same name. It contains a very industrious population of 4877, is the seat of a district court and other public offices, and has manufactures of cloth, tanneries, and a considerable trade in wood. In the neighbouring village of Abafaja are fine gardens and a stud.

REICHENAU, a tn. Austrian empire, Lower Austria, at the entrance of the romantic Hölenthal, lying between the Schneeberg and the Razole, and near the Payerbach station of the S. railway from Vienna. It has important iron-works, employed in smelting and manufacturing the iron obtained from mines in the vicinity, an oil and numerous saw mills. Large quantities of excellent cherries grow in the district. Pop. 3900.

REICHRAMING, a tn. Austrian empire, Upper Austria, circle Traun, on a stream of same name, 85 m. W.S.W. Vienna; has important manufactures of iron, steel, and brass ware.

REIFNITZ, a tn. Austrian empire, duchy Carniola, in a valley of same name, watered by the Ribenz, 27 m. S.S.E. Laybach. It has a castle, manufactures of straw and wooden ware, and some trade, and contains 1100 inhabitants.

REITENBAU, a tn. Austrian empire, Moravia, circle and 30 m. N. Olmütz, on the Tess, with ironworks, yarn and linen bleachfields, and 1100 inhabitants.

REN, a tn. Western Africa, Bornou, prov. Kotoko, 100 m. S. Kukawa and S. of Lake Chad. It was formerly a large place, and the centre of a petty kingdom, though it is in a state of utter decay. Misgovernment on the part of Bornou has produced this, and all that it can now boast of is its picturesque site and the beautiful fig-trees shading the ruins of its high and well-built houses. The inhabitants are said to have a dialect peculiar to themselves.

RENEE, a tn. India, Rajpootana, state and 120 m. N.E. Bikaner, in a district which, watered by the Katuri, is less barren than the adjacent desert. It is surrounded by walls, and contains about 7500 inhabitants.

RENGO, a tn. Chili, prov. Colchagua, cap. dep. Caupolican, 100 m. S.E. Valparaíso. It stands near the S. bank of

one of the Rio Claros, and on so low a level as to be exposed to inundation, consists only of one irregular and unpaved street, with several elegant, among a greater number of indifferent, houses, and has a handsome church. Pop. about 2000, of whom the females are remarkable for the regularity and beauty of their features.

RENI, a tn. Turkey in Europe, Moldavia, l. bank Danube, at the confluence of the Pruth, 10 m. E. Galatz. It is a place of some strength, and carries on an active trade, particularly in corn. It is one of the places ceded by Russia in 1856. Pop. 7300.

REPPENDORF, a tn. Austrian empire, Transylvania, circle and 2 m. N.W. Hermannstadt, l. bank Zibin, with 1830 inhabitants, among whom are many descendants of people who emigrated from Upper Austria and Baden in the latter part of last century.

RESBANYA, a tn. Austrian empire, Hungary, co. S. Bihar, 45 m. S.E. Grosswärdein, near the frontiers of Transylvania; with copper mines and marble quarries, and 1600 inhabitants belonging to the non-united Greek church.

RESTAURACION, a tn. La Plata, prov. Entre Rios, advantageously situated on a gentle eminence above r. bank Uruguay, opposite to the Brazilian town Uruguayana; lat. 29° 45' S.; lon. 57° 30' W. It is of recent construction, and has an excellent haven formed by the broad and deep mouth of the Yatac close to it, but it cannot have much trade so long as it remains subject to custom-house regulations while its rival Uruguayana has been declared a free port.

RETAMO, a tn. La Plata, Pampas, near the Tunuyan, about 36 m. W.S.W. Mendoza. It is a large place with spacious but unpaved dirty streets and houses generally of one story only, yet large and commodious, with gardens attached, and so hemmed in by trees as somewhat to intercept a free circulation of air. The only buildings of consequence are the church and a large new post-house. The cordilleras seen from Retamo present a magnificent spectacle.

RETTÉG, a tn. Austrian empire, Transylvania, circle and 9 m. E.N.E. Dees, on the Szamos; with a Protestant and a Greek united church, and 1560 inhabitants.

REVELGUNJ, a tn. India, presid. Bengal, dist. Sarun, l. bank Ganges, 5 m. below the confluence of the Gogra, and 24 m. W.N.W. Dinapore. It is famous for its annual fair, which is much frequented both by dealers and devotees, the latter to bathe at the confluence.

REVPALU, a tn. Austrian empire, Hungary, co. Raab, at the confluence of the Rabinitz, which separates it from Raab, with the Danube. It has a large potash refinery, and contains 1660 inhabitants, who are mostly artisans and fishermen.

REVILLA, a tn. Mexico, state Tamaulipas, on the Sabinas, an affluent of the Rio Grande. It is picturesquely situated, and contains 2000 inhabitants. Coal has been discovered in its vicinity.

REYNOSA, a tn. Mexico, state Tamaulipas, r. bank Rio Grande, about 70 m. above its mouth, and 105 m. N.N.E. Victoria. It stands on a rocky site, of tertiary formation, and, being accessible by large steamboats, has some trade. Pop. 1500.

RIAD or **ABRUAD**, a city, Central Arabia, cap. kingdom of Nejed, 470 m. N.E. Mecca; lat. 25° N.; lon. 46° 35' E. Viewed from the N.W. stretches a wild open valley, in the foreground of which, at the foot of a pebbly slope, stands the city large and square, crowned by high towers and strong walls, a mass of roofs and terraces, and overtopping all, the huge but irregular pile of the royal palace, and near it another scarcely less conspicuous. For 3 m. or more on the surrounding plain, and more especially to the W. and S., are numbers of palm-trees overshadowing green fields and well-watered gardens. The city itself is divided into four quarters: one, the north-eastern, in which are the royal palaces, the houses of the state officers and of the richer and government classes. Here the dwellings are in general high, and the streets tolerably straight and open; but its situation is low, and it is therefore perhaps the least healthy locality of all. The second, or north-eastern quarter, is a large irregular mass of houses, of every size and description, and inhabited partially by the licentious and lawless classes. The south-western quarter, with open healthy streets, is spacious and well-peopled; it is the chief residence of the strict Wahabee religionists, and

above all here dwell the principal survivors of the family of the great religious founder, Abd-el-Wahhab. Mosques, oratories, wells for ablution, are met with at every turn. Lastly, the south-eastern quarter is large and more thickly inhabited than any other; being occupied by the lower classes of the population, it is naturally the worst built and worst kept part of the town; the ground is low, and the air not healthy; the ravages of the cholera in it in 1854-5 were fearful. Though there is no distinct separation, no gates or wall, between the quarters, each of them is considered as a municipal whole, and each has its own name. The market-place forms the centre at which these divisions meet, and has the royal palace adjoining it on the south side and the great mosque on the north. A covered gallery supported upon columns crosses the market-place, giving private access to the mosque from the palace. The palace is a square building, with handsomely carved gates, and three stories of windows, one above another; the ground floor, however, has no windows to the outside. The windows are all strongly cross-barred, and the doors solid and provided with stout locks and bolts; a glacis encircles the lower part of the walls and adds to their thickness, besides giving them the appearance of a regular fortification. Within the palace, besides the apartments of the king, are dwellings of some of the officers of state and the royal servants, all of whom, with their wives and families, form separate households. The whole is surrounded with high walls and hollow round towers, and two-thirds of the circuit has a deep but dry trench. The mosque is a large flat roofed parallelogram, supported on square wooden pillars, thickly coated with earth; the building is low, and has no pretensions to architectural beauty. In the different quarters there are thirty or more smaller mosques, though many of these are of spacious dimensions. The market forms a large open square, or rather parallelogram; its north side consists of shops and warehouses; towards the west end the covered gallery before named, upborne on a high and clumsy colonnade, crosses the breadth of the square, and behind it other shops and warehouses make up the end of the square. Its total length is about 200 paces, and its breadth rather more than half its length. Round the whole of the town run the walls, varying from 20 to 30 ft. in height; they are strong, in good repair, and defended by a deep trench and embankment. Riad was selected by Turke, when he threw off the yoke of Egypt, as the capital of Nejed, in place of Dereyeyah, which had been laid in ruins by Ibrahim Pasha, in the days of his father Abd-Allah, at the commencement of the present century.

RIASI, a tn. India, Gholab Singh's Dominions, on the slope of the most southerly ranges of the Himalaya, near l. bank Chenab; lat. 33° 5' N.; lon. 74° 52' E. The town is inconsiderable, containing only 1000 inhabitants; but the fort, situated on a rocky cone, and surrounded by a lofty stone wall rising from scarped precipices, is one of the strongest and best constructed in the country.

RIBAGO, or **RIBAWO**, a vil. or dist. Western Africa, Adamawa, in the vicinity of Yola, is a large straggling place stretching along a gentle eminence. It is surrounded by fertile corn fields, on which almost the only crop grown is a species of sorghum, and by rich meadow lands depastured by cattle, horses, asses, goats, and sheep. It is also abundantly supplied with fish from a large inlet or backwater which branches off from the Faro, and extends along the N.E. foot of the Bagele Mountain to within a short distance of the village. Pop. about 6000.

RIBVE-RIBVE, or **RIVI-RIVI**, a river, S.E. Africa, an affluent of the Shire, rising in the hills of the Maravi or Kirk's range, in about lat. 14° 50' S.; lon. 24° 30' E., and after a S.E. course of about 50 m. joining the r. bank of the Shire. The lower part of the channel is without water in the dry season, but higher up it has pools with dry spaces in the intervals, and still farther W. it becomes a fast-flowing stream, forty feet wide, and one or two feet deep. Its name implies that it has cataracts in it, and the *sunjika* ascends it to spawn; but the evaporation is so great in the hot season, that before it reaches the Shire it is quite dry. The adjacent country is divided into districts, that on the S. of the Ribve-ribve is called Nkwesi, and that on the N. Banda; these extend the whole length of the stream, and are interesting as indicating an appreciation among the natives of the value of land.

RICHIBUKTO, a river, British America, New Brunswick, which flows E. through co. Kent, and falls into a bay of same name in the Gulf of St. Lawrence, near the N.W. extremity of Northumberland Strait. It is encumbered by a very dangerous bar, which at low tide has a depth of only 13½ ft., but any vessel that can pass the bar may be taken about 13 m. up the river, and smaller vessels 22 m., nearly to the head of the tide. Many lumber ships are annually loaded at its wharves. On the l. bank of the Richibukto, near the confluence of the Aldouin, about a mile from its mouth, stands Liverpool, the capital of co. Kent.

RICHMOND [add.], a tn. British America, Canada East, cap. co. of same name, beautifully situated r. bank St. Francis, 75 m. E.N.E. Montreal. It possesses a R. Catholic and three Protestant churches, a college called St. Francis, lately erected, and intended to be conducted on what are called unsectarian principles, a mechanics' institute and library association, and manufactures of leather, pearl ash, and agricultural implements. The circuit court is held here. Pop. of township, 2200.

RICHTENFELD, a missionary station S. Africa, on the N. frontiers of Cape Colony, prettily situated on the Swakop, at the junction of the Ommortenna; lat. 28° 28' S.; lon. 17° 20' E. Near it are three groups of wretched hovels belonging to the Damaras, and containing in all about 200 inhabitants. In the vicinity there is abundance of garden ground, in which most European vegetables thrive well, and wheat of excellent quality has been grown.

RIED [add.], a tn. Austrian empire, Upper Austria, cap. circle of the Inn, on the Oberach and Breitach, 36 m. W. by S. Linz, consists of the town proper, surrounded by walls and entered by three gates, and of two suburbs; is well built, and has three churches, one of them with a conspicuous tower and fine altar-pieces, a town hospital, an infirmary, an asylum for children, and other benevolent institutions, a townhouse, a theatre, and, on an adjoining height, a castle inclosed by a deep ditch. The manufactures, which are important, consist chiefly of linen and a variety of woollen articles. Pop. 3500.

RIMASZECS, a tn. Austrian empire, Hungary, co. Gömör, 12 m. S.E. Rima-Szombath, on the Klima, with large horse markets and 1100 inhabitants.

RIMOUSKI, a tn. British America, Canada East, cap. co. of same name. r. bank St. Lawrence, 170 m. N.E. Quebec. It is a large and flourishing place, with a R. Catholic church, an institute and industrial college, an academy belonging to the Congregational nuns; tanneries, and numerous saw-mills, furnishing the materials of a very extensive trade in lumber. A large and magnificent wharf has recently been constructed at the expense of government. Rimouski is beginning to attract attention as a fashionable watering-place. Pop. about 5500.

RIINTIMBORE, or **RANTAMHOOR**, a fort, India, Rajpootana, state and 75 m. S.E. Jeypoor, on a rock isolated on all sides by deep ravines, and accessible only by a narrow pathway between steep overhanging cliffs. Crowning the summit of the rock, which is a mile long and nearly a mile broad, it is surrounded by a massive stone rampart strengthened by towers and bastions, and contains within its inclosure, in addition to the buildings required to accommodate the garrison, an ancient palace, in which the commandant resides, and a mosque, with the tomb of a reputed Mahometan saint. A perennial spring and several tanks furnish an ample supply of water. Since the introduction of artillery the fort cannot be considered as a place of strength, as it is commanded by several loftier summits. A small *pettah* or native town is situated a little to the east.

RIOBAMBA, or **BOLIVAR**, a tn. S. America, Ecuador, prov. and on the eastern slopes of the volcanic mountain of Chimborazo, 100 m. S. Quito. It is a modern place with spacious streets, only some of which are paved, and contains several churches, a college in which Latin, philosophy, and theology are taught, and an hospital. Its site appears to be upon the ruins of an ancient and more important town. The congress which in 1830 declared the independence of Ecuador. met here. Pop. about 16,000.

RIO PARDO, a tn. Brazil, prov. Rio Grande do Sul, on a height above a stream of same name, near its confluence with the Jacuhy, 80 m. W. Porto Alegre. It is probably

the oldest place in the province, and obtained a high degree of prosperity in early times when it was the central entrepôt of the upper Jaculy. Improved navigation and the introduction of steamboats have carried the trade into a new channel, by which, while Porto Alegre has gained, Rio Pardo has suffered. It is still a handsome town, containing, besides two churches, one of them an elegant structure, a new hospital well endowed but not yet completely finished, and barracks, a number of elegant mansions and extensive warehouses. Many of the mansions, however, are untenanted, and the warehouses, telling only of a past prosperity, show no signs of activity. Pop. 3500.

RIO QUARTO, a tn. La Plata, Pampas, on a high bank of the Quarto, 100 m. S. by E. Cordova. It consists of houses built of mud compressed within a framework of wood,

and regularly arranged in the form of a square, and possesses a large market-place, two churches, one of them belonging to a Franciscan monastery which still exists, and the other a large narrow structure with two thick towers, and barracks, which are regularly occupied by about 150 men. The inhabitants, about 3000, are chiefly employed in rearing cattle or in trading in European wares, with which they supply the neighbouring districts.

RIPON FALLS (THE), in the Nile, at its exit from the Lake Victoria N'yanza, about 3308 ft. above sea-level; lat. $0^{\circ} 33' N.$; and lon. $33^{\circ} 40' E.$ 'The falls,' says Captain Speke, 'were by far the most interesting sight I had seen in Africa. Everybody ran to see them, though the march had been long and fatiguing, and even my sketch-book was called into play. Though beautiful the scene was not exactly what

THE RIPON FALLS, LAKE VICTORIA N'YANZA—From Speke's Journal.

I had expected; for the broad surface of the lake was shut out from view by a spur of hill, and the falls, about 12 ft. deep and 400 to 500 ft. broad, were broken by rocks. Still it was a sight that attracted one to it for hours—the roar of the waters, the thousands of passenger fish leaping at the falls with all their might, the Wasoga and Waganda fishermen coming out in boats and taking post on all the rocks with rod and hook, hippopotami and crocodiles lying sleepily on the water, the ferry at work above the falls, the cattle driven down to drink on the margin of the lake—made in all, with the pretty nature of the country—small hills, grassy-topped, with trees in the folds, and gardens on the lower slopes—as interesting a picture as one could wish to see.

RISTIGOUCHE, a river, British America, which rises in the N.W. of New Brunswick on the borders of the basin of St. John, flows N.E., forming part of the boundary between New Brunswick and Canada, and after a course of above 80 m., during which it receives several considerable affluents, enters the head of Chaleur Bay, near Campbelltown, by an estuary about 20 m. long, and with a breadth varying from $1\frac{1}{2}$ to 3 m. At Indian Point, a mile above Campbelltown, the navigation for shipping ends, as the channel there becomes narrow and has only 12 ft. at low water, but small craft may ascend for some distance by very narrow passages with from 6 to 9 ft. water. In point of grandeur and picturesque beauty the scenery of Ristigouche Valley is at least equal to that of any other part of the Gulf of St. Lawrence. On the Canadian side of the estuary the mountains rise to the varying heights of 1000 to 1745 ft. at the distance of only 2 or 3 m. from the shore, while on the S. side the wooded hills or ridges attain, in the Sugar Loaf and Dalhousie Hill, the respective heights of 950 and 715 ft. The settlements are few on the N., but are rapidly increasing on the S. side. The Ristigouche offers a tempting field to the geologist and mineralogist. Among

others there are amygdaloidal trap-rocks, abounding with zoolites, jaspers, cornelians, and agates. The agates in particular, together with petrified wood, are found more or less all along the shores of Chaleur Bay, and under the name of Gaspé pebbles are worked up at Quebec into ornamental articles of jewellery.

RITSCHAN, a tn. Austrian empire, Bohemia, circle and about 12 m. E. by S. Prague; with a parish church, a town-house, tile-works, and 1000 inhabitants.

RITSCHKA, a tn. Austrian empire, Bohemia, circle Königgrätz, on the Klausenbach, 6 m. E.N.E. Reichenau, with oil and corn mills, and 1200 inhabitants.

RIVAS, or **NICARAGUA**, a tn. Central America, Nicaragua, dep. Meridional. It stands about 3 m. W. of Lake Nicaragua, in the centre of an extensive plain overgrown with rank vegetation and interspersed with cacao, coffee, sugar, and indigo plantations, which are among the most valuable in the state. Its streets are regularly laid out, paved, and of uniform width; and its houses are of one story, with heavy cedar doors, entered by a portico, and roofed with tiles. The principal public buildings are on the grand plaza, where the edifice of greatest pretension is a large church which has been long in course of construction, and still remaining unfinished looks not so much a modern edifice as an ancient ruin. The town contains four other churches, but none of them deserves special notice. The market, held on the N. and W. sides of the plaza, is abundantly supplied with fruit, Chili pepper, articles of light clothing, medicines, and trinkets. As the central entrepôt for the department, Rivas carries on a considerable trade. Pop. about 5000.

RIVER DAVID, a tn. British America, Canada East, co. Yamaska, on the river which gives it its name, 52 m. N.E. Montreal; with a R. Catholic church, a model school, several mills, and a large trade in firewood, sent to Montreal and Sord, chiefly for the use of steamboats. The wilds of

the surrounding districts abound with cranberries, of which large quantities are exported to the U. States. Pop. of parish about 5000.

RIVIÈRE DU LOUP EN HAUT, a tn. British America, Canada East, co. Maskinongé, 70 m. N.E. Montreal. It possesses a Protestant and a R. Catholic church, and several tanneries. The seigniory in which it stands belongs to the Ursuline nuns of Trois Rivières, or Three Rivers. Pop. about 2000.

RIVIÈRE QUELLE, a tn. British America, Canada East, co. Kamouraska, r. bank St. Lawrence, 72 m. N.E. Quebec; with a R. Catholic church, manufactures of tinware and mill work, a tannery, and some general trade. Pop. about 2500.

RIZSNA, a tn. Austrian empire, Hungary, co. Arva-Thurocz, about 40 m. N.E. Neusohl on the Arva, with an iron-mill, iron furnaces, and a considerable trade in flax. Pop. 1200.

ROCHESTER, a tn. U. States, Minnesota, cap. co. Olmstead, on the Winona and St. Peter's railway, 44 m. W. Winona. It is an important station on the railroad, and is situated in a rich wheat-growing district. It contains a court-house, several churches, and a bank. Pop. (1860), 1424.

ROCKALL, an islet, N. Atlantic Ocean, about 150 m. W. St. Kilda, the westernmost of the Hebrides; lat. 57° 36' N.; lon. 13° 41' W. It is a circular mass of rock which rises steep from the water, and being whitened by the dung of the numerous birds frequenting it, appears, when first seen, like a distant sail. The breakers around it warn the mariner to give it a wide berth. From recent examination it proves to be the top of a submarine mountain, separated from the great plateau which forms the bottom of the ocean for a long distance westward from the shores of the British Isles, by a valley in which no bottom is found at the depth of 5760 ft. Rockall, hitherto regarded merely as a danger, has changed its character so far as to become an object of some practical interest, on account of the fish around it being found to be large and plentiful.

ROCKHAMPTON, a tn. Australia, Queensland, cap. co. Livingstone, r. bank Fitzroy River, about 20 m. direct distance above its embouchure in Keppel Bay, which lies on the tropic of Capricorn. It is a thriving place, and the outlet for the wool produce of the Comet, Peak Downs, and Barcoo. Pop. about 6000.—(*Proceedings Roy. Geo. Soc.*)

ROCKINGHAM BAY, a bay, Australia, Queensland, lat. 18° S., lon. 146° E.; immediately N. of Hinchbrook Island. Its shores are mountainous, and off its entrances are islands of various sizes. The mountains rise to the height of 3500 to 4000 ft., and their slopes and the plains at their foot are clothed with a dense and luxuriant tropical vegetation, resembling the most picturesque parts of Ceylon. On this bay, in January, 1864, Sir George Bowen, Governor of Queensland, founded the new settlement of Cardwell. The pastoral districts to which Rockingham should naturally serve as an outlet lie on the table-land, and in the valleys beyond the mountains. Communication is established between the bay and these districts by means of a road, suited for wheeled vehicles, through a gap in the wall-like range. This road likewise connects all the interior country and the banks of the Flinders, Lynd, and Burdekin, with the shores of the Pacific.—(*Proceedings Roy. Geo. Soc.*)

RODONDO, an isl. on the N. side of Bass Strait, 5½ m. from Wilson Promontory, the extreme S. point of Australia. It consists of a conical mass of granite, which rises to the height of 1130 ft. above the sea, so as to be visible from a ship's deck at the distance of 30 m., is thinly clothed with vegetation on its upper part, and so steep all round that even the seals cannot find resting-places on its declivities.

ROFFAH, a tn. Africa, Nubia, prov. Senaar, r. bank Blue Nile, 65 m. S.E. Khartoom. It stands opposite to the ruins of Arbagi, is the residence of the Sheikh of Shukory, who rules over a large extent of territory nominally subject to the Turks; and being thus regarded as the capital, possesses a considerable degree of importance. The inhabitants manufacture lances and sandals, and deal largely in agricultural produce and cattle, for which an active market is held twice a week within the town.

ROGAN KOTO, a tn. W. Africa, territory Keana, r.

bank Benuwe, 140 m. above its confluence with the Kwara. It is surrounded by a wall with numerous loopholes for archers, and has a pop. of about 1200, who are very industrious and disposed to trade. On a large island immediately eastward are two towns inhabited by people from Kororofa.

ROHATYN, a tn. Austrian empire, Galicia, circle and 16 m. W. Brzezau, cap. dist. of same name; with manufactures of cloth and a trade in corn. There are rich gypsum quarries in the vicinity. Pop. 3626.

ROHR, a tn. Austrian empire, Lower Austria, on the Schwarza, 35 m. S.W. Vienna; with four saw-mills, a considerable trade in wood and wooden ware, and 1030 inhabitants.

ROHRBACH, a tn. Austrian empire, Upper Austria, dist. and 23 m. N.W. Linz. It has a handsome parish church, an hospital, manufactures of leather, and an active trade. Above the town lie the ruins of a castle, and beside it a church to which pilgrimages are made. Pop. 1000.

ROHTUK, a dist. India, N.W. Provinces, between lat. 28° 38' and 29° 16' N.; lon. 76° 10' and 77° 4' E.; is bounded N.E. by Paneput, E. Delhi and the native state Bahadoor-gurh, S. Jhujhur, S.W. Dadree, and W. Hureannah and Sirhind; area, 1340 sq. m. The Rohtuk branch of Feroze Shah's canal traverses the district from N. to S., and adds greatly to its fertility. The old Delhi canal also traverses it, but when first opened was the cause of a great disaster. Owing to a blunder in taking the levels the water, which was expected to flow in a continuous stream, accumulated at Ghana, threw down the embankment, and carried devastation into the surrounding country. Pop. 294,199.

ROHTUK, cap. of the above dist., 42 m. N.W. Delhi, stands on a watercourse 45 m. long, formed by the British government in 1825 to convey water from the canal of Feroze Shah. It is surrounded by a wall, and possesses a good bazar. Hodson, who distinguished himself so much during the Sepoy mutiny, here encountered a body of rebels on 16th August, 1857, and signally defeated them. Pop. 10,350.

ROMANOVSKAIA, a tn. Russia, gov. Don Cossacks, r. bank Don, 88 m. E.N.E. Novo-Perchask. It is a chief entrepot for salt, and has 2181 inhabitants.

ROME. See PAPAL STATES in *Supp.*

RONCADE, a tn. Italy, Venetia, prov. and about 12 m. S.E. Treviso. It is inclosed by a wet ditch and an ancient wall flanked with towers, and has a handsome parish church and a palace Giustiniani. Pop. 3556.

RONCEGNO, a tn. Austrian empire, Tyrol, circle and about 12 m. W. Trent; with a handsome parish church, a ruined castle, and 2200 inhabitants.

ROODURPOOR, two places, India:—1, A tn. N.W. Provinces, dist. and 26 m. S.E. Goruckpore, on the Mughane, a small feeder of the Raptee. It consists of about 300 mud huts, and has in its vicinity two temples, one a large pyramidal structure, and the other of smaller dimensions adjoining it.—2, A tn. Rohileund, dist. and 53 m. N. Bareilly, on the banks of an affluent of the Ramgunga, amid fine mango groves. The foliage of the trees, and the temples and other buildings overtopping them, give the place at a distance a striking appearance, and raise expectations which a nearer inspection does not realize. The houses are merely a few scores of wretched huts, and the temples and tombs are all in ruins.

ROOPROA, a vil. Aracan, r. bank Koladyn, which here flows through a hilly district, and on the W. is hemmed in by the Peetoung range. The inhabitants are Aracanese, and differ in many respects from the Mughs of Akyab and the seaboard. Their houses are entirely of bamboo, and built contiguously in short rows or streets, an elevated platform common to all running along their front. The cultivation, chiefly cotton, tobacco, sugar-cane, and small quantities of upland rice, the last used chiefly to make arrack, is very indifferent. The river here abounds in fine fish.

ROORKEE, a tn. India, N.W. Provinces, on one of the most elevated sites in the Doab, between the Jumna and the Ganges, and on the great Ganges canal, 90 m. N. by E. Delhi. The operations connected with the canal have converted a place which was formerly a mere village, into an important European station, and an institute, called in honour of its founder 'Thomson College,' has been established here for the purpose of affording instruction in civil engineering

to Europeans and natives. In the vicinity the canal has been carried over the Solane, by means of an aqueduct 920 ft. long. This noble work, of which the estimated expense was £158,000, and the actual expense above £300,000, consists of fifteen arches, each of 50 ft. span.

ROOS-EL-DJEBAL, a prov. E. Arabia, kingdom of Oman, comprising Cape Mesandun and its vicinity. It is the wildest and most barren district of Oman; the people are looked upon as half savages, though they are not really so in character; they furnish good sailors to the government, and have often rendered valuable service in naval war. Each village has its chief, apparently independent of all the others, owing no doubt to the little communication that can be held between places in this region of precipitous mountains.

ROPCZYCE, a tn. Austrian empire, Galicia, circle and 26 m. E. by N. Tarnow, cap. dist. of same name; with three churches, a synagogue, important horse markets, and 2939 inhabitants.

ROPUR, a tn. India, Sirhind, a mile from the left bank of the Sutlej, a little below the point where this river finally quits the ranges of the Himalaya, lat. 30° 58' N.; lon. 76° 37' E. It occupies a slight eminence in a narrow plain, which extends for several miles along the bank of the river, and contains what was once the residence of a rajah, who forfeited his territory by proving unfaithful to the British government during the war with the Sikhs. Here, in November, 1831, an interview took place between Lord William Bentinck, then governor-general, and Runjeet Sing, and was accompanied with much expensive and ostentatious display.

ROSALIA (SANTA), a tn. Mexico, state and 80 m. S.S.E. Chihuahua, on a height above the Florido, at its confluence with the Couchas. It is a place of some consequence, and has a pop. estimated at 5000.

ROSARIO, a tn. La Plata, prov. Santa Fé, r. bank Parana, 170 m. N.W. Buenos Ayres. It stands on a high and steep bank, about 60 ft. above the level of the river, and is regularly laid out in square blocks, according to the invariable mode adopted in all the towns of the confederation. The central part of the streets is unpaved, but on each side there is a footpath formed of tiles. Besides a square at the entrance of the town there is another near its centre, one angle of which is occupied by a tolerably handsome church, with a peristyle and two towers. There is no other public building of any consequence. Some of the private dwellings are of two stories and elegant. This, however, is the exception, as the great majority are only of one story, poorly built, and often even of wretched appearance. Still the place is evidently prospering, mainly in consequence of the opening of the navigation of the river, and its facilities of transport to Buenos Ayres by means of regular steam-packets. A Centro-Argentine railway is in course of construction, and will afford communication with the interior provinces, the commerce with which is now carried on by means of carts and mules. This traffic had risen from 16,326 tons in 1862, to about 30,000 tons in 1864. The shipping trade in 1864 comprised 806 coasting and river craft, of 55,241 tons, and 33 foreign vessels of 9007 tons, *entered*; and 893 coasting and river craft, of 52,254 tons, and 33 foreign vessels, *departed*. Some of the foreign vessels drawing 16 ft. discharged their cargoes alongside the railway mole. Copper from the mines of Catamarca is manufactured at Rosario; and there are also several flour-mills. Wool forms an important and increasing article of trade, and the American system of curing beef has been commenced. The value of the exports in 1864 was £512,959. Some things are still wanting to develop the trade of Rosario. The river is navigable up to it for vessels of large burden, but it has as yet no proper harbour, and is very imperfectly provided with warehouses for the reception of goods. Though of comparatively recent origin, Rosario already contains nearly 16,000 inhabitants, composed of a mixture of almost all nations.

ROSARIO, or ASILO DEL ROSARIO, a tn. Mexico, dep. Cinaloa, on a river of same name, which flows W., and falls into the Pacific at Mazatlan, about 30 m. below. It was once an important mining place, and carried on an extensive trade, being the principal entrepot for an extensive tract of country; but since the mines have ceased to be productive, and the merchants, who used to visit it for foreign goods, prefer supplying themselves directly at Mazatlan, it is greatly decayed.

Its site, in a mountain gorge, is very imposing, and its streets, though narrow, contain many lofty and substantial stone-built houses. Pop. about 7000.

RÖSCHITZ, a tn. Austrian empire, Lower Austria, circle Lower Mannhartsberg, 38 m. N.N.W. Vienna. It contains 1200 inhabitants, who carry on a considerable trade in fruit, wood, and corn.

RÖSCHNAU, a tn. Austrian empire, Moravia, circle and 9 m. S.E. Neutitschein, on the Betschwa, in a beautiful valley. It has a parish church, and a considerable trade in cattle, flax, and ewe-milk cheese. On one of the lofty mountains in the vicinity is the old ruined castle of Röschnau. Pop. 3109.

ROSDIALOWITZ, a tn. Austrian empire, Bohemia, circle and 12 m. S.W. Gitschin, on the Truawa; with a deanery church, a castle, and 1200 inhabitants.

ROSSIENU, a tn. Russia, gov. and 50 m. N.W. Kovno, cap. circle of same name, on the Dubissa; with two churches, a circle and a parish school, two charitable institutes, and a pop. of 6234. A battle was fought here in 1830, between the Russians and the Poles.

ROSSITZ, a tn. Austrian empire, Moravia, circle and 9 m. N.W. Brünn, with which it is connected by railway. It has a parish church and a castle, both of them beautiful structures; manufactures of beet-root sugar, a blast furnace, and coal mines, which are very extensively worked; and contains 3689 inhabitants.

ROSSOW, a tn. Austrian empire, Galicia, circle and 12 m. S. Kolomea, cap. dist. of same name, with a salt spring, a government salt magazine, an extensive trade in salt, and 2671 inhabitants.

ROTH-WESELY, a tn. Austrian empire, Bohemia, circle and 6 m. S.S.E. Gitschin, on the Cydlina; with a parish church, a castle, a townhouse, a brewery, and 1000 inhabitants.

ROUPAT, an isl. Indian Archipelago, on the N.E. coast of Sumatra, in the straits and nearly opposite to the town of Malacca. It is for the most part mere jungle, its only inhabitants being a few Malay fishermen living on the coast.

ROVERCHIARA, a tn. Italy, Venetia, prov. and 18 m. S.E. Verona, on the Adige; with a church containing fine paintings, and 2689 inhabitants.

ROVIGO, a tn. N. Africa, Algeria, prov. and 18 m. S. Algiers, on the Arrah, where it enters the plain of Metidja. It has several oil-mills, and in the vicinity are gypsum quarries and mineral springs. Excellent tobacco grows in the district. Pop. 1403.

ROVUMA, a river, E. Africa, falling into the Indian Ocean in lat. 10° 30' S.; lon. 40° 27' E. Its source, as yet undiscovered, is supposed to be in the country N.E. of the northern extremity of Lake Nyassa, about lat. 10° 30' S.; lon. 36° E. It has been explored for 150 m. from the sea in a W.S.W. direction. At its mouth it forms a magnificent bay, and has no bar. The scenery upon the lower part of it is superior to that on the Zambesi, the highlands being visible from the sea. Eight miles up a beautiful range of well-wooded hills on each bank begins. On these ridges a tree resembling African black-wood, of finer grain than ebony, grows abundantly, and attains a large size. The current is rapid, but the volume of water is not great, and in depth is at times only navigable by a small vessel. Upon the l. or N. side of the river, 25 m. from the entrance, is a small lake named Chidia, which is connected with it in flood time, and is nearly surrounded by hills, 500 or 600 ft. high, dotted over with trees. The navigation becomes more difficult as the river is ascended, the channel being much impeded in the dry season by 'snags' brought down by the floods. In some places the river is divided into two or three shallow channels. The valley of the Rovuma, bounded on each side by a range of highlands, is from 2 to 4 m. broad, and its direction is tolerably straight; the channel in the dry season, however, is exceedingly tortuous, and useless for navigation for at least four months in the year. Forty miles beyond Lake Chidia is an inhabited island, called Kichokomana; along the l. bank above this island is an exceedingly fertile plain nearly 2 m. broad. At Michi, 80 or 90 m. up the river, the table-land disappears, which, up to this point, bounds the view on both sides with ranges of flat-topped hills 600 or 800 ft. high; to this plateau a level fertile plain succeeds, on

which stand detached granite hills. That part of the tableland on the right bank seems to bend away to the S., still preserving the appearance of a hill range. The height opposite extends a few miles further W., and then branches off in a N. direction. Indications of the existence of coal are found hereabouts, probably a continuation of the coal-field of the Zambesi, the same sandstone rock, with fossil wood in it, being seen at the lakelet Chidia, which is on the Zambesi a sure evidence of coal beneath. The direction of the river now is more from the south, and some parts of it are deeper than nearer the sea. At 140 m. up, by the course of the river, soft tufa rocks begin to appear; and 10 m. beyond the river becomes narrow and rocky, and at 156 m. (rather less than 2° in a straight line from the coast) it ceases to be navigable in the dry season. Just above this point is the island of Nyamatolo, lat. 11° 53' S.; lon. 38° 36' E.; near the island is a rocky rapid with narrow passages fit only for native canoes; the fall is small and the banks quite low, but the rocks are an effectual barrier. The Rovuma is remarkable for the high lands that flank it for 80 m. from the ocean. The cataracts of other rivers occur in mountains, those of the Rovuma are found in a level part with hills only in the distance. Far away in the W. and N. blue heights are visible, probably from their form of igneous origin, rising out of a plain. According to native accounts the Rovuma is joined about 30 m. beyond Nyamatolo Island by the Liende, which, coming from the S.W., rises in the mountains on the E. side of Lake Nyassa; the Rovuma itself coming from the N.W. By some the latter is said to come from the Nyassa itself, but the statement is hardly trustworthy. The country about the lower part of the Rovuma is sparsely inhabited by a poor race of Arab extraction. Higher up the population is somewhat more numerous, though rendered ill-disposed to strangers by the slave-trade; but proceeding more inland the people are more civil and peaceable. In the neighbourhood of Nyamatolo they are well supplied with food, and cultivate the land extensively. Sesamum, gum-copal, and tobacco are articles of traffic. Honey of excellent quality is collected in bark hives, placed for the bees in the high trees all along the river. Crocodiles inhabit the stream, and are much hunted by the natives, by whom their flesh is eaten and relished. Of rare animals, the senze, about the size of a large cat, but in shape more like a pig, exists in the reedy banks and low islands; the hunting of it is a favourite pastime of the natives, who set fire to the reeds to drive the senze out.

RÜWERSDORF, a tn. Austrian empire, Silesia, dist. Holzenplotz, about 13 m. N.N.W. Troppau; with manufactures of worsted and articles used in weaving woollens, and 2757 inhabitants.

ROZDOL, a tn. Austrian empire, Galicia, circle and about 20 m. N.E. Stry; with a beautiful baronial castle with fine gardens, two monasteries, one belonging to the Sisters of Mercy; a sulphur mineral spring, and 3906 inhabitants.

RSHEV, or **RZEV**, a tn. Russia, gov. and 68 m. S.W. Tver, cap. circle of same name, on the Volga. It is a handsome well-built town, and has nine churches, secular and religious schools for the circle and the parish, two benevolent institutes, manufactures of chemicals, paints, and hardware, particularly ploughshares, sickles, sheep-shears, peasants' knives, &c. There is also a stone quarry in the vicinity, and the trade is extensive. Pop. 11,354.

RUAMAHUNGA, a river, New Zealand, which, rising among the mountains in the S. of North Island or Ulster, flows S.S.W. through the fine valley of Wairarapa, which contains 350,000 acres of level grazing land, and when about to enter Palliser Bay in Cook's Strait, loses itself in two shallow lakes. In the winter months these lakes, forcing a passage through the narrow sand-bar which separates them from the bay, may be entered by boats, which, after sailing over their expanse of 15 m., may afterwards ascend the Ruamagunga for 20 or 30 m. Numerous settlers are established in the Wairarapa Valley.

RUANWELLE, a fort, Ceylon, on an eminence above the Kalany, 32 m. N.E. Colombo, and nearly the same distance S.W. Kandy. Standing near the frontier of the latter it was once regarded as a place of great importance, but is now merely the residence of the civil officer in charge of the district. A few miles W. stood Sita-wacca, one of the most ancient cities of Ceylon. It was the stronghold of the chiefs

Maaya Dunna and Rajah Singha during their war with the Portuguese, as the allies of King Cotta, and was eventually destroyed by the Portuguese general Azavedo at the close of the sixteenth century. Among the still existing remains are a deep moat, crossed by a bridge composed of five slabs 14 ft. long, and more than proportionate thickness; and vestiges of the palace and temple, which were of hewn granite. Ruanwelle, meaning 'Golden Sand,' takes its name from a small stream near it. The country around is magnificent, and commands fine views of the mountains near Adam's Peak, and of the cataracts which descend from them.

RUAPUKE, an isl. New Zealand, nearly in the centre of the E. entrance of Foveaux Strait, which separates the Middle from the South Island. It is of irregular shape, $4\frac{1}{2}$ m. long from N. to S., and about 2 m. wide. The surface is low, nowhere rising more than 220 ft., and only becoming visible from a vessel's deck at sea at the distance of 12 or 14 m. Its central part, 140 ft. high, is thickly covered with trees of stunted growth. In almost every direction it is surrounded by islets, reefs, and tide riplings, causing some anxiety to the mariner, particularly when approaching it from the E.

RUBY CITY, a vil. U. States, Idaho, on Jordan Creek, 60 m. S.W. Boisee City. Here are gold placer mines, and quartz lodes producing silver.

RUDNA (**GREAT** and **LITTLE**), a tn. Austrian empire, Galicia, circle and 4 m. N. Rzeszow; with two fine castles, and 1850 inhabitants.

RUDNIK, a tn. Austrian empire, Galicia, circle and 28 m. N.E. Rzeszow, with 1900 inhabitants. The Swedes were here defeated by the Poles in 1656.

RUFJI, or **LUFU**, a large river, E. Africa, which pours its water into the Indian Ocean by a number of mouths west of the island of Mufrah, in lat. 8° S. It is the main drain of the Zanzibar coast, and, like the Zambesi, becomes swollen by the heavy rains in the interior, from January or February till May and June. The natives ascend it in boats for a distance which they calculate at seven days, when the current becomes too strong for them to stem it. The inhabitants on the banks have their houses raised on piles or poles, beyond the reach of the inundation and the crocodiles. They are very barbarous. Could the barbarous tribes be conciliated, the Rufiji might become one of the great gates for commerce into E. Africa. In its upper course it has the name of Rwaha.

RUM, an isl. or cay, West Indies, near the centre of the Bahamas, about lat. 23° 45' N.; lon. 74° 40' W. It is about $9\frac{1}{2}$ m. long by 2 m. to 5 m. broad, and terminates in the S.E. in two remarkable high white cliffs, which become visible at the distance of 10 or 12 m. The principal settlement is at St. George Bay in the S.E., where there is excellent anchorage and a valuable salt pond. Its inhabitants amounted in 1857 to 900.

RUO, a river, S.E. Africa, rising among the hills S. of Lake Shirwa, and flowing S.W. into the l. bank of the Shire, in lat. 16° 33' S.; lon. 35° 11' E., opposite the island of Malo. About 100 yards from the point of confluence is the grave of Bishop Maekenzie, the first missionary bishop to this part of Africa, who died here of fever not many months after the arrival of his mission.

RUPERT'S LAND, the name given by a charter of Charles II. to a considerable territory in British America, extending from the Rocky Mountains on the W. to Hudson's Bay on the E., N. to Lake Methy, and S. to the U. States boundary; between lat. 49° and 55° N.; and lon. 65° and 118° W. It includes the settlement of Red River, and the co. or dist. of Saskatchewan, English River, Nelson River, Cumberland, Severn, Albany, Rainy Lake, &c.; is the seat of a bishopric, and divided into two archdeaconries. The Episcopal cathedral is St. John's, Red River—(See HUDSON'S BAY TERRITORY in *Imp. Gaz.*, SASKATCHEWAN and RED RIVER in *Supp.*)

RUSKBERG, a tn. Austrian empire, Banat Military Frontiers, N.E. Karansebes; with a colliery, silver, lead, and copper mines, and 2290 inhabitants.

RUSSIA [add.] In pursuance of her long cherished designs upon the integrity of the Turkish empire, Russia took advantage of some petty quarrel between the Latin and Greek priests at Jerusalem, to claim the protectorate of the Greek Christians under Turkish rule. Such a claim being

inconsistent with the independence of the sultan was resisted, and after long negotiation, carried on with great haughtiness on the part of the Russian embassy at Constantinople, a Russian army was sent across the Pruth, on July 2, 1853. The leading European powers strongly remonstrated against this wanton aggression, and England and France, subsequently joined by Sardinia, resolved to support the cause of the sultan by force of arms, and declared war against Russia in March, 1854. The Russian fleet was shut up in Sebastopol harbour, and an army was landed at Gallipoli in April. The Russians laid siege to Silistria, which was long and gallantly defended by the Turks, who proved themselves able to protect the line of the Danube; and thereupon the allies resolved to carry the war into the Crimea. Landing at Eupatoria, on September 14, 1854, they defeated the Russian army on the heights of the Alma on the 20th, and then invested the fortress of Sebastopol. The memorable siege, of which a condensed account is given in this *Supplement*, under the head of SEVASTOPOL, after the most arduous operations terminated in the capture of the city by the allies, on September 5, 1855. The fall of Sebastopol virtually brought the war to an end, the Crimea having been the principal scene of the contest, though desultory operations had been carried on in the Baltic and elsewhere with variable utility. A treaty of peace was signed at Paris, on March 30, 1856, in which Russia renounced all claim to interference in the internal policy of Turkey. The accession of the Emperor Alexander upon the death of his father Nicholas, gave promise of important and valuable reforms in the domestic condition of the empire. First among these was the emancipation of the serfs from the absolute power of the landowners. Though some amelioration of their condition had been made by previous measures, yet at this time their masters still had the power of using their labour without the payment of wages; of punishing them without reference to the civil magistrate; of arbitrarily controlling their marriage; and of sending them at pleasure into the army or to Siberia. The maximum of unpaid labour which could be exacted, was, however, limited by law to three days in the case of men, and two days in that of women per week. For their maintenance most of the serfs held allotments of their masters' land, and those who followed other trades and handicrafts paid a tribute to their owners for the privilege. By the ukase of Alexander II., February 19, 1860, and subsequent modifications of it, the position of serfdom has been abolished. The peasants are now responsible to the laws only. The agricultural labourer retains his allotment on condition of working three days a week for the proprietor, or paying an equitable equivalent in money; and he has the right of purchasing his dwelling and inclosure for 16½ times its annual value. For this latter purpose the government will advance 80 per cent. of the purchase money. These regulations, however, do not come into unconditional operation until 1870. Serfs not employed on the land became absolutely free on March 3, 1863, and were exempted from all taxes for two years; and this exemption is continued for four years longer to all those who settle in towns, and for six years to those who settle in villages.

In 1863 an insurrection in Russian Poland broke out, in consequence of an arbitrary system of conscription, in which the best men fitted for military service were impressed solely from the population of the large cities, thus carrying off the most valuable of the inhabitants. A sanguinary but desultory struggle ensued, in which Russia exerted suppressive measures with an iron hand.

In the extension and consolidation of her power in Central Asia, as well as to overawe, and if necessary subjugate adjacent states displaying any hostility, the Russian government has taken measures for uniting the two fortified lines, the one reaching from the Chinese frontier to Lake Issyk-Kul, the other extending from the Sea of Aral to the Syr-Daria. Advanced forts are to be established in fertile places for colonization, and for provisioning the military and other settlers. The long hostile and warlike tribes of the Caucasus also have been at length subjugated, and their famous leader Schamyl reduced to surrender; large numbers of the people being driven from their homes, and forced to seek refuge in other lands.

The following statistics supplementary to those in the body of the *Gazetteer* will be found useful for comparison, as

indicating the relative condition of the empire at the periods indicated.

The total value of the imports and exports (exclusive of specie) of the Russian empire in the years 1859-63, is stated as follows:—

	Imports.	Exports.
1859.....	£25,227,910	£26,230,240
1860.....	25,223,039	28,719,020
1861.....	26,459,203	28,053,498
1862.....	24,204,413	25,508,050
1863.....	24,493,849	24,458,250

The trade of Great Britain with Russia is shown in the following table of the imports and exports from and to the United Kingdom:—

	Imports from Russia.	Exports to Russia.
1860.....	£16,201,498	£5,446,279
1862.....	15,101,055	3,733,618
1864.....	14,712,630	6,036,332

Of the imports from Russia in 1864, wheat amounted to £531,750; oats, £728,430; flax, £3,047,595; hemp, £850,715; linseed and flaxseed, £1,024,063; tallow, £895,421; sawn wood, £1,414,956; and wool, £390,316. Of the exports of British produce, the principal items were coal, £169,101; cotton yarn, £393,575; iron, £448,857; machinery, £382,966; and woollen yarn, £398,530.

The amount of bullion and coin imported and exported in the years 1861-3, is thus given:—

	1861.	1862.	1863.
Imported.....	£1,130,326	£794,262	£823,102
Exported.....	2,500,140	6,222,178	11,264,073

The number and tonnage, in lasts of 2 tons each, of vessels entered and cleared at ports in Russia, from and to various countries in the year 1863, are stated thus:—

	Entered.		Cleared.	
	Vessels.	Lasts (2 tons).	Vessels.	Lasts (2 tons).
Russia.....	844	62,062	1335	96,474
Great Britain.....	2535	290,341	2611	340,819
Sweden.....	74	3,712	106	9,147
Norway.....	693	28,115	336	8,433

The number of the various manufactories in the Russian empire in the year 1864, together with the value (in silver roubles = 3s. 2d. each) of the produce, and the number of work-people employed, is given as follows:—

	No. of Manufac-tories.	Value of Produce.	No. of Work-people.
Silver roubles.			
Woolen Cloth.....	365	20,082,702	71,797
Other Woolen Goods.....	120	6,364,193	13,031
Fine assorted Woolen Goods.....	51	4,653,790	9,242
Cotton Yarn.....	35	26,111,093	21,711
Cotton Manufactures.....	388	12,607,003	36,407
Linon Manufactures.....	104	8,027,582	10,642
Hempen Goods and Cordage.....	147	4,300,952	5,055
Silk and Trimming.....	326	5,483,944	8,957
Golden Wares and Epanlets.....	24	1,055,532	676
Paper.....	183	6,140,826	11,829
Tobacco and Snuff.....	263	7,735,252	6,092
Linon Yarns.....	348	21,193,472	22,723
Agricultural Implements.....	970	9,428,753	5,620
Machinery.....	103	12,190,079	14,980
Sugar.....	432	31,081,501	54,980
Tallow.....	1254	12,949,617	6,716
Stearine.....	13	5,701,859	1,761
Tanneries.....	2,508	16,564,417	12,169
Distilleries.....	1,446	52,502,079	30,790
Total.....	15,453	325,859,664	464,610

The estimated number of live-stock of various kinds in the year 1863 was:—

	European Russia.	Asiatic Russia.	Total.
Horses.....	15,443,000	3,076,000	18,519,000
Cattle.....	22,816,000	2,638,000	25,454,000
Sheep.....	39,315,000	5,815,800	45,130,800
Swine.....	9,517,000	580,000	10,097,000
Goats.....	1,724,000	335,400	2,059,400

In the year 1865 the public revenue of the Russian empire amounted to £60,181,474, and the expenditure to a similar sum. The public debt of the empire in 1861 was £263,609,644.

RUSTCHUK [add.], a tn. Turkey in Europe, Bulgaria, eyalet and 66 m. W.S.W. Silistria, r. bank Danube, opposite to Giurgevo in Walachia, at the confluence of the Kara Lom, and on the great road leading from Russia to Constantinople,

by way of Jassy and Bucharest, and the two principal passes of the Balkan. It occupies a series of heights, and is a place of strategical importance, being defended both by extensive fortifications and especially by a strong castle which commands the town and also the river, the channel of which is here partly occupied by several islands. Among the public buildings within the town and its suburbs are nine mosques, several Greek and Armenian churches, one or two synagogues, the palace of a Greek archbishop, and numerous bathis. The manufactures include woollen and linen cloth, muslin, silk, leather (ordinary and morocco), tobacco, &c., and the trade is very extensive. Rustchuk and its environs have been the scene of many conflicts between the Turks and the Russians. The latter took it in 1810, after a long siege and the gaining of a battle at Battin. Pop. estimated at 30,000, composed of Walaks, Turks, Greeks, and Jews.

RUTNAGHERRY, a dist. or collectorate, India, presid. Bombay, Concan, between lat. 15° 44' and 18° 6' N.; lon. 73° 6' and 73° 58' N., is bounded N. by Hubsie's Territory, and dist. Tannah, E. Sattara and Kolapore, S. Sawuntwarree and the Portuguese territory of Goa, and W. the Arabian Sea; greatest length, N. to S., 167 m.; greatest breadth, 40 m.; area, 3964 sq. m. The quantity of arable land is, owing to the mountainous character of the country, limited; but this is in general well cultivated, as a ready means of conveying the produce to market is furnished by the numerous creeks which indent the coast. Towards the interior the case is different, as access to it is excluded by the Sydaree range belonging to the Western Ghauts, in which there are only a few practicable passes, and these so difficult that pack and not draught bullocks are employed in the conveyance of goods. In this way the expense becomes so heavy that the district is in a manner shut out from all profitable trade with the rich country E. of the Ghauts. The consequence is that the great body of the people, left without any proper stimulus to exertion, are ignorant and apathetic, and activity and enterprise are almost entirely confined to the sea-coast, where productive fisheries give considerable employment. The chief agricultural products are rice and various species of grain. Both cotton and flax have been tried, but pronounced failures. Sugar-cane is cultivated to a small extent. Pop. 665,238.

RUTNAGHERRY, cap. of the above dist., is situated on the coast in lat. 17° N.; lon. 73° 20' E.

RUTTUNGHUR, three places, India:—1, A fort, Kahlloor, on the crest of the steep ridge on which Malown stands, and 1½ m. N.W. of it. It is of considerable strength, by both nature and art, and having been taken by the British during the Nepaulese war, greatly aided them in their operations against Malown.—2, *Ruttunghur Kheree*, a tn. Scindia's Dominions, 36 m. N.E. Neemuch. It stands in a rugged and elevated district, is of considerable size, and has a well-supplied bazar.—3, A tn. Rajpootana, state and 86 m. E. Bikaner. It is surrounded by a stone wall and defended by a fort at its N.E. angle, and has a good bazar.

RYEN, a tn. Austrian empire, Transylvania, circle and 27 m. E.N.E. Kronstadt; with a Protestant and a Greek non-united church. In the vicinity are the ruins of an old castle which belonged to the Teutonic knights. Pop. 2030.

RYMANOW, a tn. Austrian empire, Galicia, circle and 16 m. W. Sanok, cap. dist. of same name; with an ancient parish church with some remarkable monuments, much-frequented cattle markets, and 2128 inhabitants.

RYMNIK, or SLAM-RYMNIK, a tn. Turkey in Europe, Walachia, cap. circle and on a river of same name, 75 m. N.N.E. Bucharest. It is situated in a beautiful plain, is the see of a bishop, and the seat of a court of primary jurisdiction, and has an ecclesiastical seminary, a church, and a normal school. The Russians defeated the Turks here in 1789.

RYMNIK-VULTSHEA, a tn. Turkey in Europe, Walachia, in a mountainous district on the Aluta, 95 m. N.W. Bucharest. It is the seat of a court of primary jurisdiction, and contains several churches and a normal school. Pop. 3000.

S.

SAAD-EL-DIN, an isl. off the coast of E. Africa, about 2 m. N. Zaylah. It is of very small extent, bordered on its outer edge by a thick belt of underwood, and consisting within of a barren flat of silt and sand. Local tradition, however, says that it was the site of an ancient Zaylah, built by the Arabs from Yemen. In proof of this remains are still shown, consisting chiefly of watercourses stretching across the plain to wells now lost, and of tanks made apparently to collect rain-water. Near one of the latter, which is a work of some art, there is a cemetery containing, among other tombs, that of Sheikh Saad-el-Din, formerly the hero, and now the much venerated patron saint, of Zaylah. On the island some specimens of fine sponge and coral are picked up.

SABA [add.], an isl. West Indies, in the N.E. of the Caribbean Sea; lat. $17^{\circ} 39' N.$; lon. $63^{\circ} 19' W.$ It is nearly circular, $2\frac{3}{4}$ m. in diameter, and is throughout a mass of rugged mountains, intersected by deep and precipitous ravines, and terminating in a summit which is 2820 ft. high, and usually enveloped in clouds. The inhabitants live chiefly in a small valley called the Bottom, 960 ft. above the sea. They export poultry and vegetables, chiefly sweet potatoes, to the neighbouring islands, speak the English language, and are excellent ship-builders, their boats and small craft being famed and generally used as a model over all the Windward Islands. A heavy surf, which generally breaks all along the shore, renders landing extremely difficult and often dangerous. Pop. 1674.

SABON-BIRNI, a tn. Western Africa, Hausa States, near the Tuarik frontier, 140 m. N.W. Kano, is approached with difficulty through the narrow lanes of a suburb, and has outside its western wall a large sheet of stagnant water of very bad quality, with a border of kitchen garden in which onions are cultivated. The governor is a dependant of the emir of Sokoto.

SACO, a river, U. States, one of the largest in New England, has its sources in the White Mountains, New Hampshire, being there formed by the junction of three principal branches at Bartlett, flows S.E. into Maine, and after an abrupt turn northwards, resumes its original direction and falls into the Atlantic at Sao Bay, after a course of about 160 m. A succession of lofty falls, the last of them only 4 m. above its mouth, render it unfit for navigation beyond this point, but furnish immense water-power. It is subject to freshets, which have repeatedly proved very destructive.

SACRAMENTO [add.], a tn. U. States, cap. California, 1. bank river of same name, 125 m. above its mouth at San Francisco; lat. $38^{\circ} 33' N.$; lon. $121^{\circ} 20' W.$ It occupies a low flat only 30 ft. above the level of the sea, and 20 ft. above low-water in the river, and is of unattractive appearance, being for the most part bare, with occasional patches of oak, and considerable tracts of swampy ground. The streets are wide and straight, cross at right angles, and are well shaded by trees; the shops and stores are mostly of brick, but the dwelling-houses are of wood, most of them with gardens attached. The only public building of imposing appearance is the capitol; among the other public buildings are numerous churches and schools. The prosperity of the place and the rapidity of its progress are almost entirely due to the Sacramento Valley, which has become famous for its gold-fields, and exports all its produce by way of the town. In maintaining this trade, and keeping up the connection with the mining localities, numerous steamers are employed. It is the S.W. terminus of the Central Pacific railroad now in progress, and of the Sacramento Valley railway, 20 m. long, to Folsom, which was opened on 3d February, 1856, and is extended to Lincoln. Unfortunately the river becomes so low in the dry season that none but boats of light draught can ascend. Another serious disadvantage is the lowness of the site already mentioned. Calamitous results have already followed. In 1850, 1852, and 1853 the flooding of the river threatened to overwhelm the

whole place, some of the streets having 5 ft. of water in them, and not more than a dozen houses remaining level free. A similar catastrophe occurred in 1861-2. Means have been employed to remedy this evil. The level of the streets has been raised, and a levée or embankment carried round the town. Water, however, is not the only element against which Sacramento has had to contend. A dreadful conflagration on 3d November, 1852, destroyed 600 houses and other property to the value of about a million sterling; another serious conflagration occurred in July, 1854. Pop. (1860), 13,788; (1865), 18,000.

SADAGURA, a tn. Austrian empire, duchy Bukowina, dist. and 4 m. N.N.E. Czernowitz, cap. dist. of same name, with very important cattle markets, and 3936 inhabitants.

SADO, an isl. Japan, off the W. coast of Nippon; lat. (W. point), $38^{\circ} 1' N.$; lon. $138^{\circ} 17' E.$ It is high, bold, and safe of approach, but nowhere presents what appears to be a safe anchorage. The N. point, off which there is a remarkable conical rock 700 ft. high, rises somewhat abruptly to an elevation of 3800 ft., and then, running in rocky ridges S.W. for 9 m., attains its culminating point in a sharp peak of 4500 ft. Thereafter the surface descends in a gentle uniform slope till it meets the low lands in the S. The number of villages, and the indications of high cultivation, seen in sailing along its W. shore prove that it is well peopled.

SADOWA, a vil. Bohemia, about 8 m. N.W. Königgrätz, on the road to Gitschin; with a castle and some dwellings of government officials, and about 200 inhabitants. On 2d July, 1866, the Austrian army under General Benedek received here a crushing defeat from the Prussians, commanded by the king in person.

SADOWA-WISZMA, a tn. Austrian empire, Galicia, circle and 25 m. E. Przemysl, on a muddy stream of same name which rises in the marshes of the Dniester. It has a Franciscan monastery and an hospital for the poor. In the vicinity are several mounds containing the remains of a Tartar host that perished here. Pop. 3882.

SAGHALIEN, or TARRAKAI [add.] (native, *Turaka* or *Choke*; Japanese, *Krafto* or *Oku-yeso*), an isl. off the E. coast of Asia, from which it is separated by the Gulf of Tartary and the Strait of Mamia, extends 588 m. from N. to S., with an average breadth from E. to W. of not more than 60 m., and has a computed area of 32,000 sq. m. Its N. extremity, Cape Elizabeth, lat. $54^{\circ} 24' N.$, is in the Sea of Okhotsk; its S. extremity, Cape Crillon, lat. $45^{\circ} 54' N.$, is in La Perouse Strait, which separates it from the Japan island of Yeso; on the E. it lies open to the Sea of Okhotsk, and has no land nearer than the Kurile Isles, forming the E. entrance of this sea; on the W., in the Strait of Mamia, it approaches within 6 m. of the continent. In shape it bears no inconsiderable resemblance to the S. part of the Italian peninsula. The coast is generally rocky and steep, except in the N.W., opposite to the mouths of the Amoor, and a similar part of the E., where sandy downs occur. Its only remarkable indentations are the Gulf of Patience in the S.E., and the Bay of Anwa in the S. The interior is traversed centrally from N. to S. by a mountain chain, part of which, about lat 52° , is believed to be covered with perpetual snow. As it extends through 8 degrees of latitude there is a considerable difference between its N. and S. climates, the former reproducing the winter rigours of the Lower Amoor, while the latter is more equable and moderate than the opposite coast of Manchouria. The only rivers of any consequence are the Tyny and the Ty, which, though they rise nearly in the same locality, take opposite directions, the one piercing the central chain, and flowing N.E. through a wide valley into the Sea of Okhotsk, and the other flowing S. into the Gulf of Patience. Among the forests which cover many parts of the island, oak, ash, and maple are frequent. The rivers afford a refuge to numerous kinds of ducks and other birds, and both in them and on the coast fish abound. Among the land animals are the reindeer, the common stag, the roe, the elk, and the musk-ox.

The inhabitants consist chiefly of Gilyaks, Oronchons, and Ainos. The island belongs in its northern part to the Russians, who have lately supplanted the Chinese, and the southern part to the Japanese.

SAIGON, a city and river port, cap. of the French prov. of Cochin China, upon the river of same name, 35 m. from the China Sea; lat. 10° 47' N.; lon. 106° 45' E. It consists of two towns connected by a straggling suburb; Pingeh with the citadel being on the W. side of the river, and the commercial town being on a tributary stream navigable by large boats. It is regularly built and intersected by canals, some of which are lined with quays of stone and brickwork. The houses are mostly of earth, one story high, and thatched with palm-leaves. The citadel, fortified in European style, contains barracks, officers' quarters, and the governor's residence. Saigon has also a naval yard and arsenal, a palace, and large rice magazines. It communicates with the Mekong by a canal 23 m. in length, and has a foreign trade, chiefly with Siam and China. The markets are well supplied with provisions, especially fish, and the environs are fertile and carefully cultivated. Pop. estimated at 180,000.

SAINTE ADELE, a vil. British America, Canada East, dist. and 41 m. N.W. Montreal, on the North River; with a R. Catholic church, several schools, a small-debt court, and a trade in pearl-ash, flour, and lumber. Pop. of vil. and par. about 1400.

SAINTE ANNE, the name of five places, British America, Canada East:—1, *Sainte Anne de la Perade*, a large and flourishing vil. co. Champlain, intersected by the Anne River close to its mouth in the St. Lawrence, 53 m. W.S.W. Quebec. It possesses a R. Catholic church, a building-yard, a tannery, manufactures of mill machinery and tinware, and a local flour and lumber trade. Pop. of par. about 4000.—2, *Sainte Anne des Monts*, a settlement rather than a vil., dist. Gaspé, at the mouth of the Ste. Anne, on the S. shore of the estuary of the St. Lawrence. It possesses fine fisheries, abounding in cod, halibut, salmon, trout, mackerel, and herring, and exports in addition furs, barley, potatoes, deals, lathwood, and shingles. Pop. of par. about 13,000.—3,

Sainte Anne de la Pocatière, a vil. co. Kamouraska, r. bank St. Lawrence, 66 m. N.E. Quebec. It is beautifully situated, and boasts of a magnificent college, with an attendance of 200 students.—4, *Sainte Anne des Plaines*, a vil. co. Terrebonne, 19 m. N.N.W. Montreal, with a R. Catholic parish church, and some trade in lumber. Pop. of vil. and township, about 2000.—5, *Sainte Anne du Nord*, a vil. co. Montmorency, l. bank St. Lawrence, 20 m. N.E. Quebec; with a R. Catholic church, a tannery, factories for mill machinery, and some general trade. Pop. of par. about 1900.

SAINTE CLAIRE, a vil. British America, Canada East, co. Dorchester, 20 m. S.E. Quebec; with a R. Catholic church, a tannery, and several cooperages. A considerable number of the inhabitants are blacksmiths. Pop. of par. about 2500.

SAINTE CROIX, a vil. British America, Canada East, co. Lotbinière, r. bank St. Lawrence, 20 m. above Quebec; with a R. Catholic parish church, an academy of Congregational nuns, two tanneries, and carding and saw mills. Pop. of par. about 2300.

SAINTE SCHOLASTIQUE, a vil. British America, Canada East, cap. co. Two Mountains, on Belle Rivière, 25 m. N.W. Montreal; with a R. Catholic church, an Institut Canadien des Artisans, two tanneries, a carriage factory, and some trade. Pop. of par. about 4600.

SAKULA, a tn. Austrian empire, Banat Military Frontiers, on the Teines, 6 m. N.N.W. Opova; with two Greek churches, and 2640 inhabitants.

SALA, a tn. Western Africa, on the route between Sokoto and Gando. It is walled, but so embosomed among the splendid vegetation of tamarind, monkey-bread, and other trees, that at a distance its dwellings are scarcely visible. It stands in a fine valley entered by a steep rocky descent, and intersected by a considerable sheet of water.

SALAIER, a tn. Russia, gov. Tomsk, prettily situated on one of the spurs of the Altai, which runs down into the low country between Tomsk and Kolyvan. Large quantities of silver have been obtained from its mines, which have been wrought for a long series of years. A bed of coal has been discovered in the vicinity.

SALATAU, a dist. Russia, forming that part of Hilly Daghestan or Lesghia lying immediately W. of the Sulak. It has a mountainous surface intersected by deep ravines, but is well wooded and rich in pasture land, on which large flocks of sheep are fed. Though some of the mountains rise to the height of 8000 ft., the climate is generally warm in the valleys. There rice is cultivated, the vine is raised with success, and peaches abound. There are very fine hot sulphurous springs in the district, but they have hitherto been little frequented, in consequence of the troubled state of the country, Salatau having long been the theatre of the bloody struggles between the Russians and the Lesghi highlanders, while the latter endeavoured nobly, but fruitlessly, to escape the thraldom which had been prepared for them.

SALBYE, a tn. India, Scindia's Dominions, 32 m. S.E. Gwalior, is of some historical interest, as the place where a treaty, which bears its name, was concluded in 1782 between the Mahrattas and the British, on terms disadvantageous to the latter.

SALEM [add.], a tn. India, presid. and 175 m. S.W. Madras, cap. dist. of same name, in the lowest and narrowest part of a valley washed by the Teromany, which sweeps round the N. and W. sides of the town, and is here crossed by a substantial bridge of three arches. It stands at the height of 1070 ft. above the sea, and, though containing many wretched huts and narrow lanes, is on the whole a tolerably well-built place, having two wide principal streets, and a number of better houses built of brick and tiled. Across the river, to the S. of the town, stands the old mud fort, the ramparts of which have been partly thrown down, and the ditch filled up. It is now inhabited chiefly by peons, and has no building of greater consequence within it than the civil jail. The principal buildings of the town are a commodious and well-ventilated hospital, and a new jail, intended to receive 300 prisoners, but most injudiciously erected on a low, damp, confined site. The inhabitants of the town and suburbs, estimated at 25,600, are employed partly in agriculture, and partly in weaving silk and cotton goods.

SALEM, a tn. U. States, cap. Oregon, r. bank Willamette, 50 m. S.S.W. Portland, is situated in a rich prairie, and is accessible by small steamers up the river for the greatest part of the year. It contains six churches, the Willamette university, a woolen factory, flour and saw mills, and a foundry, and has telegraph communication with the Atlantic states and with California. Pop. (1865), 2500.

SALGA, a tn. Western Africa, Ashantee, cap. prov. Gonja, on the Volta, which falls into the Bight of Benin about 180 m. below. It is the mart of the guro trade. Pop. 1000.

SALINE, a river, U. States, which, rising to the W. of Little Rock, near the centre of state Arkansas, flows successively and circuitously S.E., S., and S.W., and joins the Washita after a course of about 200 m.

SALMON, a river, U. States, rises in the central part of Idaho, and flows northward in two branches, the North Fork and South Fork; the main stream then runs westward into Snake or Lewis River, about 50 m. S. Lewiston. Gold is found upon the Salmon River.

SALTO, a tn. S. America, Banda Oriental, cap. dep. of same name, l. bank Uruguay, a little below the point where the navigation of the river is obstructed by the Salto-Grande rapids. It stands about 60 ft. above the water. It is a bustling place, and its inhabitants carry on a limited trade in hides and tallow, and a very extensive one in *yerba*, transported by *carretas*, or ox waggons, from Uruguayana and other Brazilian towns. Though the quality of this *yerba* is inferior to that of Paraguay, 30,000 arrobas of 25 lbs. each are here shipped annually. Pop. 2800.

SALVADOR (SAN) [add.], two islands, West Indies, Bahamas, about lat. 23° 30' N.; lon. 75° 30' W.—1, *San Salvador*, more frequently called Cat Island, is somewhat in the shape of a leg and a foot, the leg stretching S.S.E. for about 40 m., and the foot trending westerly for about 15 m. The average width is from 3 to 4 m., and the height, varying from 200 to 400 ft., proves this island to be the loftiest of the Bahamas. It is fertile and well cultivated, and contains a considerable population, not congregated in any particular locality, but scattered over its surface. At its S.E. extremity is Columbus Point, so called because it has been sup-

posed to be the landfall of Columbus, or the first land which the great navigator reached, in October, 1492, during his first voyage across the Atlantic. The title of San Salvador to this honour has, however, been disputed; and Captain A. B. Becher, in particular, has shown, in an elaborate article inserted in the 26th vol. of the *Journal* of the R.G.S., that not the present San Salvador, or Cat Island, but Watling, situated 50 m. to the E., is in all probability the true landfall, as it completely answers the description given of it by Columbus himself in his journal.—2, *Little San Salvador*, about 10 m. from the N.W. end of the former, is 5 m. long from E. to W. by 1 m. broad. The space between the two is almost filled with dry ledges and small rocks, leaving only a single intricate opening, with a depth of 2½ to 3 fathoms.

SALVADOR, a tn. Paraguay, l. bank Parana, 160 m. N. by E. Asuncion. It is the most northern town or settlement, except Guardias, in Paraguay; and has about 1000 inhabitants, who live in great poverty in the midst of great natural advantages. Corn, rice, sugar-cane, tobacco, mandioc, water-melons, cabbages, pumpkins, and beans grow luxuriantly, and in the vicinity the *caragatay guaza*, the most useful species of the aloe tribe, abounds. Its filamentous tissues are said to make a cordage stronger and more durable than hemp, and yet to be fit for the manufacture of the finest fabrics.

SALVADOR (SAN) [add.], a tn. Central America, cap. state and near the S. base of the volcano of same name. It was founded in 1528 by Jorge de Alvarado, about 6 m. N. of its present site, to which it was removed in 1539. Under the Spaniards it was the capital of a province, and after their expulsion the capital of the republic of Central America. When this confederation was broken up in 1839, it became, as it continues to be, the capital of an independent state. In 1853 it contained about 30,000 inhabitants, and had nine churches, one of them a large and beautiful cathedral, a university, a female seminary, several hospitals, and an active trade. In the night of 16th April, 1854, it was so completely overthrown by an earthquake, that government laid out a new city, under the name of Nuevo San Salvador, 10 m. nearer the sea; so many of the inhabitants, however, chose to remain, and rebuild their ruined houses, that the old city was formally reinstated as the seat of government. Pop. about 15,000.

SAMANA, or **ATTWOOD** [add], an isl. or cay, West Indies, Bahamas, to the N. of the Crooked Island group, about lat. 23° N.; lon. 73° 30' W. It is 9 m. long by 1½ m. broad, has a hilly and uneven surface rising to the height of 100 ft., is skirted by dangerous reefs, and is uninhabited. The anchorage is at its S.W. extremity, but is little used, as the island lies almost entirely out of the usual track of vessels.

SAMAO, or **SEMAO**, an isl. Indian Archipelago, off the W. end of the island of Timor, from which it is separated by a safe navigable channel 3 m. in width. Its length is about 20 m., its breadth 7 m., and its area 134 sq. m. With the exception of the S.E. extremity and part of the interior, it is a bare and sterile plain, covered with decomposed limestone and fossil shells. It is the residence of the rajah of Coupang, and contains about 3000 inhabitants.

SAMARA [add.], a tn. Russia, cap. gov. of same name, in the angle formed by the confluence of the Samara with the Volga; lat. 53° 11' N.; lon. 50° E. It was built in 1591 as a protection against the inroads of the Bashkirs and Kalmucks, and inclosed by a deep ditch and an earthen rampart. In 1703 these defences were demolished and a new fortress built. It too has so completely disappeared that scarcely any traces of it remain. The modern town, which is the seat of a civil governor and the see of a bishop, has two cathedrals and two parish churches, secular and religious schools for the circle and the parish, numerous manufactures, and two annual fairs, which attract large numbers of dealers from distant quarters. The trade is very extensive, Samara ranking as the most important corn market on the Volga. Pop. 19,753.

SAMBA-KATENDA, a tn. S.W. Africa, on the S.E. frontiers of the Kimbunda country, territory Kapingi; lat. 13° 30' S.; lon. 18° 35' E. In its vicinity are the marshy lakes of Kapeke, in which the Coanza has its source. Pop. 1500.

SAMBOR [add.], a tn. Austrian empire, Galicia, cap. circle of same name, on a beautiful and fertile plain, l. bank Dniester, 40 m. S.W. Lemberg. It is the seat of several important government offices, and has an upper gymnasium, a high-school, a Bernardine convent, founded in 1472, and containing the tomb of the woiwod Chomentowski, famed in Polish history; manufactures of linen, and a considerable trade. It was besieged in 1498 by the Turks, in 1656 by the Swedes, and in 1657 by the Siebenburghers. In 1768 it was ravaged by the plague. It was the starting-point of the false Demetrius, when he set out at the head of a host in 1604 to invade the Muscovite territory. Pop. 10,507.

SAMBOS, a territory, S.W. Africa, Kimbunda country, between lat. 12° 30' and 13° 25' S.; lon. 16° 35' and 17° 50' E.; bounded N. by Bailundo, E. Kakingi, S. Galangue, and W. Iambo; area about 1800 sq. m. It consists entirely of an elevated plateau, which towards the N.E. becomes connected with the Bulun-Bulu; its climate is temperate and healthy, and its surface, watered by numerous streams, is fertile and cultivable. The government is in the hands of an absolute prince; the people, more peaceful in their habits than those of the adjoining territories, devote themselves to agriculture and trade. Pop. 30,000.

SAMBULPORE, a tn. India, presid. Bengal, 290 m. W.S.W. Calcutta, extends for about 2 m. along the l. bank of the Mahanudy, and is said to contain a number of temples and other substantial buildings, but comparatively little is known of it, as its climate is deadly to European constitutions. Though the river is navigable by large boats during eight months, and by small boats throughout the year, there is little or no trade.

SAMOBOR, a tn. Austrian empire, kingdom of Croatia and Slavonia, co. and 12 m. W.S.W. Agram, cap. dist. of same name; with a castle, a Franciscan monastery, a copper-mill, and 2660 inhabitants.

SAMULCOTTAH, a tn. India, presid. Madras, dist. and 25 m. E. Rajahmundry. It is a large place, but derives its chief claim to notice from its cantonment, which occupies the site of an ancient fort, portions of the rampart of which are still standing. The public buildings, all substantial, consist of barracks, hospital, magazine, store-rooms, and sergeants' quarters. There is also a racket-court, and a good mess-house; but the officers' houses, scattered about the cantonment, are indifferent.

SAN ANDREAS, a vil. U. States, California, on the Calaveras River, 165 m. E. San Francisco; is surrounded on all sides by lofty mountains. Gold-mining is the occupation of the inhabitants, who number about 1250.

SAN ANTONIO, a tn. W. Africa, on the N.E. shore of Prince's Sound, in the Gulf of Guinea, 140 m. S.W. Fernando Po. It consists of about 200 houses of a single story, and contains two churches and a convent. The entrance to the harbour is defended by a small fort. Of the inhabitants, about 1000 in number, only a tenth are whites; the rest are mulattoes and negroes.

SAN CARLOS, a tn. La Plata, prov. and 190 m. N. Catamarca, between the sierras of Aconquija and Santa Barbara. It consists of houses, for the most part substantially built, white-washed, and of pleasing appearance; and possesses on its principal square a handsome church with a dome and two towers, erected at the sole expense of a Dominican monk. Pop. above 1000.

SAND, an isl. W. Africa, near the mouth of the river Nunez. About half a century ago it was a small bare sand-bank, but subsequently became a distinct island, about half a mile long, raised 6 ft. above the highest tides, and covered at its N. end by many large trees. On its S. side fallen timber was piled up to such an extent that H.M.S. *Aina*, which anchored in 5 fathoms within hail of the shore, completed her fuel from it and the growing trees without any apparent diminution of the store. The greater part of the island, however, consisting of fine sand, which the slightest wind sufficed to raise, it would seem that in recent times it has diminished as rapidly as it had previously increased, and is reverting, if it has not already reverted, to its original condition of a flat sand-bank.

SANDEC (NEU), a tn. Austrian empire, Galicia, cap. circle of same name, on the Dunajec, 42 m. S.E. Cracow. It has a Protestant church, an upper gymnasium, a high-school

for the circle, an ancient castle, a monastery which belonged to the Jesuits, a Jewish hospital, and an infirmary. Pop. 7079.

SANDORF, a tn. Austrian empire, Hungary, co. Upper Neutra, 20 m. N.W. Tyrnau, with 1250 Slovak inhabitants. In the vicinity are the ruins of the castle of Korlatkeo, the cradle of the Hungarian family of that name.

SANDY, the name of two islands, Australia, off the E. coast of Queensland.—1, *South Sandy Island*, about lat. 27° S.; lon. 153° 30' E., is 27 m. long from N. to S., and from 5 to 11 m. broad. On the S. it is separated from the mainland by Laguna Bay, which is 5 m. wide, and communicates with an extensive sheet of water washing the island on the W. On the E., where the island lies open to the sea, its coast is nearly straight, and rises abruptly to a ridge of sand-hills partly covered with stunted bushes.—2, *Great Sandy Island*, separated from the former on the S. by Wide Bay, is 68 m. long from N. to S., and has a breadth of 13 m. measured nearly across its centre. It consists of a continuous range of barren sand-hills, which rise in some parts to the height of at least 600 feet, and are diversified only by some bushes and stunted trees scattered over the slopes facing the sea. Wide Bay, which separates the two islands, and is about 10 m. across, throws off two arms, which penetrate to the N. and S. between the two islands and the mainland. The entrance to the bay is encumbered by a bar, with 2 to 3 fathoms water on it; but, once inside, secure anchorage may be found for any number of vessels in 4 to 10 fathoms, in what is called Wide Bay Harbour.

SANGENBERG (ALT), a tn. Austrian empire, Bohemia, circle and 16 m. E.N.E. Eger; with a parish church, two mills, and several chalybeate springs. Iron and tin are worked in the vicinity. Pop. 1300.

SANGIR [add.], a group of islands, Indian Archipelago, so called from the largest island, which is nearly equidistant from the N.E. extremity of Celebes and the S. extremity of the Philippine isle Mindanao. The group consists of three larger and a great number of smaller islands, most of them uninhabited, and covered with whole forests of cocoa-palms. Where the ground is cleared, the natives, who are very industrious, raise good crops of pisang, rice, and other useful plants. The islands are generally mountainous, and betray their volcanic origin, not only by their geological formation, but also by actual display of volcanic agency. On Doewang, the loftiest island of the group, an eruption took place in 1808, and destroyed all the buildings and cultivated ground for a considerable distance. It has since continued to smoke at intervals. On the island of Siao, the volcano of Api manifests its activity by volumes of smoke and occasional showers of ashes. On Great Sangir, the largest and most northerly of the islands, the volcano of Aboe, which rises to the height of 4000 feet above the sea, burst forth in 1812, and emitted streams of lava which poured down on all sides, destroyed many human beings, and converted the northern part of the island, previously covered with cocoa plantations and well-cultivated fields, into a desert waste. After nearly half a century of quiescence it burst out anew in 1856 and repeated its former devastation, pouring down seven broad streams of lava, and covering the whole district with stones and ashes. Most of the people being engaged at the time in the fields, many were inclosed within the lava streams, and having no means of escape, perished to the number of 2800. The principal articles of culture and trade are rice, pisang, sago, and cocoa-nut oil. The last, which is the great staple, is sent chiefly to the Ternate group. Two of the smaller islands abound in swallows' edible nests, which yield no small revenue. The number of inhabitants in the group, exclusive of slaves, is above 21,000. This number falls far short of what might be maintained, but any great increase is prevented by the ravages of small-pox and fever.

SAN JOSÉ, a tn. S. America, Banda Oriental, on a stream of same name, 40 m. N.W. Monte Video. It is a small place of pleasing appearance, with a plaza, on which stands the church, without a tower, and a pair of good houses, one of which is the post-house. Neither the plaza nor the streets are paved, but there are good side-walks raised above their level and paved with tiles.

SAN JOSÉ, a tn. S. America, Ecuador, prov. Oriente, on an elevated site above r. bank Napo, 300 m. S.E. Quito.

It is the best-peopled place in the interior of the country, and carries on a considerable trade, but has no public building deserving of notice.

SAN JOSÉ DEL MORRO, a tn. La Plata, prov. San Luis, on the banks of a stream with a broad bed full of large boulders but scantily supplied with water, 25 m. E. Mendoza. It consists of a number of good houses, possesses a church with neither a tower nor an officiating priest, and contains about 1000 inhabitants.

SAN JUAN DE NICARAGUA, or **GREY TOWN** [add.], a tn. Central America, state Nicaragua, at the mouth of a river of same name in the Caribbean Sea; lat. 10° 55' N.; lon. 83° 43' W. It stands on the frontiers of Costa Rica, and was claimed by that state as well as Nicaragua. It has been finally secured to the latter by a treaty concluded in 1860. It is at present a paltry place, with a pop. not exceeding 1000, but derives much importance from being the E. terminus of a proposed navigable canal to connect the Atlantic with the Pacific Ocean. The communication by water by means of the river San Juan and the lake of Nicaragua, leaves so little land conveyance that an American transit company was established to convey goods and passengers between the two seas. The town, instead of profiting, suffered severely in consequence of this arrangement, having been bombarded and burned in 1852 by a naval force of the U. States, on the charge that the inhabitants had infringed the rights of the transit company. It is said that the harbour has since become choked with sand.

SAN LUIS DE LA PUNTA, a tn. La Plata, cap. prov., and at the S. extremity of a mountain of same name, 195 m. E.S.E. Mendoza. It stands at the height of 2330 ft. above the sea, and consists partly of large and elegant houses substantially built, and partly of others of a very indifferent description. The church, though surmounted by a tower, has no other claim to notice. A small body of troops occupies the barracks. The only attraction in the place is the abundance of fine fruit, almost every house of any importance possessing a productive garden, in which plums, figs, grapes, and even oranges of excellent quality, are grown. Fossil bones of some of the extinct gigantic animals are found in the vicinity. Pop. about 4000.

SANSANNE AISA, a tn. Western Africa, Hansa States, on the S. Tuarik frontier, 160 m. N.W. Kano. Its advanced and isolated position has made it necessary to provide carefully for its defence, and hence it is surrounded not only by a wall, but a dense forest, forming a kind of natural fortification. It has thus become a place of considerable importance, travellers preferring to encamp at it, on account of its greater security, though it lies somewhat out of the direct route.

SANSANNE MANGO, or **MANGO**, a tn. Western Africa, an old settlement of the Mandingoes or Wangarawa, who seem to have migrated to this quarter at an early period, and engaged in the gold trade between Kong and Kukea. It is situated about 270 m. N. of the Bight of Benin, and has an estimated pop. of 3000.

SANTA CLARA, a tn. U. States, California, on the St. José and San Francisco railway, 46 m. S.S.E. San Francisco. It contains five churches, a collegiate institute for girls, two public halls, and a Jesuit college with about 210 students. Between the town and San José, 3 m. distant, is a shaded carriage drive. The manufactures are of carriages, bricks, lime, leather, &c. Pop. 2500.

SANTA CRUZ, a river, S. America, which is understood to have its source near the E. frontiers of Chili, flows E. across Patagonia, and falls into the Atlantic about lat. 50° S. Near the shore at Weddell Bluff, a conspicuous headland 300 feet high, it divides into two arms, a N. and a W. The former ceases to be navigable, even at high-water, 12 m. above its commencement; the latter, which is the far more considerable of the two, and ought evidently to be regarded as the main stream, was examined by Captain Stokes for 33 m. At 4½ m. up, the head of the tide was reached, and the water was altogether fresh. The stream, with a mean breadth of a quarter of a mile, and a depth in mid-channel of 8 ft., ran beautifully clean and pure, with a velocity of at least 5 m. an hour, over a bed of pebbles mixed with dark sand. Captain Fitzroy sailed up the river with three light whale-boats, which laboured against the stream by rowing or tracking for 16 days, when, provisions failing, they were obliged to return.

The down voyage was performed in four days. The utmost point reached was 140 m. of direct distance to the westward of the entrance, or 245 m. by the course of the river. They were then within 30 m. of the foot of the snow-capped Andes, but the sources of the river seemed still to be distant, as the channel had scarcely narrowed for the last 100 m., while the temperature of the water, higher than that of the air, was supposed to indicate that the headwaters were to be found northward in a warmer, and not southward in a colder climate. The spot reached was 400 feet above sea-level. This spread over the whole distance gives an average descent of only 1·6 foot per mile, though in many places the stream ran like a torrent. The tides range 40 feet at springs and 18 feet at neaps, and run from 6 to 3 knots.

SANTA EULALIA, a tn. Mexico, prov. and 15 m. S.E. Chihuahua. It has a pop. of about 1500, who subsist chiefly by the working of its mines in a very imperfect and desultory manner. These mines, of which more than 200 have been worked within a space of two square leagues, were the main source of the prosperity of Chihuahua, the population of which rose in consequence to 76,000, though it now barely exceeds a sixth of that number.

SANTA FÉ, or **SANTA FÉ DE LA VERA CRUZ**, a tn. La Plata, cap. prov. of same name, advantageously situated at the confluence of the Salado with the Parana, 230 m. N.N.W. Buenos Ayres. It stands on a height, the only one which occurs in a district remarkable for its uniform flatness, and is of a rectangular shape, with several tolerably regular but narrow streets, and a plaza of considerable dimensions. On the latter stand an ancient and a modern church, and the Cabildo, by far the largest and most imposing building in the town, though displaying little taste; and immediately behind, a Dominican and a Franciscan monastery, each with its own church, making four churches in all. The only other buildings of any note are the guard-house and the market-hall, the former surmounted by a tower and the latter in the form of a square, with the sides partly arched over for booths. The whole place has a lifeless and deserted look, except towards the quay, which is solidly built of brick, and giving excellent accommodation to vessels large and small, is occasionally a scene of considerable activity. The principal trade is in hides, and in the excellent timber obtained from the forest on the banks of the Salado. Pop. about 8000.

SANTA LUCIA, a tn. Central America, Honduras, dep. and 4 m. S.E. Tegucigalpa, on a mountain range of same name. It stands embowered among trees in the centre of a celebrated mining district, is well built, and possesses a neat white church. The grounds around produce good crops of wheat and other grain, and the mines in the vicinity are still worked, but by processes so rude as to be by no means productive.

SANTA MAGDALENA, a tn. Mexico, dep. Sonora, near r. bank San Ignacio, 80 m. N.W. Ures. It is a paltry place, with about 1000 inhabitants, but is celebrated for its annual fair, which begins on the 2d October, and attracts thousands from the surrounding country.

SANTA MARIA, a tn. La Plata, prov. and 160 m. N.N.W. Catamarca, at the height of 7000 feet above the sea. It consists of a principal and two other crooked streets, together with a square, on which stands a church in a very dilapidated condition. The houses, built for the most part of mud, are very indifferent. Any importance possessed by Santa Maria is due to the copper mines in its vicinity. Pop. 800.

SANTA ROSA, a vil. U. States, California, cap. co. Sonoma, on a creek of same name, 60 m. N. San Francisco. It is situated in a fine cultivated valley, and has a courthouse, four churches, and an hospital. Wine and grain are produced and exported.

SANTA ROSA, a tn. S. America, Ecuador, cap. prov. Oriente, on the N. bank of the Napo; lat. 0° 58' S.; lon. 77° 15' W. It was once a place of commercial importance, and contained a large population of whites; at present it is a wretched place, occupied only by a few families of Indians.

SANTIAGO, a vil. Bolivia, on the S. border of prov. Chiquitos, near the frontier of Paraguay. It stands on a cordillera, near the source of the Otquis, in a district at once fertile and rich in minerals, valuable woods, and medicinal plants. Pop. 1380.

SANTIAGO, two rivers, S. America, Ecuador. The one, formed by several streams which have their most distant source in the E. slope of the Andes, in the district of Cuenca, first assumes its own name on receiving the Zamora on the right, flows successively S.E. and E.S.E., forming in the latter direction part of the boundary between Ecuador and Peru, and after a course of about 250 m., of which 100 might be navigated by steamers, falls into the Amazon. The Jivaros Indians, who inhabit its banks, are the only serious obstacle to its successful navigation.—The other Santiago, rising on the W. slopes of the Andes, receives the Bogota or Cachavi on the right, and the Cayapas coming from Mount Cotacachi on the left, and flows N.N.W. in a majestic stream till it reaches the island of Tola. Here it is divided into the two branches of Tola and Pailon, the latter of which, the more important of the two, is again subdivided, so that the whole at last enters the Pacific by three mouths, not far from the S.W. frontiers of Granada. Its banks, and those of its affluents, are said to be rich in gold.

SANTIAGO DEL ESTERO [add.], a tn. La Plata, cap. prov. of same name, about a mile W. from the r. bank of the Dolce, and near the point where the parallel of 28° S. is intersected by the meridian of 64°. It is nearly in the form of a regular square, with the plaza situated in one of its angles, but nowhere has the least appearance of a capital. The streets are dusty and deserted, and the only buildings which have an air of importance are dilapidated or uninhabited. The cathedral, which appears to have been originally a handsome structure, is a mere ruin, in consequence of the falling in of its dome; and the Franciscan and Dominican monasteries, though still nominally devoted to their original purpose, are occupied only by five monks, three in the one and two in the other. The ground in the immediate vicinity is so sandy as to be naturally unfit for cultivation, but the manuring which it annually receives from the inundations of the river has so far improved its texture that part of it is laid out in gardens—in which, among other fruits, excellent oranges are grown—and part in corn fields, which raise good crops of maize. The only important export is of mules, for which the province is famous. Pop. about 5000.

SANTIAGO DE MACHACHO, a tn. Bolivia, dep. and 150 m. W.N.W. Oruro, at the source of an affluent of the Desaguadero. It is inclosed by ill-constructed walls, and consists for the most part of miserable-looking houses. The only buildings of any consequence are the church and parsonage, which contrast strikingly with the general wretchedness. There is no trade, but the wine-shops are numerous, and do a thriving business.

SANTOS [add.], a tn. Brazil, prov. and 50 m. S.S.E. Sao Paulo, on a bay of the S. Atlantic. It stretches for a considerable distance along the bay from S.S.E. to N.N.W. with comparatively little breadth, and is on the whole well built, having several wide and spacious streets, containing many elegant and stately houses. Among the public buildings are several churches and monasteries, a town-house, custom-house, and two hospitals. Its marshy site, however, makes it very unhealthy, and the evil is greatly aggravated by imperfect sewerage and the filthy state in which the streets are permitted to remain, the clearing of them, even of matters notorious as the breeders of fever and pestilence, being apparently regarded by the authorities as a work of supererogation. The harbour, which is the best in the province, and the chief outlet for its products, is the emporium of a very extensive trade, in which the principal articles of export are coffee (the great staple), sugar, tobacco, hides, lard, bacon, and other provisions. The only imports are various articles of European and American manufacture. Pop. about 7000.

SARAHAN, or **SERAN**, a tn. India, Bussahir, beautifully situated in a semicircular mountain recess, forming a wooded amphitheatre, at the height of 7246 ft. above the sea; lat. 31° 30' N.; lon. 77° 50' E. The houses are handsomely built in the Chinese style, with pent-roofs and balconies, and are occasionally embellished with fine wood carving. The principal buildings are a summer palace of the rajah, and a Hindoo temple, where, it is said, that human victims were once offered. Sarahan is the N. limit of Brahminism.

SARAWU, a tn. Western Africa, Adamawa, 50 m. N.E. Yola, in an elevated district, on the water-shed which sepa-

rates the basins of Lake Chad and the Kwara. It consists of a N. and a S. village, the former of which, being inhabited almost exclusively by Bornou people, is distinguished by the name of Sarawu Berberé, while the other, separated from it by a ravine, takes the name of Sarawu Fulfuldé. The staples of the market are cattle, ground-nuts, butter, salt, and soap. Cotton is cultivated to some extent. The situation of Sarawu is very important, from its being the point where the road from Logon and all the N.E. of Adamawa, including some very considerable centres of industry and commerce, particularly Fatawel, the entrepôt of all the ivory trade in these quarters, joins the road from Kukawa to Yola.

SARAYAMO, a tn. Western Africa, cap. prov. Kiso, on a navigable affluent of the Niger, 85 m. S. by E. Timbuktoo. It consists of an inner city and a large suburb, the former composed of narrow and uncomfortable clay dwellings, and the latter of huts of large size with very low doors. The inhabitants, Fellatah, possess a great number of horses; and the whole place, though there is no regular market, and the trade is unimportant, appears to be tolerably flourishing. Rice is the chief article of food.

SARBOGARD, a tn. Austrian empire, Hungary, co. and 23 m. S. by E. Stuhlweissenburg; with a court of justice and 3000 inhabitants, who belong to the Reformed church, and are mostly engaged in weaving.

SAROS (GREAT and LITTLE), two places, Austrian empire, Hungary, co. Saros:—*Gross* or *Great Saros*, situated 6 m. N.W. Eperies, on the Tarozs, was once a royal free town, and has a large castle, a high-school, numerous looms and iron mines. Pop. 2323.—*Little Saros*, situated about 2 m. from the former, has a mineral spring, and 600 inhabitants. On the highest summit of a large pine forest in the vicinity stands the old castle of Saros, which gives name to the county.

SARYKOI [anc. *Zelea*], a tn. Turkey in Asia, Anatolia, on the S. slopes of the last outliers of Mount Ida, about 90 m. S.W. Constantinople. It consists of about 200 houses, many of them in a state of decay, and contains four mosques. There are still some remains of the ancient acropolis, which stood on a completely isolated hill.

SASKATCHEWAN [add.], a river, British America, which, in the upper part of its course, consists of two branches, a N. and a S. The N. branch, issuing from the E. end of Glacier Lake, on the E. slope of the Rocky Mountains, at the height of 4320 ft. above the sea, in lat. 51° 54' N., lon. 117° 30' W., flows E. along the base of Mount Murchison, which has an absolute height of 15,789 feet, then turns abruptly N.N.W. and continues this direction to the junction of Big Horn River. Here it resumes its easterly course, and continues it till it reaches the station called Rocky Mountain House, when it makes another abrupt bend and begins to flow N.N.E. On reaching the meridian of 115° it bends round and flows first E.N.E. to Fort Edmonton, in lat. 53° 29'; lon. 113° 49', and then very circuitously but on the whole nearly due E. to Fort Pitt, lat. 53° 34'. Here bending round it flows S.E. in a very winding channel to a point known as the North Branch Elbow, where another bend carries it N.E. past Fort Carleton, to its junction with the S. branch at the Grand Forks, near the meridian of 105°, and about 12 m. above Fort à la Corne. The S. branch of the Saskatchewan, formed by the junction of the Bow and Belly Rivers, from the Rocky Mountains, about lat. 49° 40' N.; lon. 111° 40' W., flows N.E. to Chesterfield, where it receives the Red Deer, and then circuitously E. to the South Branch Elbow, near the parallel of 54°, and there changes its direction to S.E., which it retains till it enters or expands into Cedar Lake. On issuing from it it flows E., rushes down the Grand Rapid, and pours its accumulated waters into Lake Winnipeg. The N. branch, which passes over 12° of longitude, is a yellowish turbid stream, flowing with a current so rapid, and in a channel so shallow and obstructed by boulders, as to be very difficult of navigation. At its

SUPP. IMP. GAZ.—VOL. II.

mouth it is only 140 yards broad, and discharges 91,011,360 cubic feet of water per hour. Its affluents, though numerous, are too insignificant to require special notice. The S. branch, a more important stream, has, 18 m. below the Elbow and 584 m. from its mouth, a breadth of 600 yards, a depth in the main channel of 10 feet, and a current at the rate of 2½ m. per hour. At its mouth it is 180 yards wide, and discharges 123,425,616 cubic feet of water per hour. Its

GRAND RAPID, SASKATCHEWAN RIVER.—From Hind's Canadian Exploring Expedition.

only important affluent is the Red Deer, which joins it on the left at Chesterfield. The main Saskatchewan, called by the natives Ki-sis-ka-chewan, sweeps in magnificent curves through a valley about a mile broad and 150 to 200 feet deep. Opposite Fort à la Corne it is 320 yards broad, 20 feet deep in the main channel, and flows at the rate of 3 m. an hour. At Tearing River, lon. 102° W., near the middle of its course, its discharge of water is 206,975,000 cubic feet per hour; at its mouth the mean discharge per second is 59,289 cubic feet, or 213,440,400 per hour. The estimated area of its basin is 240,000 sq. m. At Fort à la Corne it usually becomes frozen in the second week of November, and remains closed till the second or third week of April. The basins of the N. and S. branches are generally too wild and mountainous, and of too rigorous a climate, to admit of much cultivation. From the Rocky Mountain House to Fort à la Corne, the N. Saskatchewan traverses the plains in a valley that varies in depth from 100 to 300 ft., and never exceeds 2 m. in width. The greater part of this width is occupied by alluvial flats, the river itself rarely exceeding 400 yards in breadth. The alluvial flats, which form the finest quality of land in this part of the country, are often well timbered, but in the manner in which the stream winds from side to side of the valley the 'points,' as they are termed, seldom are more than 2 or 3 m. in extent. The general course of the river is bounded by hills, which sometimes recede to a considerable distance, and rise 200 to 400 ft. above the general prairie level. At their base are tracts of land of fine quality; while the space, sometimes of 30 m., between the hills and the river is good grazing land. These natural pastures produce nutritious species of grasses and carices, along with vetches in great variety, affording excellent food for cattle during winter, which lasts five months, from November to April. The places chosen for settlements and mission stations are all at a distance from the river, for the sake of vicinity to the large lakes along the base of the hill country, which afford a vast abundance of fish, which are preserved throughout the winter simply by being frozen, and furnish a cheap and nutritious article of food. In the upper part of the Saskatchewan country coal of fair quality is found abundantly, and in the same strata iron ore exists. Between Carlton and Edmonton there is no valuable timber S. of the river; to the N. however spruce, fir, pine, and birch abound. The S. Saskatchewan, in its upper part called Bow River, passes through a different description of country. After leaving the mountain region it flows in a deep and narrow valley, through arid plains devoid of timber or pasture of good quality. The steep and lofty sides of the valley are composed

of calcareous marls and clays baked hard by the parching sun. The sage and cactus and other scanty vegetation bespeak the arid nature of the climate. Towards the confluence of Red River with the S. Saskatchewan, there are isolated patches of table-land, on which vegetation becomes luxuriant; to the S. of the river, also, about lat. 49° 40' N., at the Cypress Hills, there is abundance of water and pasture, and a heavily timbered slope faces the north. The capabilities of this country and its climate in the growth of cereals have not been thoroughly tested. Barley and oats are successfully grown at the settlements, but wheat does not answer, owing perhaps to other causes than soil or climate. Harvest commences in September. Wolves are so numerous in every direction as to be a serious hindrance to sheep-farming.

SASKATCHEWAN (LITTLE). See RAPID RIVER in *Supp.*

SATSUMA, a principality, Japan, on W. coast of the island of Kiusin, in various respects one of the most interesting parts of the whole Japanese empire, and ruled by the most powerful and richest prince of the land. It extends on the S. to Van Diemen Strait, and includes the islands beyond the strait. The country, both in the mainland and the smaller islands, abounds with volcanic hills, some of them 6000 ft. high. One of the small islands is an active volcano rising directly out of the sea to a height of 2324 ft. It contains large masses of sulphur. The province contains iron and copper ore, sulphuret of lead, &c. The Bay of Kagosima, bordered by rugged rocks, runs far up into the mainland. The town of the same name situated upon it was bombarded by the British fleet in 1863, in retribution of the murder of an Englishman by the retainers of the prince.

SAUGOR AND NERBUDDA TERRITORY, an extensive tract, India, between lat. 21° 16' and 25° 15' N.; lon. 76° 53' and 82° 51' E.; bounded, N. by Bundelcund, and dists. Banda, Allahabad, and Mirzapore; E. Mirzapore and Kora; S. Nagpore or Berar and the Nizam's Dominions; and W. Scindia's Dominions and Bhopal; length, E. to W., 380 m.; breadth, 190 m.; area, 32,114 sq. m. Within these limits, however, are comprehended the native states of Rewah, Kotee, Myhir, Oochehya, and Sohawal. The portion strictly British is of very irregular shape, and has an estimated area of only 20,000 sq. m. The territory is generally elevated, being partly covered by the Vindhya and Mahadeo Mountains, which inclose respectively the N. and the S. sides of the Nerbudda Valley. The greatest elevation is in the E., where Mount Amarakantak rises to the height of 3463 feet. The average height of the two ranges does not exceed 2000 feet. Besides inclosing the valley of the Nerbudda, they form the watershed between it and two other basins, the drainage of the S. slope of the Mahadeo range being carried to the Taptee, while the N. Vindhya slope sends its drainage to the Jumna and Ganges. In the E. the prevailing rock appears to be sandstone, overlaid in many places with a rich mould, producing luxuriant vegetation. The sandstone, in extending westward, becomes intermixed with red marl, slate, and limestone. Still farther W., about the meridian of 79°, a volcanic tract commences and extends over the N.W., where the town of Saugor is seated on its highest part. In the S., among the Mahadeo Hills, trap also predominates. In some localities granite, gneiss, mica-schist, quartz, and other primitive rocks are seen piercing the overlying trap and sandstone. In the great valley of the Nerbudda there is a large extent of alluvium, intermixed with sandstone, coarse conglomerate, limestone, schists, and laterite. The minerals include both iron and coal. The former is mined and smelted to a considerable extent about 30 m. N.E. Jubbulpore; the latter also abounds, particularly on the left bank of the Sone. The soil in the volcanic tract is very fertile, producing almost every kind of crop; on the alluvium of the Nerbudda rice is extensively grown. The principal domestic animals are a small indigenous cow celebrated for its milk, buffaloes, reared also for the dairy, and oxen for draught. Neither horses nor sheep are much attended to. Among wild animals none seem to commit more ravages than the wolf. Manufactures are few and insignificant. A considerable portion of the inhabitants are Gonds, some of whose tribes still live in the woods in a state of savage nature. They have been charged with cannibalism, and are known to have been, within a recent period, addicted to human sacrifice.

SAUGOR, cap. of the above territory, occupying the highest part of a hilly tract 1940 feet above the sea, 225 m. S.W. Allahabad, is built along the W., N., and N.E. sides of a lake abounding with fish, and frequented by large flocks of waterfowl. It was once defended by a fort which is now used as an ordnance dépôt, and had a mint, in which 400 men were employed before the establishment was finally removed to Calcutta. It possesses a church, built in the Gothic style, for the accommodation of the European residents, who are more numerous here than in most provincial Indian towns, and consist partly of the officers of the native troops stationed here in military cantonments. These, situated on an undulating plain N.E. of the lake, are in some places low and swampy, and as a natural consequence unhealthy. The only other building and establishment requiring notice is a sort of collegiate school, in which English, Hindoe, Persian, and Mahratta are taught. In the vicinity an iron suspension bridge, 200 ft. in span, made of native materials and executed by native workmen, under the superintendence of a British officer, has been erected over the Bessi or Bes. The skill thus manifested is further displayed in various manufactures in brass and iron. For goldsmiths' work the place has long been famous, more especially for the kind of gold chains known by the name of rose-chains. During the sepoj mutiny a number of Europeans, including about 100 women and children, were closely besieged here from July, 1857, to November, 1858, when Sir Hugh Rose relieved them. Pop. about 50,000.

SAUGOR, an isl. India, presid. Bengal, near the E. shore of the great entrance of the Hooghly. It is nearly 8 m. long by 4 m. broad, and consists of a low flat of considerable fertility. It was leased by government to a company who undertook to clear it, and to begin paying land-tax on the cleared lands on the expiry of 20 years. The undertaking has not prospered, and the period of rent-free tenure has been extended. An iron lighthouse has been erected on the island at Middleton Point, and on the E. side of it there is an ancient temple with a large tank, which is annually visited by large numbers of Hindoos for ritual purposes. Pop. 10,000.

SAULT STE. MARIE, a vil. U. States, Michigan, on the W. side of the celebrated rapids of same name, which form part of the boundary between the States and British America, and through which Lake Superior discharges itself into Lake Huron. For a long time these rapids were the only remaining obstruction to a continuous navigation of the whole chain of North American lakes from the St. Lawrence upwards, but all difficulties have at length been overcome by the completion of the magnificent locks of the Sault Ste. Marie canal, and ships can now sail from European or Atlantic ports, and, without breaking bulk, land their cargoes at Fort William, at the W. extremity of Lake Superior, and, of course, make their return voyage in the same way. The canal is 1½ m. in length, 70 ft. wide at bottom, and 100 ft. at water-line, and has a depth of 12 ft. It was completed in May, 1855, and in 1856 was passed for the first time by the *Dean Richmond*, a vessel of 266 tons register, bound from Chicago for Liverpool. Since then the number of sea-going vessels from Lake Superior has regularly increased, and its trade is assuming an importance which the most sanguine scarcely ventured to anticipate.

SAVA, or **SAVEH** (supposed anc. *Tubus*), a tn. Persia, 70 m. S.W. Teheran. It must have once been much more important than at present, as nearly two-thirds of the space within the walls are occupied by mounds of debris and crumbling buildings, while the remaining third appears not to contain a population of more than 5000. The only buildings deserving of notice are the mosque, and near it a minaret, which has at one time been highly ornamented; a large domed structure, called the Chehar Su, containing a reservoir and the remains of rich internal decorations; and a small covered-in bazar of about fifty shops, where petty trades are carried on and provisions sold. There is no trade, even transit, as the caravans do not enter the town, and the only manufacture is one of nitre, for which the extensive ruins furnish ample materials.

SAVANNA GRANDE, a tn. Central America, Honduras, dep. and 30 m. S.S.W. Tegueigalpa, in a valley surrounded by bleak hills. It is compactly built, possesses a paved plaza and an adobe church, and carries on a thriving

trade in brandy, of which large quantities are made in the vicinity.

SAVITREE, a river, India, presid. Bombay, which rises in dist. Ratnagherry, S. Concan, in lat. 18° 17' N.; lon. 73° 27' E., flows W. past the town of Mhar, and falls into the Arabian Sea at Bankote, after a course of about 70 m. It is navigable up to Mhar, 30 m. above its mouth, and was once accessible at all times for large ships, but the bar has now only 10 ft. at low-water spring tides, though the depth inside is still 5 fathoms.

SAY, a tn. Western Africa, Hausa States, 190 m. W. Sokoto, l. bank Niger, which here, when Dr. Barth visited it in June, 1853, was about 700, and again on his return in July, 1854, only about 300 yards wide. The town is nearly in the shape of a quadrangle, open to the river, but inclosed by a low earthen rampart on the other three sides, each measuring about 1400 yards. This large space is thinly inhabited; the houses, all of which are of reeds and matting, except the governor's, scattered about like so many separate hamlets, and the pop. in all not exceeding 8000. A wide shallow depression, bordered by doum-palms, almost the only tree within the town or outside, intersects it from N. to S., and becoming filled with water in the rainy season, must cause much unhealthiness and prove a serious obstacle to intercourse between the different quarters. In floods the greater part if not the whole of the town must be under water, and the inhabitants must necessarily take refuge beyond the borders of the valley. There are scarcely any industrial establishments in Say, even weaving and dyeing being greatly neglected; and the market is unimportant, though it is much frequented by the natives of W. Soudan, whom it supplies, through importation from Sinda, with native manufactures, especially articles of clothing.

SAYULA, a tn. Mexico, state Jalisco, 64 m. S. by W. Guadalaxara. It is a regular and well-built place, with 9500 inhabitants, who manufacture large quantities of fine earthenware, and rear great numbers of cattle.

SCARCIES (GREAT and LITTLE), the name of two rivers, W. Africa, which have their mouths about 25 m. N. Sierra Leone. Previously a united stream, they are divided into two by Carteemo, a considerable island with extensive mud-banks lying in their mouths. Great Scarcies is navigable for large ships, but Little Scarcies is fit only for very small vessels.

SCHADOWITZ (GREAT and LITTLE), two nearly contiguous places, Austrian empire, Bohemia, circle and 13 m. N.E. Königgrätz, at the terminus of the branch railway from Josephstadt. They have a pilgrimage chapel, sulphur springs, and extensive coal mines, and contain an aggregate population of 1200.

SCHIAHI, an islet, Persia, Lake Urumiah, bearing considerable resemblance to the Island of Capri in the Bay of Naples, and forming a most picturesque object when its rocky peaks, shaped like sharp-pointed crowns, are seen towering above the bluish-green waters of the lake.

SCHNEIBBS, a tn. Austrian empire, Lower Austria, circle Upper Wienerwald, cap. dist. of same name, on the Erlauf; with a parish church, a Capuchin convent, a high-school, a castle with many ancient monuments, a town-hospital, a townhouse, and various industrial establishments. Pop. 1040.

SCELLENBERG, a tn. Austrian empire, Transylvania, circle and S.E. Hermannstadt. It contains only 750 inhabitants, but makes some figure in history. In 1599 it was the scene of a battle in which the Prince-cardinal Andreas Bathory was defeated by the Walachian hospodar Michael, and in consequence lost both his principality and his life. George Rakosky, when besieging Hermannstadt in 1659 and 1660, had his head-quarters here.

SCHENK (GREAT), a tn. Austrian empire, Transylvania, circle and 30 m. E.N.E. Hermannstadt, cap. dist. of same name; with a Protestant high-school, manufactures of linen, and a trade in flax and fruit. Pop. 2565.

SCHENKENFELDEN, a tn. Austrian empire, Upper Austria, dist. and 15 m. N.N.W. Linz; with a town-hospital, extensive manufactures of linen, and a pop. of 1000. On the Kalvarienberg, in the vicinity, there is a handsome church.

SCHILTNER, a tn. Austrian empire, Lower Austria, circle Upper Manhartsberg, on the Schiltbach, 40 m. N.W. Vienna; with 1020 inhabitants, who are partly employed in a stone quarry in the vicinity.

SCHINTAU, a tn. Austrian empire, Hungary, co. Lower Neutra, l. bank Waag, opposite to Szered; with a fine castle, numerous mills, a trade in wine of good quality, and 1400 inhabitants.

SCHLACKENWERTH, a tn. Austrian empire, Bohemia, circle and 29 m. N.E. Eger, on the Wistritz; with a parish church, a high-school, a townhouse, an hospital, a beautiful castle with a park, a brewery, four mills, and iron mines. Pop. 1300.

SCHLÜSCHOWITZ, a tn. Austrian empire, Moravia, circle Hradisch, about 2 m. N. of Wisowitz; with a R. Catholic church possessed of a fine high altar, a considerable trade in fruit, and 1000 inhabitants.

SCHÖNBACH, two places, Austrian empire, Bohemia, circle Eger. The one, situated near the N.W. extremity of the empire, on the frontiers of Saxony, has a castle, a brewery, manufactures of cloth and white leather, several mills, and 1000 inhabitants. The other, about 10 m. N. Eger, has a parish church, manufactures of calico and musical instruments, cotton, saw, and other mills, and 2292 inhabitants.

SCHÖNGRABERN, a tn. Austrian empire, Lower Austria, circle Lower Manhartsberg, on the Lower Schmida, 29 m. N.N.W. Vienna. It has a large church in the Byzantine style, with bas-reliefs and numerous monuments. Pop. 1160.

SCHÖNNA, a tn. Austrian empire, Tyrol, circle Brixen, at the entrance of the valley of the Passer, about 4 m. N.E. Meran. It has an imposing castle belonging to the Counts of Meran, and contains 1400 inhabitants.

SCHÖNWALD, a tn. Austrian empire, Moravia, circle and N. Olmütz, on the Draschler; with an old parish church and 2100 inhabitants.

SCHREMS, a tn. Austrian empire, Lower Austria, circle Upper Manhartsberg, cap. dist. of same name, on the Braunerbach, 71 m. N.W. Vienna. It has glass-works and an iron-mill, and contains 1960 inhabitants, many of whom are weavers.

SCHRUNS, a tn. Austrian empire, Vorarlberg, circle and 38 m. S.E. Bregenz, on the Ill; with important cattle markets, and 1600 inhabitants.

SCHUMITZ, a tn. Austrian empire, Moravia, circle Hradisch, not far from Hungarian Brod, on the Olsawa; with 1100 inhabitants, who carry on an important trade in fruit.

SCHWANBERG, a tn. Austrian empire, duchy Styria, on the Schwartz Salm, an affluent of the Mur, 24 m. S.W. Gratz, with a castle, a Capuchin monastery, and manufactures of lucifer matches. There is a mineral spring, and lignite is worked in the vicinity. Pop. 1000.

SCHWARZAU, a tn. Austrian empire, Lower Austria, on the Schwarza, near the Schneeberg, 50 m. S.W. Vienna; with iron-works, numerous saw-mills, and a quarry which furnishes grindstones. Pop. 1900.

SCHWARZENBERG, a tn. Austrian empire, Upper Austria, in the N.W. corner of the district of Linz, near the frontiers of Bohemia and Bavaria; with glass-works and a paper-mill, and 1100 inhabitants.

SCHWECHAT, a tn. Austrian empire, Lower Austria, cap. circle, and on a stream of same name, 4 m. S.E. Vienna. It is an industrial place, with numerous manufactures, a cotton-mill, and three breweries. In the vicinity is an obelisk, commemorating the meeting of Sobieski, king of the Poles, with the emperor Leopold I., after the raising of the siege of Vienna. The Hungarian insurgents sustained a defeat here in 1849. One of the Roman frontier forts was situated in this locality, and had the name of Villa Gai.

SEBASTIAN (VILLA DE SAN), a tn. Mexico, state Cinaloa, 105 m. S. by E. Culiacan, stands in a fertile district, is well built, and contains 2500 inhabitants, whose chief employment is the rearing of cattle.

SEBBA, a tn. Western Africa, cap. prov. Yagha, 300 m. W. Sokoto. It is picturesquely situated among a thick covert of trees beside a large sheet of water, but is a miserable place, composed of about 200 huts, without any market or anything to indicate that it is the residence of one who styles himself the lord of Yagha. This personage, when Dr. Barth visited the town, was sitting in front of his house close to the mosque in the midst of a large congregation, to whom he was reading and expounding some passages from the Koran. All the inhabitants are Fellatah.

SEBOU, a river, N. Africa, Marocco, which rises in the slopes of the Little Atlas, flows westward through a valley between two parallel chains, from which it receives numerous affluents, and after a course of which so little is known that it is variously estimated at 150 and 250 m., falls into the Atlantic near the ruined town of Mehedia. The determined hostility of the natives has hitherto prevented any survey of its mouth, but the large quantity of water which it discharges, as well as the rapidity of its current, may be inferred from the extent of discoloration caused by it to a considerable distance seaward.

SECKAU, a tn. Austrian empire, duchy Styria, circle Bruck, at the foot of a mountain range of same name, 33 m. N.W. Gratz. It has a large Gothic church, with an excellent organ, some fine monuments, and two handsome towers; a spacious castle, once the residence of the Bishops of Seckau; considerable manufactures of iron, and a powder-mill.

SECRETARY, an isl. New Zealand, on the S.W. coast of Middle Island or Munster. It extends 10 m. between N. and S., with a maximum width of 5 m., and separates Doubtful Inlet from Thomson Sound, forming the N. side of the one and the S. side of the other. Its W. shore, forming the coast line between the two, is almost straight, and has so great a depth of water opposite to it, that at the distance of little more than a mile no soundings are obtained at the depth of 300 fathoms.

SECRULE, a tn. India, N.W. Provinces, so close to Benares on the W. that it may be considered as its suburb. It contains the civil establishment, the military cantonment, and the residences of the European population. These residences are substantial, well finished, and commodious. Near their centre there is a church with a spire, and in the vicinity a neat chapel, in which the service is conducted in Hindoostanee. The other principal buildings are the courts of justice, the treasury, the jail, and the mint. The last, the only one of these buildings possessed of any architectural merit, was scarcely finished when the mint itself and the whole establishment connected with it was removed to Calcutta.

SEDICO, a tn. Italy, Venetia, 6 m. S.W. Belluno, on an affluent of the Piave. It contains a parish church, and a splendid villa with a large garden laid out in the English style. Pop. 3345.

SEDLÉTZ, a tn. Austrian empire, Bohemia, circle and N.W. Tabor, cap. dist. of same name; with a parish church, a townhouse, and two mills.

SEDZISZOW, a tn. Austrian empire, Galicia, circle and 14 m. N.W. Rzeszow, on the railway from Craeow; with a Capuchin monastery founded in 1740, and 1900 inhabitants.

SEEPRA, a river, India, Malwa, which rises on the N. side of the Vindhya range, in lat. 22° 37' N.; lon. 76° 12' E., flows circuitously N.W., passing Oojein and Mehidpoor, and joins the Chumbul on the r. bank, after a course of 120 m.

SEFISIFA, a tn. N. Africa, Sahara, on the N. slope of Mount Raguba, belonging to the Uled Sidi Sheikh range, about 25 days S. of Algiers on the road to Insalah. It is not walled, but is a place of some importance, containing 350 houses, with a pop. of about 1800.

SE-GAN-FOO or SI-NGAN-FOO, a tn. China, cap. prov. Shansi, near the junction of the Koei-ho and Kin-ho, whose united stream joins the Hoang-ho about 85 m. below. It is surrounded by walls, which are about 10 m. in circuit, is entered by gates, of which several are remarkable for height and splendour, and contains an estimated pop. of about 300,000. The troops intended for the defence of the N. of China have their head-quarters here. The old palace, in which its sovereigns resided when Shansi was an independent principality, still exists. In 1685 a marble tablet was dug up here with an inscription containing Syriac words in Chinese characters. It was headed by a cross, and contained a brief statement of Christian doctrine. It is supposed to have been written by Nestorian missionaries from Persia or Syria.

SEGERO, a vil. Western Africa, Adamawa, in a well cultivated district within sight of Mount Holma, 190 m. S. by W. Kukawa. It occupies a commanding position on the two edges of a mountain ravine and watercourse, which divides it into two parts, the one of which is inhabited by the dominant Fulbe, and the other by the subjugated Holma. Ground-nuts, of the species called *kólche* in Kanuri, here form as large a part of the food of the people as potatoes do in Europe.

They are made into a kind of porridge, which, if boiled with milk, is by no means disagreeable. In cultivating them they are planted with regular spaces left between the stalk of corn, just as beans are grown in many parts of Negroland.

SEHLANDERS, a tn. Austrian empire, Tyrol, circle Brixen, about 36 m. N.W. Botzen. It stands at the entrance of a narrow Alpine valley, contains 2050 inhabitants, and has an institute of the Sisters of Mercy, a Capuchin monastery, and a strong castle. Excellent marble is quarried in the vicinity.

SEHORE, a tn. India, Malwa, state and 22 m. W.S.W. Bhopal. It stands on a rock of quartz, rising boldly from the plain, surrounded by a large grove of mango and other trees, and is a place of considerable size, with a good bazar, and manufactures of printed muslin.

SEINE, a river, British America, which issues from Mille Lacs in a channel more than 100 ft. wide, flows W. through a narrow valley, thickly wooded with Banksian pine and poplar of large size, and falls into Seine Bay, on the E. shore of Rainy Lake, after a course of 67 m. Soon after leaving Mille Lacs it falls, by a series of seven rapids, 36 ft. in 9 m., is then precipitated 24 ft. by two successive steps; and before reaching Seine Bay makes a total descent of 350 ft., by 29 steps, varying in height from 3 to 36 ft. One of its affluents, called Fire Steel River, has its source in swampy marshes, common to the basins of Lake Superior and Hudson's Bay.

SEISENBERG, a tn. Austrian empire, duchy Carniola, on the Gurk, 24 m. S.E. Laybach. It has a castle belonging to Prince Auersperg, with a square tower, a paper-mill, several flour-mills, and contains 1100 inhabitants.

SELEANGSHAN and TUNGLEANGSHAN, the names of two remarkable masses of rock, China, prov. Nganhoei, the former on the E. or r., and the latter on the W. or l. bank of the Yang-tze-kiang, about 14 m. above the town of Taeping. The river, here narrowed to the width of not more than $\frac{1}{2}$ m., forces its way between these rocky barriers; the rugged flanks of which are hewn out in zigzag paths and steps, while their projecting ledges are scarped into batteries. Seleangshan is said to be a resemblance in miniature of the rock of Gibraltar. Its height is somewhere about 300 ft. This pass is evidently the key between the upper and lower portions of the Yang-tze-kiang, and properly defended would be impregnable.

SELLES, a territory, S.W. Africa, Kimbunda country, between lat. 11° 45' and 12° 40' S., and lon. 14° and 15° E.; bounded N. by Ambuim, E. by extensive uninhabited forests, S. by Kissandeh, and W. by the Makango desert; area, about 2000 sq. m. The surface is generally mountainous, but between the ranges are several large, beautiful, and fertile valleys. These, intersecting the mountains nearly at right angles, are the beds of considerable streams, which flow W. in directions nearly parallel to each other, and render the soil so productive, that Selles is regarded as the granary of an extensive barren tract along the sea-coast. Unfortunately the predatory habits of the people prevent them from turning their natural advantages to account, and they crown all their enormities with the practice of cannibalism, making horrible repasts, not only of many of their prisoners taken in war, but of their own aged sick. This small territory is ruled, not by one chief, but by a number, all claiming to be equally independent. Pop. about 75,000.

SELMA, a tn. U. States, state and r. bank river Alabama, on the Alabama and Tennessee, and the Alabama and Mississippi River railways, 42 m. W. Montgomery. It stands on an elevated plateau, which terminates in a steep cliff on the bank of the river; and has six churches, several public and private schools, a carriage factory, two iron foundries, and a trade in cotton, of which, in 1859-60, it exported nearly 100,000 bales. So abrupt is the cliff above the Alabama that passengers ascend or descend by flights of steps, and goods are conveyed to or from the plateau by means of machinery. Pop. (1860), 3177.

SELOWITZ, a tn. Austrian empire, Moravia, circle and 9 m. S. Brünn, pleasingly situated on the Schwarza. It is the seat of several public offices, and has a handsome parish church, a large and beautiful castle, manufactures of beet-sugar, a considerable trade in fruit, and five yearly markets. Pop. 2355.

SELVI, a tn. Turkey in Europe, Bulgaria, eyalet and

110 m. S.E. Widin. It has three mosques, and a pop. of 5000 to 6000.

SEMENDRIA, or **SMEDEREMO** [add.], a tn. Turkey in Europe, Servia, cap. circle of same name, r. bank Danube, at the confluence of the Jersava, 22 m. S.E. Belgrade. It is pleasantly situated, rising in the form of an amphitheatre on a height encircled by vineyards; ranks next to Belgrade as the largest and most important place in Servia, is the see of a Greek archbishop, and has some imperfect fortifications, but is poorly built, and is rendered unhealthy by the swamps in its neighbourhood. Its only manufacture is firearms, which are much esteemed. Its inhabitants, amounting to 3829, are chiefly employed in trading, fishing, and cultivating the vine.

SEMIPALATINSK, a tn. Russian empire, W. Siberia, on the frontier between Tomsk and Tobolsk, in lat. 50° 30' N., lon. 80° E. It stands on the E. bank of the Irtysh, at the height of 775 ft. above the sea, and consists chiefly of wooden buildings, facing the river, and overlooking the Kirghis steppe, which stretches in the direction of S.W. for upwards of 1000 m. A space of about 150 yards between the houses and the river is occupied by gardens, in which melons of large size and delicious flavour are grown without the aid of glass. The space occupied by the town is of considerable extent, as each house, great and small, has its courtyard inclosed by a wooden fence from 10 to 12 ft. high, with a large gate in the centre. The principal public buildings are the government offices, the custom-house, and the barracks. All of them, built, not, like the dwellings, of wood, but of brick, have an imposing appearance at a distance. The regular garrison is always considerable, as the position of the town with reference to the Kirghis makes it strategically important. The merchants, chiefly Tartars, carry on a large trade with the Chinese towns of Tchoubachack and Kulja, and also with Bokhara, Kokhan, and Tashkend. There is also a large traffic with the Kirghis, who, in exchange for black and gray fox skins, black lamb skins, horses, oxen, and sheep, obtain silk dresses, tea, raisins, and wooden bowls from China, kalats of printed cotton from Kokhan, Russian hardware, iron, copper, and leather.

SENECA [add.], a lake, U. States, in the W. of the state of New York, about 25 m. S. of Lake Ontario, into which it discharges itself by the Seneca and Oswego. It is a long and narrow expanse, about 37 m. long from N. to S., and only 2 to 4 m. broad; lies 441 ft. above the Atlantic, has a depth of 630 ft., and was never known to be frozen over till 22d March, 1856. It communicates with the Erie canal, and is navigated by steamers which ply between Watkins, its S., and Geneva, its N. extremity.

SENGA, a vil. S.E. Africa, near N. or l. bank Zambesi, at the foot of Mount Motemwa, lat. 15° 38' S.; lon. 31° 20' E. It is a flourishing village, in a country the mountains of which are generally covered with open forest and grass. Many are between 2000 and 3000 ft. high, with their summits clothed with trees. The country N. of the mountains here in sight from the Zambesi is also called Senga, and its inhabitants Asenga or Basenga, but they appear to be of the same family as the Manganja and Maravi.

SENGE, a tn. S.W. Africa, Kimbunda country, territory Galangue, r. bank Kubango, lat. 13° 45' S.; lon. 18° 10' E. It is surrounded by a palisade and a ditch, and contains 3000 inhabitants, employed in agriculture and fishing.

SENNA, or **SENA**, a tn. S.E. Africa, Portuguese possessions, on r. bank Zambesi, about 125 m. above its mouth, lat. 17° 28' S.; lon. 35° 13' E. It stands in a low plain, with some pretty detached hills in the background, and is surrounded by a stockade of living trees to protect its inhabitants from their troublesome and rebellious neighbours. It contains a few large houses, some ruins of others, and a weather-beaten cross, where once stood a church; a mound shows the site of an ancient monastery, and by the river are the prostrate walls of a mud fort. The greater part of the area inclosed by the stockade, which is an oblong of 1000 yards by 500 yards, is covered with tall indigo plants, cassia, and bushes; and a number of foul pools, filled with green fetid mud, afford wallowing places for lean and filthy pigs. The air is thus foul, and deprived of circulation, and fever abounds. Among the pigs is a curious variety, marked with yellowish brown and white stripes running horizontally along the body: perhaps betokening relationship to the original

wild pig, the young of which are distinctly banded, though the marks fade as the animal grows up. Near the summit of an adjacent hill behind the village a plant, the *Pedevia fetida*, is found, the smell of which produces headache and fever. In the vicinity of the town are gardens and patches of wood, the loftiest trees being thorny acacias. The natives, who are tributary to the Zulus, are industrious and active. 'We met many natives on the road,' says Dr. Livingstone; 'most of the men were armed with spears, bows and arrows, or old tower muskets; the women had short-handled iron hoes, and were going to work in the gardens; they stepped aside to let us pass, and saluted us politely, the men bowing and scraping, and the women, even with heavy burdens on their heads, courtesying: a courtesy from bare legs is startling!' But the Zulus, or Caffres, here called Landeens, taking advantage of the miserable state of the place, visit it periodically, and levy fines upon the inhabitants, who, unable or too cowardly to resist, allow themselves to be pillaged without mercy, thus confirming the Caffres in the belief they entertain that the Portuguese are a conquered tribe. Under these circumstances it necessarily follows that trade is all but extinguished. The only period of activity is during the visits of a number of Banyans, or native merchants of India, who come annually in small vessels from Bombay with cargoes of British and Indian goods. About a mile W. of Senna is a remarkable conical hill, called Baramuana, composed of trap, and commanding a fine view of the surrounding country.

SENOSETSCH, a tn. Austrian empire, duchy Krain or Carniola, on the commercial road from Laybach to Trieste; with an ancient castle, and 1200 inhabitants.

SEREDNICA, a tn. Austrian empire, Galicia, circle and about 10 m. S.S.E. Sanok; with 1100 inhabitants, chiefly employed in making sieves.

SERGATSH, a tn. Russia, gov. and 83 m. S.E. Nijnei-Novgorod, cap. circle of same name on the Sergatshka. It has three churches, a circle school, a charitable endowment, several manufactures, and contains 3035 inhabitants.

SERGIEVSK, a tn. Russia, gov. and 66 m. N.E. Samara, on the Sok; with cold sulphur baths, and 5145 inhabitants.

SERINAGUR, **SRINAGAR**, or **SREENUGGUR** [add.], the cap. of Kashmir, situated on the river Jhelum, in the far-famed valley of Kashmir; lat. 34° 10' N., lon. 75° 0' E. The houses cluster upon the river banks, or, built upon piles, project over the sluggish waters, while irregular streets stretch up either slope of the valley, shaded by poplars and other trees. Beyond these extends a wide space of blooming garden ground; the naturally genial soil being rendered very prolific by careful cultivation. The river is crossed by seven bridges. The town is the seat of a busy population, remarkable for their mechanical talent. Kashmir shawls have achieved a world-wide reputation; and their gun, pistol, and matchlock barrels, are of exquisite workmanship. They also excel in the manufacture of papier maché, jewellery, watches, shoes, &c. The maharajah's palace is a long labyrinth of brick walls and dingy woodwork, enlivened by a few gilded domes. The Huree-purwat fort, on the high ground above the town, is not calculated to resist European artillery. There are one or two musjids or mosques of great antiquity, but the public buildings of Serinagur are not calculated to interest the visitor. The bridges, however, are picturesque, built entirely of wood, resting on piers formed of massive blocks of cedar, and some having rows of shops on them, flanking the footway on either side.—(Torrens' *Travels in Ladak, Tartary, and Kashmir*.)

SEROHEE, a petty state, India, Rajpootana, between lat. 24° 28' and 25° 16' N.; lon. 72° 10' and 73° 12' E., and bounded N. by Joodpoor, N.E. Godwar, E. Odeypoor, and S. and S.W. Gujerat; area, 3024 sq. m.; revenue, £7000. In the E. and N.E. it is hilly, being partly composed of the S.W. slope of the Aravulli range; in the E. and S.E. it is mountainous, rising in Mount Aboo. It was for some time considered a district of Joodpoor, which has not yet abandoned a claim upon it for tribute. The population consists in a great measure of predatory tribes of Minas, Grasias, and Bheels.

SEROHEE, cap. of the above state, 135 m. W.N.W. Neemuch. It is built on or near the site of a more ancient city of same name, the ruins of which can still be traced, and is of considerable extent, possessing good brick houses, many

of which, however, are untenanted, and a palace of the *rao* or chief, totally devoid of architectural merit. The trade is considerable, and the manufactures are almost entirely confined to sword blades, for which the place has long been famous.

SERPENT ISLE, or *FIMO NISI* [add.], situated in the N. W. of the Black Sea, opposite to the delta of the Danube, and nearly equidistant from its Kilia and Sulina mouths, being about 25 m. E. S. E. of the one, and E. N. E. of the other. In itself it is comparatively insignificant, though, in consequence of the lighthouse erected upon it, it is sometimes spoken of as the eye of the Danube. It is nearly of the shape of a triangle, about a mile in circuit, and surrounded for the most part by precipitous cliffs from 60 to 100 ft. high, with deep water near their base. The rocks composing it consist of siliceous strata, separated by thin bands of friable shale, containing large crystals of quartz, attaining a thickness of 200 ft., and sometimes passing into red jasper. Its surface is sterile, but it still justifies its name by the great number of serpents, or rather water-snakes, which live among its cliffs, and subsist on the fish which they manage to catch in the surrounding sea. The island is not devoid of historical interest. The Greeks, whose traditions made it the final abode of Achilles, built a temple upon it, which was dedicated to him, and became celebrated. On its summit are several blocks of squared marble, which may have belonged to this temple, and in many other parts numerous fragments of ancient pottery seem to tell of an early period when the island must have been inhabited. It also attracted considerable attention at the termination of the Russian war, from being mutually claimed by Russia and Turkey. By the congress of Paris in 1857 it was finally adjudged to the latter, as virtually and necessarily included in that part of Bessarabia which Russia had been compelled to cede.

SERRYAH, a tn. India, Gujerat, peninsula Kattywar, 190 m. S. W. Ahmedabad. It consists of a town and a fort, situated on a stream of same name, about $2\frac{1}{2}$ m. above its mouth, and has a harbour which, though bad, commands a considerable trade.

SESEMITZ, a tn. Austrian empire, Bohemia, circle Chrudim, on the Lautschna, 5 m. E. S. E. Pardubitz, with a parish church, a townhouse, a brewery, manufactures of alcohol, and a mill.

SESHEKE, a tn. S. Africa, cap. of the Makololo, l. bank Zambesi, about 200 m. E. N. E. Linyanti. The old town, now in ruins, is on the l. bank of the river, but another has been built on the same side $\frac{1}{2}$ m. higher up. The site is very unhealthy, being productive of fever, which has carried off numbers of the natives, and was fatal to the mission of the London Society a few years ago. The native produce cultivated in this the centre of the continent consists of the holcus sorghum, millet, maize, underground beans, cucurbitaceous plants, sweet potatoes, tobacco, cotton, and Indian hemp; but wheat, rice, and yams, the natives have never seen, and they have no garden fruits or vegetables.

SESSANA, a tn. Austrian empire, circle and 22 m. S. E. Görz, near the frontiers of the district of Trieste and Vienna and Trieste railway. It is the seat of several public offices, has some trade, and contains 450 inhabitants.

SETIF, a tn. N. Africa, Algeria, prov. and 68 m. W. S. W. Constantine. It occupies a plateau more than 3000 ft. above sea-level, on the banks of one of the principal affluents of the Ouad-Sahel, where the ancient Roman city *Sitiſis* once stood, and having been employed by the French as an entrenched camp, became the site of a new town, which has made rapid progress, and carries on an extensive trade. Its weekly market is numerously attended by the Arabs, who bring to it grain, wool, oil, wax, and honey. Pop. 3238.

SEUE-TOW-SZE [the Snowy Valley], China, prov. Chekiang, among the mountains, about 45 m. S. W. Ningpo. The country between it and Ningpo is a level and exceedingly fertile plain, producing large crops of rice, and thickly covered with small towns, villages, and farm-houses. On approaching the mountainous district, one of the first objects which meets the eye is the pagoda of Kong-k'how-ta, seated on a hill, the summit of which is about 1000 ft. above the sea, and commands a splendid view. From the pagoda six or seven others can be counted, each marking the position of some ancient city on the plain, or Buddhist monastery on the hills. The

next place reached is Too-poo-dow, situated on the Ningpo, which, a few miles above it, ceases to be navigable for boats. About 25 m. S. W. Too-poo-dow is a beautiful mountain pass, called Yang-ling, where, in addition to the common trees of the mountains, the funeral cypress grows in great abundance, and forms a striking feature in the landscape. The neighbourhood is rich in iron ore, which occurs in the form of black sand, and is smelted at a place called Sha-k'he, in furnaces about 5 ft. high and 3 ft. in diameter, for which the fuel used is charcoal, and the blast a rude box-bellows. The cast iron, run into moulds about 1 foot square, and 1 inch thick, is afterwards converted into malleable iron in blocks 4 inches long, 2 inches wide, and 1 inch thick. The Snowy Valley, about 10 m. beyond Too-poo-dow is at first somewhat unpromising, but after a winding ascent for about 6 m. the scenery becomes varied and beautiful. On every side are hills and mountains of every conceivable shape, some peaked, precipitous, and barren, and others sloping gently, and covered densely with pines and brushwood, while a stream winds its way towards the Ningpo. The point thus reached is not the termination, but only the entrance, of the Snowy Valley, which lies a little beyond, at the height of about 2000 ft. above the sea. It is inclosed at all sides by mountains, except towards the farther extremity, where the mountain stream which drains it plunges over a precipice some 300 or 400 ft. below, and forms a series of noble falls, the water long before it reaches the bottom being converted into showers of spray. The temple of the Snowy Valley is an old and dilapidated Buddhist building, occupied by a number of priests, but possessing nothing within or without to entitle it to special notice.

SEVASTOPOL, or **SEBASTOPOL** [add.], was originally nothing more than a Tartar village, until the empress Catherine commenced, in 1780, the works which her successors completed, and which made it a beautiful city and the chief naval arsenal of Russia. It was then 1 m. long and $\frac{3}{4}$ m. broad, rising from the S. shore of the harbour in the form of an amphitheatre. It possessed a basin, dry docks, and quays, and immense magazines and warehouses belonging to government, and was strongly defended both by land and by sea. On the south the port was defended by six batteries, and on the north were four batteries; altogether mounting before the war 850 guns; but during the siege the number was immensely increased. The original defences on the land side were not so formidable, but new earthworks and batteries were rapidly and continually erected during the operations. When the allied English and French armies invested the city in September, 1854, the English occupied a high bare plateau overlooking the city, and the French were placed W. of them on the lower slope of the plateau, and on a level with the Russian defences. On October 17 the bombardment of Sevastopol was commenced by the allies by both land and sea. The land attack produced little effect upon the Russian defences; and by sea the allied fleets were prevented from effective co-operation by the shoals that obstructed the mouth of the harbour, and by a blocking up of the entrance channel by seven vessels sunk by the defenders for the purpose. After this unsuccessful attack the allies settled down to a regular siege, and operations were prolonged with varied success and many important engagements: the battle of Balaclava on October 25, and that of Inkermann on November 5, among them. During the winter the condition of the allied armies was very serious; unprovided with proper and sufficient shelter, and inadequately supplied with provisions and other necessaries, in addition to the laborious siege operations, the troops were overwhelmed with disease and suffering, borne nevertheless with heroic fortitude and patience. With the opening of 1855 Sevastopol was acquiring new defensive strength, every available piece of ground being fortified; and counter works were as actively pushed on by the allies. On April 9 a second bombardment of the town was made, but with no useful result. More active measures were then adopted; the Sardinians furnished a body of 15,000 men, and the fortress was now closely invested. On June 7 the French assaulted and captured the Mamelon, and on the 18th a general assault upon the line of defences was only partially successful on the side of the French, but was a signal failure in the British attempt to capture the Redan. The Russians in the meantime were becoming hard pressed, their sources of

supply in the sea of Azof having been destroyed by the allies. On August 18 they made a fresh endeavour to raise the siege in the battle of the Tchernaya, in which the brunt was borne by the Sardinians and French; but the endeavour failed, and the assailants were heavily repulsed by the allied forces. The allies then made preparations for an attack upon Sevastopol which should be final and successful, and mid-day, when the Russians were accustomed to withdraw under shelter for their meal, was the time fixed. The French assaulted the Malakoff and speedily captured it, as well as the other works allotted to them; but the British were again unsuccessful in their attempt upon the Redan, owing partly to bad arrangements and partly to the Russians being on the alert and ready to repel them, after the French attack. Sevastopol, after

the capture of the Malakoff and other defences, was now at the mercy of the allies, and the resistance of the Russians could only be prolonged for a few days at the most. The defenders, however, determined to leave nothing but ruins for the captors, and on the evening of the 8th Sept. they commenced their passage in boats and by the bridge to the N. side of the harbour, and when all were safe the work of destruction was begun: magazines and stores were blown up, streets and squares were enveloped in flames; the remainder of the fleet was scuttled and sunk, and the bridge removed; and on the morning of the 9th the allies, approaching as close as the fire and ruins permitted, beheld only the funeral pyre of Sevastopol. Subsequently the extensive docks, and other naval and military works, which it had

taken the Russian government long years to construct, were effectually destroyed by the allies, and Sevastopol no longer existed as a stronghold. In December, Russia made overtures of peace, and on February 26, 1856, an armistice and the terms of peace were agreed upon. The final evacuation of the Crimea took place on July 12, on which day the British commander-in-chief formally restored Sevastopol and Balaklava to the Russians. Sevastopol, thus deprived of all that gave it importance, has become a comparatively insignificant place, though considerable efforts have been made to repair the damage which it sustained during the siege. Most of the S. side has accordingly been rebuilt on a new plan forwarded from St. Petersburg. On the site of the six bastions which formed the outer fortifications, and were long and ably defended, hospitals and alms-houses for invalided soldiers and sailors have been erected; the communication between the N. and S. sides of the town is now maintained by means of a handsome chain bridge, which stretches between the former forts of St. Nicholas and St. Michael, and the small huts which occupied the greater part of the sailors' suburb, have been replaced by large symmetrical houses. To give more solemnity to this work of restoration and improvement, the S. side of the town has been consecrated anew by the archbishop of Cherson and Tauris. The position of Sevastopol, however, makes it all but impossible that it can ever acquire much commercial importance.

SEVEN ISLANDS, a bay and group of isles, British America, N. side of the Gulf of St. Lawrence, about lat. $50^{\circ} 20' N.$; lon. $66^{\circ} 30' W.$ —The BAY, remarkable for its wild beauty, is about 6 m. long, $2\frac{1}{2}$ m. wide at its entrance,

and nearly landlocked by the islands and a bold peninsula at its W. extremity, rising 737 ft. above the sea; the bottom is of clay, and without shoals, so that the bay forms one of the best and most sheltered anchorages on the N. shore of the gulf. From the E. point of the bay a broad shelving sandy beach, fringed with white and balsam spruce, the boundary of a forest covering the flat country behind, extends to the river where the settlement is; and between the bay and two ranges of hills 1300 to 1700 ft. high, some distance inland, lies a considerable extent of lowland. The bay has always been a great resort of the Montagnais Indians.—The ISLANDS, beautiful at a distance, on a nearer view are rugged and barren. The summit of the largest is 700 ft. above the sea, and two others rise 500 ft. and 457 ft. So bold are these islands, and so suddenly do some of them rise from the sea, that there is no anchorage close to them on the seaward side.

SEYNGUR, or **KUROON**, a river, India, which rises in the Doab, in dist. Allyghur, flows S.E. in a very winding course, and joins the Junna on its l. bank, about 15 m. below Calpee. Its total length is about 210 m.

SEYPAN, an isl. of the N. Pacific, belonging to the Ladrone or Marianne group, lies 3 m. N.E. of Tinian, and has a peak which, rising to the height of 2000 ft., forms a very conspicuous object. Its only village, situated on its N. side, contains about 300 inhabitants, most of them fine young men from the Caroline Islands, who go almost naked, their only piece of dress being a narrow slip of cotton round the lower part of their bodies. Seypan is annually visited by three or four whalers, which anchor off its N.W. shore, outside a long reef stretching southwards towards Tinian.

SFAX, or **SKAFUS** [add.], a tn. N. Africa, regency and 140 m. S.S.E. Tunis, beautifully situated on the N.E. shore of the Gulf of Gabes. It is surrounded by a lofty wall, and consists of two parts, the one, called El Bled, inhabited exclusively by Mahometans, and the other, called El Rbadh, inhabited by Christians and Jews. El Rbadh is a comparatively insignificant place, having only 1500 inhabitants, whereas El Bled contains nearly 12,000; and in respect both of its site and its buildings, ranks as one of the prettiest places in the regency. The manufactures consist chiefly of woollen and cotton tissues, and the trade, which embraces a large extent of country, is very important, though the harbour is so bad that vessels lie exposed nearly a mile from the shore. The principal articles of export are wool, oil, barilla, sponges, dates, almonds, and dry fruits.

SHABA, a tn. Russia, gov. Bessarabia, circle and not far from Akermann; with a church and 1400 inhabitants. The vine is extensively cultivated in the vicinity.

SHABAZ, a tn. Turkey in Europe, Servia, cap. circle of same name, on the Save, 37 m. W.S.W. Belgrade. It is the seat of a court of justice and the see of a bishop, and possesses a gymnasium. It was once a strong fortress, and was inclosed by a large ditch and a palisade. The culture of the vine and the rearing of cattle are the chief employments. It contains a pop. which amounted in 1854, exclusive of the Turkish garrison, to 3920.

SHADRINSK, a tn. Russia, gov. and 315 m. S.E. Perm, cap. circle of same name, l. bank Isset. It has three churches, a circle school, two charitable institutes, several factories, particularly for smelting tallow, an important trade, and three yearly markets, at which large quantities of goods are sold. Pop. 4885.

SHAHABAD, two places, India:—1, A tn. Sirhind, l. bank Sursooty, in lat. $30^{\circ} 10' N.$; lon. $76^{\circ} 56' E.$ It contains nearly 3000 inhabitants, and possesses a good bazar, but is described as little better than a heap of filth and ruins.—2, A tn. Oude, 82 m. N.W. Lucknow. It is a considerable place, built chiefly of brick, and proving by its remains of fortification that it must once have been more important than at present. Its palace was strengthened with towers like a citadel, and it had also a fine mosque. At present it possesses a bazar.

SHAHJEHANPOOR, three places, India:—1, A tn. Scindia's Dominions, l. bank Tilir, 33 m. N.E. Oojein. It is a considerable place, with an important trade carried on chiefly by the Borahs, an intelligent and wealthy class of Mussulman merchants.—2, A tn. N.W. Provinces, dist. and 21 m. S.E. Meerut; with a dilapidated fort and a bazar.—3, A tn. N.W. Provinces, dist. Cawnpore, 12 m. N. Calpee; with a bazar.

SHAHSZ, or **SHASEE**, a tn. China, prov. Houpeh, on the Yang-tze-kiang, about 170 m. above the point where it communicates with Lake Tung-ting. It is built on the embankment on the left side of the river, and extends along it for upwards of 2 m. On the banks and in all the creeks lie junks at anchor, some of them of large size, and all as closely crammed together as possible. Numerous boats from the W. come down the river to Shahsz, bringing sugar, pepper, salt, opium, tobacco, and hemp, and carrying baek cotton, as well as some of the articles imported at Canton. Shahsz is only considered as the port of Kinchow, which is situated 1 m. inland, and is said to be a place of much more importance. The pop., as stated by a mandarin, is 600,000; but it is suspected that he has at least doubled the real number.

SHAKABABA, a tn. S.W. Africa. Kimbunda country, territory Galangue, lat. $14^{\circ} S.$; lon. $18^{\circ} E.$ It is surrounded by a palisade and a ditch, is finely shaded by lofty incendera trees, and contains 1500 inhabitants.

SHANGHAI, a foreign settlement on the mainland of China, adjacent to the walled city of the same name, but perfectly distinct in its boundaries, government, and commerce. The name signifies 'upon the sea;' and there is data in Chinese history that goes to prove that at one period the site whereon it stands on the r. bank, at the mouth of the Yang-tsze River, was washed by the waters of the Pacific Ocean. Now it is distant 25 m. from the sea-coast, and surrounded by navigable creeks that intersect the delta, so numerous that within a circuit of 50 m. there are not less than from 2000 to 2500 m. of water communication; and if the

ditches for irrigating the land be taken into account, this network of waters may be doubled. The widest of these creeks is named the Whang-poo, which is about $\frac{3}{4}$ m. wide at Shanghai, and increases to over 1 m. at its outlet into the Yang-tsze, at the port of Woosung, 14 m. distant by water, and 8 m. by land. From the immense volume of water flowing into these creeks at their upper junction with the Yang-tsze, the water is perfectly fresh in the Whang-poo. The settlement stands on the left bank of that stream, below the

PORT OF SHANG-HAI.

walled city, from which it is separated by a moat, with several bridges across; and it, again, is divided by two smaller creeks, the Yang-king-Pang and Soochow Creek—the latter being from 150 to 200 yards in width, with one stone and one wooden bridge across it. These water boundaries divide the settlement into three sections, each under the jurisdiction of the following nationalities:—the upper French, the middle British, and the lower American. They are commonly called 'concessions,' but no portion of the land has been ceded by the Emperor of China, the foreign residents being merely 'renters' of the soil, who have purchased the rights of the former native occupiers, and are subject to the same trifling annual tax paid by them to the government. At the same time they hold their title to the land under a code of regulations drawn up by the treaty powers, and sanctioned by the Chinese government, whereby they cannot be dispossessed of their claims by the Chinese, while they are at liberty to sell or let the ground, with any buildings thereon, to the native inhabitants. Moreover, this applies to the subjects of other nationalities who have concluded treaties with China besides the three already mentioned. The British section is not only the most valuable, and covered with the largest number of buildings, but the consulates of all the other nations are situ-

ated there, except the French and American. Along the bank of the Whang-poo extends a wide 'bund' or quay, with a bulwark of stone, and numerous stone jetties, for landing and loading cargo; while the path forms a promenade for the residents, from 50 to 80 ft. wide. This frontage is nearly 1 m. in length, along which range the foreign 'hongs'—places of residence as well as business. These are chiefly spacious mansions, built mostly in the Italian style of architecture, which give an air of elegance and wealth to this otherwise unpicturesque site that is seen nowhere else in the far East. For a quarter of a mile back they extend more or less, each hong surrounded by a wall inclosing a garden, presenting the aspect of a fashionable suburb in London. Here are extensive 'godowns' or warehouses for storing imported merchandise, and preparing tea and silk brought from the interior for export. There are no European shops in the thoroughfares, which consist of narrow roads, from 20 to 30 ft. wide, laid out at right angles, with walls more or less on either side, and occasionally a narrow footpath. These roads are macadamized, but the low nature of the ground is such that the metal sinks in the soft mud; and during heavy rains or high tides the water oozes up through the drains, flooding the lowest parts of the settlement. There at any time water may be found by digging from 3 to 5 ft. deep. Below this mud is a tenacious clay, into which piles are driven to obtain a secure foundation, not only for buildings, but the walls that surround them—all of which are built of small black bricks, dried in the sun, but very durable. A system of underground drainage has been constructed, but it is very defective, in consequence of the level nature of the site. This general plan of the settlement is carried out to the westward for about three quarters of a mile, extending from N. to S. the same distance, the greater portion of the area being densely covered with Chinese houses, the property of the foreign residents. Here the aspect of the roads is completely changed by the continuous streets of native shops, displaying every description of European and Chinese wares suitable for the foreign and native consumers. Through the middle of this quarter runs the Maloo (*horse-road*), from 50 to 60 ft. wide, where a market is held in the morning for the sale of poultry, fish, vegetables, and all other kinds of provisions. A busy and industrious population throngs this quarter from sunrise to sunset, who enjoy all the privileges of their own country with the protection of the British authorities. On the other hand they are obliged to comply with the land regulations and local laws established for their control, which in some respects differ from the clauses referring to foreigners. For this purpose a municipal council is elected annually by the foreign 'renters,' comprising subjects of all nationalities except French, who elect a chairman and appoint a staff of officials, similar to that of an English municipality, chiefly for the maintenance of roads, bridges, jetties, &c., and lighting and cleaning the settlement. They have also the appointment and control of the police, which consists partly of Europeans and partly of Chinese. To meet the expenditure, they are empowered to levy taxes upon the occupiers of tenements native and foreign, and wharfage dues upon imports and exports—the former varying per annum from £20,000 to £25,000, and the latter from £10,000 to £15,000. This includes the revenue of the American section of Shanghai, which is incorporated for municipal purposes with the British division; but the French 'concession' has a council of its own, specially under the control of the consul for France at this port. In extent the latter section is about half the area of the British, and about as densely peopled by Chinese; while the American portion, named Hong-que, extends nominally over a greater superficies than the two others together, but thinly populated, with comparatively few native or foreign houses. According to a detailed census of the population taken in March, 1865, the following general results were obtained, which have not altered materially since:—British and American sections, including the army (1319), navy (532), and mercantile shipping (981), 5129—of whom 180 were females, and 107 children, comprising 18 nationalities, namely, English, 3996; Americans, 407; Germans, 240; Danish, 20; Spanish, 131; Italians, 16; Dutch, 27; Portuguese, 118; Norwegians, 22; Swedish, 50; Russians, 23; Swiss, 22; Greeks, 7; Austrians, 6; French, 38; Mexican, 1; Peruvian, 1; and Arabs, 4. In the French section, exclusive

of the army and navy, the foreign population number 460 persons, of whom 101 were women and children, belonging to eleven different nationalities. Of the native population in the British section, 48,490 resided on shore, 9700 in boats, and 2000 vagrants; of whom 15,455 were females; in the American section 17,455, all living on shore; making a total of the two districts, 77,645; but the council considering that the Chinese evaded being enumerated to the extent of one-sixth, this percentage was added, forming a total of 90,587. In the French section the returns furnish a total of 55,645, making a grand total of 146,232 Chinese and 5589 foreigners. The subjects and citizens of each nationality are under the protection of their respective consuls, and amenable to the jurisdiction of their courts; or where the person has no consul to appeal to, he is amenable to the Chinese authorities. It was a question whether Chinese in foreign employ were exempt from imperial jurisdiction, and it has been decided in the affirmative. The following consular flags may be seen fluttering in the breeze along the 'bund':—British, French, American, Prussian, Swedish, Norwegian, Russian, Netherlands, Belgian, Portuguese, and Spanish. On occasion, when any matter affecting the general interests of the community is mooted, the foreign consuls meet in a body, and pass resolutions, or make representations to be forwarded to the Taou-tai of the walled city and the ambassadors at Peking. That functionary, who is both governor and chief magistrate of the city and district, has judicial power over all the Chinese in the settlement, except where British interests are involved, when the case is tried before a mixed court at the consulate, and if the Chinese offenders in petty cases are convicted, they are sentenced to hard labour on the roads of the settlement. Previous to 1865 all cases civil and criminal were tried by the British consul, vice-consul, and their assistants; but these accumulated to that degree with the rapid growth of the settlement that the home government sent out a complete judicial staff, forming at Shanghai a supreme court, with jurisdiction over all British subjects in China and Japan, and removing the court of appeal from Hong-kong to the settlement. The subjects and citizens of other nations are tried by their respective consuls. This motley community of foreigners, having equal rights on Chinese ground, gives to Shanghai settlement a domestic and public character which nowhere else exists. Consequently there is no united system of government able to control the population, many of whom are desperadoes of the worst class, giving greater trouble to the authorities than the whole native population.

The port of Shanghai extends from the upper limits of the Whang-poo, below the native shipping, to Woosung, a distance of 14 m., of which the anchorage for foreign vessels extends for 4 m. below the settlement. The anchorage is divided into nine sections, defining the foreign from the Chinese boundary, where all the vessels are anchored abreast, and lettered according to their position, steamers being separated from sailing ships. A foreign harbour-master is appointed by the Chinese authorities, who retain complete control over the conservancy of the harbour and its entrance, and collect all shipping dues, duties on imports and exports, &c., through the imperial foreign maritime customs. This institution arose out of the troubles of the government, when, in 1853, the native customs was suspended while the city was in the occupation of the Taipings. A treaty was drawn up and a foreign protectorate established in July, 1854, which proved so beneficial to all concerned, that on the ratification of the Tientsin treaty in 1858, its jurisdiction was extended to all the open ports, each under the management of a commissioner, and the whole under an inspector-general, most of whom are British subjects. At this port the number of employés is about 80, of whom from 50 to 60 are English. During the year 1864 the number of foreign vessels entered inwards and cleared outwards was 5352, making an aggregate of 1,870,909 tons; carrying imports of general merchandise valued at £21,610,757, and exports of tea, silk, cotton, and other products of £13,282,589; realizing a customs revenue of £680,776. In 1865 and 1866 commerce declined on account of over-trading, but there is every prospect of the port maintaining its title of the 'commercial capital of China.' Its position near the silk districts, with which it is connected by magnificent water communication, and lying at the mouth of the Yang-tsze, makes it the chief outport of the tea-dis-

tricts on the tributaries of that river. Moreover, its central situation with regard to the northern ports, and the open ports in Japan, will necessarily make it the entrepôt for imports to be transhipped thence. Although the nationalities trading with this port are numerous, yet it may be said that the British are the only importers. In 1865 they introduced goods to the amount of £12,000,000 sterling, of which the principal item was opium from India, and next to that Manchester calicoes, the remainder being general merchandise—the former representing not less than £6,000,000. France brings nothing to Shanghai, and takes away only a small portion of the silk that supplies her looms. Out of 43,000 bales exported in 1865, France purchased 7300 bales, of which no more than 2500 were shipped by French houses. The Americans are the next in importance to the British, and they excel in establishing steam traffic on the rivers and coast, and recently a line of 4000-ton steamers has commenced running from San Francisco to the ports in China and Japan. Between thirty and forty steamers ply regularly to and from the riverine and coast ports and Shanghai, chiefly American. They are likewise the only shippers of tea, after the British. Although the tea-districts are situated from 500 to 1000 m. from Shanghai, yet the export exceeds that of all the other ports in China. In this important branch of trade, as well as the export of silk, the native merchants work in harmony with the foreigners, and each class is satisfied with the trade that falls to its share. Nowhere in China have the wealthy inhabitants such faith in foreign transactions and in foreign protection as in Shanghai. During the years 1861–2 the Taiping rebels threatened the city and settlement with an armed force of 80,000 men, when it was defended by British and French troops and men-of-war. The Chinese flocked to the settlement from all parts with their families and treasure, until the population increased to half a million, and the amount of silver in coin and ingots was incalculable. This created a transient degree of prosperity, which can only be compared to the sudden increase of wealth in the gold regions of California and Australia. Land increased ten, twenty, and even a hundred fold in value, as the affrighted fugitives paid fabulous rents for the houses within protection of the British army. When the rebels were driven beyond the boundary of 30 m. by our troops, and the rebellion finally suppressed by an army of disciplined Chinese under Colonel Gordon, the refugees left Shanghai for their native places, and the value of land and dwellings returned to something like its former position. Many foreigners who had amassed great wealth were ruined, and whole streets of Chinese houses were untenanted. At the same time the overtrading in tea caused some of the oldest firms to become bankrupt, and otherwise checked the banking and mercantile operations in 1865; since when they have been slowly recovering in the aggregate. The following table exhibits this phase of the foreign trade of Shanghai, compiled from the Chinese customs reports:—

	1864.	1865.	1866.
Imports, . . .	£21,610,757	£14,820,536	£17,632,275
Exports, . . .	13,282,589	9,843,327	8,441,557
Total, . . .	£34,893,346	£24,663,863	£26,073,832

Here are the chief mission establishments in China. That of the London Missionary Society has a printing-office for publishing religious works in Chinese, from which was issued in one year half a million copies of the New Testament for gratuitous distribution, or at a small charge. Connected with the mission is an hospital for the gratuitous cure of native patients, under the charge of a medical missionary, where many thousands attend during the year. The American Presbyterian Mission not only print in Chinese, but manufacture the metallic types. There is an extensive mission, also, under the auspices of the French *Société de la Propagation de la Foi*, where the missionaries conform to the dress and manners of the Chinese, with an extensive establishment near the walled city, having a cathedral within its precincts, capable of accommodating 3000 people. Besides this, the French have a handsome church in the concession under their control. In the British concession there is an English church, with the chaplain as incumbent; and several chapels and meeting-houses are scattered over the other parts of the settlement. Here also is a public library, and a branch

of the Royal Asiatic Society, which publishes its transactions. Of newspapers there are two issued daily, one twice a week, two weekly, and one fortnightly. The oldest of these is the *North China Herald*, established in 1851; and at the same office a newspaper is issued twice a week, printed in the Chinese character. The British consulate and the foreign customs, likewise, issue reports and returns connected with their affairs.—(*Consular Reports; Customs Returns; Mossman, MS. Notes.*)

SHAN-TUK, or TY-LOONG, a tn. China, prov. Quang-tong, about half-way between the Canton and Western Rivers, and about 4 m. back from the channel which connects them. It consists of a walled city about 2 m. in circuit, and suburbs of still greater extent. A creek passing through the heart of the suburbs, and sufficiently deep for pinnaces, is spanned by two well-built granite bridges of three and five arches. The city walls are 25 ft. high, but without embrasures, and have at the base a thickness, including facing and earth-work, of not less than 20 ft. For the purpose of arresting fire, double walls run through the town, which contains many good shops and several handsome yamuns, has clean streets, and appears from the bustle and activity displayed in them to be densely peopled.

SHAO-KING, or TCHAO-KHING, a tn. China, prov. and 60 m. Quangtong or Canton, l. bank Si-kiang, 80 m. from the sea at Macao; lat. 23° 3' N.; lon. 113° 3' E. It consists of a walled city of the second class, and an extensive suburb lying to the westward, is one of the finest towns in the province, and was once the residence of a governor, whose jurisdiction extended over both Quangtong and Quangsec. About 3 m. below Shao-king the Si-kiang flows in a deep channel through a magnificent mountain pass, 3¼ m. long. The district is famous for tea, and the grass which is woven into mats.

SHARJAH, a tn. and port, Arabia, Oman, cap. prov. of same name, on the Persian Gulf, lat. 25° 20' N.; lon. 55° 36' E. The harbour is a narrow creek, adapted only for small vessels, and the town, which is walled in on the land side, is open towards the creek. The old or central town consists mainly of brick or stone houses, and long rows of cottages, half wood, half palm-leaf, and chiefly tenanted by fishermen and sailors, extend along the beach, especially northwards. Towards the S. end of the town is the large market-place, divided into several 'quarters;' near the centre stands a long and lofty vaulted building, strongly constructed, with iron-bound gates, and a guard, within which is kept the government treasure. The shops are neat and well-built, with raised seats, counters, and shelves, as in Bombay or Madras; they display Cashmere shawls, Bengal manufactures, Persian arms, and jewellery of various kinds. The N. quarter of the town has a large number of weavers, who make the long red cloaks common in Oman, cotton robes, carpets, and curtains. Beyond the walls stretches a large extent of sand, sloping and studded with palm-trees, with an occasional garden; but the soil is too light to produce much. Sharjah is the centre of a large export and import trade, being the chief emporium for wool, cotton, and metal, and the sale of dromedaries and asses; and it is also the principal slave-market of the inner Persian Gulf, and through it are imported the goods of Persia and India. Hence a large population of many races is attracted; and were the harbour better adapted for shipping, it would rise into a place of considerable importance. Pop. 20,000 to 30,000.

SHARKOI, or SIKOT, a tn. European Turkey, in the N. of Turkish Servia, eyalet and 25 m. S.E. Nissa. It contains 8000 inhabitants, who are mostly employed in the manufacture of carpets.

SHAVLI, a tn. Russia, gov. and 80 m. N.N.W. Kovno, cap. circle of same name; with two churches, a gymnasium, a circle school, a charitable endowment, and 5344 inhabitants.

SHEBOYGAN, a tn. U. States, Wisconsin, on the W. shore of Lake Michigan, at the mouth of a stream of its name, 48 m. N. Milwaukee, with which it is connected by railway. It possesses seven churches, and carries on a very extensive trade, particularly in timber. So large a proportion of the inhabitants are Germans, that two of the four newspapers published in the place are in their language.

SHEDIAC, a tn. British America, New Brunswick, co.

Westmoreland, at the mouth of a small river in a bay of same name, on Northumberland Strait. It is a small but thriving place, well situated for trade, as its harbour is the easiest of access and egress on this part of the coast, and the only one to which a vessel in distress can safely run for refuge. A railway has been made to Monkton, a distance of 14 m., where by communicating with the Petticoadiac, which falls into the Bay of Fundy, it saves the transport which would otherwise be necessary round the peninsula of Nova Scotia. It has been proposed to gain the same object still more effectually by means of a ship-canal. Shediac Bay abounds in oysters and other shell-fish.

SHEEMOGA, or **SIMOGA**, a tn. India, presid. Madras, Mysore, 1. bank Toonga, here navigable during the rainy season, 130 m. N.W. Seringapatam. Till destroyed by the Mahrattas in 1792 it was a large and flourishing place, containing about 30,000 inhabitants. Flourish now greatly diminished, it is clean, well-drained, and apparently thriving.

SHEIPU, a tn. China, on the E. coast of prov. Chekiang; lat. 29° 12' N.; lon. 121° 50' E. It is surrounded by dilapidated walls, and consists of very indifferent houses and shops, but derives some importance from being a convenient stopping place for the coasting trade. Its harbour, formed by the mainland and Nyew-tew Island, has an entrance at its W. end into San-mun Bay, and another in the S. leading into the bay W. of Leaming Island. At high-water the harbour has the appearance of a splendid basin, but at low-water dries so far out as to become a mere expanse of mud with a small strip of water in its centre.

SHEKAWUTTEE, a state, or rather collection of petty states, India, Rajpootana, between lat. 27° 20' and 28° 33' N.; lon. 74° 52' and 76° 10' E.; and bounded N.W. by Bikaneer, N.E. Loharoo and Jhujhur, S.E. Jeypoor and Patun, and S.W. Joodpoor; length, N.E. to S.W., 95 m.; breadth, 63 m.; area, 3895 sq. m.; revenue about £230,000. It is an arid barren tract, consisting of either sandy wastes or rugged hills and mountains. In the valleys there is some fertile soil, on which several kinds of grain, pulse, red pepper, and hemp for *bharg* are grown. The inhabitants, a semibarbarous race with a mongrel religion, partly Hindoo partly Mahometan, have long been notorious freebooters, but effectual means have at last been taken to check their depredations.

SHELIF, or **UED-SHELIF**, a river, N. Africa, the largest and most important in Algeria, rises on the N. slope of the Jebel Amoor, near the village of Bazid; lat. 34° 25' N.; lon. 2° 10' E. At first it has the name of Mokta, which, while proceeding almost due N., it exchanges successively for the names of Berda and Tuguin, and passes through the sandy eastern portion of the Algerian Sahara. On approaching the high land of the coast, which has an elevation of about 1600 ft., and passing round Mount Gontas, which attains the still loftier elevation of 3300 ft., it takes a W. direction, and continues it to its mouth in the Mediterranean, near Mostaganem.

SHELLALA, a tn. N. Africa, Algerian Sahara, in a small oasis of same name irrigated by copious springs, 170 m. S. by E. Oran. It is surrounded by a wall with two gates, consists of about 100 houses constructed of earth, and possesses a small mosque and a school. The principal articles of trade are tobacco, which is grown to some extent in the large and beautiful gardens of the interior, and tar, obtained from the *arar* (*Juniperus phœnicia*).

SHENANDOAH [add.], a river, U. States, which is formed in Virginia by the junction of three streams near Port Republic, flows N.E. through the valley of Virginia, along the W. side of Blue Ridge, and nearly parallel to it, and immediately below Harper's Ferry joins the Potomac, of which it is the principal tributary. Its length from Port Republic is 170 m., the greater part of which is navigable for small boats. It furnishes a large amount of water-power.

SHENKOTTAH, a tn. India, presid. Madras, dist. Travancore, about 70 m. S.W. Madura. It stands near the E. entrance of the Pass of Periancoil, and, though covering a considerable area, is neatly and compactly built. Among its public edifices are several pagodas and the Tahsildar's cutcherry.

SHENKURSK, a tn. Russia, gov. and 190 m. S.S.E. Archangel. Though containing only 616 inhabitants, it has six churches, a secular and a religious parish school, and a

charitable institute. Sulphur is found in the vicinity in the bed of the Petchi, and within the circle is a village called Blagoveschtshenskoï, where two important yearly markets are held, one for horses, which lasts four, and the other for cloth, which lasts ten days. Great quantities of turpentine are extracted in the district.

SHERA, a tn. Western Africa, Hausa States, cap. prov. of same name, 95 m. S.E. Kano. Its position is among rocks, which surround it on all sides, leaving only a narrow approach from the N.W., and fortifies it so strongly by nature that it has no wall. The houses are built partly of clay, partly of reeds. The inhabitants, belonging to the dominant Fellatah, have neither industry nor commerce.

SHERA, a mountain chain, N. Arabia, which, commencing not far from the Red Sea and the Gulf of Akabah, stretches N.E. towards the Syrian desert. Its W. slope descends rapidly and often precipitously toward the shore, but the E. slope is lost gradually and almost insensibly in the sandy deserts. When composed of granite the chain is sterile and naked, but when limestone prevails cultivation only is wanting to make it fertile as in Palestine. The inhabitants belong chiefly to the Huweita tribe.

SHERAYENKEEL, a tn. India, presid. Madras, dist. Travancore, 3 m. E. Anjengo, and behind one of the lagoons of the Malabar coast. It is a large and irregular place, laid out in streets, inhabited chiefly by Nairs, and in gardens, in which the cocoa-nut, areca-nut, jack, mango, and other fruits abound; and contains a *gotarum* or palace, a pagoda, and a free school for the instruction of native youths in the English and Malayalam languages.

SHERBRO, or **SHERBOROUGH**, an isl. W. Africa, 40 m. S.S.E. the peninsula of Sierra Leone; lat. (W. extremity), 7° 34' 30" N.; lon. 12° 58' W. It is upwards of 27 m. long from E. to W., by 10 m. broad; and is densely wooded, particularly on the W. side, the forest everywhere advancing to within a few yards of the beach. On the N. side it is bordered by an extensive mud bank, and separated from the mainland by Sherbro River, in which there is a good channel 6 fathoms deep, but with several shallow and irregular patches. On the S.E. it is separated from the mainland by another channel called the Shebar River. Cape St. Ann, a low sandy point, forms the W. extremity of the island, and immediately westward, separated only by a narrow opening choked with sand, are the Turtle Islands, originally mere banks formed by deposits from the neighbouring rivers, and gradually acquiring vegetation.

SHERBROOKE, a vil. British America, Nova Scotia, on the E. bank of the St. Mary, which is one of the largest rivers of Nova Scotia, and falls into Indian Bay. It is a small place, with only 300 inhabitants; but possesses two churches, a school, a courthouse, and jail; owns some schooners employed in the fisheries, builds a few vessels, and trades in firewood and deals. The district is well settled, and at a short distance below there are other two churches, one of which, 75 ft. high, is a conspicuous object at sea.

SHERGHOTTY, a tn. India, dist. Behar, on a small island formed by a tributary of the Poonpun, 126 m. S.E. Benares. It contains about 5000 inhabitants, and having once been the seat of the civil establishment, contains several bungalows of the European officials.

SHILKA, a river, Russian empire, Trans-Baikal Provinces, which, formed by the junction of the Onon, rising in the Kentei, and the Ingoda, rising in the Chokondo Mountains, flows N.E., and unites with the Argun in forming the Amoor. At Biankina, in lat. 52° N.; lon. 116° 30' E., it is 450 yards wide, and navigable thereafter by boats drawing 2 ft. of water. Its shores, partly hilly and wooded with birches and pines, are also lined with large tracts of prairie covered with rich herbage. Below Gorbiza the country through which it flows becomes more mountainous, and abrupt cliffs often rise directly from the water. At Ust Strelka some Cossacks are stationed, who employ their time in fishing, hunting, and bartering with the Oronchons and Manyards on the Amoor. The current of the Shilka is at the rate of 4 knots.

SHILKINSKOI, a tn. Russian empire, E. Siberia, gov. and 640 m. E.N.E. Irkutsk, on a rocky recess on the banks of the Shilka. The dwelling-houses, built of wood, extend for some distance along the left bank of the river. On the

opposite side are government smelting-works, formerly used for lead and silver, but now for iron, as the more profitable commodity. Besides the smelting-works government has here a glass manufactory and a large tanyard, famous for the superior quality of its leather, which is wholly tanned with birch bark.

SHINGE, a tn. S.W. Africa, Kimbunda country, territory Sumbe, r. bank river of that name, 40 m. N. by W. Benguela. It occupies a beautiful and romantic site in the midst of a grove of palms, and contains about 2000 inhabitants.

SHINGHIT, a tn. N. Africa, Sahara, dist. Aderer; lat. 20° 30' N.; lon. 11° 40' W. It is a straggling place, situated in a sandy valley between two hills, which are planted with date-palms, and consists chiefly of huts in a variety of forms, square, oval, &c. The inhabitants, who do not number more than 300, carry on a considerable trade with Tisshit, Nun, and the Senegal, and derive great facilities from the caravans proceeding into the interior and toward the W. coast. Their staple article is salt, which they obtain from Sebsha, and exchange for European goods, chiefly cottons. There are some carefully cultivated fields around Shinghit, but the sand from the desert is constantly threatening to overwhelm them.

SHINTE, or **КАБОМПО**, a tn. S. Africa, country of the Balonda, pleasantly situated on a rivulet in the centre of a green glen, about 10 m. E. of the Liambe or Zambesi; lat. 12° 37' 35" S.; lon. 22° 47' E. It is embowered in banana and other tropical trees, has straight streets, contrasting with those of the Bechuanas, which are all very tortuous, and consists of well-formed huts, with squares, walls, and round roofs, each with a carefully fenced court, used in some instances as a garden for raising a little tobacco and sugar-cane.

SHIR, a native tribe, E. Africa, upon the White Nile. The men are armed with well-made ebony clubs, two lances, a bow always strung, and a bundle of arrows; their hands are completely full of weapons; and they carry a small neatly-made stool slung at their backs. They wear tufts of cocks' feathers on the crown of the head, and their favourite attitude when standing is with one leg raised over a spear, and the foot resting on the inside of the other knee. Their arrows, about 3 ft. long, are pointed with hard wood, iron being scarce among them. The women wear small lappets of tanned leather as broad as the hand, and from the back of the belt a 'tail' of finely cut strips of leather; their children are slung from the shoulder in a skin across the back, and secured by a thong round the waist. The huts of the natives are circular, with very low entrances. The women are skilful in manufacturing mats and baskets of the leaf of the doum-palm; they also make girdles and necklaces of river-mussel shells threaded upon the hair of the giraffe's tail.—(*Baker*.)

SHIRÉ, a river, S.E. Africa, draining Lake Nyanza into the Zambesi, which it enters on its left bank, in lat. 17° 46' S.; lon. 35° 35' E., after a course of about 270 m. Ascending the river from the Zambesi, the lower part of it has an average depth of 2 fathoms, but it becomes shallower higher up, when many departing and re-entering branches diminish the volume of water; the absence of sandbanks, however, makes it easy of navigation. It drains a low and exceedingly fertile valley of 15 to 20 m. in breadth. Ranges of wooded hills bound this valley on both sides. For the first 20 m. the hills on the left bank are close to the river; then comes the detached mountain Morambala, with steep sides towards the W., wooded to the top, and reaching a height of 5000 ft. A few clumps of palms and acacias appear W. of the river, on the tongue of land occupying the angle it forms with the Zambesi. Beyond Morambala the Shiré winds through an extensive marsh. For many miles northwards a broad sea of fresh green grass extends. Ten or fifteen miles N. of Morambala stands the dome-shaped hill Makanga; several others with granitic-looking peaks stretch away to the N., and form the E. boundary of the valley; another range, of metamorphic rocks, bounds the valley on the W. Villages are numerous, and many gardens of maize, pumpkins, and tobacco fringe the marshy banks. Into the river, on its right bank, runs a deep stream about 30 yards wide, flowing in from a body of water several miles broad, from which great quantities of duckweed are carried into the Shiré. Further on the village of Mboma stands upon the right bank, and a range of hills commencing opposite Senna on the Zambesi, approaches it within 2 or 3 m., and then runs in a N.W. direction; the principal hill is

named Malawe; a number of villages stands upon its tree-covered sides, and coal is found cropping out in the rocks. The country now improves as the river is ascended, the rich valley becoming less swampy, and adorned with trees. The majestic mountain, to which the name of Mount Clarendon has been given, now becomes visible in the N.E., as does also the S. end of the Milanje range, among the mountains of which the Ruo has its source, and flowing S.W. joins the Shiré in lat. 16° 31' S. A short distance beyond the Ruo is the Elephant Marsh, in which Dr. Livingstone counted 800 elephants in sight at once. The marshes of the Shiré support prodigious numbers of many kinds of water-fowl. Beyond the marshes the country is higher, and has a larger population; the soil is saline, and salt is extracted from it, and cotton of excellent staple is grown upon it. A succession of rich low islands studs the river, many of them being cultivated with maize, &c. About midway in the river's course is a series of cataracts, to which the name of 'Murelison' has been given, dividing the river into the Upper and Lower Shiré. The lowest, called the Mamvira, is in lat. 15° 55' S., but it is insignificant compared with the five above it; altogether they occupy 40 m. of the river's course, with a total fall of 1200 ft. in that distance; but the river is navigable in the still reaches which exist in the intervals of the cataracts. Above the cataracts the Upper Shiré is a broad deep stream with but little current; indeed the current here seldom exceeds a knot an hour, while that of the Lower Shiré is from 2 to 2½ knots. The course at first is rather tortuous, and makes a long bend to the E. till it comes within 5 or 6 m. of Mount Zomba, which stands near the W. shore, about the middle of Lake Shirwa. The direction of the river is then northerly, as far as the lakelet Pamalombe, which is an expansion of 10 or 12 m. long, and 5 or 6 m. broad, a few miles below its exit from the S.E. arm of Lake Nyassa. The banks of the lakelet are low, and encircled with a dense wall of papyrus 10 or 12 ft. high. At its effluence from Lake Nyassa the Shiré is from 9 to 15 ft. deep, the depth in the lake itself being much greater.

SHIRWA, a lake, S.E. Africa, lying S.E. from the S. end of Lake Nyassa; lat. (S. extremity), 15° 35' S.; lon. 35° 40' E. It has never been explored, but was seen by Dr. Livingstone from the base of Mount Pirimiti, on its S.S.W. side. Thence the prospect northwards ended in a sea horizon, with two small islands in the distance; a larger one, resembling a hill-top, and covered with trees, rose more in the foreground. Ranges of hills appeared on the E., and on the W. Mount Chikala, which seems to be connected with the great mountain mass called Zomba. The shore was covered with reeds and papyrus. The N. end of the lake has not been seen, though it has been passed; the length of the lake is probably 60 or 80 m., and the breadth 20 m. The height above the sea is 1800 ft. From probably having no outlet the water, which appears to be deep, is slightly brackish, with a taste like that of a weak solution of Epsom salts. The country around is very beautiful, and clothed with rich vegetation. Exceedingly lofty mountains, perhaps 8000 ft. above sea-level, stand near the E. shore; on the W. stands Mount Zomba, 7000 ft. in height, and 20 m. long.

SHISHOW, a tn. China, on the frontiers of Hoonan and Hoopoh, at the point where the Yang-tze-kiang comes into communication with the Lake of Tung-ting. It is protected on two sides by the river and the lake, and surrounded by a wall apparently of no great strength. The space inclosed being far larger than is built upon, nearly a half of it is laid out in gardens.

SHKLOV, a tn. Russia, gov. and 25 m. N. by W. Mohilev, on the Dnieper; with two churches, an ancient castle, and a pop. of 11,565.

SHLEB, a tn. Austrian empire, Bohemia, circle and 4 m. E.S.E. Czaslau, on the Daubrawa; with a parish church, a castle, an asylum for children, several corn and saw mills, and 1100 inhabitants.

SHOAL LAKE, or **LAC PLAT**, British America, on the N.W. of the Lake of the Woods, about lat. 49° 30' N.; lon. 95° 10' W.; is a considerable sheet of water, about 10 m. long by 7 m. broad, shallow, reedy, and much frequented by aquatic birds. Its S. shore is bordered partly by ridges clothed with large oak-trees, and partly by rich meadows, which stretch southward for a considerable distance. It is a

favourite sporting ground of the inhabitants of Fort Garry, situated about 85 m. N.W.

SHOE AND SLIPPER, the name of two isls. New Zealand, North Island or Ulster, on the N.W. side of the Bay of Plenty. The one is 1½ m. E.N.E., and the other 4 m. S.E. of Tairua Head. They are both named from their shape, Shoe Island in particular, which is only 1 m. in circuit, exactly representing its name even to the tie.

SHOLAPORE, a collectorate or dist. India, presid. Bombay, between lat. 16° 10' and 18° 34' N.; lon. 75° and 76° 28' E.; bounded N. by Ahmednuggur and the Nizam's Dominions, E. the Nizam's Dominions, S. Sattara and Belgaum, and W. Ahmednuggur, Poona, and Sattara; greatest length, N.W. to S.E., 170 m.; greatest breadth, 50 m. It has an undulating surface diversified by upland and valley, and is well watered by the Kistna and the Beema; but has scarcely any trees, except a few mango topes. The staple product is cotton, which it is said might be far more extensively grown if the roads were better, the difficulty of transport destroying the profit which would otherwise be realized. Still, notwithstanding this disadvantage, the quantity sent along this route from the Nizam's Dominions towards Bombay is large and increasing. Pop. 675,115.

SHOLAPORE, cap. of the above dist., on a level tract at its E. extremity, 220 m. S.E. Bombay, occupies a considerable area of an oblong form, inclosed by a wide and deep ditch, and by a wall of substantial masonry, provided with a *fausse-braie*, and flanked by round towers. Beside the town proper there is an extensive suburb or outer town, also surrounded by an outer wall. Though not possessed of much natural strength, Sholapore early ranked as an important fortress, the possession of which was repeatedly contested, till it was taken by Aurungzebe in 1685. It afterwards fell into the hands of the Mahrattas, and being in their possession in 1818, when the Peishwa fled from Poonah, previous to his final deposition, was taken by a British force by escalade. A church has been erected within the town.

SHOOA, a territory and tn. E. Africa, S. of the Madi, and N.E. of the N. end of the Albert Nyanza, intersected by the parallel of lat. 3° N., and meridian of lon. 32° E. The country forms a natural park, well watered by numerous rivulets, ornamented with fine timber, and interspersed with high rocks of granite, which from a distance produce the effect of ruined castles. The pasturage is of superior quality, and the surface being undulating, a small brook in every valley forms a natural drain; consequently the more elevated land is remarkably dry and healthy. The cultivation of the soil is superior; large quantities of sesame are grown and carefully harvested, the crop being gathered and arranged in oblong frames, 20 ft. long and 12 ft. high, and in this way dried previous to being stored in the granaries. These are of two kinds—the one; of wicker work, supported on four posts with a thatched roof; the other, simply contrived by fixing a stout pole 20 ft. long firmly in the ground; about 4 ft. from the ground a bundle of strong and long reeds is tied tightly round the pole; hoops of wicker work are then bound round them at intervals, until they assume the form of an inverted umbrella half expanded; this receptacle being filled with grain, fresh reeds are similarly added, until the work reaches within a few feet of the top of the pole; the whole is then covered with reeds securely strapped. Fowls, butter, and goats are abundant and cheap; and beads are held in great value.—The TOWN or VIL. of Shooa, in lat. 3° 4' N.; lon. 32° 4' E., is a lovely place. A fine granite mountain ascends in one block, in a sheer precipice, for about 800 ft. from its base, perfectly abrupt on its E. side, while the other parts of it are covered with fine forest trees, and picturesquely dotted over with villages. The people are precisely similar to the more northerly Obbo and Farajoke in language and appearance, and are exceedingly mild in their manners. The village stands a few miles S.W. of the Asua, which receives the entire drainage of the Madi and Shooa countries, with that of extensive districts E. of Shooa, and becomes a tremendous torrent so long as the rains continue, and conveys a vast volume of water to the Nile; but the inclination of the whole country being rapid towards the N.W., the bed of the Asua, following the general incline, is so quickly emptied after the cessation of the rains that it becomes insignificant as a river. Shooa has an elevation of 3600 ft. above the sea.—(Baker.)

SHOOSHEENDRUM, a tn. India, presid. Madras, Travancore, about 5 m. N.W. Cape Comorin. It has a large Brahmin population, and a famous pagoda.

SHUPANGA, a vil. S.E. Africa, r. bank Zambesi, about 80 m. from its mouth. It occupies the prettiest site on the river. In front a sloping lawn, with a fine mango orchard at its S. end, leads down to the Zambesi with its green islands; beyond, northwards, lie vast fields and forests of palms and tropical trees, with Mount Morambala towering to the clouds, and further away more distant hills appear in the horizon. A one-storied house situated here possesses a melancholy interest: in it Kirkpatrick, of Captain Owen's surveying expedition, died of fever in 1826, and in 1863 died of the same fatal disease the wife of Dr. Livingstone. A hundred yards E. of the house, under a large baobab-tree, both are buried.

SHUYA, a tn. Russia, gov. and 65 m. N.E. Vladimir, cap. circle of same name, on the Testa, which is here crossed by two handsome bridges. It has five churches, circle and parish schools, a charitable institute, and numerous industrial establishments; both the town and the circle ranking among the most industrious in Russia. Pop. 8408.

SHWELYN, a vil. Aracan, l. bank Koladyn, on a bank 20 ft. above high-water, in the midst of groves of plantains, mangoes, and jack-trees. It is a large and populous place, with comfortable houses and homesteads, and an extensive cultivation of rice. The cotton-tree is common. The people are all Mussulmans, and dress nearly like the genuine Mughls, though their features are different.

SIBIRU (PULO), or SEBEEROO, an isl. Indian Archipelago, off the W. coast of Sumatra, between lat. 2° 15' and 4° 5' S. It has a length of about 56 m. from N.W. to S.E., a medium breadth of about 10 m., and an area of 480 geo. sq. m. There is an active volcano near its centre. Its inhabitants are of Malay origin, and speak the same language as those of the adjacent islands of Sepora and Pogi.

SIDDAPORE, a tn. India, Nizam's Dominions, about 37 m. N.W. Bellary, on the road to Bombay via Bejapoor. It consists of about 200 inhabited houses, and possesses two pagodas and four choultries. The inhabitants are mostly agriculturists.

SIDEROW, a tn. Austrian empire, Galicia, circle and 20 m. E. Czortkow, on the Russian frontier; with an ancient castle and a poorhouse.

SIDHOUT, a tn. India, presid. Madras, dist. and 12 m. E. Cuddapah, l. bank Pennar. It consists of a town and fort, but the only objects of any interest belong to the latter, which is in the form of a quadrangle, built of sandstone and limestone, and strengthened by bastions, which are round at the angles, but square on the curtain. A deep and broad fosse incloses three sides of the fort; the fourth side is washed by the river, and furnished with a *fausse-braie*. It had once two gateways, but that on the E. has been built up, and that on the W. is now the only entrance. Among the buildings of the interior are the ruined Patan palace, the *zenanah*, the *cutcherry* or hall of audience, and the mausoleum of Bismillah Shah. The last is surmounted by a handsome cupola with a gilded crescent, and has attached to it a small mosque, garden, and burial-ground. Except during the rainy season the flat bed of the Pennar, near Sidhout, is used as garden ground, and produces melons, which are celebrated for their superior flavour.

SIDI-BEL-ABBAS, a tn. N. Africa, Algeria, prov. and 33 m. S. Oran. It was founded by the French in 1843, and consists of two quarters, a military, provided with immense storehouses, and a civil, which consists of spacious streets which cross at right angles, and are lined by shady trees and a number of lofty and handsome houses. Its advantageous position promises to make it the principal entrepôt for the ports of Mostaganem, Arzew, and Oran. Pop. 4156.

SIDI-HESHAM, a small state, N. Africa, territory Maghreb, between lat. 28° and 29° 41' N.; lon. 11° 45' and 15° 44' E.; bounded N.W. and W. by the Atlantic, S. the Sahara, and E. and N.E. Morocco. Much of the traffic between Morocco and Timbuktoo passes through it, and its inhabitants, availing themselves of the facilities thus afforded, carry on a considerable trade. They are also industrious cultivators of the soil. Sidi-Hesham, which originally belonged to Morocco, threw off allegiance to it, and secured its independence in 1810.

SIENKOV, a tn. Russia, gov. Poltava, cap. circle of same name, on the Grunya. It has nine churches, a circle and a parish school, and a charitable institute; and contains 7715 inhabitants.

SIGIRI, a natural stronghold, Ceylon, 46 m. N. by E. Kandy. It is situated in the heart of the great central forest, and consists of a gigantic cylindrical rock rising suddenly from the surrounding flat to the height of 400 ft., as if shot up by subterranean force. Its scarp walls are nearly perpendicular, and in some places overhang their base. Its upper surface is very little more than an acre in extent. This was the retreat selected by the parricide Kyaspa, who seized the throne of Ceylon after assassinating his father, King Dhātu Sena. Having inclosed it by a rampart, and formed a deep fosse, filled with water from an adjoining tank, he carried galleries along the face of the cliff, partially hollowing them out of the rock, and protecting them in front by strong curtain walls of stone. His palace, which stood on a triangular bastion, protected on two sides by the fosse, is now a shapeless mass of debris and fallen brickwork, the mounds of which are infested by bears and snakes, while the ruined galleries are tenanted by thousands of bats. The tank, covered with the red and white flowers of the lotus, swarms with crocodiles.

SIHETE-ALIN, a mountain range, Russian empire, stretching N.N.E. at the distance of 25 to 80 m. from the W. shore of the Sea of Japan and the Gulf of Tartary. It may be considered a continuation or offset of the Than-alin range in the S. The loftiest of the mountains rise from 4000 to 6000 ft., and are densely wooded with pines, hardwood and leafy trees being entirely confined to the valleys and lower slopes. The drainage of the E. slope is carried to the Sea of Japan and the Gulf of Tartary by numerous torrents, the course of which is too short to allow them to be developed into considerable streams; the drainage of the W. slope belongs to the basin of the Amoor. Of the numerous passes leading across the mountains the best are in the S. One of these, somewhat difficult, leads from the Upper Usuri to Olga Bay; another is said to be practicable even for carriages.

SI-KIANG, or **WEST RIVER**, China, by far the most important of the streams which unite to form the Canton River, was till recently almost entirely unknown. Even now its upper course, from the mountains of Yunnan and Koeichoo continued eastward across Quangsee, is only conjectured; but the lower course, from the city of Canton up to the frontiers of Quangsee, was thoroughly explored in 1859 by a British gunboat squadron. This expedition, leaving the anchorage of Canton on the 16th February, and proceeding down the river, entered the Sai-wan passage by the Si-chi-tau channel. The passage was easily navigated till abreast of the town of Sai-wan, where the stream, dividing into two channels, leaves a large middle ground of hard sand, on which several of the vessels grounded. The expedition next proceeded by the Tam-chau passage into the Tai-ling channel, which runs out of it to the westward. In this channel no obstruction was found till within 3 m. of the village of Yun-kai-tau, where a flat island, about 1 m. long, forms a N. and a S. passage—the former almost barred by a bed of rocks, with a channel only 7 ft. deep at low water; the latter better and deeper, but very narrow at its E. end, and encumbered near its centre by a rock, on which, as it is dry only at low-water and had not been discovered by the previous soundings, the leading vessel struck. Having cleared all the channels leading to it, the expedition on 19th February entered the Si-kiang proper, called also the Blue River from the clearness of its waters, and the following day reached the San-shui junction, and anchored at Shao-king, situated on the left or N. bank about 20 m. further up. About 3 to 6 m. below or E. of this town is a fine pass, the river becoming narrowed and flowing nearly straight for $3\frac{1}{2}$ m. among mountain ranges from 2000 to 3000 ft. high. In the narrowest part of this pass the width does not exceed 300 yards, but at Shao-king it is not less than 1400 yards. Midway between the San-shui junction and Shao-king, below the village of Kwang-li, the river splits round a richly cultivated island; and a little above the village, before reaching the pass, appears at one spot not to be more than 2 fathoms deep. The necessary inference is that at this spot in February, when the exploration was made, the river, which is here only 75 m. from the sea, ceases to be navigable

for vessels drawing more than 12 ft. Near Shao-king limestone hills appear in rugged and picturesque groups, and still farther up the river winds through a continuously hilly country of sandstone and granite, chiefly in N. and W. directions. The hills, varying in height from 100 to 1500 ft., are in general densely wooded and often highly cultivated. At 50 m. above Shao-king, after passing a singular mass of granite, which rises perpendicularly 300 ft. in the form of a thumb, out of a range of hills 1500 to 1800 ft. high, the river bed is studded with rocks, and the navigation becomes dangerous. The exploration was however continued 25 m. further to Wu-chu or Ng-chu, situated on the E. frontiers of Quangsee, where the Si-kiang is joined by the stream on which Kwer-ling, the capital of that province, stands. At Wu-chu, in lat. $23^{\circ} 28' N.$; lon. $112^{\circ} 14' E.$, the breadth of the river is nearly a mile from shore to shore, and about 600 yards between the sandbanks; but the navigation is difficult even for junks, and, according to report, becomes about 12 m. further up entirely obstructed by rapids. The course of the Si-kiang, so far as now known, being only the portion from Wu-chu to the sea, is 150 m. in length.

SILAO, a tn. Mexico, state and 12 m. W. Guanajuato. It contains 6000 inhabitants, who used to weave large quantities of woollen and cotton goods, but now confine themselves almost entirely to agriculture.

SILESIA (**DUCHY OF**), Austrian empire, lies between lat. $49^{\circ} 28'$ and $50^{\circ} 26' N.$; lon. $16^{\circ} 23'$ and $18^{\circ} 30' E.$; and is bounded N. by Prussian Silesia, E. Galicia, S. Hungary and Moravia, and W. Moravia and Prussian Silesia; area, 1496 geo. sq. m.; pop. (1857), 462,051, of whom 230,000 are Slaves, 210,000 Germans, and 3280 Jews. With the exception of 61,872 Lutherans, 45 Reformed Protestants, and the Jews, they are all R. Catholics. For administrative purposes the duchy is divided into 22 districts; Troppau is the capital.

SILLOTH, a seaport, England, co. Cumberland, newly formed on the English coast of the Solway Frith, 18 m. W. Carlisle; lat. $54^{\circ} 52' N.$; lon. $3^{\circ} 23' W.$ The channel here has 15 ft. depth at low water; and the mariner, in an emergency, may securely run his vessel into it at a time when the tidal harbours along this part of the coast cannot be approached. The commercial traffic is chiefly with Ireland.

SILVER, an isl. China, prov. Kiangsoo, in the Yangtze-kiang, beyond a bold projecting bluff above Kiang-yin. It rises out of the centre of the river to the height of nearly 200 ft., covered with the richest foliage, and crowned by a small pagoda-shaped edifice, which commands an extensive panoramic view over a broad and richly cultivated plain stretching away to the N. On its sides, embowered in foliage, are several quaint temples, with white walls gleaming, and lazy priests basking in the sun. Silver Island is evidently destined to form a junction with the small islands of Ja-sha. Two spits of land, jutting out from each and accumulating alluvium, are rapidly narrowing the channel which lies between them. H.M.S. *Furious*, in proceeding up the river with Lord Elgin in 1858, grounded on a reef to the S. of this island, in a channel through which a British fleet, consisting of several ships of the line, had passed, totally unconscious of the danger, and which was marked on the charts as having a depth of 16 fathoms. This island must not be confounded with Kintang, which lies between the W. end of the island of Chusan and the mouth of the Yung or Ningpo, and is also known by the name of Silver Island.

SIMEN, a prov. Abyssinia, Tigré, washed on the E. by the Tacazze, and consisting almost entirely of an elevated plateau, averaging about 10,000 ft. in absolute height. Above the plateau rise several mountains, the loftiest of which, called Ras Detchen, is at least 14,000 ft. above sea-level. Snow is often seen upon it, and from its sides descend numerous torrents, which, after forming beautiful cascades, hurry along, some to the Bellegas and others to the Tacazze. The whole of the mountains are evidently volcanic, consisting of clinkstone, basaltic tufa, and trachyte. The plateau, though generally bare, has patches of excellent pasture; even barley is grown upon it at the height of 11,000 ft., where trees cease to grow. The inhabitants of Simen have a very limited export of cattle and cereals, for which they obtain in return cotton, salt, pepper, coffee, iron, &c., all in small quantities.

SIMILIAN, a tn. Austrian empire, Military Frontiers, Croatia, dist. Licca, about 58 m. S. by W. Karlstadt; with a

R. Catholic and a Greek non-united parish church, a trivial school, and a large corn magazine. There are several ruined castles in the vicinity. Pop. 1900.

SIMNITZA, a tn. Turkey in Europe, Walachia, l. bank Danube, opposite to Shistova, 20 m. W.S.W. Rustehuk. It is the seat of a court of primary jurisdiction, contains several churches, a normal school, and a quarantine establishment, and has a harbour formed by an island. Pop. 7400.

SIMODA, a tn. Japan, near the S.E. extremity of the peninsula of Idzu, on the island of Nippon and at the W. entrance of the Gulf of Yeddo; lat. $34^{\circ} 39' 49''$ N.; lon. $138^{\circ} 57' 50''$ E. It occupies an extremely picturesque site among undulating hills, which rise from the water edge covered with trees and verdure, and extend backward till they terminate in bare, rugged, and lofty mountains. About two centuries ago it was the port of entry for vessels bound to the capital, but having been supplanted in this respect by Uraga, situated further up the bay, suffered a considerable decline. Still, however, it continued to be an important place, and in April, 1854, when visited by the U. States expedition to Japan, was a compactly built town, with regular streets intersecting each other at right angles, and about 1000 houses, containing an estimated pop. of 7000. Among the public buildings were nine Buddhist temples and many smaller shrines, while the

whole place had a tolerably thriving appearance. A few months later a very different scene presented itself. On 23d December an earthquake of the most frightful description occurred, and carrying destruction along a large part of the coast of Nippon, laid Simoda in ruins. The sea first retiring so far as to leave the harbour, which had a usual depth of five fathoms, nearly dry, returned in a wave which overtopped many of the houses and swept everything away. Only a few temples and private dwellings that stood on elevated spots escaped. Fortunately the harbour, on which the prosperity of the town mainly depended, has suffered only by the washing away of the alluvium which formed its holding ground, and the leaving of a rocky bottom in its stead. It is expected, however, that the washings from the higher ground will ere long supply this deficiency. Meanwhile the work of rebuilding has gone on with spirit, and the houses, constructed indeed as before of inexpensive and flimsy materials, have rapidly reappeared.

SIMONOSAKI, a tn. Japan, on the S.W. point of the island of Nippon and province of Nagato, at the western entrance to the Suonada Sea; lat. $33^{\circ} 56'$ N.; lon. 131° E. It stretches in one straggling street about $1\frac{1}{2}$ m. along the shore, and is situated in a very commanding position for purposes of trade. At present the high hills by which it is sur-

rounded supply the principal articles of its small export trade—sugar, rice, oil, and iron; but it forms an important depot station for the transmission of European imports from Nagasaki to the interior, as well as for the return traffic in native produce from Osacea and other ports of the Suonada Sea. In the shops are retailed considerable quantities of gray shirtings, camlets, prints, &c., of British manufacture, besides medicines and glass from Holland. The most conspicuous building is the custom-house, recognized by its tall white gables. The warehouses or 'godowns' are constructed of wood and mud, coated with white cement or stucco, and are said to be fireproof; but the dwelling-houses are generally built of wood. Pop. estimated at 10,000.—The strait, commencing at Entrance Head, the S.W. point of Hiku-sima, is 7 m. in length, with a navigable channel varying from 3 to 7 cables in breadth; the town stands 4 m. within the entrance.

In consequence of the persistent refusal of the semi-independent Prince of Nagato to open the channel of Simonosaki to foreign vessels, notwithstanding the treaties with the government at Jeddo, an attack was made on the batteries

he had erected to command the strait by a combined squadron of British, French, Dutch, and American ships, on the 5th and 6th September, 1864, and a passage forced in spite of an obstinate resistance.

SINANO, a vil. Greece, Morea, $1\frac{1}{2}$ m. N. the ruins of ancient Megalopolis, the metropolis of the Arcadians, is of only a few years date. All the houses are built on the same primitive plan, with four walls, a roof, a low door, and two windows. The chimney is considered useless. The furniture is as simple as the house, and the dress of the people not more complicated. Pop. 750.—(*Dora d'Istria*.)

SINDER, a tn. Western Africa, on an island of same name in the Niger, 210 m. W.N.W. Sokoto. It is the market for all the corn used in this district, and even exports largely to the provinces of Zaberina and Dendina. Including Garu, another town on an adjacent island, it has an estimated pop. of 18,000.

SINGHANA, a tn. India, Rajpootana, state Shekawuttee, on the skirts of a hill of purplish rock, 95 m. S.W. Delhi. It is a handsome town, built of stone, and depends for its prosperity on a copper mine in the vicinity, which has been

worked to such an extent that the subterraneous galleries are about 2 m. in length, and the scoria forms a line of small hills several hundred feet in length, and from 30 to 60 ft. high. On these hills four isolated stone bastions have been built.

SINGKEL, a river, Sumatra, the largest which falls into the ocean on its W. coast. Its mouth, which is in lat. $2^{\circ} 15' N.$, is about three-quarters of a mile wide, but the bar has only 12 ft. water even at spring-tides. Within its channel is deep and navigable for a considerable distance. At one time benzoin, camphor, and gold-dust were exported from it.

SINGURH, a fort, presid. Bombay, dist. and 11 m. S.W. Poonah, among the mountains to the S. belonging to the Western Ghats. It possesses great natural strength, being seated on an immense craggy precipice, access to which, if opposed, seems almost impossible, and is of a triangular form, surrounded by a strong stone wall flanked with towers, and inclosing an area about 2 m. in circuit. It figures much in the Indian wars while the Mahrattas were establishing their supremacy in opposition to that of the Moguls. In 1818 it capitulated to a British force, after it had been invested for eight days, and had suffered much from shot and shell.

SINHIO, or **SINHIA**, a vil. China, prov. Pechili, 85 m. S.E. Peking, on a narrow canal or ditch which flows from the Peiho, half a mile distant, and through which communication is kept up with the river by junks. It consists chiefly of one long winding street of shops, and is surrounded by pleasant orchards. Water-melons, peaches, Cape gooseberries, and various vegetables, are grown abundantly.—(Swinhoe's *N. China Campaign*.)

SINJÈRE, a tributary of the Zambesi, S.E. Africa, rising in the Chiroby-roby Hills, and flowing S. into the Zambesi, which it joins on its l. bank about lat. $16^{\circ} 25' S.$; lon. $32^{\circ} 10' E.$ It is a fine stream, one of many which drain the mountainous country N. of the river. Gray sandstone is common hereabouts, and many lumps of coal, brought down by the rapid current, lie in its channel. A vast coal-field exists hereabouts, both N. and S. of the Zambesi. A dyke of black basaltic rock crosses the Zambesi near the mouth of the Sinjère; but it has two openings in it from 60 to 80 yards in breadth, and the channel is very deep.

SINKEP, an isl. Indian Archipelago, off the N.E. coast of Sumatra, and S. of the entrance to the Straits of Malacca. It has an area of 152 geo. sq. m., is composed chiefly of granitic rocks, and is rich in tin, which, existing in the form of gravel both on the land and on the sea-shore within water-mark, is obtained in the latter position by a rude kind of dredging. The inhabitants, Malays, are mostly fishermen. Sinkep is nominally subject to the Dutch.

SIOUX CITY, a vil. U. States, Iowa, cap. co. Sioubury, on the Mississippi, 3 m. below the mouth of Sioux River, and 220 m. above Omaha. It is the W. terminus of the Dubuque and Sioux City railway, now in progress.

SIPHANTO (anc. *Siphnos*) [add.], an isl. Greece, nom. arch Cyclades, intersected by the parallel of $37^{\circ} N.$, has a maximum length N.N.W. to S.S.E. of 11 m., a central breadth of 5 m., an area of 32 geo. sq. m., and a pop. of 5700. It has a rather elevated but finely diversified surface, is healthy and fertile, producing corn, cotton, figs, oil, silk, honey, and wax, possesses quarries of marble, and was at one time famous for its mines of gold and silver. The only manufactures are cottons and straw-hats, particularly the latter, which are in demand in all the islands of the Egean Sea. Many of the inhabitants, male and female, become domestic servants in Athens, Smyrna, and Constantinople. In the last they are in great request as cooks. The principal villages of the island are Stavni, near its centre, with an Hellenist and a parish school, and a pop. of 1200; Kastro, seated on a strongly fortified precipice on the E. coast, and containing 750 inhabitants; and Grampela, which stands 1000 ft. above the sea, is most beautifully situated among cultivated fields, vineyards, oliveyards, and gardens, and has a pop. of 600.

SIPORA, an isl. Indian Archipelago, forming one of the long chain of islands lying nearly parallel to the W. coast of Sumatra. It is situated between Sibiru on the N.W. and Pagi on the S.E., is about 50 m. long by 18 broad, and has a computed area of 1200 geo. sq. m. The inhabitants belong to a peculiar race of Malays, known by the name of Mantawis.

SIRBA, a river, Western Africa, the whole course of which is imperfectly known. Rising, as is believed, in the S.E. of prov. Mosi, it flows N.N.E. past Kulfela, enters prov. Gurma, which it intersects, and then, proceeding between districts Yagha and Torobe, joins r. bank Niger near lat. $14^{\circ} N.$ At the village of Bosegango, where Dr. Barth crossed it on the 2d July, 1853, it was about 70 yards wide and 12 ft. deep in the middle, and was running between banks about 20 ft. high; on the 26th of July in the following year, he found it, much lower down, near its confluence with the Niger, to be only a foot deep.

SIRCI, or **SEERCE**, a tn. India, presid. Madras, prov. N. Canara, 122 m. N. Mangalore. It is situated above the W. Ghats, and has risen since the establishment of the British rule. It was the great emporium for the area-nut trade while the inland duties were levied, and is now an important entrepôt for the cotton transmitted from the S. Mahratta country to Coompta. The sub-collector of Canara resides here. Pop. 4370.

SIRCOZ, a tn. Austrian empire, Hungary, co. and 10 m. N.N.E. Oedenburg, near the N.W. shore of Lake Neusiedl, where the Wulka falls into it. It has a mineral spring, with a bathing establishment; and 1200 R. Catholic inhabitants.

SIRDIHANA, a tn. India, N.W. Provinces, dist. and 11 m. N.W. Meerut. It stands in an open and level country, and is surrounded by a mud wall, and defended by a mud fort in a dilapidated state. Its principal buildings are the palace of the rather notorious Begum Sumroo, and a church, built at her expense. The palace is a large and handsome structure, profusely ornamented with paintings; the church is a miniature imitation of St. Peter's at Rome. At the begum's death, without issue, in 1836, Sirdhana, which was her capital, and all her territory, lapsed to the British government.

SIRGOOJAH, a petty state, India, on the S. frontier of Bengal, between lat. $22^{\circ} 34'$ and $23^{\circ} 54' N.$; lon. $82^{\circ} 40'$ and $84^{\circ} 6' E.$; is about 90 m. long from N. to S., by 85 m. broad, and has an area of 5441 sq. m. Its surface is rugged and mountainous, rising about 600 ft. above the adjoining tableland of Chota Nagpore, and is drained chiefly by the shallow streams Kunher and Khern. Its forests contain elephants, leopards, deer, and hogs; and its extensive pastures are frequented by large herds of buffaloes, which come down to graze from Benares and Mirzapore. Pop. 316,252.—The town, of same name, situated about 140 m. S. Mirzapore, is a ruined place, with scarcely a vestige of former grandeur.

SIRJAN, a dist. Persia, in S.E. of prov. Kerman. It is one of the most flourishing of the Kerman districts, and contains forty-one villages, among which is Pares, once celebrated for its mine of turquoise, which is no longer worked, and still noted for the hawks which it rears. Game is abundant, and both copper and lead ore are found in Sirjan.

SIRMOUR, a petty hill state, India, between lat. $30^{\circ} 25'$ and $31^{\circ} 2' N.$; lon. $77^{\circ} 5'$ and $77^{\circ} 53' E.$; is bounded N. by Balsun and Joohul, E. the Dehra Doon from which it is separated by the Tons and Jumna, and S. and W. Sirhind and Putteala; area, 1075 sq. m. The surface declines generally, though irregularly, from N. to S., and sends almost all its drainage to the Jumna. Its culminating point, the Chur peak, has a height of 12,150 ft. The minerals include copper, lead, and iron. The working of the first has been abandoned, but that of the other two still continues. Notwithstanding the elevation good crops are raised. Of these the most important is marwa (*Eleusine coracana*), but wheat, barley, poppy, and oil seeds are also grown, with marwa for a first crop, and rice, cotton, and tobacco for a second. The rice, cultivated on ground suited for irrigation, and arranged in terraces, is very fine. The forests, which are so dense as to be almost impassable, and contain much fine timber, abound in wild elephants, tigers, leopards, bears, and lynxes; the principal domestic animals are kind of the humped species. They are kept only for the dairy, and are never killed or eaten for food. The manufactures are confined to the smelting and working of iron, and the weaving of a few coarse woollens and cottons for home use. There is no trade. The state of morals among the population may be judged from the fact that chastity is unknown. Pop. about 62,000.

SIRONJ, or **SEKONGE** [add.], a tn. India, Malwa, lying within the territory granted to the noted freebooter Ameer Khan, and still possessed by his descendants, is situated at

the base of a ghaunt leading S. from a plateau to the plain 213 m. S. Agra. It was once a place of great importance, surrounded with walls, and crowded with merchants and weavers famous for their fine muslins and chintzes. Much of this prosperity has disappeared, but it still contains a considerable population, is defended by a rectangular fort with a square tower at each angle, and possesses many mosques, two caravanserais, and a fine bazar.

SISSEK, a tn. Austrian empire, kingdom of Croatia and Slavonia, co. Agram, at the confluence of the Kalpa with the Save. It is the seat of a district court, and has a castle, a building-yard, and a large trade in corn. Pop. 800.

SISURO, a vil. Chinese empire, on the E. side of a peninsula of same name, near the N.E. extremity of the peninsula of Corea. It is of considerable extent, is surrounded by low stone walls, and has a small harbour convenient of access for fishing-boats. The Tumen-kiang, or Tsing-king, which has its mouth 4 m. E. of Sisuro, now forms, in consequence of the Russo-Chinese treaty of 14th November, 1860, the S. limit of the Russian territory on the shores of the Sea of Japan.

SITANG, a river, Burmah and Pegu, which rises among the hills to the S.E. of Ava. Taking the name of Pongloun in the upper part of its course, it flows nearly due S. through a valley about 350 m. long. Before entering Pegu, and beyond its frontier as far S. as Toungoo, its banks, so far as yet traced, are high and hilly. Lower down an alluvial tract commences, and is continued with varying breadth towards the sea. In Pegu the river is much more tortuous than it seems to be in Burmah. At the town of its own name it widens out, and, forming a broad estuary, falls into the Gulf of Martaban, 55 m. E. of Rangoon. One great obstacle to its navigation is its bore, which advances at the rate of nearly 12 m. an hour, sometimes with a crest 9 ft. high.

SKALAT, a tn. Austrian empire, Galicia, circle and 19 m. S.E. Tarnopol, cap. dist. of same name, in a well-wooded and well-cultivated country, not far from the Russian frontier; with an ancient castle and much-frequented yearly markets. Pop. 4008.

SKALITZ (GREAT and LITTLE), two tns. Austrian empire, Bohemia, circle and 18 m. N.E. Königgrätz:—1, *Gross* or *Great Skalitz*, l. bank Aupa, contains 2045 inhabitants, and has a townhouse, an hospital for the poor, and a mill.—2, *Klein* or *Little Skalitz*, situated opposite to the other, on the r. bank, contains 400 inhabitants, and has a parish church and a cotton mill.

SKARI-MAYDAN, a tn. Turkey in Europe, in the N.W. of Bosnia, 30 m. W.N.W. Banyaluka; is the see of a Greek bishop, and has iron mines and iron mills, in which the inhabitants, about 3000, are chiefly employed. In another place, called Brusani-Maydan, and situated about 10 m. eastward, there are extensive iron foundries.

SKOTSCHAU, a tn. Austrian empire, Silesia, cap. dist. of same name, 40 m. E.S.E. Troppau, on the Vistula, here crossed by a long bridge. It has an elegant townhouse, a castle, an hospital, and cattle and other yearly markets. Pop. 2000.

SKRZYSZOW, a tn. Austrian empire, Galicia, circle and 3 m. S.E. Tarnow; with numerous linen looms, a waggon factory, and 2250 inhabitants.

SLANKAMEN [add.], a tn. Austrian empire, Peterwardein, Military Frontiers, r. bank Danube, nearly opposite to the mouth of the Theiss, 22 m. E.S.E. Peterwardein. It has a R. Catholic and two Greek churches, the ruins of an ancient and once strongly fortified castle, salt springs, and an important fishery. It is an ancient place, and under the Romans had the name of *Ritium*. The defeat of the Turks here in 1691, by Prince Eugène, was followed by the peace of Karlowitz. Pop. 890. At a short distance on the same side of the Danube is New Slankamen, with 2400 inhabitants.

SLATINA, a tn. Turkey in Europe, Walachia, cap. circle Oltu, near the Oluta, 85 m. W. Bucharest. It is the seat of a court of primary jurisdiction, and contains a church and a normal school. Pop. 3530.

SLICHOV, a tn. Austrian empire, Hungary, co. and 10 m. N.E. Trencsin, in a mountainous district; with a large trade in glass, and 1400 inhabitants.

SLOBODZIE, a market tn. European Turkey, Walachia, 63 m. E. by N. Bucharest, l. bank Jalomnizta, here crossed by a flying bridge.

SUPP. IMP. GAZ.—VOL. II.

SLOVINKA (UPPER and UNDER), two nearly contiguous places, Austrian empire, Hungary, co. Zips, about 22 m. S.E. Leutschau, in a picturesque district; with mines of silver and copper, and an aggregate pop. of 2500.

SLOWITA, a tn. Austrian empire, Galicia, circle and 16 m. W. Zloczow; with a Basilian nunnery, and a beautiful mansion seated on an artificial mound, said to have been constructed by the Tartars while encamped here. Pop. 1100.

SMATYN, a tn. Austrian empire, Galicia, circle and 24 m. E.S.E. Kolomea, cap. dist. of same name, l. bank Pruth. It has a high-school, a fund for making loans to the industrious, an hospital, and an infirmary. Here, in 1638, the Tartars sustained a bloody defeat from the Polish general Wisniowiecki. Pop. 10,663.

SOAVE, a tn. Italy, Venetia, prov. and 16 m. E.N.E. Verona, on the Tromegna. It is surrounded with ancient walls, is the seat of a court of justice, and has a parish church, an old castle, manufactures of leather, and a trade in excellent wine.

SOBAT, a river, E. Africa, a tributary of the White Nile, which it joins in lat. 9° 21' 14" N., from the E. It is the most powerful affluent of the White Nile, and is probably fed by many streams from the Galla country about Kaffa, in addition to receiving the rivers from the Berri and Latooka countries. It appears to be supplied by considerable streams from distinct countries E. and S. having a rainfall at different seasons, as it is full at the end of December, when the more southerly affluents of the Nile are extremely low. The mouth of the Sobat at its junction with the White Nile is not more than 120 yards wide, and the country about it consists of dead flats of prairie and marsh as far as the eye can reach. The stream (at the beginning of January) Sir S. W. Baker found to run about 2½ m. per hour; the quality of the water was superior to that of the Nile, indicating a mountain origin; and the depth varied slightly from 27 to 28 ft. Within a few days' sail from the junction the Sobat is reported to divide into seven branches, all shallow, and with rapid streams. Between its mouth and the farthest navigable point it is said to be fed by many mountain torrents. It has been navigated from its mouth upwards for nearly 200 m. Its N. or r. bank is inhabited by the Denka and Djibba, its S. or l. bank by the Bolir and Berri tribes.

SOBOTIST, a tn. Austrian empire, Hungary, co. Upper Neutra, on the Verbocz, about 26 m. N.N.W. Tyrnau; with a castellated mansion, and several mills. Many of the inhabitants, who occupy a separate suburb, are descendants of the German Anabaptists, who have returned to the R. Catholic church, and are mostly potters and cutlers. Pop. 3097.

SOBRAON, a vil. India, Cis-Sutlej territories, l. bank Sutlej, 50 m. S.E. Lahore; is famous for the victory gained here on the 10th February, 1846, by the British, under Sir Hugh Gough, over the Sikhs.

SOFYEVSK, a tn. Russian empire, E. Siberia, r. bank Amoor, above Lake Kidze, and 40 m. W. of Castries Bay in the Gulf of Tartary, with which it is connected by a good road. Though only founded in 1858, it is intended to be the great entrepôt for the produce of Manchouria, and promises to become the most important commercial place on the Amoor, more especially after the projected railway to the coast shall have been completed. Foreign shipping is admitted to it on the same terms as at Nikolayevsk, and wharves and dry-docks are to be built.

SOHAR, a tn. and port, Arabia, Oman, cap. prov. Batinah, on W. shore of Sea of Oman, 140 m. N.W. Muscat. The roadstead and anchorage are good, sheltered by the promontory of Farksah on the N. and W., and by that of Sowarah on the S.; and the fishery off-shore is excellent. Within the town there stands the chief's castle, a handsome building with a triple circuit of walls, and occupying a small rising ground. In front of the castle is an open space planted with trees, and reaching down to the wall seawards. The market-place is large and regular in form, and possesses good shops. Weavers, and smiths in silver, gold, iron, and copper, are the staple workmen. The houses, of two and three stories, are well built, and over the main street several arches are thrown. Around the town outside the walls, which are in tolerably good condition and mounted with a few guns, is an open sandy space, beyond which are gardens with shady trees and

running waters, and a tropical vegetation. The commerce of the place has been drawn away to Muscat, and its prosperity consequently reduced. Many of the houses are empty, and some are in ruins. Pop. about 24,000.

SOKNA, a tn. N. Africa, regency and 280 m. S.S.E. Tripoli. It stands 1036 ft. above sea-level, in a hollow entirely surrounded by hills, is well built, and has an apparently prosperous population of about 2500 souls, who obtain abundance of dates and various other kinds of fruit from their gardens, and are supplied with water from forty wells, which are all hot, and have a temperature of $88\frac{1}{2}^{\circ}$. At Sokna the first salt lagoons of the desert are found.

SOKOTO, a tn. Western Africa, Hausa States, once the capital of the princes of Gober, on a slope, 220 m. W.N.W. Kano. It consists of the town proper and a suburb, the former inclosed by a ditch and a machicolated wall, and nearly in the form of a square, and, though in a dilapidated condition, and exhibiting on every hand symptoms of declension and ruin, contains many good buildings. The market is much frequented and well supplied. The principal articles are horses and cattle, slaves, leather articles, salt, and iron. The leather articles in particular bear a high name throughout Negroland, and consist of bags, cushions, bridles, &c. The iron also is excellent and in great demand, as that of Kano is of bad quality. Rice is extensively cultivated in a well-watered valley near Sokoto. The traveller Clapperton died here. Pop. roughly estimated at 20,000.

SOKUWA, a tn. Western Africa, Hausa States, dist. Katagum, on the W. bank of a stream, which is converted into stagnant pools in the dry season, 120 m. E. Kano. It is a large place surrounded by a wall of earth, and consists of clay-houses and reed-huts. There is a weekly market.

SOLANDER, a small island, S. Pacific, New Zealand, near the W. entrance of Foveaux Strait, lying 22 m. S. of the S. coast of Middle Island, and 35 m. W. by S. of the N.W. end of Stewart Island. It is about a mile long, and rising almost perpendicularly from the sea to a peaked summit, which is 1100 ft. high, and visible at the distance of 40 m., forms a perfect finger-post to vessels from the W. making for Foveaux Strait.

SOLANI, a river, India, which, rising at the S.W. base of the Sewalik Hills, flows S.W. for about 55 m., and joins the Ganges on its right bank, in lat. $29^{\circ} 3' N.$; lon. $78^{\circ} 1' E.$ It is crossed by the Ganges canal by a magnificent aqueduct of fifteen arches, each of 50 ft. span, executed at an expense of not less than £300,000.

SOLFERRINO [add.], a vil. Italy, Lombardy, about 18 m. N.W. Mantua, has a ruined castle, formerly belonging to a prince who took his title from it; a church and two chapels; and is famous as the scene of two great battles, in both of which the Austrians were signally defeated. The first battle was fought between them and the French in 1796, and prepared the way for the siege of Mantua; the second was fought between them and the allied French and Sardinians, on 24th June, 1859, and was obstinately contested for sixteen hours, the French, led by the Emperor Napoleon III., having 12,000, and the Sardinians, led by King Victor Emmanuel, having 5000 killed and wounded. The Austrians, led by the Emperor Francis Joseph, suffered much more severely, and, moreover, left in the hands of the victors 4 standards, 30 cannon, and 6000 prisoners. This battle is said to have been decided in favour of the allied forces chiefly through the superior range of their artillery and rifles. The fruit of the victory was a peace, by which Lombardy was ceded to France, and by France made over to Sardinia.

SOL-GALITSCH, a tn. Russia, gov., on the river and 100 m. N. by E. of the town of Kostroma, cap. circle of same name. It has seventeen churches, of which several are cathedrals; secular and religious schools for the circle and the parish, a benevolent endowment, salt springs, baths, and several industrial establishments. Pop. 2730. A large quantity of salt is made in the circle.

SOLLENAU, a tn. Austrian empire, Lower Austria, 22 m. S. by W. Vienna, contains 1050 inhabitants, and has a cotton-spinning mill. Numerous sheep are reared, and coal is extensively worked in the vicinity.

SOMBRERO [add.], an isl. W. Indies, N. of Virgin Island, between lat. $18^{\circ} 35'$ and $18^{\circ} 39' N.$; lon. $63^{\circ} 28'$ and $63^{\circ} 30' W.$ Attached to the Leeward Islands it naturally

belonged to the English government, but remained unoccupied and uninhabited until the Americans took possession of it in 1856. They immediately began to remove and export the rock of which the island is composed, and which was proved to be an excellent substitute for guano, containing 70 to 80 per cent. of soluble phosphoric acid lime. English traders soon established a business connection with the American possessors, and a large export of the valuable rock is made to England and Germany, as well as to the U. States. The dimensions of the island, the whole of which consists of the manure-stone, render the supply practically inexhaustible of this valuable and opportune substitute for Peruvian guano. The exact nature of the stone is still unascertained. The chemical compound results from 70 to 80 per cent. of a base of phosphoric acid limestone, as before stated; the next constituent part being chiefly carbonic acid lime and oxyhydrate of iron. In 1866 about 25,000 tons were exported to England. Present pop. of island, about 380.

SOMERSET RIVER, or **VICTORIA NILE**, Central Africa, the name given by Captain Speke, and retained by Sir S. W. Baker, to the river issuing from the Victoria Nyanza at Ripon Falls, lat. $0^{\circ} 22' N.$; lon. $33^{\circ} 28' E.$, and supposed to be the same that enters the upper part of the Albert Nyanza, or Lake Luta N'zige, in lat. $2^{\circ} 18' N.$; lon. $31^{\circ} 34' E.$ From the Victoria Nyanza its course is generally N.W., until it reaches the parallel of its mouth in about lon. $32^{\circ} 30' E.$, where at the Karuma Falls it turns and flows directly W. A little below the Karuma Falls it is about 150 yards wide; the cliffs on the S. side are higher than those on the other, being about 150 ft. above the stream; the falls themselves are insignificant, but curiously regular, the ridge of rock over which they flow extending like a wall across the river. They are just at the bend where the river turns westwards. From this point the river passes through a densely wooded country, and over a succession of rapids and falls between high cliffs, covered with groves of bananas and palms. The descent of the river is very great, the fall from Karuma to Patoon Island being 801 ft., and a total of 1276 ft. from Karuma to the Albert Nyanza. The last cataract is that of the Murchison Falls, where the river, contracted into a narrow gorge scarcely 50 yards in width, plunges in one leap of about 120 ft. into a dark abyss, whence it flows over a more level bed, and gradually widens to 500 yards. The stream becomes so sluggish that at its outlet into the Albert Nyanza at Manguo it is scarcely perceptible.

SOMLYO [add.], a tn. Austrian empire, Transylvania, cap. circle of same name, in the N.W. of Transylvania, 114 m. N.N.W. Hermannstadt. It is the seat of several important public offices, and has a beautiful R. Catholic church, built by Stephen Bathory in 1434; a Minorite monastery, a town-hospital, a high-school, a castle, once strong, but now dilapidated; a mineral spring, and a trade in wine. It contains 4002 inhabitants, mostly R. Catholic.

SOMMA CAMPAGNA, a tn. Italy, Venetia, prov. and 7 m. W.S.W. Verona; with several churches, one of which has a painting by Paul Veronese. The Piedmontese were here defeated by the Austrians under Radetzky, on 23d July, 1848. Pop. 2569.

SOMNATH PATTAN [add.], a tn. India, Gujerat, on the S.W. coast of the peninsula of Kattywar, 210 m. N.W. Bombay. It occupies a beautiful and commanding site, and is in the form of an irregular quadrangle, inclosed on all sides except the W., where the sea washes it, with a ditch and a wall. This wall, which is a mile and three-quarters in circuit, is of great solidity and strength, constructed of massive square stones without cement, and flanked with two round and thirty-six square towers. The space inclosed is far too large for the present inhabitants, who do not exceed 5000, and live amid splendid ruins, telling of a grandeur which has long since passed away. The great temple, to which the place was mainly indebted for its celebrity, stands on an eminence N.W. of the town, and so completely overtops all the other buildings that it can be seen at the distance of 25 m. It was stormed and pillaged by Mahmood of Ghuznee, who found an immense booty within it, and carried off its sandal-wood gates, which, according to a prevailing tradition, he employed in embellishing his own tomb at Ghuznee. The temple has never been rebuilt, and still remains a shapeless ruin; but a very extraordinary attempt was made by Lord

Ellenborough, while governor-general, to give it back its gates, which were carried in ostentatious procession from Ghuznee for this purpose, and would doubtless have been replaced had not the court of directors interfered to prevent it. The only other buildings of consequence are a small but beautiful temple, erected in the vicinity of the ancient temple by the celebrated Ahalya Bae, and a number of mosques, one of which is an imposing structure surrounded by colonnades, and surmounted by four domes. Billawul or Vairawul, situated about 2 m. W., is the seaport of Somnath Pattan, and having a good haven for trading vessels, enables it to carry on a considerable trade.

SONA, a tn. Italy, Venetia, prov. and 8 m. W. Verona, on the railway to Milan, with 3196 inhabitants. The Austrians under Radetzky were victorious here, on 23d July, 1848.

SONAH, a tn. India, N.W. Provinces, dist. Goorgaon, 39 m. S.W. Delhi. It stands in a long valley inclosed by ridges of hills, is defended by a fort large enough to afford an asylum to the inhabitants, who used to retire to it with their movables when attacked by lawless depredators; and possesses a bazar, a hot sulphurous spring, which is said to be very efficacious in leprosy and other cutaneous affections, scrofula, chronic rheumatism, and liver complaints. The water is received in a basin cut out of the rock, surrounded by apartments with open verandahs, and covered with a beautiful ancient dome. The water has a temperature of 108°, and is said to be used every morning by almost every inhabitant of the place as a warm bath, greatly to the advantage of a number of Bramhims, who levy fees from the visitors. Pop. 6103.

SONAR, a river, India, which rises in the Saugor and Nerbudda territory, at the height of 1950 ft. above the sea, flows N.E., and joins the Cane on its left bank, in lat. 24° 22' N.; lon. 79° 59' E., after a course of 118 m.

SONORA [add.], a dep. Mexico, bounded N. by New Mexico belonging to the U. States, E. Chihuahua and Durango, S. Cinaloa, and W. the Gulf of California; area, 123,466 sq. m. Its present capital is Hermosillo. By some writers it is divided into Upper and Lower Sonora, and it includes the departments of Arispe, Cieneguilla, and Horcasitas in the N., Hostionuri, Alamos, and the Pueblos of Mayo and Yaqui in the S. The inhabitants are generally docile and obedient to any constituted authority; a weakness and a misfortune in their instance, as it has rendered them the tools of the different revolutionary chiefs who have exercised the power of the sword. They suffer severely from the continual incursions of the nomadic tribes of the Indians, who destroy their hamlets and carry off their cattle. Living in a state of continual apprehension they accordingly neglect agriculture. They are ignorant in the extreme; the proportion of those who can read and write not exceeding five per cent. of the whole population. The best feature in their character is the hospitality they freely extend to strangers. Sonora is a mountainous country, watered by numerous rivers, and abounding in mineral wealth. Its mines have been only partially developed. The most celebrated are those of Alamos, in the district of the same name; Jubiata, near Hermosillo; San Xavier; San Marcial; Corral Vieja, yielding gold, silver, and lead; Canensa, yielding silver, copper, and lead; and the Rial del Carmen. Were these properly worked, and their *gambusinos*, or miners, more skillfully trained and organized, there can be no doubt that their annual products would largely exceed the present returns. Gold-dust has been discovered in abundance in the *placero* of San Francisco, La Sienga, Crusabaquita, and San Perfecto. Soni is renowned for its gold mines, as well as Coconpera and Baba Seco; the precious metal has also been met with in the district of Pueblo de Cucurpe, and in the rainy season there is a considerable supply in Baquachi, a district of Arispe. The climate of Sonora is healthy. The rainy season commences in June and lasts until the beginning of September; from that month until March there are only partial showers. The cold is never severe. From March to June the dry season prevails, but the temperature never rises to an excessive degree. The soil is fertile, and produces two crops a year. Corn, maize, beans, and pease are chiefly cultivated. The sugar-cane is largely grown at Hermosillo, San Mignel, Urbes, Rayon, and on the banks of the river Yaqui. In all parts of the country tobacco

of excellent quality is found. Guaymas is the principal port of Sonora. It is a small town, conveniently situated for commercial purposes, and containing about 6000 inhabitants. The harbour is magnificent, and can receive the largest vessels. The principal rivers are the Fuerte, the Yaqui, the Mayo, and the Sonora. Pop. of Sonora, 130,000.

SOOCHOW [add.] This Chinese city of the first order (*foo*) suffered severely during the Taiping rebellion, and its occupation for several years by the insurgents, who drove the wealthy and refined inhabitants from the place, plundering their houses, and desolating the thoroughfares of this once busy mart. In 1863 the disciplined Chinese force, under Colonel Gordon, having reduced all the towns in its vicinity, the rebel leaders, four in number, agreed to surrender the city to the imperialists, provided their lives were spared. This was acceded to, but the governor-general of the province, when he had them in his power, treacherously beheaded them, although he promised Gordon to spare them. The act led to the disbandment of the force, and the withdrawal of British officers from the Chinese service. After the surrender the interior of the city presented a mass of ruins, except where the Taiping garrison had quartered themselves near the gates. In former times the native poet sang of 'Paradise above, and Soochow below;' now the place presented a scene of filth and desolation. The imperial authorities, however, set to work with unusual vigour to restore the streets to something like their former appearance. The canals which intersect the city were cleared of their accumulations, and the bridges repaired. The inhabitants who had fled soon returned, and erected new dwellings on the sites of their old habitations; while trade was gradually resumed in the shops. Under these circumstances the city is recovering, but it will be long, if it ever reaches its former prosperity and refinement.—(*North China Herald*.)

SOOJABAD, a tn. India, Punjab, r. bank Chenab, 30 m. S. by W. Mooltan. It stands in a fertile district, among extensive and luxuriant gardens, and is surrounded by lofty but irregular fortifications, which give it a striking and picturesque appearance. Its bazar is well supplied, and it has manufactures of cottons and wood turnery. For the latter it is famous.

SOOK, a tn. Austrian empire, Hungary, co. Lower Neutra, near the Waag, which is here crossed by a ferry, about 40 m. E.S.E. Presburg. It contains 2500 inhabitants, whose chief employment is in preparing wood for matches.

SOORAJGUNG, a tn. India, presid. Bengal, dist. Mymensing, r. bank Konaia, a great offset of the Brahmaputra, 69 m. N.W. Dacca. It is the principal mart of the district, and exports rice, butter, cattle, hides, and timber. Between 1000 and 2000 river craft of considerable size are often seen at its wharves discharging or receiving cargoes.

SOORSUTTY, a river, India, which rises near Nahun, in Sirmoor, in lat. 30° 30' N.; lon. 77° 29' E.; flows S.W. to Thanetur, then turns W., receives the Markunda, and finally, after a course of above 90 m., joins the Guggur. Flowing generally through a level tract it often during the rains overflows its banks, and inundates the surrounding country, but at other times it is merely a small thread of running water. The Hindoos identify it with Saraswati, the consort of Brahma, and hold it in high veneration, fabled that it passes underground to the confluence of the Jumna and Ganges, and there mingles its waters with theirs.

SOOSKUT, a tn. Austrian empire, Hungary, co. and about 20 m. N.E. Stuhlweissenburg; with valuable stone quarries, and 2492 inhabitants.

SOOWURUDROOG, a fort, India, S. Concan, 90 m. S. by E. Bombay, on a small and slightly elevated island close to the coast. It was first put into a state of defence in 1662 by Sivajee, and passed in 1713 into the possession of Khanjee Angria, who had once been admiral of the Mahratta fleet. In his hands and those of his successors it became a nest of pirates, who preyed so much on British commerce that Commodore James was despatched against it in 1755, and notwithstanding its boasted strength captured it without the loss of a single man. It was afterwards given to the Mahrattas in exchange, but finally reverted to the British, on the extinction of their confederacy in 1818.

SORSOGON, a tn. Philippine Isles, prov. Albay, in the island of Luzon. It is situated at the head of a spacious

bay of same name, which, next to that of Manilla, is the best port of the Philippines, and contains a pop. of 7315.

SORUTH, a terr. India, Gujerat, peninsula of Kattywar, between lat. 20° 41' and 21° 50' N.; lon. 69° 58' and 71° 12' E.; is bounded N. by dist. Hallar, N.E. and E. dist. Kattywar, E. Babriawar, and S. and S.W. the Arabian Sea; estimated area, 3300 sq. m. The coast, which stretches about 65 m. S.E. to Diu, and then 28 m. E.N.E. to the estuary of the Ruhan at Rajpoot, is in general of moderate height, with deep soundings, so that it may be approached with safety, except towards Diu Head, where a rocky bank stretches W.N.W. for nearly 4 m., and has only 3½ fathoms of water, though the depth within is 9 fathoms. The interior in the E. and N.E. is rugged and hilly, rising in the granite peak of Girnar to the height of 2500 ft. From the mountain and the adjacent highlands numerous torrents stream down, and furnish ample means of irrigation. The most important stream, however, is the Bhader, which, after traversing the district for 25 m., forms part of its boundary for a short distance before falling into the sea. The S. part of the district is as fertile as any part of Gujerat, the soil consisting chiefly of a black loam, on which heavy crops of sugar-cane, wheat, and jowaree are grown. The mango justly takes precedence among the fruits. Joonaghur is the capital.

SOUDAH, or **BLACK MOUNTAINS**, a range, N. Africa, Tripoli, on the eastern route by Sokna to Murzuk, about 200 m. N.N.E. of the latter. The mountains consist of a yellow sandstone impregnated with iron, which gives it an outer crust of a black colour, appearing in the sun's rays of a deep blue. On these black rocks large round patches of a yellow or brown colour are often seen, and give the whole a most remarkable appearance. The breadth of the range is 25 m., and its loftiest summit 2160 feet, though the pass along which the route is continued is about 100 ft. lower. Animal and

vegetable life is entirely absent in this region, which, according to Vogel, 'vividly recalls to your mind a landscape by moonlight.' Beyond the Black Mountains, for a distance of about 70 m., as far as Om-el-Abid, extends the desert of Ben Afien, perfectly level, with an average elevation of 1370 ft., without animals, plants, or water, and so scorching by day that to save the camels' feet from being burned it is usually passed at night.

SOUK-BULAK, the cap. of Persian Khoordistan, prov. Azerbaijan, at the S. end of a green valley, 20 m. S. of Lake Urumiah. It consists of about 600 poor stone hovels, occupied by about 2000 souls, mostly of Khoordish descent, the number of Nestorian families amounting scarcely to 50.

SOUS, or **SUSE**, a river, Morocco, which rises near the S.W. extremity of Mount Atlas, flows S.W. 30 m. to Tarodant, then W.N.W., and falls into the Atlantic about 5 m. S. of Santa Cruz or Agadir. It has been inferred, from the existence of large rings in the walls of Tarodant similar to those used on quays for mooring vessels, that it was at one time navigable up to that town; but at present the bar of sand across its entrance is nearly dry at low-water, and at all times so shallow that no vessel drawing more than 4 or 5 ft. can enter it. The people along its banks are less bigoted, and more friendly to Christians, than the Moors generally are; and as the province of the same name through which it flows is peculiarly fertile and populous, and adjoins those parts of Barbary where its most valuable products are raised, there is reason to believe that it might be made the channel of a profitable trade.

SOSA, or **SUSA** [add.] (anc. *Hadrumentum*), a pretty fortified tn., whose walls are washed by the sea, regency of and about 70 m. S.S.E. Tunis, on the Gulf of Hammamel. It is commanded towards the S. by a square citadel, flanked by eight towers of Saracenic architecture, built upon Byzantine

SOSA.—From Charisson, *Aperçu Pittoresque de la Régence de Tunis*.

foundations; and its houses, placed in a regular manner one over the other, and whitewashed with lime, present an appearance of extreme cleanliness. The principal mosque, built in a good Moorish style, is one of the most remarkable in the regency. Outside the town are both Byzantine and Roman remains, though not specially noteworthy. It has manufactures of linen and shoes, and a trade in olives. The seafaring part of the population is composed chiefly of Maltese. The total population is about 6000, of whom 4000 are Moors, 1500 Jews, and 400 Europeans.—(Charisson, *Aperçu*.)

SOUTH, or **KOKSOAK**, a river, British America, Labrador, rising in Lake Caniapuscaw, and flowing N. into Ungava Bay. From its source to a small outpost of the Hudson's Bay Company called South River House, a distance of 250 m., little is known of it; it is rapid and turbulent, flowing through a partially wooded country. At South River House it receives the Washquah River, and from this point to the sea, 150 m., the current, though strong, is less broken by rapids; it also widens very much, and 90 m. from its mouth it is a mile in breadth, flowing between high rocky banks thinly clothed with trees. At its mouth it is nearly 3 m. in width. Fort Chirno is situated upon its r. bank, 28 m. from the sea.

SOUTHLAND, a prov. New Zealand, Middle Island, until 1861 a part of Otago, is cut out of the south central part of the latter province, and has 60 m. of frontage on Foveaux Straits. The new province has a large amount of agricultural and grazing land. Its capital, Invercargill, at the mouth of New River, has risen rapidly into importance, and besides its commercial advantages to the province, furnishes the most convenient access to the central goldfields of Otago. The population of the province, which a very few years ago numbered about 5000, has since rapidly and largely increased. In 1863, 171 vessels, of 44,779 tons, entered the harbour, and 153 vessels, of 34,100 tons, left it; and the value of the imports was £717,473, and of the exports £81,406.

SPENCER COVE, a vil. British America, Canada East, co. and 5 m. below Quebec, r. bank St. Lawrence; with a R. Catholic church, and several large lumber depôts, many of the timber-vessels which resort to Quebec lading here. Pop. about 2000.

SPITAL-AM-PYRN, a tn. Austrian empire, Upper Austria, circle Traun, at the foot of Mount Pyrn, near the frontiers of Styria; was founded in the beginning of the twelfth century, for the reception of pilgrims on their way to Pales-

tine. It has a beautiful church with two lofty towers, a high altar of green and black marble, and some fine paintings. Pop. 1500.

SPONAU, a tn. Austrian empire, Moravia, circle and about 10 m. W.N.W. Weisskirchen, on the Oder; with a castle, manufactures of woollen and linen cloth, and an organ and musical instrument factory. Pop. 1400.

SPOTTSYLVANIA, a co. U. States, Virginia. The county is bounded on the N. by the Rappahannock, and S. by Anne River; area, 400 sq. m. The surface is agreeably diversified by hill and dale. The soil is generally fertile in the neighbourhood of the streams, producing Indian corn, wheat, oats, and hay, &c. Pork and butter are among the staple products of the county. Granite and freestone are abundant; and two gold mines were worked here in 1850. A canal about 45 m. long has been opened along the Rappahannock, above the falls, and the county is intersected by the Richmond and Potomac railroad. It was organized in 1720, and named in honour of Alexander Spottiswood, at that time governor of Virginia. The cap. is Spottsylvania Court-house, rendered memorable by the desperate engagement which took place between the Confederate forces, under General R. Lee, and the Federal forces, under General U. Grant, on May 12, 1864.

SPYTKOWICE, a tn. Austrian empire, Galicia, circle Wadowice, about 20 m. S.W. Cracow; with a large old castle, which figures much in the early history of Poland, and is still habitable, and 1900 inhabitants.

SSEWRI-HISSAR, a tn. Turkey in Asia, Anatolia, 85 m. S.E. Constantinople. It stands at the foot of a steep rocky height composed of granite, and crowned by a castle, and is a place of considerable extent, containing nearly 600 Armenian and rather more than 1500 Turkish houses. The Armenians have a large new church of imposing appearance, but somewhat deficient in solidity, as the roof is supported entirely by wooden pillars.

SSIDI-GHASI, a tn. Turkey in Asia, Anatolia, 48 m. S.E. Constantinople. It is a large but decayed place, containing about 300 inhabited houses, and a still larger number which are empty. Its castle occupies an almost inaccessible height, and its ancient Christian monastery has been converted into a sanctuary of the celebrated Moslem saint who gives the place its name. The inhabitants, chiefly engaged in agriculture, raise good crops of wheat and barley. Ssidi-Ghasi is thought to occupy the site of the ancient Prymnessos.

ST. ANDRÉ, a vil. British America, Canada East, co. Kamouraska, r. bank St. Lawrence, 97 m. N.E. Quebec; with a R. Catholic church, several factories for mill-work, a tannery, and some general trade. Pop. of par. about 2000.

ST. ANSELME, a vil. British America, Canada East, co. Dorchester, 16 m. S.S.E. Quebec; with a R. Catholic church, manufactures of woollens, leather, and tinware, and several large general stores. Pop. of par. about 3000.

ST. ANTHONY, a tn. U. States, Minnesota, picturesquely situated l. bank Mississippi, immediately above the celebrated falls of its name. It stands embosomed among trees, and consists of white brick houses of substantial and comfortable appearance, ranged in clean and spacious streets. The inhabitants, about 2500, are chiefly engaged in the flour and lumber trade, but not a few of them find profitable employment in providing accommodation for the numerous visitors attracted to it in summer by the beauty and grandeur of its scenery. Among the principal buildings are Presbyterian, Episcopalian, Methodist, and Baptist churches, and a university, for which an ample endowment in land has been provided. This institution, opened in 1851, is attended by about 100 students. The Mississippi, immediately above the falls, is about 600 yards wide, and is divided into two parts by a large mass of white sandstone, on each side of which the water is precipitated in two white sheets. The descent, over a sheer precipice, is only 20 ft., but this comparatively small height is compensated by the perfect grouping of rock, wood, and water. Immediately below the falls the rapids extend for several hundred yards, forcing its way among numerous islands and gigantic boulders, and between lofty sandstone walls of dazzling whiteness.

ST. ANTOINE-DE-TILLY, a vil. British America, Canada East, co. Lotbinière, r. bank St. Lawrence, 38 m. W.S.W. Quebec; with a R. Catholic church, a tannery,

several general stores, and some local flour and lumber trade. Pop. of par. about 1800.

ST. APOLLINAIRE, a vil. British America, Canada East, co. Lotbinière, 27 m. S.W. Quebec; with a machine factory and some lumber trade. Pop. of par. 1800.

ST. ARSÈNE, a vil. British America, Canada East, co. Temiscouata, 75 m. N.E. Quebec; with a R. Catholic church, several schools, a cooperage, and some large general stores. Pop. of par. about 2500.

ST. ATHANASE, a vil. British America, Canada East, cap. co. Iberville, on the Richelieu, opposite St. Johns, 19 m. S.E. Montreal. It possesses a Protestant and a R. Catholic church, a Canadian institute, a building society, manufactures of woollen and cotton cloth, a machine and a thrashing-mill factory, a foundry, a tannery, and a trade in flour and lumber. A handsome toll-bridge, situated at the head of the Chambly canal, connects this place with St. Johns. Pop. about 1800.

ST. BARTHELEMI, a vil. British America, Canada East, co. Berthier, 50 m. N.E. Montreal; with a R. Catholic church, a tannery, and a number of mills, which supply the demands of a large flour and lumber trade. Pop. of vil. and par. about 2400.

ST. BENOIT, a vil. British America, Canada East, co. Two Mountains, 24 m. E.N.E. Montreal. It is the seat of a circuit court which is held every four months, and it possesses a R. Catholic church, several schools male and female, a flour-mill, and two large general stores. Pop. of par. about 1600.

ST. BERNARD, a vil. British America, Canada East, co. Dorchester, 30 m. S.E. Quebec; with a R. Catholic church, and some trade in lumber. Pop. of par. about 1500.

ST. CÉSaire, a vil. British America, Canada East, co. Rouville, on the Yamaska, 33 m. N.E. Montreal. It possesses a R. Catholic church, a nunnery, several schools, an agricultural society, a brewery, a tannery, an important weekly market, and an extensive trade in flour. Pop. 1500.

ST. CHARLES, a vil. British America, Canada East, co. Bellechasse, 14 m. E. Quebec; with a R. Catholic church, a tannery, a number of general stores, and some trade in flour and lumber. Pop. of par. about 2350.

SAINT CLOUD, a vil. U. States, Minnesota, cap. co. Stearns, r. bank Mississippi, on the St. Paul and Pacific railway, 80 m. N.W. St. Paul. It stands on a high bluff 2 m. below the mouth of Sauk River, and contains a courthouse, several churches, flour and saw mills, and a bank. Pop. (1865), 2400.

ST. CLOUD, a vil. N. Africa, Algeria, prov. and 17 m. N.E. Oran; with a church, a school, baths, and a public nursery. Pop. 1220.

ST. CROIX, a river, U. States, which rises in the N.W. of Minnesota, near the watershed between the Mississippi and Lake Superior, about lat. 46° N.; lon. 91° W., flows successively S.W. and S., and joins the Mississippi on its l. bank, about 15 m. below St. Paul. It is navigated by steamers up to the town of Stillwater, and thereafter by canoes nearly to its source, about 100 m. above its mouth. By a short portage to the Brulé River the watershed is passed, and an easy means obtained of descending into Lake Superior. A little above its mouth St. Croix expands into a long and narrow lake.

ST. CUTHBERT, a vil. British America, Canada East, co. Berthier, on a stream of same name, affording a considerable extent of water-power, 45 m. N.E. Montreal. It possesses a R. Catholic church, male and female schools, a carriage factory, and a trade in flour and lumber. Pop. of par. 2500.

ST. DENIS DE LA BOUTEILLERIE, a vil. British America, Canada East, co. Kamouraska, 78 m. N.E. Quebec; with a R. Catholic church, a tannery, and manufactures of tin and iron ware. Pop. of par. about 2000.

ST. DENIS DU SIG, a tn. N. Africa, Algeria, prov. and 50 m. S.E. Oran, in the centre of one of the most fertile and best cultivated districts in the land. It has become the entrepot for a large amount of produce from the interior, and is rapidly acquiring importance. Government has here one of its most extensive nurseries, and the weekly markets are said to be attended by nearly 10,000 Arabs. Pop., which in 1850 was only 491, has since risen to 3553, almost all Europeans.

ST. ELEAZAR, a vil. British America, Canada East, co. Beauce, 30 m. S. Quebec; with a R. Catholic church, and some trade in flour and lumber. Pop. of par. about 2500.

ST. ELOI, a vil. British America, Canada East, co. Temiscouata, in the rear of Isle Verte or Green Isle, 125 m. N.E. Quebec; with a R. Catholic church, and some trade in flour and lumber. Pop. of par. about 1200.

ST. ESPRIT, a vil. British America, Canada East, co. Montcalm, on the river of its name, 23 m. N. Montreal; with a R. Catholic church, boys' and girls' schools, tanneries, a carriage factory, and a large local trade. Pop. of par. about 1900.

ST. ETIENNE, a vil. British America, Canada East, co. St. Maurice, 65 m. N.E. Montreal; with a R. Catholic church, a tannery, several mills, and a trade in lumber. Pop. of par. about 2000.

ST. FELIX DE VALOIS, a vil. British America, Canada East, co. Joliette, near the Bayonne, 40 m. N.N.E. Montreal; with a R. Catholic church, several schools, a mechanics' institute and library association, and several mills. Pop. of par. about 3000.

ST. FIDÈLE, a vil. and par. British America, Canada East, co. Charlevoix, l. bank St. Lawrence, 10 m. below Quebec; with a R. Catholic church, building yards, and a trade in flour and lumber. Pop. about 1800.

ST. FRANÇOIS, two places, British America, Canada East:—1, A vil. and par. co. Beauce, 46 m. S.S.E. Quebec; with a R. Catholic church, mill-work factories, a tannery, and a trade in flour and lumber. Pop. about 3000.—2, *St. François du Sud*, co. Montmagny, 24 m. N.E. Quebec; with a R. Catholic church, an academy of Congregational nuns, cooperages, and some trade in lumber. Pop. of par. about 1900.

ST. GABRIEL DE BRANDON, a vil. British America, Canada East, co. Berthier, near Lake Maskinongé, 40 m. N.E. Montreal; with a R. Catholic church, male and female schools, manufactures of harness, some mills, and a timber trade. Pop. of par. about 3000.

ST. GEORGE, a vil. British America, Canada East, co. Beauce, on the Chaudière, 54 m. S.S.E. Quebec; with a R. Catholic church, maple-sugaries, and a trade in pine timber, which abounds in the neighbourhood. Gold is said to have been found within the parish. Pop. about 1500.

ST. GEORGE'S BAY, British America, between the N.E. of Nova Scotia and the S.E. of Cape Breton Island, is $13\frac{1}{2}$ m. wide at its entrance, and 20 m. deep from Cape St. George at its N.W. to the Gut of Canso at its S.E. extremity. The cape, which rises 600 ft. above the sea, is a bold precipitous headland, composed chiefly of slate, conglomerate, and trap. Antigonish Harbour, situated 11 m. S.S.W. of the cape, is of great extent, running in 6 or 7 m. to the S.W., and presents much beautiful scenery, the shores being broken into numerous coves, points, and islets, while a range of hills rises behind to the height of 760 ft. On either side the ground is well cultivated, and at the head of the W. arm stands the village of Antigonish, containing two churches, and about 600 inhabitants. Gypsum abounds in the vicinity, and at Monk Head, $2\frac{1}{2}$ m. S.E. of the harbour, forms a cliff 45 ft. high. In the bay, $2\frac{1}{4}$ m. S.S.E. Monk Head, is Ponquet Harbour, which branches into two principal and many smaller inlets, coves, and islets. The principal settlements and the church are on the N.W. branch, and on the E. and larger branch the Indians have a chapel and a reservation of land.

ST. GERVAIS, a vil. British America, Canada East, co. Bellechasse, 19 m. S.E. Quebec; with a R. Catholic church, manufactures of mill-work and of tin and iron ware, tanneries, and some large general stores. Pop. of par. about 3000.

ST. GREGOIRE, a vil. British America, Canada East, co. Nicolet, r. bank St. Lawrence, 67 m. N.E. Montreal; with a R. Catholic church, an academy of nuns of the Assomption, tanneries, and a local lumber and flour trade. Pop. of par. about 3000.

ST. HELEN'S ISLAND, British America, Canada East, in the St. Lawrence, nearly opposite to Montreal, from which it is only 1 m. distant. It is well covered with trees, and rising gradually from the water, has a pleasing appearance, both from the city and from different parts of the river. As a military post belonging to the crown, and garrisoned by

imperial troops, it has been fortified, and contains extensive buildings for stores, powder magazines, and a large and well-kept armoury.

ST. HENRI, two places, British America, Canada East:—1, A vil. co. Hochelaga, on the Lachine railway, about 3 m. from Montreal, and included within its municipality; with an ink manufactory, and some general trade. Pop. about 1500.—2, A vil. co. Levi, 10 m. S.S.W. Quebec; with a R. Catholic church, a tannery, a flour-mill, and some large general stores. Pop. of par. about 3200.

ST. ISIDORE, a vil. British America, Canada East, co. Dorchester, 17 m. S. Quebec; with a R. Catholic church, and a considerable trade in flour and lumber. Pop. of par. about 2500.

ST. JACQUES, a vil. British America, Canada East, co. L'Assomption, 26 m. N.E. Montreal; with a R. Catholic church, a convent, a brewery, and manufactures of furniture and of tin and iron ware. Pop. of par. about 3000.

ST. JEAN D'ESCHAILLONS, a vil. British America, Canada East, co. Lotbinière, 46 m. W.S.W. Quebec; with a R. Catholic church, two tanneries, and some trade in flour and lumber. Pop. of par. about 1900.

ST. JEAN PORT JOLI, a vil. British America, Canada East, co. L'Islet, r. bank St. Lawrence, 54 m. N.E. Quebec; with a R. Catholic church, a literary institute, several schools, machine and mill-work factories, a tannery, and a trade in lumber. Pop. of par. about 3800.

ST. JEROME, a vil. British America, Canada East, cap. co. Terrebonne, on the North River, 30 m. N.W. Montreal; with a R. Catholic church, a Canadian institute, several schools, manufactures of leather and harness, a cooperage, and a number of general stores. Pop. of par. about 1500.

ST. JOSEPH, two places, British America, Canada East:—1, A vil. co. Beauce, on the Chaudière, 36 m. S.S.E. Quebec; with a R. Catholic church, and manufactures of leather, potash, and tinware. Pop. about 3000.—2, *St. Joseph du Lac*, co. and near the Lake of Two Mountains, 30 m. N.W. Montreal. It occupies a height commanding a wide and splendid view, and has a R. Catholic church and male and female schools. Pop. of par. about 1225.

ST. JULIENNE, a vil. British America, Canada East, co. Montcalm, near the St. Esprit, 45 m. N.E. Montreal. It is a thriving place; with a R. Catholic church, a foundry, a tannery, a large supply of water-power, and a considerable trade in flour, lumber, and miscellaneous articles. Pop. of par. about 1500.

ST. LAMBERT, a vil. British America, Canada East, co. Chambly, on the S. shore of the St. Lawrence, directly opposite Montreal, of which it may in some respects be regarded as a suburb. It is a flourishing place, advantageously situated at the S. extremity of the Victoria bridge; possesses a Protestant and a R. Catholic church, and two schools, and is becoming the centre of a large and rapidly increasing traffic. Pop. about 600.

ST. LAURENT, two places, British America, Canada East:—1, A vil. co. Jacques Cartier, on the island and 6 m. from the city of Montreal; with a R. Catholic church, a college of the Frères St. Joseph, a convent of the Sœurs Ste. Croix, a brewery, and some local trade. Pop. of par. about 2800.—2, A vil. co. Montmorency, on the island of Orleans, not far from the S. bank of the St. Lawrence, 7 m. E. Quebec. The most important branch of industry is boat-building. Pop. of par. about 1000.

ST. LEON, a vil. British America, Canada East, co. Maskinongé, on the Rivière du Loup, 65 m. N.E. Montreal. It is celebrated for its mineral springs. Pop. of par. about 2500.

ST. LIGUORI, a vil. British America, Canada East, co. Montcalm, near the river Lac Ouarré, 42 m. N. Montreal; with a R. Catholic church, and a large amount of water-power, which has been made available for the flour and lumber trade. Pop. of par. about 2000.

ST. LIN, a vil. British America, Canada East, co. L'Assomption, on the Achigan, 22 m. N. Montreal; with a R. Catholic church, male and female schools, manufactures of sadlery and tinware, and a number of general stores. Pop. of par. about 3000.

ST. LUCE, a vil. British America, Canada East, co. Rimouski, r. bank St. Lawrence, 180 m. N.E. Quebec; with a

R. Catholic church, and several cooperages and general stores. Pop. of par. about 2000.

ST. MARC, a vil. British America, Canada East, co. Vercheres, on the Richelieu, 20 m. N.E. Montreal; with a R. Catholic church, several schools, a literary institute, a Jean Baptiste society, flour-mills, and general stores. Pop. of par. about 1500.

STE. MARIE, two places, British America, Canada East:—1, *Ste. Marie de Monnoir*, cap. co. Rouville, 17 m. E. Montreal. It possesses a Protestant and a R. Catholic church, a college of a superior description with seven professors, a convent, a race-course, manufactures of bricks, carriages and saddlery, and a considerable trade in grain, horses, &c. Pop. of par. about 1000.—2, A large vil. co. Beauce, on the Chaudière, 27 m. S. Quebec, with a R. Catholic church, a college of the Frères de la Doctrine Chrétienne, a convent of the Congregational nuns, and some trade in lumber. Pop. of par. about 3500.

ST. MARTHE, a vil. British America, Canada East, co. Vaudreuil, 35 m. W.S.W. Montreal; with a R. Catholic church, an academy, a tannery, a cooperage, and a carriage factory. Pop. of par. about 2000.

ST. MARTIN, a vil. British America, Canada East, co. Laval, on the Des Prairies and Jesus, two branches of the Ottawa, 12 m. N.E. Montreal; with a R. Catholic church, an academy of the St. Joseph friars, an observatory, a convent, several male and female schools, a St. Jean Baptiste society, an extensive carriage factory, a number of general stores, and a good local trade. Pop. of par. about 3800.

STE. MARTINE, a vil. British America, Canada East, cap. co. Chateauguay, on the river of that name, 18 m. S. W. Montreal; with a R. Catholic church, a circuit court which is held every four months, tanneries, carriage factories, carding and other mills. Pop. of par. about 4000.

ST. MICHEL DE BELLECHASSE, a vil. British America, Canada East, cap. co. Bellechasse, r. bank St. Lawrence, 15 m. E. Quebec; with a R. Catholic church, a tannery, several general stores, and a considerable trade in lumber. Many of the inhabitants are employed as pilots. Pop. of par. about 2750.

ST. NICOLAS, a vil. British America, Canada East, co. Levi, r. bank St. Lawrence, 13 m. above Quebec; with a R. Catholic church, a tannery, a saw-mill, and some trade in lumber. Pop. of par. about 3200.

ST. OURS, a vil. British America, Canada East, cap. co. Richelieu, on the river of that name, 32 m. N.E. Montreal; with a R. Catholic church, a Canadian institute, and an important market, held weekly in winter, and twice a week in summer. Pop. about 1100.

ST. PAUL, a tn. on the N.W. shore of the Isle of Bourbon or Réunion in the Indian Ocean. It is a large straggling place, built along the shores of a gulf situated between Points Des Gallets and St. Gilles. Its fine but exposed roadstead induced the French to attempt the formation of a harbour at the latter point, but after the expenditure of large sums the plan has been abandoned as impracticable.

ST. PAUL, a vil. British America, Canada East, co. Joliette, 40 m. from Montreal; with a R. Catholic church, an academy of the Frères de la Doctrine Chrétienne, and some general trade. Pop. of par. about 1200.

ST. PAUL, a tn. U. States, cap. state of Minnesota, l. bank Mississippi, at the head of its navigation, and 12 m. below St. Anthony's Falls. In 1847 it consisted of only a few huts, and bore the name of Pig's Eye, but no sooner was attention called to it than the advantages of its site were seen, and it has accordingly increased under its new name with amazing rapidity. It is now a large and well-built town, arranged in spacious streets with commodious sidewalks, and contains lofty brick warehouses and well-supplied stores and shops. Among its principal buildings are six churches, some with spires, others without them; a female academy of a superior description, and several large hotels. For the benefit of the reading public no fewer than ten newspapers are published, four of them daily. The wharves, except during the four months from November to March, when the river is frozen, exhibit a very busy scene, upwards of 300 steamers arriving annually to land new settlers and carry off the produce of a large tract of territory particularly rich in corn and lumber. St. Paul may be considered as still

in its infancy, more especially should the scheme of connecting it by railway with Lake Superior be carried out. Pop. (1860), 10,401.

ST. PAULIN, a vil. British America, Canada East, co. Maskinongé, 80 m. N.E. Montreal; with a R. Catholic church, and a flourishing lumber trade, consisting chiefly in the export of planks to the U. States. Pop. of par. about 1400.

ST. PIERRE, three places, British America, Canada East:—1, *St. Pierre du Sud*, co. Montmagny, 30 m. E. Quebec; with a R. Catholic church, and some general stores. Pop. of par. about 1600.—2, A vil. on the island of Orleans, co. and opposite the falls of Montmorency, 8 m. N.E. Quebec; with a good local and lumber trade. Pop. of par. about 900.—3, *St. Pierre les Dequets*, co. Nicolet, r. bank St. Lawrence, 52 m. W.S.W. Quebec; with a R. Catholic church, two tanneries, and a good general trade. Pop. of par. about 3000.

ST. ROCH DE L'ACHIGAN, a vil. British America, Canada East, co. L'Assomption, on the Achigan, 35 m. N. Montreal; with a R. Catholic church, and an active flour and lumber trade.

ST. ROCH DES AULNAIS, a vil. British America, Canada East, co. L'Islet, r. bank St. Lawrence, 50 m. N.E. Quebec; with a R. Catholic church, several tanneries, a flour-mill, and a number of general stores. Pop. of par. about 3000.

STE. ROSE, a vil. British America, Canada East, co. Laval, r. bank Ottawa, 70 m. N.E. Montreal; with a R. Catholic church, and two extensive carriage factories. Pop. of par. about 3000.

ST. SAUVEUR, a vil. British America, Canada East, co. Terrebonne, on the North River, 40 m. N.E. Montreal; with a Wesleyan and a R. Catholic church, two tanneries, and a number of general stores. Pop. of par. about 2000.

ST. SIMON, two places, British America, Canada East:—1, *St. Simon de Rimouski*, co. Rimouski, r. bank St. Lawrence, 140 m. N.E. Quebec; with a R. Catholic church, and a little local trade. Pop. of par. about 1800.—2, *St. Simon d'Yamaska*, co. Bagol, 35 m. N.E. Montreal; with a R. Catholic church, and manufactures of iron-ware. Pop. of par. about 2400.

ST. SYLVESTER, a vil. British America, Canada East, co. Lotbinière, 34 m. S. Quebec. It possesses Church of England, Free Wesleyan, and R. Catholic churches, and carries on some general trade. Pop. of par. about 3800.

ST. THOMAS, a vil. British America, Canada East, co. Joliette, on the St. Lawrence and Industry railway, 40 m. from Montreal; with a R. Catholic church, and manufactures of carriages and agricultural implements. Pop. of par. about 1700.

ST. THOMAS' MOUNT, a cantonment, India, presid. and 8 m. S.W. Madras, and about 4 m. E. of the Coromandel coast. The little hill, only 120 feet above sea-level, which gives it its name was, according to an ancient tradition, the scene of the martyrdom of St. Thomas the Apostle. The excellence of its position for a cantonment was however overlooked, until it was made the principal station and head-quarters of the Madras artillery. To the W., immediately under the mount, are two ranges of barracks for European artillery, the one facing the extensive parade-ground, and the other the European hospital and the Protestant Episcopal church. This church, a neat and well-ventilated structure, is seated for 500 persons. The other places of worship are a Wesleyan and two R. Catholic, the one for the European soldiery and the other for the Portuguese Christians. The native lines consist of three parallel rows of brick and tiled houses. The only other buildings requiring notice are the artillery dépôt, the artillery mess-house, which is said to be the finest in India, and the percussion-cap factory, which supplies the whole of the Madras army. The native pop. of St. Thomas' Mount is estimated at 17,720.

ST. URSULE, a vil. British America, Canada East, co. Maskinongé, on the Rivière du Loup, 50 m. N.E. Montreal; with a R. Catholic church, two tanneries, and some general trade. Pop. of par. about 2500.

STE. VICTOIRE, a vil. British America, Canada East, co. Richelieu, 4 m. N.E. Montreal; with a R. Catholic church, boys and girls' schools, and some local trade. Pop. of par. about 2000.

ST. VINCENT DE PAUL, a vil. British America, Canada East, on the Isle Jesus, dist. and 12 m. from Montreal; with a R. Catholic church, male and female schools, and some general stores. Pop. of par. 3000.

STADL BAURA, a tn. Austrian empire, Upper Austria, circle Hausruck, on the Traun, opposite to Lambach, with which it is connected by a bridge, 23 m. S.W. Linz. It has a fine church of a triangular form, with a tower at each angle, a threefold cupola, three altars, and a pavement of three-coloured marble. The abbot who built the church to commemorate a deliverance from the plague in 1717, having dedicated it to the Trinity, has endeavoured to make it correspond with its name by giving this curious prominence to the number three in everything connected with it, whether external or internal. Pop. 1600.

STANISLAU, or STANISLAWOW [add.], a tn. Austrian empire, Galicia, cap. circle of same name, on the Bistritza, an affluent of the Dniester, 74 m. S.S.E. Lemberg. It consists of the town proper and three suburbs, is the seat of several important government offices, and has a beautiful church, situated in a spacious square, and containing monuments of the Potocki family, a statue of the emperor Francis I. situated on the same square, an upper gymnasium, a high-school and other educational establishments, a military hospital, an infirmary, two machine factories, and a considerable trade. It was founded by Stanislaus Potocki in 1654, and was pillaged by the Tartars in 1692. Pop. 13,047.

STANLEY, an isl. S. America, in the Gulf of San Miguel, an E. arm of the Bay of Panama. It is $1\frac{1}{2}$ m. long by 1 m. broad, is low and wooded, and, standing in the mouth of the fine harbour of Darien, situated within the gulf, divides its entrance into two channels, the principal one called the *Boca Grande*, and the other the *Boca Chica*.

STARAI-MAINA, a tn. Russia, gov. Samara, circle Stavropol, near the confluence of the Maina with the Utka, which joins the Volga about 3 m. below. It has two churches, potash refineries, and a trade in corn, of which large quantities are shipped here. Pop. 1800.

STARO-TCHERKASKAIA, a tn. Russia, gov. Don Cossacks, circle Novo-Teherkask, r. bank Don. It was once the capital of the land of the Don Cossacks, has an important yearly market, and contains 5691 inhabitants.

STATEN ISLAND [add.], S. America, 18 m. E. of Terra del Fuego, from which it is separated by the Strait of Le Maire. It is so deeply indented by bays as to form nearly four different islets, and stretches for 38 m. between E.N.E. and W.S.W., with a breadth which nowhere exceeds 3 m. The surface is mountainous. Some of its peaks, rising to the height of 3000 ft., and usually covered with snow, offer a good landmark for ships bound into the Pacific or returning from it. The harbours, all of which are, with one exception, confined to the N. side, being merely a continuation of the valleys, are like them surrounded by high land, and deepen rapidly towards the centre. The coast consists almost everywhere of rocky cliffs, which rise abruptly from the water 200 to 500 ft., and have a depth of 15 to 12 fathoms close to their bases. The harbours, though secure enough when gained, are all more or less difficult of access, from the force with which the tides set across their mouths, and the variability of the wind, which usually follows the directions of the various ravines through which it finds an outlet. The most eligible harbour for shelter is Port Cook on the N.E. coast. In respect of geological structure, Staten Island consists chiefly of quartz rock and graywacke, which form the mountain masses, and of clay slate and micaceous schist. The quartz is in many parts disposed in vertical veins. The only quadrupeds are the otter, the rat, and the mouse. Birds are more numerous, and comprise three species of penguins, gulls, albatrosses, and shags; the last form extensive flocks, and build in the loftiest trees on the hills. With the most boisterous and humid climate on the globe, and a low but very uniform temperature, vegetation flourishes with such surprising beauty and luxuriance, that the rugged aspect which the island wears at a distance is changed on reaching it into perpetual and unbroken verdure. At all seasons the ground is covered with plants and the hills crowned with evergreens. The prevailing tree is the Antarctic beech, which grows to the height of 30 to 40 ft., with a diameter of 3 to 5 ft., and sometimes doubles these dimensions. Even the sea shores

in the luxuriance of the vegetation. Various algae, not unfrequently of a gigantic form, entangle the harbours and shores. Some of them are 300 ft. long; some of singular strength and sturdy stems become, as it were, oaks in the sea; some spread their tough and leathery substance like hides, so that buckets, bowls, and cups may be made of it; some form ropes and cables to moor boats with; and some yield a pure and tasteless jelly, far surpassing the carrageen moss of our shores.

STEBNIK, a tn. Austrian empire, Galicia, circle and 23 m. S.E. Sambor; with extensive salt mines, which were opened in 1845, and have proved very productive.

STEGERSBACH, a tn. Austrian empire, Hungary, co. Eisenburg, 20 m. W.S.W. Steinamanger, in a fertile district; with large yearly markets, and 2000 inhabitants.

STEIEREGG, a tn. Austrian empire, Upper Austria, dist. and 4 m. E.S.E. Linz, l. bank Danube, opposite to the mouth of the Traun. It is partly surrounded with walls, and has a castle perched on a rock overhanging the town, and an hospital. Pop. 1800.

STEIN, a tn. Austrian empire, Transylvania, circle and about 24 m. N.W. Kronstadt; with salt springs. In the vicinity Roman utensils, weapons, and coins have been found. Pop. 1360.

STEINAMANGER [add.], a tn. Austrian empire, Hungary, cap. co. Eisenburg, on an affluent of the Raab, and the site of an ancient Roman town, 68 m. S. by E. Vienna. It is the see of a bishop, and the seat of several important courts and public offices, and has a cathedral, regarded as the finest church in Hungary, built in the latter part of last century in the modern style, and adorned with frescoes by Dorfmeister, and beautiful altar-pieces; a bishop's palace, handsome county buildings, an ancient strong castle, a diocesan seminary, Franciscan and Premonstratensian monasteries, an asylum for children, an upper gymnasium, a high-school, and a bathing establishment. It contains 5853 inhabitants, mostly R. Catholics. In the vicinity are numerous remains of the Roman town Savaria.

STENIMACH, or STANIMAK, a tn. Turkey in Europe, Roumelia, beautifully situated on the N. slope of Mount Rhodope, 80 m. W.N.W. Adrianople. It is an ancient place, with many interesting remains attesting its ancient splendour, and until about a century ago enjoyed a high degree of prosperity, carrying on a very extensive trade domestic and internal. The envy of the Turks displayed itself with its usual barbarity, and Stenimach was devastated. It has, however, in a great measure recovered from the disaster, and now contains about 10,000 inhabitants, almost all Greeks, who live partly in Stenimach, properly so called, and partly in Ampelinos, another town or suburb situated on the opposite side of the stream, which, descending from the mountain, flows between the two places. Among the public buildings are eight churches and five schools, one of them for girls. Wine and silk are both raised in sufficient quantity to form important articles of trade.

STERLING, a tn. U. States, Illinois, on r. bank Rock River, and on the Air-line branch of the Chicago and Northwestern railway, 110 m. W. Chicago. It contains seven churches, a bank, flouring mills, a foundry and machine shop, and a manufactory of agricultural implements. A large quantity of grain and other produce is shipped here; and the river affords abundant water-power, which has been improved by a stone dam.

STICKEEN, STIKINE, or STEKIN, a colony, British N. America, formed by decree, July 19, 1862, of the N. portion of British Columbia. It is bounded W. and S.W. by the territory formerly belonging to Russia, but recently sold by her to the U. States, S. by British Columbia, E. by the 125° meridian E. from Greenwich, and N. by the 62° parallel of N. latitude. It contains the lands on the S.E. sources of the Yukon, on the Upper Liard, on the Stickeen, and the Tako. It takes its name from the Stickeen or Frances River, which falls into the Pacific Ocean opposite Prince of Wales Island, and about 160 m. N. from Fort Simpson. Gold-washings were discovered on this river about 70 m. above its mouth, at a point called Little Cañon, extending upwards to Big Cañon, 190 m. above its embouchure. A steamer has ascended this river 150 m., and the Tako, a stream which falls into the Pacific further N., 35 m. On this latter river copper is

found. Comparatively little is known of the interior of this colony, but it has been described as a desert waste of hills and rocks.

STINKENBRÜNN, a tn. Austrian empire, Hungary, co. and 14 m. N. Oedenburg; with a colliery, alum and vitriol works, limekilns, and tileworks. Pop. 1000.

STIRLING, a vil. British America, Canada West, co. Hastings, 80 m. N.E. Toronto. Though founded only about 1850, it already possesses three churches, a superior grammar-school, and several extensive factories; and deals largely in agricultural produce. Pop. about 1000.

STOCKTON, a tn. U. States, California, cap. co. San Joaquin, near the San Joaquin River, with which it is connected by a creek, 50 m. S. by E. Sacramento. The site is low and flat, in an extensive and fertile plain. Many of the houses are neatly built, and surrounded with gardens; and the town contains eight churches, an asylum for the insane, and several schools. It is supplied with water by means of pumps worked by one hundred and fifty wind-mills, which raise the water through pipes inserted in the ground; there is also an artesian well one thousand feet deep. A railway to connect Stockton with San José and Sacramento is in progress, and a steamboat plies daily between it and San Francisco.

STOLEZ, or **STOLATZ**, a tn. Turkey in Europe, Bosnia, prov. Herzegovina, beautifully situated in the narrow valley of the Bregava, which here forms a picturesque waterfall. It is defended by a fort, which is regarded as the most important on the Herzegovina, though, from being commanded by adjoining hills, it possesses little real strength. In early, and to some extent also in recent times, however, it has played a prominent part during the commotions which have agitated the country. Among the houses is one which belonged to Ali Pasha, the well-known vizier of Herzegovina. The public buildings include several mosques, whose white minarets have a pleasing effect. Stolez, which owed much of its prosperity to Ali Pasha, who valued its castle as the cradle of his family, has since his death greatly declined.

STOLZENBURG, a tn. Austrian empire, Transylvania, circle and 12 m. N.N.E. Hermannstadt; with the ruins of a castle which has stood several sieges, a trade in wine, and 2403 inhabitants.

STOPNICA, or **STOPNITZA**, a tn. Russian Poland, gov. Radom, in a mountainous district; has a handsome Reformed church, an old castle, and an elementary school. Pop. about 2261.

STOSZ, a tn. Austrian empire, Hungary, co. Zips, 19 m. W. Leutschau; with a high-school, mines of iron, silver, and copper, and 1500 inhabitants.

STRADBROKE, an isl. Australia, Queensland, forming with Moreton, situated immediately to the N. of it, the E. boundary of the large and beautiful expanse of Moreton Bay. It is about 33 m. long from N. to S., by 7 m. broad, is of moderate elevation, and, although not destitute of trees, is bleak and barren in the extreme, nowhere presenting the least appearance of fertility. Its sea face, from its S. extremity to Look-out Point, its N.E. extremity, is merely a succession of sandy beaches and rocky points.

STRASSNITZ, a tn. Austrian empire, Moravia, circle and 11 m. S.S.W. Iradisch, in a beautiful plain on the March, which is here crossed by a chain-bridge. It is the seat of several public offices, and has two churches, a synagogue, a high school, an old castle with extensive gardens, five annual markets, and an extensive trade in corn and excellent wine. It contains 4700 inhabitants, of whom 600 are Jews.

STRASSWALCHEN, a tn. Austrian empire, duchy and 25 m. N.E. Salzburg; with a handsome parish church, a town-hospital, and 1000 inhabitants.

STRATYN, a tn. Austrian empire, Galicia, circle and N.W. Brzezan; with a parish church. It possessed a Greek printing-press at the beginning of the seventeenth century. Pop. 1400.

STRELETZKA, or **ARROW BAY**, Black Sea, in the S.W. of the Crimea, forms one of a series of indentations between the road or harbour of Sevastopol and Cape Kheronesse. It is little more than 1 m. W. of Quarantine Bay, and of dimensions sufficient to form a capacious harbour, extending nearly $1\frac{1}{2}$ m. into the land. The depth at its entrance

is 12 fathoms, but diminishes gradually to 6, and in some parts is only 2 fathoms.

STRENGBERG, a tn. Austrian empire, Lower Austria, on a steep mountain of same name, 78 m. W. Vienna; has an hospital and two saw-mills, and contains 1910 inhabitants.

STRIGOVO, a tn. Austrian empire, kingdom of Croatia and Slavonia, co. and 11 m. N.E. Warasdin, on the peninsula of Muraköz. As a town it has only 390, but as a parish 8370 inhabitants; and has an ancient castle, and a trade in excellent wine.

STRUNKOWITZ, a tn. Austrian empire, Bohemia, circle and 24 m. S.S.W. Pisek, on both sides of the Blanitz; with manufactures of shoes, stockings, and linen, and 1000 inhabitants.

STRUSZINA, a tn. Austrian empire, Galicia, circle Tarnow, and so near the town of Tarnow as to be properly its suburb; contains 3560 inhabitants. On Mount St. Martin, in the vicinity, are a ruined castle, and a church built of larch-wood, and three centuries old.

STRY [add.], a tn. Austrian empire, Galicia, cap. circle of same name, l. bank Stry, an affluent of the Dniester, which here divides into several arms, 40 m. S. by W. Lemberg. It was once a place of strength, and belonged to the chivalrous John Sobieski, on whom it was bestowed for his victories over the Turks. It has a high-school, an infirmary, an hospital for the poor, and contains 9184 inhabitants.

STUART LAND, Australia, the name given in honour of its first discoverer to the central part of the country lying N. of South Australia, and forming the S. part of the new province of North Australia. Except by Mr. John M'Douall Stuart it has not yet been explored; and as he traversed only its central part, in his journey to and from the N. coast of the continent, little is yet known of its character. Mr. Stuart passed over ranges of hills, intersected by river beds mostly dry, and saw occasionally patches of good country; but the prevalence of long-continued droughts produces an aridity, and consequent sterility of soil, that appears to render the country generally quite unfit for human habitation.

STUBEN (UPPER and UNDER), two places, Austrian empire, Hungary, co. Arva-Thurocz, about 5 m. N.W. Neusohl;—*Ober* or *Upper Stuben* stands in a wooded and pastoral district, and contains 1900 inhabitants.—*Unter* or *Under Stuben*, situated about 4 m. N. of the former, contains only 500 inhabitants, but is famous for its warm baths.

STUBICA, a tn. Austrian empire, kingdom of Croatia and Slavonia, in a mountainous district, co. and 12 m. N. Agram; with much-frequented mineral springs, and 1000 inhabitants.

STUDEIN, a tn. Austrian empire, Moravia, circle Iglau, 52 m. W. Brünn; with an ancient parish church, two large weekly and two yearly markets, and 1100 inhabitants.

SUAKIN [add.], a seaport, Nubia, cap. prov. of same name, on an island on the W. coast of the Red Sea; lat. 19° 17' N.; lon. 37° 20' E. It consists of the town proper, and of a suburb on the mainland, which has outgrown it both in population and importance; is defended by a small fort, and contains a number of mosques and public buildings, of which the most deserving of notice are the governor's residence, the custom-house, and the bazar. The harbour is formed by a channel about 500 yards wide, which penetrates between the mainland and two islands, on one of which the town is built. Though completely sheltered from all winds, it is too shallow to admit large vessels. There is, however, a considerable trade, chiefly in hides, butter, cattle, ivory, and ostrich feathers. Pop., including suburbs, about 7000.

SUBATHOO, a fort and cantonment, India, Cis-Sutlej Territories, cap. dist. or pergunnah of same name, 162 m. N. Delhi. The pergunnah, which was reserved by government in 1815, on the settlement of the Hill states at the conclusion of the Nepaulese war, is a sort of table-land, bounded chiefly towards the N. by mountains varying in height from 4600 to 8000 ft., but rather open southwards towards the plains. Agriculture is carried on with great industry and skill, the level spots on the banks of streams being cultivated for rice, while the mountain-slopes are formed into a succession of terraces, and produce good crops of wheat, barley, maize, millet, cotton, opium, tobacco, ginger, &c. The fort is situated on an eminence, rising 1100 ft. from the right bank of the Gumbur. An old fort has been converted into a jail.

The salubrity of Subathoo having been satisfactorily tested, it has been selected as a sanatorium for troops.

SUBIG, a tn. Philippine Isles, on the W. side of the island of Luzon, lies in lat. $14^{\circ} 32' 58''$ N.; lon. $122^{\circ} 8' 30''$ E.; and has a pop. of 3836. The bay on which it stands, though of limited extent, is a safe haven for vessels of small draught.

SUCHA, a tn. Austrian empire, Galicia, circle and 9 m. S. E. Wadowice, l. bank Skawa; with a beautiful parish church, a baronial castle with fine gardens, iron and copper mills, and 2453 inhabitants.

SU-CHOW, a tn. China, prov. Sechnen, l. bank Yang-tze-kiang, at the confluence of the Min-kiang, coming from the N., 125 m. S. by E. Ching-too-foo; lat. $28^{\circ} 46' 6''$ N.; lon. $105^{\circ} 7' E.$ It is a large place surrounded by walls, and in quiet times carries on a very extensive trade; but when Lieutenant-colonel Sarel visited it in 1861 civil war was raging in its vicinity, and he found it impossible to gain admission, as the gates were closed, and an attack by the rebels was hourly anticipated. Under ordinary circumstances its advantages as a commercial entrepôt are very great. The Min-kiang is at all times navigable for large junks up to Kiading, a distance of about 100 m., while the Yang-tze-kiang, all the way down to Chung-king, has generally a depth of 8 fathoms in the fair way, and of seldom less than 3 fathoms close to the bank. The products of the district around Su-chow are white and yellow silk, wax, honey, coal, green tea, and some iron, obtained from mines close to the town. Immediately above Su-chow the Yang-tze-kiang takes the name of the Kin-cha-kiang, or of the Min-kiang, according as the former or the latter is regarded as its continuation. The Chinese seem to give the preference to the Min-kiang, and identify its source as that of the Yang-tze-kiang.

SUDOGDA, a tn. Russia, gov. and 20 m. S. E. Vladimir, cap. circle and on a river of same name. It contains two churches and several industrial establishments. A beautiful white stone found within the circle is much employed in making statues. Pop. 2124.

SUGHRA, a seaport, Arabia, on the shore of the Indian Ocean, district of Fadhli, 60 m. E. N. E. Aden; with a stone castle, in which the sultan or chief of the district takes up his residence several months each year. The haven is protected by a reef of rocks, and has 9 fathoms water. Good water, oxen, sheep, fowls, onions, and melons are to be obtained. In the neighbourhood dates and millet grow plentifully. Pop. 200.

SUGLEE, or **SUGGLEAIR**, a river, India, presid. Madras, which rises in a mountainous district on the frontiers of Kurnool and Cuddapah, flows first S. S. E., then nearly due S., and joins the Pennar on its right bank, 15 m. of direct distance above its mouth. Its whole length is about 80 m.

SUK-ARRAS, or **SOUK-HARRAS**, a vil. N. Africa, Algeria, prov. and 80 m. E. Constantine, on an affluent of the Mejerda, in a mountainous district near the W. frontiers of Tunis. It occupies the site of the ancient Tagaste, and has an important native market. Pop. 1300.

SUK-EL-FAWWAR, a tn. Asiatic Turkey, pashalik and 100 m. S. S. E. Bagdad, on the Fawar canal, E. of left bank Euphrates. It was formerly a large and thriving place, defended by a number of small towers; but having lost the water which fed its canal, through the breaking of one of the dams at the mouth of the Hindieh, was abandoned by its inhabitants. The ruins of its mud houses extend fully half a mile along both sides of the water-course. Recently a return of its prosperity has been promised, by the repair of the dam which caused the original calamity.

SULI, a mountain fort, Turkey in Europe, S. Albania, eyalet and 15 m. W. S. W. Yanina, on the Kalama. It is the chief place of the Suliots, who distinguished themselves so much during the struggle for Greek independence, and afterwards nearly all emigrated to Greece or Cephalonia.

SULLEPEC, or **ZULTEPEC**, a tn. Mexican Confederation, state and 60 m. S. W. Mexico, in a narrow valley at the height of 7000 ft. above the sea. It has a Franciscan monastery, and was early celebrated for its mines, which are no longer worked.

SULLERI, a tn. Central Africa, Bornou, prov. Muniyo, 160 m. N. E. Kano. It is a large place, consisting of several detached hamlets, and containing about 5000 inhabitants. Its market is the most important in Muniyo. The chief

agricultural product is millet, which is grown to a great extent under rather disadvantageous circumstances, as the obstructing roots of the doum-bush make cultivation extremely difficult.

SULTANABAD, or **SHENRI NAW**, a tn. Persia, prov. Irak-Ajemi, 150 m. S. W. Teheran. It manufactures a few carpets. Its market is abundantly supplied with European wares, especially hardware from Russia and cotton stuffs from England. Pop. 3000.

SULZ, a tn. Austrian empire, Lower Austria, circle Lower Mannhartsberg, on the Sulzbach, 25 m. N. N. E. Vienna. It contains 1900 inhabitants, who are chiefly employed in the culture of the vine and the rearing of cattle.

SUMBE, a territory, W. Africa, Kimbunda Land, between lat. 11° and $12^{\circ} 20' S.$; lon. $13^{\circ} 30'$ and $14^{\circ} E.$; bounded, N. by the Kuvo or Keve, W. the Atlantic, S. Kubale or An-handanda, and E. by the territories of Ambum and Selles; its length, measured along the sea-coast from N. to S., is about 90 m., its breadth nowhere exceeds 30 m. The surface, elevated on the E., descends gradually, and becomes flat as the sea is approached. On the heights are several extinct volcanoes, from the sides of which a large quantity of sulphur might easily be obtained. In the N. part of the territory is the district to which the Portuguese give the name of Velha, or Old Benguela, but is known to the natives as Timba; in the central part are the Portuguese presidium or fort of Novo Redondo, and the factory of Kilombo; and at intervals along the coast, in the southern portion, were no fewer than five European factories, of which Egypton is the only one now subsisting, the predatory natives having pillaged and destroyed all the others. The Musumbe, or inhabitants of Sumbe, are in person tall and vigorous, and would be rather favourable specimens of a semi-barbarous race, were they not addicted to the horrible practice of cannibalism. Small as this territory is, it is ruled by no fewer than three independent chiefs, while part of it is at the same time possessed or claimed by the Portuguese. Pop. about 35,000.

SUMBULPORE, a dist. India, on the S. W. frontier of Bengal, between lat. 21° and $22^{\circ} 5' N.$; lon. $83^{\circ} 6'$ and $84^{\circ} 51' E.$; is bounded N. by Ryghur and Gangpoor, E. Bonei and Bombra, S. Sonepoor and Patna, and W. Phooljee, Sarungthur, and Burgurh; length, E. to W., 112 m.; breadth, 60 m.; area, 4693 sq. m. It is divided by the Mahanudy into two unequal parts, an E. and a W., the latter by far the larger. The E. part is mountainous and woody; the W. generally level, and in some places greatly depressed. The valley is only 400 ft. above sea-level, and has an alluvial soil, which raises heavy and excellent crops of rice, wheat, and sugarcane. Indigo abounds in a wild state, but is not cultivated, though it was so formerly, and it is thought might still be with advantage. The only mineral of which the district boasts is the diamond, of which fine specimens are found in the beds of the Mahanudy and its affluents. The diamond-searchers, who carry on their avocation from November to the rainy season, are a very dissipated race. Pop. 800,000.

SUMEGH [add.], a tn. Austrian empire, Hungary, co. Zala, in a marshy district, 25 m. N. E. Zala Egerszeg; with a district court, a palace, in which the Bishop of Vesprim resides; a high-school, a Franciscan monastery, with a church; manufactures of calico, a trade in wood and wine, much-frequented yearly markets, and 4257 inhabitants, mostly R. Catholic.

SUPERIOR CITY, U. States, Wisconsin, co. Douglas, exists more in prospect than in reality. The site selected for it is at the mouth of the Nemadji, on the W. extremity of Lake Superior, and the object in view is to make it the great entrepôt for the traffic of the lakes from the E., and the basin of the Mississippi from the W. The site, nearly level, is elevated 34 ft. above the lake and 658 above the sea. The town contains several churches, a large hotel, and several steam saw-mills. Steamboats ply to and from Detroit, Chicago, &c., and large quantities of lumber, fur, and fish are shipped. Copper is found in the county. The harbour is commodious and safe. In 1855 the work of building the town commenced, and in 1860 the inhabitants amounted to 534; in 1865 the number had increased to about 800.

SURAJ, a tn. Russia, gov. and 25 m. N. N. E. Vitepsk, cap. circle of same name, on the Duna; with two churches, a charitable institute, and a pop. of 1872.

SURAJPOOR, two places, India:—1, A tn. N.W. Provinces, dist. Boolundshuhur, 22 m. S.E. Delhi; with a well-supplied bazar.—2, A tn. North-western Provinces, district of Futtehpoore, right bank Ganges, 117 m. above Allahabad; is irregularly built, and somewhat ruinous in its appearance, but possesses a good bazar, and a number of Hindoo temples and ghats.

SURAT [add.], a tn. India, near the S.E. extremity of Gujerat, cap. dist. of same name, l. bank Taptee, about 20 m. above its mouth in the Gulf of Cambay. It is nearly in the form of a semicircle, of which the river forms the diameter or chord, and the perimeter measures about 6 m. Near the centre stands the castle, which, though small, has bastions, covered-way, and glacis. The town, surrounded by a wall with semicircular bastions and battlements in good repair, possesses few attractions, and consists of narrow winding streets lined with lofty houses, of which the upper story, formed of a framework of timber filled up with brick, projects beyond the base. The houses of the British inhabitants, situated in the vicinity of the fort, are usually of good size, with spacious inclosures. The old French factory, standing without the walls, but completely deserted, contains some handsome and commodious buildings. The Dutch factory, also deserted, long ranked as the most regular and best constructed edifice in Surat. The palace which belonged to the nawab is a plain structure of moderate dimensions. Towards the end of the eighteenth century Surat was flourishing. Its bazars were filled with costly merchandise, partly the product of its own looms; and its streets and thoroughfares were filled with picturesque groups of natives, and strangers from all parts of the world, in their respective costumes. It then ranked as the capital of W. India; but having been supplanted in this respect by Bombay, and having in a great measure lost both its manufactures by British competition, and its trade by the silting up of its harbour, it is now only the ghost of what it was. One other cause of decadence may be found in the calamities which it has sustained from repeated inundations of the Taptee. That its name still figures in commercial lists, is owing to its being still the principal mart for the cotton which is extensively grown in the surrounding country.—The *district* to which Surat gives its name, lies between lat. 20° 15' and 21° 11' N.; lon. 72° 45' and 73° 24' E.; is bounded, N. by Broach, E. Gujerat, S. Gujerat and dist. Tannah, and W. by the Portuguese territory Damaun and the Arabian Sea; and has an area of 1629 sq. m., and a pop. of 492,684.

SURJOO, two rivers, India, tributaries of the Gogra:—1, *Eastern Surjoo*, rises in Nepal, in lat. 28° 15' N.; lon. 81° 57' E.; flows first W.N.W. to the frontiers of Oude, then nearly due S., and joins the Gogra on its left bank, after a course of about 160 m. At its mouth it expands into a kind of morass.—2, *Western Surjoo* rises in a gorge of the Himalaya, in Kumaon, at the height of about 7000 ft. above the sea, flows successively S.W. and S.E., and about 12 m. after receiving the Ramgunga, and being indifferently called by its name, or retaining its own, falls into the Gogra, after a course of 90 m.

SURMENEH, a tn. Turkey in Asia, prov. and 20 m. E. by S. Trebizond, at the mouth of the Kara Dere in the Black Sea. It stands on a limestone height, and consists of houses built of stone, but diminutive both in size and height. The shops, kept chiefly by Greeks, are very indifferently supplied, the chief articles being woollen and cotton cloth, tobacco, and groceries. The exports consist of wine, oil, and fruit. Pop. 2000.

SUSA, or **SOUGA** [add.], a tn. N. Africa, regency and 65 m. S.S.E. Tunis, on a bay of the Mediterranean. It is built partly along the shore and partly on a height above it, is surrounded by a wall nearly 1 m. in circuit, and defended by a fort, and contains some handsome houses, adorned with columns obtained from Roman remains in the vicinity, several fine mosques, and arched bazars. The harbour, though open to the winds, allows large vessels to come within a short distance of the shore, and there is in consequence a considerable trade, in which the principal exports are oil, wool, pottery, and a few other articles of native manufacture. Pop. about 11,000.

SUSINITSCH, a tn. Russia, gov. and circle Kaluga. It has a church, and carries on a large trade in hemp-oil,

which is sent partly into the interior and partly to St. Petersburg. Pop. 5321.

SÛTTO, a tn. Austrian empire, Hungary, co. Gran, on the Danube; with brandy distilleries, a marble quarry, and a trade in the excellent wine of the district. Pop. 1050.

SVENTZIANY, a tn. Russia, gov. and 42 m. N.N.E. Vilna; with a church, a circle school, and a pop. of 5497.

SVILAINATZ, a tn. Turkey in Asia, Servia, circle Kraina, near the Resava, above its confluence with the Morava, 52 m. S.S.E. Belgrade. It has a church and a school, but the chief attraction of the neighbourhood is the monastery of Manassiya, which lies a little to the S.E., is built in the Grecian style, and is adorned with frescoes and other paintings by some of the oldest Italian masters. Pop. 3284.

SWATOW, a treaty port, prov. Quang-tung, China, 190 m. N.E. of Hong-Kong, mouth of the Han River. This port was opened up to foreign trade by the treaty of Tientsin in 1858, under the designation of Chau-chow, the departmental city. But the inhabitants being inimical to foreigners, Swatow was made the foreign emporium, and trade established in 1860, increasing beyond the expectation of the merchants, to a total of external commerce in 1863 of £2,487,423, and £3,342,125 in 1864. The imports in 1864 amounted to £2,108,754—of which £973,030 was opium, £885,394 bean-cake, £504,931 raw cotton, and the remainder cotton and woollen fabrics and yarns, metals, rice, wheat, peas, beans, vermicelli, medicine, oil, &c. The exports of native produce for the same year amounted to £1,233,371, comprising sugar, chinaware, cassia, grasscloth, indigo, paper, and tobacco. No tea or silk is shipped at this port, the surrounding district being chiefly laid out in sugar plantations, the export of which was nearly a million sterling in the above return. The large debtor balance against imports of £875,383 is paid in Sycee silver and copper cash, chiefly for opium. During 1865 the neighbourhood of Swatow was seriously disturbed by the last remnant of the Taiping rebels, who held the adjacent city of Chai-ying-chow, and thus commanded the most direct route into the province of Kiangsee, which absorbs nearly all the opium imported into Swatow. Hence there was a depression of trade, which temporarily retarded the rising tendency of the port, but, however, not sufficient to check the increase, as the returns show £525,693 on the total over 1864. In 1864 the foreign merchants and their employés numbered fourteen persons, of whom six were British, seven German, and one Portuguese. Here is a British consul, with three assistants—other nationalities being represented by merchants. There is also a branch of the Foreign Maritime Customs, comprising nine officers, chiefly British; the duties collected amounting to £108,685 in 1863, and £118,394 in 1864. The shipping inwards and outwards were for the same years respectively 808 ships, in the aggregate 304,660 tons, and 941 ships of 338,808 tons. Three missionary establishments are located at this port, belonging to the English, Americans, and French, conducted by seven missionaries. The total foreign residents is 39, and the native population about 20,000.—(*Customs Returns; China Directory.*)

SWIRZ, a tn. Austrian empire, Galicia, circle and 28 m. N.W. Brzezany; with a fine baronial castle, and 1900 inhabitants.

SYDNEY, a tn. British America, beautifully situated on the E. coast of Cape Breton, near the head of the harbour of same name. It was the seat of government till the island was annexed to Nova Scotia, and though its progress in consequence of this event has been greatly retarded, it is still the principal town of Cape Breton, and contains three churches, an academy, a courthouse, and barracks. The country in its immediate neighbourhood is fertile, and its harbour is one of the finest in the world, being equally easy of access and ingress, and capacious enough to contain any number of the largest vessels in safety. At present the principal business is carried on at the N.W. bar, where the railway from the coal-mines has its terminus and the coal is shipped.

SNOW, a tn. Austrian empire, Galicia, circle and 16 m. N. Sanok, on the San. It was once defended by a strong castle, is a principal mart for the linen trade, and has much-frequented yearly markets. Pop. 2364.

SYRA (NEW), or **HERMOPOLIS**, a tn. Greece, nomarch

Cyclades, cap. island of same name, on the N.E. shore of a capacious and semicircular bay, which forms an excellent harbour, and is visited as the common point of rendezvous by the steamers from Marseilles, Trieste, Constantinople, Smyrna, and Alexandria. It is the capital of the nomarch of the Cyclades, the residence of a Greek archbishop and a R. Catholic bishop; is well built, containing several handsome houses of three stories, and has a court of primary jurisdiction and a justice of peace court, several churches and parish schools, a gymnasium, an arsenal, a lazaretto, and a custom-house. Pop. 19,500. Old Syra, situated on a height, has 4000 inhabitants.

SZALLAS (Kis-Ur), a tn. Austrian empire, Hungary, co. Stuhlweissenburg, 9 m. S. Karczag; with 9545 inhabitants, who belong to the Reformed church, have a reformed gymnasium, and raise large quantities of corn and wine.

SZALONNA, a tn. Austrian empire, Hungary, co. Borsod, N. Miskolez, on the Bodva; with 850 inhabitants, who mostly belong to the Reformed church, whose chief employment is in making charcoal, and carrying it into the lower districts. They also produce a good wine. There is a thermal spring in the vicinity.

SZCZAWNICA, a tn. Austrian empire, Galicia, circle and about 18 m. S.W. New Sandec; with mineral springs and a much-frequented bathing establishment. Large quantities of the water are exported. Pop. 1450.

SZCZERZEC, a tn. Austrian empire, Galicia, circle and 10 m. S.W. Lemberg, cap. dist. of same name, with a seam of gypsum strongly impregnated with sulphur, and a remarkable limestone cavern. There are excellent quarries in the vicinity. Pop. 5100.

SZCZYRK, a tn. Austrian empire, Galicia, circle Wadowice, 42 m. S.W. Cracow; with a Cistercian monastery and 1600 inhabitants.

SZEK, a tn. Austrian empire, Transylvania, circle and 12 m. S.S.W. Dees; with salt-mines, good vineyards, and 3158 inhabitants.

SZELI (UNDER and UPPER), two places, Austrian empire, Hungary, co. Presburg:—*Unter-Szeli*, on the Dud-Waag, S.W. Sellye, with 1500 inhabitants, trades in cattle and excellent cheese.—*Ober-Szeli*, on the opposite bank of the stream, and nearly 4 m. distant, has 1920 inhabitants.

SZEWCZYKI, a tn. Austrian empire, Galicia, circle Rzeszow; with a parish church, manufactures of turpentine, and 1900 inhabitants.

SZKLO, a tn. Austrian empire, Galicia, circle and 26 m. N.E. Przemysl; with a paper-mill, and warm sulphur spring with a tolerably complete bathing establishment. Pop. 1350.

SZOLGYON (MAGYAR and NEMETH), two places, Austrian empire, Hungary, co. and 15 m. N.E. Komorn, situated opposite to each other, in a well cultivated district; with two churches, a trade in corn and wine, and 2850 inhabitants.

SZOLNSK [add.], a tn. Austrian empire, Hungary, cap. co. of same name, in the angle formed by the confluence of the Zagyva with the Theiss. It ranks as the most ancient town in the kingdom, having, according to tradition, been founded by a military leader from Scythia, and was one of its strongest fortresses, though it has now become comparatively insignificant. Its only buildings deserving of notice are a Franciscan convent, a high-school, and an infirmary. Its inhabitants are chiefly employed in agriculture, the rearing of cattle, and fishing, have several mills and yearly markets, and carry on a considerable trade, now greatly facilitated by the railway leading to Miskolez, and in which the principal articles are salt, wood, corn, fruit, and fish. A conflict with the Hungarian insurgents took place here on 5th March, 1849. Pop. 13,936.

SZOMBATH (UPPER and LOWER), two places, Austrian empire, Transylvania, circle and 40 m. N.W. Kronstadt; with a fine castle with extensive gardens, and 2090 inhabitants.

SZOREGII [add.], a tn. Austrian empire, Banat, circle Temesvar, not far from the Maros; with an important trade in swine, cattle, wine, and tobacco. The Hungarians were defeated here by Haynau on 5th August, 1849. Pop. 2533.

T.

TAAL, a lake and town, Philippine Isles, in the S.W. of Luzon. The LAKE, called also *Bombon* or *Bongbon*, is about 15 m. long from N. to S., by 9 m. broad, and is so deep that some parts have never been fathomed. It lies in a basin surrounded on all sides by hills, and has near its centre an islet of a triangular shape, named Volcan, which rises to the height of 1667 ft. above the sea, and is evidently volcanic, since its surface is almost throughout incrustated by a coat of lava, and the hollow of its summit has all the appearance of a crater. Indeed it cannot be said to be extinct, since two eruptions have taken place within a century and a half, the one in 1716, and the other in 1754. The latter, the more tremendous of the two, destroyed four towns, and sent its ashes into Manilla, 50 m. distant, and beyond into the provinces of Bulacan and Pampanga. At present the bottom of the crater is occupied by a caldron, about 3 m. in circuit, containing water which is strongly impregnated with sulphur. The lake abounds with fish, a species of which, weighing from 6 to 7 lbs., are considered the most delicate of the Philippines.

—The TOWN, called also *Taal de Bombon*, substituted for another of same name destroyed by the above-named volcanic eruption, stands on the shore of the Bay of Balayan, and seems to rank next in size to Manilla, having a pop. of 41,347. The surrounding dist. is fertile and well cultivated.

TAB, a tn. Austrian empire, Hungary, co. Somogy, 20 m. N.E. Kaposvar; with manufactures of linen and leather, a brewery, a steam-mill, and 1580 inhabitants.

TABACUNDO, a tn. S. America, Ecuador, dist. and N. E. of Quito; lat. 0° 7' N. lon. 78° 40' W. It contains

about 2000 inhabitants, who, in the revolutions which have taken place, have greatly distinguished themselves by zeal in the liberal cause. The trade is chiefly in wheat, barley, potatoes, and other agricultural produce.

TABASCO, or GRIGALVA, a river, N. America, which rises in the mountains of Chuchumatanes, near the N.W. frontiers of Guatemala, enters the Mexican dep. Chiapas, and flows through it very circuitously, intersecting it from S.E. to N.W. Some time after entering dep. Tabasco it divides into two branches, the more westerly of which, taking the names successively of Gonzales, Rio Secco, and Chiltupec, proceeds N. to the Gulf of Mexico. The easterly branch, continuing for a time nearly parallel to the other, and at so short a distance that it nearly unites with it on passing the city of Tabasco, flows N. in a very winding channel, and receives on its right first the Tulija or Tepetican, and then the Chilapa. On approaching the sea, across a very extensive and swampy flat, it is joined by a large arm of the Usumatinta, and a few miles below, near the town of Frontera, falls into the Gulf of Mexico. It is navigable for vessels of considerable size for about 50 m. above its mouth.

TABASCO, or SAN JUAN BAUTISTA DE TABASCO, or VILLA HERMOSA [add.], a tn. Mexico, cap. dep. and l. bank river of same name, 350 m. E.S.E. Mexico. It stands partly on a flat and partly on a gentle eminence surrounded by fertile fields, and though of imposing appearance at a distance, presents a miserable spectacle within, a great part of its houses lying in ruins ever since the place was last stormed by the Americans during the Mexican war. The best part

of the existing town is towards the bank of the river, where there are some good houses. As a whole, however, and even before the disasters which have befallen it, the town must have been very indifferently built. Its streets are steep, uneven, and dirty in the extreme; and the houses, partly of stone and partly of wood, are entirely devoid of elegance or taste. The only public buildings worthy of notice are two churches, several schools, the governor's residence, and the custom-house. The inhabitants, not more than 6000, are chiefly employed in trading in cacao, coffee, maize, rice, tobacco, dyewood, &c. The climate of Tabasco is one of the worst in the Mexican Confederation.

TABISINTAC, a river, British America, New Brunswick, which flows E., and falls into a gully of same name in the Gulf of St. Lawrence. It is encumbered at its mouth by a bar, with not more than 7 ft. at low-water, but within it there is a depth in some parts of 4 to 5 fathoms. The tide flows 10 m. up the river through an undulating country, and occasionally between steep banks of sandstone, which rise to the height of about 100 ft. Its shores are occupied chiefly by Scotch settlers.

TACOTALPA, a tn. Mexico, dep. and 36 m. S. Tabasco, on a river of same name. It was at one time the capital of the dep., but now ranks only as a village. It consists of some well-built houses, and a greater number of cane-huts, and contains 2000 inhabitants, who have no industrial establishment of any importance, and, though situated on a navigable river, no trade except in a little cacao.

TACUNGA, a tn. S. America, Ecuador, situated to the S.E. of Quito, on the slopes of the volcanic mountain of Cotopaxi. It is tolerably well built in regular and spacious streets, and contains a parish church, several convents, an ancient Jesuit college, now used as a public college, in which practical chemistry, Latin, and philosophy are taught. The chief manufactures are gunpowder, and cotton, woollen, and linen goods. Pop. about 16,000.

TADPUTRI, or TARPUTRY, a tn. India, presid. Madras, dist. and 80 m. E.S.E. Bellary, r. bank Pennar. It possesses two handsome temples, elaborately decorated with sculptures representing the exploits of Krishna Rama. The pop., consisting of about 4000 Hindoos and 2000 Mahometans, are engaged either in weaving turbans and similar articles, or in trade.

TAE-SHAN, an isl. of the Chusan Archipelago, E. coast of China, 8 m. long by 5 m. broad. Its centre is an extensive plain, which is well cultivated and maintains a large population. The only manufacture of any consequence is salt from sea-water. It was at Woo-hou Creek, which runs through the centre of this island, that a Chinese force assembled to attempt the recapture of Chusan.

TAE-YUEN; FOW, a tn. China, cap. prov. Shansi, on the Fuen-ho, an affluent of the Hoang-ho, 240 m. S.W. Peking. It was once a place of great splendour, filled with palaces in which princes of the imperial family resided. These have all been allowed to go to ruin; but it is still large and populous, inclosed by a wall about 7 m. in circuit, and has extensive manufactures of carpets and of various articles in iron. On the neighbouring hills is an ancient cemetery, surrounded by groves of cypresses, and containing many fine monuments in marble.

TAGANAMA, a tn. W. Africa, Bornou, about 90 m. N.E. Kanó. It is a considerable and apparently thriving place, inclosed by a wall and a double ditch, and consists of large and spacious huts with well-fenced courtyards.

TAGANET, a large and favoured dist. W. Africa, bordering towards the E. and S.E. on the Kodja, which encircles El Hodh; towards the S.W. on Aflot, and towards the W.S.W. on Aderar. It is naturally divided into two regions—the Black Taganet or S. part, consisting of fertile valleys full of palm-trees, and with excellent pasturage for cattle and sheep, but fit only for the camel in the dry season, and moreover infested with lions and elephants; and the White Taganet, consisting of white desert sand, with excellent food for the camel, and plantations of date-trees in a few favoured spots. The nomade inhabitants are the Zenaga or Senhaja, a mixed Berber tribe, who figure much in the history of this part of Africa, and contributed mainly to destroy the Ruma empire.

TAGLEL, a vil. W. Africa, in the country of Damerghu, which lies in the S. of the kingdom of Asben, and is

about 60 m. long by 40 broad. The vil., consisting of two separate groups of cottages, numbering in all about 120, would be undeserving of notice but for the political importance which it derives from being the residence of a chief whose talents and powerful connections have enabled him to play an important part in the factions and wars which have long distracted the country, and dried up the sources of its prosperity.—(Barth.)

TAGILSK, or NIJNEL-TAGILSK, a tn. Russia, gov. and 210 m. E. Perm, near the source of the Tagil in the Oural Mountains. It is a large town, picturesquely situated in a valley, and contains many elegant buildings in brick and stone, including a fine church with some beautiful paintings. Being the principal mining establishment of the Demidoff family, it is provided with a large and splendid edifice for the administration of the mines; capacious and well conducted hospitals, excellent schools, vast warehouses, spacious mansions for the directors and chief managers, and comfortable dwellings for the workmen and their families. The smelting furnaces, forges, rolling-mills, machine-shops, and other works, with the machinery and tools, are on a magnificent scale, and of the best description. The principal minerals are iron and copper. The iron ore, which is magnetic, is chiefly dug out from the sides of a hill, which appears to contain it in inexhaustible quantity. In a small valley on the W. side of the hill, it is worked as an open quarry, where it is found in an enormous mass, about 400 ft. in length and 80 in thickness. The copper ore is obtained by sinking shafts to the depth of about 50 fathoms. It often occurs in the form of malachite, of which many large and beautiful specimens are found. Platina is found chiefly in grains, but occasionally in large fragments; one of these weighed nearly 12 lbs. Gold is another of the riches of this district. It also abounds with porphyry and jasper of great beauty, and a variety of coloured marbles. The manufacture of japan ware, and other articles for which Tagilsk was at one time celebrated, no longer exists. Its school of design has also been given up. Pop. 25,000.

TAIF [add.], a tn. in the W. of Arabia, on a stream in a mountainous district of Hejaz, 55 m. W.S.W. Mecca. It forms a kind of oasis in the midst of a sandy plain, inclosed by mountains of no great elevation, and is surnamed the 'Garden of Mecca,' on account of its gardens, which are celebrated throughout Arabia for the beauty of their roses, vines, and fruit-trees. It is surrounded by a wall and a ditch, and defended by a castle seated on a lofty rock, consists of houses built of stone, but generally small, and has wider streets than usual in eastern towns. Its principal buildings are two mosques. It was pillaged and destroyed by the Wahabees in 1802, but has been almost entirely rebuilt. Its market is held in the only public square which the place contains.

TAJAX (GREAT and LITTLE), two places, Austrian empire, Moravia, circle and N.E. Znaim:—*Great Tajax* contains 2500 inhabitants, who live chiefly by cultivating the district, which is remarkable for fertility, and in producing wine.—*Little Tajax* possesses an old church built in the Gothic style, and contains 1000 inhabitants.

TA-KOO, or TAKU, a vil. and forts at the entrance of the Pei-ho River, 100 m. S.E. of Peking, on the shores of Pe-chee Gulf. The village is a collection of wretched mud-built cabins, inhabited by a poverty-stricken population engaged in the salt trade on the river; suffering severely in the winter when it is frozen up, and navigation closed during four months. The forts are of extensive construction, built of mud and bricks, deriving their importance from the batteries commanding the entrance to the river, leading an enemy to the capital; and being almost unapproachable by an armed force from the sea, in consequence of the low marshy lands of mud and tenacious clay that surround them. These forts were captured with comparative ease by a British and French force on the 20th of May, 1858. The treaty of Tien-tsin was the immediate result. It would seem, however, that the Chinese had been allowed to escape too easily, and accordingly, when Mr. Bruce appeared at the mouth of the Peiho to exchange ratifications, he found the Takoo forts re-established in a much more formidable manner than before. They were of considerable extent, built in the alluvial mud deposit which flanks the river, and formed strong redoubts, with thick, heavily-armed ramparts on the sea-front, contain-

ing casemated batteries, with a mantlet in front of each gun. The rear of the forts was protected by a crenellated wall, defended by guns and wall-pieces. The walls of the forts were built of thick logs of timber, cased with a coating of mud and flax, or sometimes chopped straw. The approach to each fort was defended by two or three encircling ditches and belts of wooden spikes, and the ditches were scattered over with iron crowsfeet. The force accompanying Mr. Bruce, as a serious renewal of hostilities had not been anticipated, consisted only of a squadron of gunboats and a few other vessels, and was far too feeble for any important military or naval operation; but as admission into the river was refused, it was determined, perhaps with more boldness than prudence, to force it. Here the British fleet, under Admiral Hope, met with a sad reverse in attempting to force the passage up the river and capture the forts, in July, 1859, when several ships were lost, and a number of the attacking force killed and wounded. This led to the third war with China in 1860, in which the English and French allied forces landed at Peh-tang, to the N.E. of Ta-koo, taking the north forts in the rear. Upon this the Chinese garrison in the south forts surrendered on the 22d August, and the invading army afterwards marched upon Peking, some 20,000 strong—12,000 British and 8000 French, the former under Major-general Sir James Hope Grant, and the latter commanded by General Montauban. After the treaty of peace was ratified in October, the forts were garrisoned by British troops, and held as a material guarantee for the good faith of the Chinese, until March, 1863, when they were evacuated, and handed over to the imperial authorities. During the occupation of the forts, the British garrison were on such friendly terms with the government, that a number of Tartar and Chinese officers in the army were drilled by our drill-sergeants and instructors, who exhibited great aptitude in acquiring a practical knowledge of European discipline, the manual exercise, and the use of arms. As they became proficient each officer was drafted away to instruct the soldiers in the native army, with a view to form the nucleus of a disciplined force under their own officers. How the experiment has succeeded has not transpired.—(Rennie's *British Arms in China and Japan*.)

TALAE SAP, or **KING'S LAKE**, situated in Cambodia, on the S.W. frontiers of Cochin China, is a large expanse of water, which, although it becomes so shallow in the dry season that boats require to be poled instead of rowed over its surface, is so augmented in the wet season as to have a length of 100 m. and a breadth of 40 m., with a depth of not less than 45 ft. It is formed in a depressed basin in a very flat country, and is said to have been once a fertile plain, and the site of a large city. Abounding in fish, it is the seat of a very extensive fishery from November to July, when the rising of the water compels the fishermen to remove to Mattabong, or other places in the vicinity. The fish, when dried, are sold to the Chinese, who come from Battabong, Oodung, and other places, to purchase them and export them to Cochin China, where they are sold at the rate of four ticals = 10s. 8d. per picul of 133½ lbs. The chief feeder of the lake is the Mattabong, augmented by the Kunburri and the Tasawai. The Oodung is its outlet.

TALANGA, or **SAN DIEGO DE TALANDA**, a tn. Central America, Honduras, dep. and 15 m. N.E. Tegucigalpa, in a very extensive valley, watered by a stream of same name. It consists of a number of huts ranged partly in streets, and partly in a large plaza, where the church, the only building of any pretensions to architectural merit, attracts notice, not so much by its own elegance as by contrast with the paltry dwellings in its vicinity.

TALCA, a prov. Chili, is bounded N. by the Lontue and Malaquito, separating it from Colchagua; S. the Maule, separating it from the prov. of that name; E. the Andes, in which the lofty peak Descabezado occurs; and W. the Pacific; length, E. to W., 120 m.; breadth, N. to S., 96 m. It has an extremely fertile soil, yielding in profusion all the products peculiar to S. Chili; a mild and healthy climate, and numerous streams, affording a cheap and ready means of transport. The largest of them is the Claro, which takes its source in the Andes, and, skirting the head of the province, joins the Maule, and forms with it an uninterrupted water-communication from the Cordillera to the sea. The trade is chiefly in wheat, barley, cattle, lumber, and jerked beef, sent

to Santiago and Valparaiso. The inhabitants are naturally enterprising and industrious, and generally in good circumstances. Pop. 71,381.

TALCA, a tn. Chili, cap. of above prov., on an undulating plain near the river Maule, and 640 ft. above sea-level, 140 m. S.S.W. Santiago; lat. 35° 14' S.; lon. 71° 57' W. It is built with the greatest regularity, according to the usual plan of Spanish American towns, in rectangular streets, with a plaza near its centre, on which the principal public edifices stand, and an alameda. The streets, wide and well paved have occasionally side-walks for foot-passengers, and are kept clean and in good repair. The houses are generally white-washed, and many of them have two stories, of which the upper one is provided with a balcony facing the street. Both churches and convents are numerous, but the only public building which has any pretensions to architectural merit is the cathedral, which, however, must be judged of by its plan rather than its actual state, as it is unfinished, and the two towers intended to be given it are still wanting. The manufactures consist of ponchos, woollen cloths, and blankets. All of these are woven to a considerable extent, both within the city and in the surrounding district, and are in great demand; the ponchos particularly are famous for the excellence of the material, the evenness of the texture, and the durability of the colours. The only other industrial establishments are two flour-mills. The trade is chiefly in the above manufactures, and in grain, tallow, cheese, wine, brandy, and wool. Pop. about 15,000.

TALCAHUANO, a seaport tn. Chili, prov. and 12 m. N.W. Concepcion, cap. dep. of same name, on the S.W. side of the Bay of Concepcion, of which it is the port. In 1835 it suffered dreadfully from an earthquake, followed by a huge wave, which demolished and swept away almost everything that the earthquake had spared. It has since been rebuilt in a better style than before, and contains about 5000 inhabitants, for whom, so far as can be judged from the number of churches and schools, ample means of instruction have been provided, though the preference given to Concepcion seems to preclude Talcahuano from ever being more than a place of business. A railway to Chillan, a distance of 103 m., running S.E. by Concepcion, has been designed, and its construction will be very beneficial.

TALLA MUNGONGO, a vil. and mountain, S.W. Africa, Portuguese settlements, prov. Angola, 225 m. E.S.E. Loando. The **VILLAGE** is seated on the edge of the mountain of same name, commanding a view of the great Quango valley, which, according to Dr. Livingstone, is equal in fertility to that of the Mississippi. Within the village, as at several other Portuguese stations, travellers' houses are erected on the same principle as the khans or caravanserais of the East. They are built of the usual wattle and daub, and besides benches of rods for beds, are each provided with a table and chairs, and a large jar of water.—The **MOUNTAIN**, Talla Mungongo, from 1200 to 1500 ft. high, is ascended by a steep and slippery path, with deep gorges on each side of it, which leaves but narrow room for the traveller; its summit is a kind of table-land covered with lofty trees, while on its heights the coffee plant is seen growing at the distance of nearly 300 m. from the W. coast, where the Jesuit missionaries first introduced it.

TAMATAVE [add.], a maritime tn. E. coast of Madagascar, lat. 18° 10' 6" S.; lon. 49° 28' 30" E. The anchorage here is little better than a roadstead, protected by reefs, but exposed to the winds from the E. and N. The village is built on a point of land between 300 and 400 yards wide, stretching into the sea to the S. The surface is diversified by sand-hills thrown up by the wind or sea to the height of 15 or 20 ft., and the low sandy shore is partially clothed with brushwood, rushes, and grass, relieved by the tall slender pillar of the cocoa-palm. The custom-house, a native structure between 30 and 40 ft. long, and nearly as wide, may be taken as a sample of the Malagasy houses. Its walls are about 12 ft. high, and composed of posts fixed at irregular distances, the interstices being filled up with the thick strong leaf-stalks of the traveller's tree between flat laths. The thatch covering the steep roof is composed of the leaves of the same tree fastened with native cord—the floor of sea-sand, partly covered with the bark of the traveller's tree. The cocoa-palm and the pandanus fling their grateful shadows

around this modest structure. Almost the only good houses in the village belong to the foreign residents and Hova officers. The dwellings of the inferior classes are much

TAMATAVE.—From a drawing by E. De Berard, *Tour du Monde*.

dilapidated. The trade is chiefly in rice, cattle, and poultry. Pop. about 3000.—(*Three Visits to Madagascar*, by Rev. W. Ellis.)

TAMBLEGAM, a lake or lagoon, Ceylon, which communicates with the bay, and is about 4 m. S.W. of the town of Trincomalee. It is a shallow expanse, about 20 m. in circuit, and, according to native tradition, confirmed in some measure by an examination of the locality, was once a fertile plain covered with rice-fields, and irrigated by a canal from the enormous tank of Kandelai, about 12 m. to the S.W. This tank, allowed to fall into ruin, burst its embankment, and sent its water like an impetuous river, which inundated the plain, and forced its way to the sea by a breach, which has ever since remained open, though it is said that the breach might easily be closed, and the tank repaired, so as to convert the lake once more into a productive plain. At present Tamblegam is chiefly valuable for its fish, particularly the thin transparent oyster (*Placuna placenta*), whose clear white shells are used in China and elsewhere as a substitute for window-glass, and are collected annually, both for the small pearls contained in them, and also for export to India, where they are burned into chunan, to be eaten with betel. So abundant and prolific is the *Placuna*, that the number taken by the licensed reinter in the three years prior to 1858 could not have been less than 18,000,000. They delight in brackish water, but excess of either salt or fresh kills them.

TAMKALA, a tn. Western Africa, Hausa States, prov. Zaberma, 140 m. W. Sokoto. It is a celebrated place, which has figured much in the wars of the country, and suffered accordingly. Its walls are greatly dilapidated, and even the governor's house is little better than a ruin. The market is very indifferently supplied.

TAMSUI, a treaty port, China, N.W. coast isl. of Formosa, lat. 21° 46' N.; lon. 120° 30' E.; 45 m. S. of Taiwan, the chief city of the island, and near the S. entrance to Formosa Strait. In the treaty of Tientsin, Taiwan is the place mentioned as the port to be open to foreign trade. But the British consul appointed there found it less eligible as an entrepôt than Tamsui, and removed to the latter place in 1864, when the first regular returns of trade were reported from the 5th May to the close of the year. During that period the total amount of imports and exports was £385,627—the former, £229,613, comprising opium (£170,796), treasure (£48,533), and general merchandise; and the latter, £156,014, consisting of rice (£83,176), sugar (£52,967), sesamum seed, turmeric, &c. This being the latest port in China opened to foreign commerce, there remains a remnant of the prohibitive system which long paralyzed the external commerce of the country. Rice, which is largely produced in Formosa, can be exported only under pass to Amoy and Foochow. During 1865 a slight increase in all the more important

imports was noticeable; and exports, with the exception of turmeric, displayed an advance upon 1864. In shipping the entries for 1865 were 152 vessels (27,648 tons), against 135 vessels (25,450 tons) in 1864. It possesses an excellent harbour, over the bar of which there are above 12½ ft. water at high-water. The entrance is unmistakably marked by two lofty and picturesque hills—that on the left, termed the Kwang-yin Hill, having two prominent peaks, of 1720 and 1240 ft. respectively—and that on the right, the Tai-tun Hills, forming an imposing ridge, of which the summit is 2800 ft. high. From land to land at the entrance of the harbour, is just half a mile; but a considerable spit of sand diminishes it more than one-half. Within the harbour, however, it rapidly increases to three-quarters of a mile, and even a mile in width, affording good anchorage for large vessels. Immediately on the left hand, on entering, is a small Chinese fort; and half a mile higher are the ruins of an old Dutch fort—a square, red brick, casemated building, once no doubt of great strength, and elevated 50 or 60 ft. above the water's edge. The long rambling town of Tamsui, or Hoo-wei, as it is more properly called, commences a little higher, and consists for the most part of a narrow street of shops of a poor description,

paved with great cobble-stones, or not at all, and in which pigs of all sizes and barking dogs dispute the passage, which in some places scarcely admits of two passengers passing one another. There is a very pretentious joss-house in the town, of which the stone pillars, elaborately carved, represent, with considerable cleverness, fantastic dragons encircling the columns in high relief—workmen being yet engaged in the task. The immediate neighbourhood is hilly, having numerous scattered houses; and a large amphitheatre, just outside the town, forms an immense and well-filled burial-ground, upon which grows abundance of the rice-paper plant (*Aralia papyrifera*), which is largely exported from this neighbourhood. The soil is very fertile, consisting of a considerable depth of alluvium, in which are numerous angular and rounded blocks of stone, some of very great size. The inhabitants of Hoo-wei (Tamsui) are mostly poor and meanly clad—the males wearing usually nothing more than a pair of short drawers, or some substitute for them—some of the younger male children going entirely naked. The women and girls, however, are always decently clothed, very few of the female children being even naked to the waist. Banded feet are universal among them.

Palm Island, at the entrance of the harbour, produces no palm-trees, as its name would seem to indicate, but they are represented by cycaeds, which have probably been mistaken for them. This island presents unmistakable indications of having risen above its former level in comparatively recent times, and similar indications in other parts of the harbour seem to show that a gradual elevation is taking place, a circumstance which renders it more necessary to preserve the integrity of the harbour from the recklessness and ignorance of the native coolies, who misuse it by throwing overboard the ballast they are paid to take away. Its importance is yearly increasing as a harbour of refuge, as a port of trade, and more particularly as a coaling station.

In consequence of the aboriginal population on the island being harshly treated by the Chinese, its productive capabilities are not developed; and few foreign merchants are disposed to settle at Tamsui, insulated from the authorities on the mainland. All the residents are British, comprising three merchants, two consular officials, and six employes in the Foreign Maritime Customs.—(*China Directory*; *Customs Returns*; *China Telegraph*; *Proceedings of Royal Geog. Soc.*)

TANANARIVO, or **ANTANANARIVO** [add.] [*the thousand towns, the city*], the cap. of Madagascar, prov. Ankova, near the centre of the island; lat. 18° 56' 26" S.; lon. 47° 57' 48" E. It is built on the summit and sides of a long irregular hill, 1½ m. or more in length, rising 500 ft. above the surrounding rice-fields, and 7000 ft. above the sea-level. A path from the E. winds up the hill to the centre of the town, another from the N. traverses the town to its S. extremity,

and forms the principal thoroughfare. Innumerable pathways run between the houses on each side, so narrow in some cases as scarcely to allow two persons to pass.

The houses, generally detached and surrounded by mud walls, stand on terraces 20 to 40 ft. wide, cut in the declivity of the hill. The richer inhabitants have substantial houses of wood, with long roofs of bamboo rafters, thatched with rushes; the poorer have huts constructed of split bamboo, or of rush-mats supported on poles. Mud huts, sometimes painted yellow or bright pink, are found in the surrounding villages. All the houses are rectangular, with the window and door in the W. front, the former at the S. end, the latter at the N., 18 inches above the pathway, with a single step outside and inside. The interior is sometimes divided by matting and bamboos, but in general it is a single apartment. The floor is seldom boarded; a coarse mat spread on the earth forms the bed, the table, and the floor; three to five upright stones near the centre constitute a hearth; no chimney is thought necessary. Of late, however, several improvements have been introduced: beds are found in most of the houses, the furniture has become more European in character, and a second story is more frequently added. A few houses are hired by Arabs as shops, the proprietor levying a percentage on the sales from the purchaser; but as a rule the occupants are also the owners, and most of the richer inhabitants have a second or third house for a kitchen or for their slaves. The palace stands near the centre of the town, on the summit of the hill. It is about 60 ft. high, with a very long roof pierced by attic windows at three different elevations, and surmounted by a large gilt figure of an eagle on the wing. Double verandahs, one above the other, surround the walls. Near the N.E. angle is a smaller house of similar construction, the residence of the prince royal. The houses of most of the

immense block of stone marking the boundary of the sacred capital. It has been removed in order to widen the road, but its site still retains a partly sacred character; over this point unclean animals or vegetables are not allowed to be carried into the town.

The surrounding country is all but destitute of trees, and a species of wild fig is almost exclusively admitted into the capital. To this may be ascribed its remarkable freedom from the Malagasy fever, indigenous elsewhere throughout the island. In 1820 the population was estimated at 10,000 to 12,000; under the rule of Radama it increased rapidly, and in 1838 was stated to be about 20,000, the number of houses being 6000 to 7000. Another estimate makes the population 80,000, which is obviously largely in excess of the truth, and probably includes the numerous surrounding villages as well as the capital itself.—(*Ellis*.)

TANCITARO, a tn. Mexico, in the S.W. of state Michoacan, on the N. slope of a mountain range remarkable for the richness of its mineral veins, particularly iron. It possesses an Augustinian monastery, and has a pop. of 1500.

TANDA, two places, India:—1, *Tanda*, or *Tarah*, a station, N.W. Provinces, 62 m. N. Bareilly, on the route to Almora. It occupies a small cleared spot in the marshy forest of the Terai, and during the hot season has a climate so deadly as to occasion a fearful loss of life among both travellers and permanent residents. An ample supply of water seems to be the only inducement to retain it as a station.—2, *Tanda*, or *Tandah*, a tn. Oude, near 1. bank Gogra, 110 m. E.S.E. Lucknow. It contains about 6000 inhabitants, the greater part of whom are weavers, the largest cloth factories of Oude having their seat here.

TANGA, a tn. on the E. coast of Africa, on a bay of same name, about lat. 5° S. Like all settlements on this part of the coast it is a patch of thatched, pent-shaped huts, built in a straggling grove of cocoas and calabashes. The country around, with a soil of hard red and yellow clay, is fertile, and yields in abundance cassava, wild toddy-palms, plantains and papaws, holcus and sesamum, castor and wild-egg plants. Pop. from 4000 to 5000.

TANGANYIKA, a lake, situated in the centre of the length of the African continent, and on the inland edge of the eastern third of its breadth, between lat. 3° 25' and 7° 20' S.; lon. 29° 30' and 30° 35' E.; length, N. to S., 290 m.; average breadth about 23 m.; circuit about 640 m.; and area about 5800 sq. m. The southern half, up to lat. 5° S., is in the shape of an elongated oval; the northern portion diminishes gradually in width, and finally terminates at its N. extremity in a point. The basin in which it lies is inclosed on all sides by an almost continuous mountain curtain, rising from 2000 to 3000 ft. above the water-level, and suggests the idea of a depression similar to that of the Dead Sea in Palestine, rather than that of a vast reservoir formed by the drainage of the surrounding country. The surface of Tanganyika, though 1850 ft. above sea-level, is nearly 2000 ft. below that of the

TANANARIVO.—From a drawing by Lieut. P. P. Oliver, Illustrated News.

judges, nobles, and chief military officers are in the immediate vicinity of the palace. The courts are held in the open air to the W. of the palace, and a little to the N.W. is a rock, the Tarpeian Rock of Madagascar, where criminals convicted of witchcraft or sorcery are hurled down a precipice of more than 300 ft., broken by scattered masses of rock 60 or 70 ft. from the top. The common place of execution, however, is a dreary spot at the S. extremity of the hill on which the town is built, covered with the bones of the criminals left without burial to be devoured by dogs and birds. Kabarys or public assemblies are held, to receive messages from the sovereign and transact all public affairs, in a natural amphitheatre N. of the palace, capable of accommodating 100,000 persons. N. of this was built one of the chapels or school-rooms of the English missionaries, now become a prison, and a few hundred yards further the repository, printing-office, and library of the Madagascar mission. Westward lies a part of the town which the sovereign and royal family are forbidden to enter. At the N. extremity of the hill formerly stood an

Victoria Nyanza, situated about 400 m. E.N.E.; but lofty ranges intervene. No soundings have been taken to ascertain the depth of Tanganyika, but its shingly shore shelving rapidly into blue water tends to confirm the statement of the Arabs that with lines of several fathoms no bottom was found. The only important feeder of the lake yet known is the Malagarazi, which flows westward from the Unyamwezi plateau, and has its mouth near the middle of the E. shore, to the south of Ujiji. The water is fresh, and to the traveller arrived from the E. tastes deliciously sweet and pure, after the salt and bitter, the putrid and slimy produce of the wells, pits, and pools in his line of route. The natives, however, complain that it does not satisfy thirst, and contrast it unfavourably with the water of the Victoria Nyanza. Tanganyika is well supplied with various kinds of fish. It contains few islands. By far the largest of these is Ubwari, in the N.W.; the only others are two small groups, one near the middle of the W. shore, and the other near the S.E. extremity. The borders of the lake are generally low, and thickly fringed

with rush and reed. Immediately behind is a shelving plain, the principal locality for cultivation and settlements. This plain is in some parts a dry conglomerate, in others a rich red loam, and in others sandy, but everywhere clothed with dense vegetation. Beyond the ground rises in slopes and terraces, occasionally cultivated, and producing luxuriant crops of manioc and cereals; and finally forms a back-ground of mountains, clothed for the most part with giant trees of mvule, tamarind, and bauhinia, but sometimes also covered with various species of cactus. The commercial importance of the lake is as yet undeveloped. The Arabs in former times built sailing vessels, and trained their slaves to the regular use of the oar; but in 1858 only one dow, or small quarter-decked sailing craft, remained. The native boats are long narrow canoes, or rather mere logs of mvule or some other large tree, rudely hollowed with the axe. Sometimes three of these hollowed logs are joined together so as to form one vessel. It is, however, a very rude and clumsy contrivance, has neither mast nor sail, and though fit from its size to carry a cargo, is so leaky that the cry, 'Senga!' or 'bale, bale!' rarely ceases. The traffic on the lake from Ujiji takes three principal directions, one to the ivory and slave marts of Uvira at the N.W. extremity, a second across the lake to the island depôts near its W. shore, and the third southward to the land of Murungu. The lake is frequently visited by violent storms of wind, lightning, and rain. To add to the dangers of the navigation, prowling tribes haunt the beach, and are ever on the alert to seize any canoes that may chance to land upon it.

TANGKOO, a vil. and fort, China, prov. Pechili, in the Peiho, taken by the British and French troops, August, 1860. The fortifications of the place consisted of a long semicircular crenellated wall 3 m. in length, terminating at both ends on the banks of the river.—(Swinhoe's *N. C. Campaign.*)

TANNAH, a dist. or collectorate, India, presid. Bombay, between lat. 17° 56' and 20° 20' N.; lon. 72° 42' and 73° 48' E.; is bounded N. by the Portuguese territory Damann, dist. Surat, and the Guicowar's Dominions; S. Rutnagherry; E. Ahmednuggur, Poonah, and Satara; and W. the Arabian Sea; length, N. to S., 175 m.; breadth, 65 m.; area, 5477 sq. m. Its soil is admirably adapted for the cultivation of grain, particularly rice, compared with which all other crops are insignificant. The most extensive are sugarcane, from which a small quantity of sugar is manufactured; and plantains, grown chiefly on the island of Bassein, and largely exported to Bombay. Ginger, the cultivation of which is nearly confined to the gardens of Mahim, is sent chiefly to Bombay and Surat for consumption in the green state. The great Bombay and Agra road and the Indian Peninsular railway pass through the district. This railway was opened on 16th April, 1853, from Bombay to Tannah, which is situated 24 m. N.E. of the former, and had then a pop. of about 9000. Pop. of district, 815,849.

TANNWALD, a tn. Austrian empire, Bohemia, circle Bunzlau, cap. dist. of same name, on the Kamenitz; with a church, a cotton factory, linen bleacheries, and numerous glass-polishing mills. Pop. 1100.

TANTANAH, a mountain, N. Africa, which attains the height of 4000 ft. above the sea-line, and forms the culminating point of the mountains situated near the W. frontiers of Fezzan. Vegetation being confined to narrow crevices and valleys, it supports only a few nomade stragglers. The sandstone and sloping strata of marl which previously prevailed, are here succeeded by granite, which rises in lofty peaks not without grandeur.

TANTOO, a tn. China, on a creek of the Yang-tze-kiang, forming one of the outlets of the Grand canal, and at some distance above Kiang-yin. It has been several times in the hands of the rebels, and in consequence suffered so severely that a large portion of it was laid in ruins, and remains so, as no attempt has been made to rebuild the temples, and many of the poorer inhabitants are living in straw-huts. Before devastated it had a small but active trade, and at times presented a busy scene, from the number of boats passing up and down the creek.

TAODENNI, a tn. Western Africa, lat. 22° N., about 300 m. N.N.W. Timbuktoo, celebrated for its salt mines, which have been worked for about three centuries, and are

SUPP. IMP. GAZ.—VOL. II.

still very productive. The salt covers a very extensive tract in the district of El-Jof, and consists of five layers, of which the fourth, which presents a beautiful intermixture of black and white, not unlike some species of marble, is the most esteemed. The largest pieces brought to market measure 3 feet 5 inches in length, 13 inches broad, and 2½ inches in thickness; this, however, is only half of one layer, each layer being sawn into two slabs. A government officer, who superintends the mines, lets out the ground in small patches to workmen, who pay a certain *khomus* or lordship for each *hofra* or hole.

TAPANULY, a bay, Indian Archipelago, remarkable as the only one of any extent possessed by the island of Sumatra. It is situated on its N.W. coast, in the country of the Bataks, and contains many islands, and several well-sheltered coves and harbours, with sufficient depths for large ships. Ponchong-kachil, or Little Ponchong, near its entrance, was once occupied by the British; but the attractions are small, as most of the country is mere jungle, and the inhabitants are in a state of barbarism.

TAPARANG, or LABAYA, a lake, Indian Archipelago, the largest in the island of Celebes, is situated near the centre of its S.W. peninsula. It is about 24 m. long by 12 m. broad, is fed by numerous streams, and discharges itself by the Chinrana into the Bay of Boni, about lat. 4° 15' S. Both the Chinrana and the lake are navigable, the former for vessels of 20 tons, and the latter having a depth of 2 to 3 fathoms in the dry, and as much as 8 fathoms in the wet season.

TAPOLCZA, a tn. Austrian empire, Hungary, co. Zala, 28 m. E. Zala Egerszeg, cap. dist. of same name; with a steam company for navigating Lake Balaton, a sulphur spring with a bathing establishment, and a trade in corn and wine. Pop. 3439.

TARANAKI, or NEW PLYMOUTH, a prov. New Zealand, W. side of North Island or New Ulster, bounded N. and N.E. by prov. Auckland, E. and S.E. Wellington, and S. and W. the ocean; has an extreme length of about 120 m., an extreme breadth of 60 m., and a coast-line of 120 m.; area, 3,000,000 acres. Notwithstanding its large extent of coast it is utterly destitute of harbours, and, though well watered by torrents, possesses neither rivers nor lakes. The surface is elevated, particularly towards the S.W., where Mount Egmont rises to the height of 8270 ft.; a large proportion of the soil is admirably adapted for agriculture. Owing to the war with the natives the province has made no progress for several years, but lost what prosperity it had previously attained. The pacification, however, which has at last been effected will reopen the country to colonization. From the fertility of its soil and the beauty of its scenery it has been called the garden of New Zealand. The name of Taranaki is generally applied to the settlement, and that of New Plymouth to the capital, which is situated in lat. 39° S., and stands on the margin of the beach embosomed in gentle hills, and watered by several streams. With its granite church and chapel and rustic buildings, and the beautiful and varied scenery around it, the settlement presented a fair appearance. But the total number of colonists in the province, owing as said before to its disturbed state, amounted to only about 2000. The number of vessels entering the port in 1863 was 5, of 759 tons; and there left it 9 vessels, of 2809 tons. The imports in the same year were of the value of £49,030, and the exports £1238.

TARCENTO, a tn. Italy, Venetia, prov. and 8 m. N. Udine, on the Torre; with a civil court, a silk mill, and 2981 inhabitants.

TARKANY (FELSO and Mezö), two places, Austrian empire, Hungary, co. Hevcs:—*Felső Tarkany*, situated 4 m. N. Erlau, between mountains, has a saw-mill, and quarries of slate, limestone, and red marble, and contains 1500 inhabitants.—*Mező Tarkany*, situated about 10 m. N. Heves, on the Laksö, contains 2520 inhabitants, chiefly employed in agriculture and rearing cattle.

TARNOCZ, a tn. Austrian empire, Hungary, co. Liptau, about 4 m. N. Szent-Miklos; with 1100 inhabitants, who cultivate flax, weave linen, and fell and saw timber in the adjoining forests.

TARNOW [add.], a tn. Austrian empire, Galicia, cap. circle of same name, 42 m. E. by S. Cracow, on the Dunajec, near the confluence of the Biala, and on the railway which

here crosses the latter by a bridge. It is the seat of several government offices, and the see of a R. Catholic bishop; and has an ancient and beautiful cathedral, with some remarkable statues; an ecclesiastical seminary, a Bernardine monastery, an upper gymnasium and high-school, a theological institute, an hospital, and an orphan asylum. Pop. 8459.

TARRANGOLLÉ, a tn. E. Africa, cap. Latooka country, 101 m. E.S.E. Gondokoro. It is situated at the foot of Mount Lafite, about a mile from the stream, a tributary of the Chol or Sobat, that flows below it, and which is about 80 yards wide, but shallow. The town contains about 3000 houses, and is not only surrounded by iron-wood palisades, but every house is separately fortified with a stockaded courtyard. The cattle are kept in large kraals in various parts of the town; fires are lit every night to protect them from flies, and sentinels keep watch on high platforms day and night to give alarm in case of danger. The houses are generally bell-shaped, while others resemble huge extinguishers, 25 ft. high; the roofs are neatly thatched, and rest upon a circular wall about 4 ft. high, the eaves overlapping to within 2½ ft. of the ground; the doorways are only 2 ft. 2 in. high. The interiors are remarkably clean but dark, windows being unknown. The town has several entrances in the form of low archways through the palisades, which are closed at night by large branches of the hooked thorn of the kittur-bush, a species of mimosa. The main street is broad, but all the others are purposely only wide enough to admit a cow singly between high stockades, these narrow passages being easily defended in case of attack. The natives, Latookas, Sir S. W. Baker describes as 'the finest savages he had ever seen.' The average height of a number of them was 5 ft. 11½ in., and they possess great muscular development and well-proportioned limbs, and a very pleasing cast of countenance.

TARRENS, a tn. Austrian empire, Tyrol, circle and about 28 m. W. by N. Innsbruck; with large manufactures of scythes and sickles, and 1200 inhabitants.

TARTAKOW, a tn. Austrian empire, Galicia, circle and 36 m. N.E. Zolkiew; with a fine castle, and a church to which pilgrimages are made. Pop. 1780.

TARUSA, a tn. Russia, gov. and 40 m. N.E. Kaluga, at the confluence of a stream of same name with the Oka. It has two churches, a circle and a parish school, and a benevolent institute; and contains 2374 inhabitants.

TASCO, or **TLASCO**, a tn. Mexico, state Guerrero, at the height of 5853 ft. above the sea, 67 m. N. by W. Tixtlan. It is the oldest mining town in the Mexican Confederation, and had at one time valuable mines of tin; but is now without importance, and has no building deserving of notice, except its parish church, which is a beautiful structure, erected at the expense of a Frenchman who had made his fortune at the mines, but was afterward reduced to such poverty, that the ciborium which he had presented to the church was afterwards sold for his beef to the cathedral of Mexico.

TASMANIA, formerly *Van Diemen's Land* [add.] This island, the S. coast of which was discovered by Captain Abel Jansen Tasman, in 1642, and by him named Van Diemen's Land, was found by Mr. Bass, surgeon of H.M.S. *Reliance*, in 1798, to be separated from the mainland by a strait 130 m. wide. Immediately after Bass's exploration the island was named Tasmania, in honour of its first discoverer; but it was not until 1852 that the home government adopted it, on the petition of the colonists, at the time of the cessation of transportation to its shores. In consequence of the utilization of convict labour under a ticket-of-leave system adopted by Sir W. Denison, appointed governor in 1846, the government increased the amount of transportation to Tasmania, till the free settlers took alarm, remonstrated with the governor, and petitioned the home government, and even the queen in person, to stay the flood of demoralization thus being poured into their adopted country. At length they prevailed, and an order in council terminating transportation to the colony took effect in 1853. But a retrograde movement had already begun in the material condition of the colony, the discovery of gold in New South Wales and Victoria abstracting from it both labour and capital. Many of the richest and most enterprising merchants removed to Melbourne; the farmers found a large demand and high prices for their produce, and the traffic across Bass Strait rapidly increased in both sailing and steam vessels. Besides agricultural produce, a large trade in timber

from Tasmania for wharves, railways, and other works in Victoria, employed a large amount of shipping. But these vessels carried many passengers also towards the gold regions, and from 1851 an exodus of the population of Tasmania began, and has continued ever since. This withdrawal of capital and labour in a few years produced a reaction, and so reduced the value of landed property, and raised the rate of wages, that whole streets of houses in Hobart Town became deserted, and the splendid harbour, with its docks and jetties, no longer presented the bustle consequent on the arrival of transport vessels with convicts and government supplies, the intercourse with Melbourne being chiefly through Launceston. A new constitution too had been granted to the Australian colonies, and the governing power became vested in the responsible advisers of the governor and two houses of legislature, elected by universal suffrage and vote by ballot. The local parliament, to check the exodus and revive prosperity, offered rewards for the discovery of gold in Tasmania. The most promising district was found at Fingal, some distance from Launceston, the productiveness of which, in both its washings and gold-bearing quartz, was favourably reported on in 1864. Some slight improvement in the condition of the colony has since taken place in some respects, though, upon the whole, there seems to be a decline. The annual volume of statistics issued in 1867 by the government of the colony, shows that the population at the end of 1866 was 97,368, an increase of 2167 in the year. The birth-rate in the year was 34.68 per 1000 living; the death-rate only 16.07. At the end of 1866, 2,251,071 acres were held under depaupering licenses, at rents amounting to £9303; 279,022 acres were in a state of cultivation, but only 167,866 were under crop. The number of sheep in the colony was 1,722,804; of cattle, 88,370; of horses, 21,567; of swine, 33,259—all these numbers are less than those of 1865. The exports of 1866 amounted to £834,606, a decrease of £46,359; the imports reached £942,107, an increase of £179,732. The general revenue amounted to £245,421, and the expenditure to £242,361. The territorial revenue was £88,342, and the expenditure £106,740; the commissariat expenditure was £56,460. The public debt was £553,230, being only £5, 13s. 7d. per head. The number of vessels belonging to the two ports of Hobart Town and Launceston was 211, of 19,769 tons. Of coal, 14,309 tons were raised in the year, valued at £13,036; 62,290 acres of crown land were sold in the year, and realized £39,227.

TASSAU, a tn. Western Africa, cap. territory of same name, 100 m. N. by W. Kano. It is a large place, of pleasing appearance, and contains a population who possess many of the comforts of life, and seem disposed to enjoy them. They are, however, much exposed to the depredations of the Fellani and other marauding tribes. The territory is of limited extent, and the chief, though in many respects independent, is regarded as a powerful vassal of the king or chief of Maradi, another territory which bounds it on the W.

TATAR BUNAR, a tn. Russia, gov. Bessarabia, circle and 35 m. S.W. Akermann, close to the frontiers of Moldavia. It possesses a church, and contains 1400 inhabitants.

TATCHIO, a tn. cap. Tsusima Island, in the Strait of Corea, between Japan and the Corea. It stands upon a somewhat exposed bay on the E. side of the S. division of the island, at the mouth of a stream which flows through a rich and well-cultivated valley. A cliff rising abruptly 100 feet from the water forms a cove, behind which small vessels find shelter, and, covered with pines, is a striking feature in the scenery. The bay opens to the right and left of the entrance, and is surrounded by wooded hills. The town, upon the right or N. arm of the bay, does not differ in appearance from an ordinary Japanese town. The residence of the prince, who is absolute and independent, is about 4 m. from the town. Pop. 10,000.

TAUGUNCHERRY, a tn. India, presid. Madras, Travancore, adjoining Quilon on the W. It was formerly a Dutch settlement, and consisted chiefly of a fort, seated on a promontory of laterite. Part of its walls still remain, and the interior of one of its bastions is used as a Protestant burying-ground. The present town consists of four regular streets, intersected by narrow lanes, and is inhabited mostly by R. Catholics, under the charge of the Bishop of Cochin, who resides here. The customs, port-dues, and other

revenues are levied by the Travancore rajah, who pays an equivalent in money. By this arrangement a check has been put to the smuggling which formerly prevailed.

TAUPO, a lake, New Zealand, about the centre of North Island, prov. Auckland. It is of triangular shape, 36 m. long and 25 broad, and is the largest lake in New Zealand. The Waikato River flows into it from the S., and passes out of it in a N.W. direction, carrying off its superfluous waters. A broad table-land surrounds the lake, intersected by many creeks and streams, which carry off the drainage of the mountain district above. The lake is in the central portion of the island, which remains as yet in the state of a wilderness, and which extends over a considerable space around the lake, and southward to the neighbourhood of the volcanic mountains Tongariro and Ruaphui, displaying some of the most remarkable features of natural scenery in New Zealand. The small hot-water lake of Rotarua, with the curious boiling springs in its vicinity, is situated about 30 m. N. of Taupo. It has been proposed to form a military station or permanent camp at Lake Taupo, to overawe the Maoris.

TAUROW, a tn. Austrian empire, Galicia, circle and about 8 m. E.N.E. Brzezan; is memorable as the scene of a bloody battle fought in 1649, between the Poles under John Casimir, and the Cossacks under Chmielniki. Pop. 1600.

TCHANG-KIA-KHEOU, or KHALGAN, a tn. China, prov. Pechili, on the frontiers near the Great Wall, about 100 m. N.W. Pekin. It consists of the town proper and extensive suburbs. The former, inclosed by a fosse and an earthen rampart, and defended by a citadel, contains about 25,000 inhabitants; the latter is inhabited chiefly by merchants, who carry on an extensive trade, Tchang-kia-kheou being the chief entrepôt for the trade with Russia through Mongolia.

TCHASTALOWITZ, a tn. Austrian empire, Bohemia, circle and 12 m. E.S.E. Königgrätz, r. bank Wild Adler; with a parish church, a castle with a chapel, an hospital, a brewery, and 1200 inhabitants.

TCHATCHAK, a tn. Turkey in Europe, Servia, cap. circle of same name, in a mountainous district, on the Servian Morava, 65 m. S. by W. Belgrade. It is the seat of a court of justice, and has a church and a school. Pop. 1200.

TCHEMBAR, a tn. Russia, gov. and 62 m. W.S.W. Penza, cap. circle and on a stream of same name; with four churches, a circle and a parish school, a charitable institute, and several industrial establishments. Pop. 3664.

TCHERKASSU, a tn. Russia, gov. Kiev, cap. circle of same name, on the Dnieper. It was once the chief town of the Dnieper Cossacks, has two churches, a parish school, and a charitable endowment. There are several beet-root sugar factories within the circle. Pop. 8684.

TCHERNILOW, a tn. Austrian empire, Bohemia, circle and 4 m. N.E. Königgrätz; with 1300 inhabitants, a R. Catholic parish church, and two Protestant churches, one of the Augsburg and the other of the Helvetic Confession.

TCHIKORIK, a tn. Turkey in Asia, pach. Sivas, 32 m. S.E. Amasia, on the side of a steep descent into a valley. It contains about 120 houses, which have an air of comfort about them; and possesses a mosque with a minaret, which seen from a distance is a very striking object.

TCHING-TOO-FOW, or CHING-TOO-FOW [add.], a tn. China, cap. prov. Sechuen, about lat. 30° 20' N.; lon. 104° 25' E. According to M. Hue it is one of the finest towns in the empire. It stands in the middle of a fertile plain watered by beautiful streams, and bounded in the distance by hills of varied and graceful forms. The principal streets are of good width, paved with large flagstones, and so clean that one can scarcely believe them to be Chinese; the shops are equally remarkable for the value of their goods and the taste displayed in arranging them, and many of the public buildings, more especially the pagodas, courts of justice, and literary institutes, are fine structures. Though the poor are numerous, the inhabitants generally appear to be in comfortable circumstances. In the vicinity is one of the richest and best maintained Bonze monasteries in China. The present Tching-too-fow is a modern town, which was built to replace an ancient one destroyed by a conflagration.—(Hue's *Chinese Empire*.)

TCHIRKIS, a tn. Turkey in Asia, Anatolia, r. bank Baitin, 90 m. S.W. Sinope. It is surrounded by walls, and has a pop. of 2000 to 3000. Angora goats are reared in its

vicinity, and there is a mine of rock-salt in the adjoining mountains.

TCHISTOPOL, a tn. Russia, gov. and 68 m. S.E. Kazan, cap. circle of same name, l. bank Kama. It has a cathedral and thirteen other churches, a monastery, secular and religious schools for the circle and the parish, and a considerable trade in corn, cattle, and fish. There are mineral springs in the circle. Pop. 9212.

TCHUKLOMA, a tn. Russia, gov. and 138 m. N.N.E. Kostroma, cap. circle and on a lake of same name; has three churches, a circle and a parish school, and a benevolent institution; and contains 2712 inhabitants. Many of the inhabitants of the circle leave their homes during several of the winter months, and find employment at their different trades in other parts of the kingdom.

TCHUNG-KING-FOO, a tn. China, prov. Sechuen, 160 m. S.E. Tehing-too-fow, and next to it the most important town in the province. It stands on an advantageous site, l. bank Yang-tze-kiang, opposite to another large town, which would make one with it were it not for the magnitude of the river, which is here, though 900 m. above its mouth, more than a mile wide. It is a most important commercial place, being the central entrepôt for merchandise from almost all the provinces of the empire. The R. Catholics are said to be here a large and flourishing community.

TEAPA, a tn. Mexico, dep. and 40 m. S. Tabasco, picturesquely situated at the foot of the mountains of Chiapas, on a stream of same name, which is here crossed by a bridge. It consists partly of houses substantially built of stone, and arranged in a few tolerably regular streets, and partly of a great number of cane-huts, grouped without any regard to order, and forming a kind of suburb. In the highest part of the town is a square containing the church and the market-place. The only manufacture is water-tight shoes, made of the gum of the *Castilloa elastica*, said to be nearly as good as caoutchouc; the trade is important, particularly in cacao, which bears a high name. Pop. about 6000.

TEBESSA [anc. *Thevesta*], a tn. N. Africa, Algeria, dep. and 75 m. S.E. Constantine, on the N. slope of the Jebel Aures, and close to the W. frontiers of Tunis; lat. 35° 27' 30" N.; lon. 6° 7' 30" E. On being taken by General Negrier, in May, 1842, it was immediately resolved to make it the seat of a French colony. A number of European traders have accordingly settled in it, and the population, including that of two adjoining villages, but excluding the military, amounts to about 2000. The military must be numerous, as a French work of some authority makes the whole population amount to 15,000. Even this, however, is not more than the half of what it is believed to have had under the Romans. The Arab town, which is poorly built, lies among the Roman ruins, and is surrounded by a wall flanked with towers. Within it there is no Arab building worth notice, but immediately outside there is a Marabout establishment which the natives hold in the highest veneration. Among the Roman remains, the most interesting are a portico or triumphal arch, and a temple. The position of the town at a point where four highroads meet gives it great facilities for trade, but at present its prosperity is more in prospect than in reality. Many of the inhabitants find employment in the quarries of Jebel Dir, from which millstones are obtained.

TEE-KIANG, a tn. China, prov. Nganhoei, on the Yang-tze-kiang, about 5 m. above Kew-hsien. It is picturesquely situated near a range of hills, which trends away from it to the S. and E., about 90 m. above Nanking, and with its three-arched bridge of heavy masonry, its white houses clustering up the hill-side, or nestling among the trees at its base, looked more like an Italian than a Chinese town. It at one time contained about 10,000 inhabitants, but the cruel hand of the insurgents has been upon it, and it now possesses only a single street.

TEFAX, a tn. Mexico, state Yucatan, 50 m. S.S.E. Merida, at the foot of a hill. It is regularly built, consists of spacious streets and a fine market-place, and has large and substantial houses, a handsome church, and an active trade. Within the town are some ancient Indian ruins.

TEGUCIGALPA, a tn. Central America, cap. dep. of same name, on the Rio Grande or Cholutska, here crossed by a white sandstone bridge of ten arches; lat. 13° 55' N.; lon. 86° 52' W. It consists of the little outer town or suburb of

Comayaguda, on the opposite side of the river, and of the town proper, which, contrary to usual rule in Honduras, has an active and bustling appearance. It is laid out with great regularity in well-paved streets, lined for the most part with handsome stone and adobe houses, painted, according to the fancy of the proprietor, blue, red, cream-colour, or white, and provided with grated balconies. The most important public buildings are the churches and old convents, most of them stripped of their wealth and in a very dilapidated state, but still imposing structures. La Parroquia, the largest and most venerable of the churches, is considered superior to any in Central America, those of Leon and Guatemala alone excepted. Among its educational institutions the place boasts of a kind of university or *academia literaria*, which was established in 1847 in the old convent of San Francisco. The shops and market are well supplied, the former with all kinds of wares, among which articles of female finery seem to predominate, and the latter with fruit of every description in the greatest abundance and at the most moderate price. Most of the goods exposed for sale of foreign manufacture consist of British cutlery, woollen and cotton cloths, wood and tin ware, French wines and silks, Italian olives, sweet-oil, sardines, macaroni, &c., and American patent-leather boots and shoes, soap, candles, Lowell goods, and household wares. Pop. about 12,000, one half of whom are mestizos and mulattoes, and the other half whites, negroes, quadroons, and Indians.

TEHERAN [add.], cap. Persia, about 5000 ft. above sea-level, is in the form of a trapezium, of which the north and south are the longest sides. It is surrounded by mud walls, furnished with towers every fifty or sixty paces; outside is a dry ditch 20 ft. wide. The city has six gates, from which the main streets lead to the bazar in the centre of the town; the smaller streets on the left and right have no thoroughfare. Teheran has too few open spaces within the walls; the best is that called the 'green place,' in front of the entrance to the shah's palace from the inner side of the town. The ruins of Rei, the most remarkable in Persia after those of Persepolis and Pasargarda, lie an hour's walk S.E. from Teheran. Pop. 80,000 in summer, 120,000 in winter.—(Brugsch's *Persien*.)

TEHREE, a tn. India, Bundelcund, cap. territory of same name, called also Oorchha, 180 m. S. by E. Agra. It is a place of considerable size, surrounded by walls, and defended by a fort seated on an adjoining height; and contains the rajah's palace, and a few neat temples built as tombs or cenotaphs. It is described, however, as a wretched place, the only tolerable houses being unoccupied and ruinous.

TEHUANTEPEC, a tn. Mexico, in the newly formed territory, and about 10 m. above the mouth of a river of same name in the Pacific, 205 m. S.S.E. Vera Cruz. It occupies several hills, and consists of two distinct portions—one occupied by whites, composed of substantial stone houses, and containing among other public buildings several churches and a Dominican monastery; and the other, occupied by Indians, who, though dwelling only in cane-huts covered with palm-leaves, have made great progress in civilization, and are at once intelligent and industrious, producing considerable quantities of indigo and cochineal. The harbour, being encumbered by a dangerous bar, is little used. Pop. 9000.

TEJA, or TEZA [add.], a tn. N. Africa, Morocco, gov. and 75 m. E. by N. Fez. It is strongly defended, and is of great strategic importance, because it guards the principal communication between the basins of the Molouia and Sebou, and between Algeria and Fez, and moreover keeps watch over the S. slope of the Rif. Its site is upon a rock overlooking a fertile and well-watered district. Among its public buildings is a handsome mosque. Pop. about 6000.—(Godard.)

TEKENDORF, a tn. Austrian empire, Transylvania, circle and 12 m. S. Bistritz, cap. dist. of same name; with 1750 inhabitants, mostly employed in agriculture and the production of wine.

TEKKULCOTA, a tn. India, presid. Madras, dist. and 28 m. N. Bellary. It contains two stone forts, one in ruins and the other in tolerable condition; and an old temple, with a stone inscription in the Hala Canarese character. The number of houses is about 480.

TEKUT, a mountain, N. Africa, regency and 50 m. S. Tripoli, on the borders of Ghurian. It is in the form of a

cone, the summit of which has an absolute height of 2800 ft., and a hollow in the centre which has every appearance of an ancient crater. The rock, though said not to be pure basalt, is volcanic.

TEKUTSII, a tn. Turkey in Europe, Lower Moldavia, cap. circle of same name, on the Berlat, an affluent of the Sereth, 44 m. N.W. Galatz. It is the seat of a civil and criminal court, and has a normal school and an important trade in corn and wine. Pop. 3000.

TELETZY, a tn. Austrian empire, Bohemia, circle Chrudim, 4 m. W. Politzska; with a Protestant and a R. Catholic church, three mills, and iron-mines.

TELLICHERRY [add.], a tn. India, presid. Madras, dist. Malabar, 90 m. S.S.E. Mangalore, and very nearly the same distance S.W. Seringapatam. It occupies a beautiful site between the sea on the W. and the magnificently wooded heights of the Ghauts on the E., and consists of a town and a fort. The town is built for the most part of unbaked bricks, though some of the wealthier natives use laterite, which abounds in the neighbourhood. The fort stands on a rising ground close to the sea, and about 40 ft. above its level. It is of very limited dimensions, being only 117 yards long by 34 broad. The whole of its N.W. side is occupied by a lofty building, the upper part of which is appropriated to the criminal court and offices, and the lower to the jail, which is calculated to receive 300 prisoners. Other parts of the fort are occupied by the civil and military hospitals. Though of comparatively small size, the place is so healthy that they have never been overcrowded with patients, except during some frightful visitations of cholera. The harbour of Tellicherry is protected by a natural breakwater, which consists of a ledge of rocks extending about 472 yards in length, and running parallel to the shore at the distance of about 614 yards. It is said that within the ledge the depth is sufficient for a vessel of 500 or 600 tons; but meanwhile, till some important improvement takes place, large ships are directed to anchor well out in 7 or 8 fathoms. From not taking this precaution, the *Superb*, 74 guns, was lost here in November, 1781. Tellicherry was long the chief settlement on the Malabar coast, but other ports having come into competition with it, it has greatly declined. Many of the richest natives, however, still reside here; and an active trade is carried on, chiefly in pepper, cardamoms, sandal-wood, ginger, &c. Hyder Ali laid siege to Tellicherry in 1782, but failed to take it. It has an estimated pop. of 20,000.

TELLNITZ, a tn. Austrian empire, Hungary, co. Upper Neutra, 12 m. N. by W. Tyrnau; has a fine castle with English gardens, and 2050 inhabitants, who are mostly weavers and shoemakers, or cultivators of the vine. There is a hermitage in the vicinity.

TELSCHI, a tn. Russia, gov. and 105 m. N.W. Kovno, cap. circle of same name. It is the see of a R. Catholic bishop, and has a church, a circle school, and a charitable endowment. Pop. 3784.

TELTS, a tn. Austrian empire, Transylvania, circle and 22 m. N. by W. Bistritz, on an affluent of the Great Szamos; with a Greek united parish church, and 1570 inhabitants.

TEMASCALTEPEC, a tn. Mexico, state Guerrero, in a beautiful and healthy district, 50 m. N.N.E. Tixtlan. It contains 5000 inhabitants, and though once famous for its wealth, has now a very indifferent appearance.

TENANCINGO, a tn. Mexico, in a beautiful valley at the foot of a mountain, 25 m. S.S.W. Mexico. It possesses a principal church and two chapels, and contains about 6000 inhabitants, who are chiefly employed in agriculture, but partly also in the manufacture of *paños*, which are made of cotton, and form an indispensable article of female dress in Mexico.

TENDUKHERI, a tn. India, Saugor and Nerbudda territory, 50 m. S. Saugor. It stands at the base of a remarkable conical hill composed of trap, and has in its vicinity rich mines of iron ore, which is worked to a considerable extent, and furnished the iron of which a suspension bridge of 200 ft. span was constructed by native workmen at the cantonment of Saugor.

TENES, two nearly contiguous places, N. Africa, Algeria, prov. and about 100 m. W. by S. Algiers:—1, *Old Tenes*, a small filthy place on a stream at the bottom of a bay of the Mediterranean, which forms a very indifferent harbour. It

was once the capital of a petty kingdom, and is still surrounded by ramparts built of large stones, and contains a mosque and a caravanserai.—2, *New Tenes*, founded by the French in 1843, on the site of the Roman *Cartenna*, consists of well-formed streets and handsome houses, has an important weekly cattle-market, and exports considerable quantities of grain. A large part of the adjoining plain has been laid out in vineyards and mulberry plantations, and in the vicinity marble, lead, and copper are found. Pop. about 3300, of whom 2500 are Europeans.

TENG-CHOW-FOO, a tn. China, prov. Shantung, at the S.E. entrance of the Gulf of Pechili. It stands upon a flat raised somewhat abruptly to the height of about 100 ft. above the sea, and is surrounded by battlemented walls which have the form of a parallelogram, and extend for upwards of 3 m. along the shore, terminating on the extreme right in a conical hill crowned by a citadel and joss-house. It is one of the ports opened by the treaty of Tientsin, and is probably destined to become the principal emporium of N. China. The harbour, however, is not on the mainland, but among the islands of the Miau-tan group, lying opposite to it at the distance of about 4 m. At present the harbour is used chiefly by large numbers of junks proceeding with grain for the supply of Peking. The ground in the vicinity of Tengchow is richly cultivated, and rises in a gentle ascent till terminated by lofty, rugged, and barren mountains, apparently granitic.

TEPANTITLAN, a tn. Mexico, state Jalisco, about 50 m. E.N.E. Guadalajara; with 3500 inhabitants, chiefly employed in agriculture.

TEPEACA, or TEPEYACAC, a tn. Mexico, state and 22 m. S.E. Puebla, in a fertile district upwards of 7000 ft. above the sea. It is an ancient place, which has lost much of the importance once belonging to it, but still contains several fine churches, an octagonal tower, a fountain, and a large market-place.

TEPOSCOLULA, a tn. Mexico, state and 60 m. W.N.W. Oajaca, cap. dep. of same name, on a beautiful plain. The chief products are cochineal, cotton, and maize. At one time the culture of silk, introduced by the Dominicans, was extensively carried on in this and the adjoining department of Achintla, but the Indians, provoked by some acts of oppression, revenged themselves by cutting down the whole of the mulberry plantations in a single night. Since then the culture of silk has entirely ceased.

TEREGOVA, a tn. Austrian empire, Banat, Military Frontiers, 68 m. S.E. Temesvar; with a Greek non-united parish church, and 2410 inhabitants. Not far from it is a mountain pass leading into Walachia.

TERENNYE, a tn. Austrian empire, Hungary, co. Neograd, 22 m. E. Balassa-Gyarmath; with a fine castellated mansion, a manufacture of alcohol, and 1550 R. Catholic inhabitants.

TERNOVA, a tn. Austrian empire, Hungary, co. and 25 m. N.E. Arad; with 2113 inhabitants, engaged in agriculture and in rearing live-stock and bees.

TESERO, a tn. Austrian empire, Tyrol, circle Trent; with a large hospital, an institute of the Sisters of Mercy, and 1200 inhabitants, many of whom are basket-makers.

TESSOWA, or TASAWA, a vil. N. Africa, pach. Fezzan, 30 m. N.W. Mourzouk. Seen from a distance, its clay walls and towers have a conspicuous appearance, but the expectations thus raised vanish as soon as it is entered. Still, however, though it has a deserted look, it ranks among the more wealthy and important places of the country.

TESTE, an island, the largest and most conspicuous near the W. limit of the Louisiade Archipelago; lat. 10° 58' S.; lon. 151° 3' E. It is 2½ m. long by ½ m. broad, and is traversed by a ridge of hills through its whole length. It has not been explored, and nothing is known either of its inhabitants or of the depth of water near its shores.

TETTE, or TERE [add.], a tn. Portuguese possessions. S.E. Africa, r. Bank Zambesi, about 170 m. (direct) from its mouth; lat. 16° 7' S.; lon. 33° 37' E. It stands on a succession of low sandstone ridges at the side of the river, which is here 960 yds. wide. Shallow ravines running parallel with the river form the streets, the houses of the Portuguese being built upon the ridges. A wall of stone and mud surrounds it, and the native population live in huts outside. The num-

ber of white inhabitants is small, comprising chiefly the garrison, many of the officers and men of which are said to have been sent out of Portugal 'for their country's good,' and the merchant settlers, who deal in ivory and slaves. The place is under the rule of a Portuguese governor. Droughts are of frequent occurrence, and the crops suffer severely, owing probably to the ranges of hills N. and S., which attract the rain-clouds to themselves. Indigo grows freely, and fills the shallow ravines which form the streets of the town; wheat is sown in May, and in about four months is ready for the sickle; onions and other seeds of plants cultivated by the Portuguese are sown in April. The wheat of Tette is exported as the best grown in the country. A small quantity of cotton of first-rate quality is grown by the natives for the manufacture of a coarse cloth. The Zambesi is in flood twice in the year: first about the end of December or beginning of January; the second, after the river has like the Nile inundated the interior, takes place at Tette in March. A few miles to the N. of Tette coal is found in seams from 4 to 7 ft. in thickness—one measured was found to be 25 ft. thick, and of good quality for steam purposes. It lies under a coarse gray sandstone, which often has the ripple mark and impressions of plants and silicified wood on its surface. Magnetic iron exists in abundance near Tette, and gold also is found in many of the streams to the south. Pop. 4500.

TETUAN [add.], a tn. N. Africa, Morocco, 24 m. S. by W. Ceuta, in a valley of the Little Atlas, and rather less than 1 m. W. of the shores of the Mediterranean. It rises on a slope which descends rapidly eastward towards the sea, and terminates westward in a lofty eminence crowned by its citadel, while at some distance S. the view is closed by a mountain range of rugged appearance, and about 3000 ft. high. To the W. lies the mouth of the valley by which it is approached after crossing a stream on a substantial bridge. On nearing the town the ground becomes covered with gardens, and the ear is delighted by the sound of the waters employed in irrigating them. Shortly Tetuan itself comes fully into view, with its white, lofty, and picturesque walls. On entering the first thing passed is a large garden planted with olive-trees, and forming an appendage to the governor's residence. Beyond is a large public square, imperfectly levelled, where the markets are held. To the left of this square stand the governor's palace and the citadel, and to the right the gate of the *mellah*; while in front is seen the Moorish town, with its narrow tortuous streets, occasionally shaded with trellis-work of vines, and its arched and gloomy bazars. Among the public buildings are about forty mosques, several of them large and well kept, but not a few in a ruinous condition. The manufactures, chiefly of leather and leathern articles, sword-cutlery, and fire-arms, are carried on to a large extent, and are so much in demand as to form a considerable export trade. Tetuan figures a good deal in early Spanish and Moorish history, and attracted notice in the hostilities which broke out between Spain and Morocco. The latter, after sustaining several defeats, the last and most signal of which took place in the vicinity of Tetuan on the 23d of March, 1860, was glad to sue for peace, and obtained it on somewhat onerous conditions. Among others the Emperor of Morocco engaged to pay twenty millions of piastres 'as a just indemnity for the expenses of the war,' and till payment, left Spain in possession of 'the town of Tetuan and the whole of the territory that formed the pachalic of the same name.'—(Godard, *Description et Histoire du Maroc*.)

TEITYUSHI, a tn. Russia, gov. and 60 m. S.S.W. Kazan, cap. circle of same name, on the Volga; with a church, a circle school, a charitable institute, and 2092 inhabitants. There are sulphur and naphtha springs within the circle.

TEUTILA, a tn. Mexico, state and 120 m. N.N.E. Oajaca, on a fertile plateau on the N.E. slope of the mountain range stretching along the N.E. side of the state. It once possessed importance as the capital of the Cuicateks, but now contains only about 150 families, whose chief employment is in agriculture and in weaving cotton covers.

TEWAEWAE, a bay, New Zealand, in the S. of Middle Island or Munster, towards the N.W. entrance of Foveaux Strait. It is formed by Pahlia Point on the E. and Sandy Hill Point on the W., which are about 15 m. apart, is square shaped, and has a depth of 7 m. It is entered at its N.W. and N.E. corners by two rapid barred rivers, which drain a

wild mountain region. The river in the N.E. issues from a large lake in the interior, and is turned to account by the natives, who descend its rapid current on rafts during their excursions to the sea coast. The river in the N.W. seems to form a natural boundary between the open country and the mountains.

THAIRVAUPOOR, a tn. India, presid. Madras, Poodoocottah or Tondiman's Country, on the skirts of a jungle on the road to Trichinopoly, and 2 m. S.W. Poodoocottah. It is a populous place, noted for its weekly market, where cloths of various kinds, including the best in the province, are sold along with other commodities.

THALESAP, or **TOULI-SAP**, a lake, Cambodia, situated at the N. extremity of the kingdom, in about lat. 13° 30' N.; lon. 102° E. It is nearly 100 m. in circumference, and abounds in fish, especially in a large and very delicate kind called *savaï*, which the Cambodians esteem a luxury. Near the shores of this lake are the marvellous ruins of Ongkor-wat, which are described under **ONGKOR** in *Supp.*

THEBEN-NEUDORF, a tn. Austrian empire, Hungary, co. and 7 m. N.W. Presburg, on the railway to Vienna, and on the March, which is here crossed by a long bridge, giving access to a fine imperial palace on the opposite bank. Pop. 1200 Slowacks.

THEINNEE, or **SHANS TSEN-VEE**, cap. of a Shan state tributary to Burmah, 65 m. N.E. Ava, near the frontiers of China, on the highroad to Yunan; has a population of about 3000. The territory, though by no means the most populous, is the largest of the Shan tributary states.

THEISING, a tn. Austrian empire, Bohemia, circle and 22 m. E.N.E. Eger, on the Schnelle; with a deanery church, a castle, an hospital, two breweries, two mills, and 1900 inhabitants.

THERMIA, or **KYNTHOS** [add.], an island, Greece, Cyclades, S.S.E. of the island of Zea. It has an area of 40 geo. sq. m., and has an elevated and rugged surface, intersected by numerous ravines and small valleys. The island is tolerably productive, yielding barley, wine, figs, honey and wax, wool, goat-milk cheese, excellent silk, and some wheat and olives. One main employment of the inhabitants, amounting to about 4000, is in rearing goats and swine, particularly the latter. The principal places are Messaria, the capital, situated on a bay of the E. coast, with a justice-of-peace court, a Hellenist and a parish school, a considerable trade, and a pop. of 1950; Poleceastron, perched on the summit of a steep rock overhanging the sea, and having near its foot the large and sheltered haven of Phikiada; and Syllaka, which contains 1800 inhabitants, and has a parish school and a harbour. Iron is found in several parts of the island.

THERNBERG, a tn. Austrian empire, Lower Austria, on the Schlattenbach, about 35 m. S. by W. Vienna; with a palace of one of the Austrian archdukes, a picture-gallery, a botanical garden, several saw-mills, and 1020 inhabitants.

THOMPSON, a river, British Columbia, Western N. America, an affluent of the Fraser River, which it joins about lat. 50° 12' N.; lon. 121° 25' W. It issues from the Shushap Lake, in about lat. 50° 55' N.; lon. 119° 35' W., flowing S. and then W. through Kamloops Lake, whence it runs westward for some miles, receiving some minor streams, then S., being joined by the Nicolas River, and then W. into the Fraser, after a course of about 125 m., with scenery in its lower part similar to that of some parts of the Fraser—a shelving bank with large boulders. Below the Nicolas it receives the Nicoaween, a small stream in which the first discovery of gold in this region was accidentally made by an Indian, who, stooping to drink, saw a nugget glittering in the water. The district of the Thompson and its affluents is exceedingly beautiful and picturesque, being composed of a succession of hills and valleys, lakes and rivers, with miles of green hills, crowning slopes, and level meadows, all producing an abundant growth of grass. It is of great value as a grazing district, and has a most healthy and agreeable climate. The lakes and streams furnish great facilities for irrigation in dry seasons, so that the cultivation of the land may always be carried on with great success.

THOROLD [add.], a vil. British America, Canada West, co. Welland, on the Welland canal, and on the Great Western and Welland railways, 33 m. S.S.W. Toronto. It

crowns a hill commanding an extensive and beautiful view, in the centre of an old settled and rich agricultural country, and possesses three churches and several schools, manufactures of soap and candles, agricultural implements, tin and iron ware, &c., tanneries, a pottery, a carriage factory, and flour, saw, planing, and cement mills. In the vicinity are building and limestone quarries, which are wrought to a considerable extent. Pop. about 2500.

THUNDER BAY, British America, between lat. 48° 15' and 48° 35' N.; and lon. 89° and 89° 25' W.; forms a portion of the N.W. expansion of Lake Superior, and is one of three large and deep land-locked bays which characterize that part of the coast; its greatest length in a N.E. direction is 32 m., and its breadth about 14 m. The main entrance to it is between the imposing headlands of Thunder Cape, 1350 ft. above the level of the lake, and nearly 2000 ft. above the level of the ocean, and Pie Island, which is 5 m. S.W. of the cape, and attains the height of 850 ft. The depth of water at this entrance is 30 fathoms, and in many parts of the bay varies from 10 to 20 fathoms. On the W. side of the bay, where the Kaministiquia pours its waters into it, stands Fort William, one of the earliest and most important stations of the Hudson's Bay Company. The scenery around the bay, and beyond it on the mainland, where Mackay's Mount, forming the N.E. boundary of a trap range, and having its flanks covered with a heavy growth of hardwood timber, lifts its broad front to the height of 1000 ft., is of the most imposing description.

THUNNESIR, a tn. India, Sirhind, l. bank Sursooty, in a fertile and well-cultivated district abounding in mango groves, 90 m. N. by W. Agra. It stands on a great irregular mound composed of the ruins of a former city, is surrounded by a ruinous wall which was once of considerable height, and is defended by a dilapidated fort with numerous towers. Most of the dwellings are wretched huts scattered among ruins, but the natives in easy circumstances have handsome houses, the walls of which are covered with figures of their monstrous idols painted in gaudy colours. The principal buildings are a Hindoo temple and a ruinous Mussulman tomb of an octagonal form, with a turret at each angle, and a large and very elegant crowning dome of white marble. At a short distance is the Lake of Khoorket, famous for a great legendary battle fought upon its banks, and described in the Mahabarat. It is much visited by Hindoo devotees. The ancient Thunnesir was sacked and destroyed by Mahmood of Ghuznee, whose army, according to Ferishta, 'brought to Ghuznee 200,000 captives and much wealth.'

TIBATI, a tn. Western Africa, on the S.W. frontiers of Adamawa, 190 m. S. by W. Yola. It is situated on a small stream which joins the Faro, and is one of the few places in Adamawa which are regularly walled. Though the residence of a governor, it is inhabited for the most part only by slaves. It boasts of having the richest vegetation in the kingdom.

TIBANIN, the *Toron* or *Turinin* of the Crusaders, a deserted fortress, Palestine, on the summit of an isolated hill near the S. extremity of Lebanon; covers a large extent of ground, and exhibits among its ruins many indications of the labour which the Crusaders must have expended upon it. The only part still entire is the gateway.

TIBURON, an isl. Mexico, in the Gulf of California, off the coast of Sonora, from which it is only separated by a narrow channel, of so dangerous a character that it bears the name of Canal Periglioso. It is nearly in the form of a rectangle, about 30 m. long from N. to S., and 18 broad from E. to W., and is inhabited by Ceris Indians, who subsist by hunting and fishing, but bear a bad name for their predatory propensities.

TIENTSIN, or **TEEN-TSIN** (*heaven's ford*) [add.] This may be considered the river-port of the Chinese capital, with which it has water communication by the Peiho River, a distance of about 120 m. by its windings, and 80 m. by land. At the same time only small junks can reach the discharging place, several miles below the walls of Pekin. Foreign vessels of ordinary burden cannot reach the city of Tientsin, on account of a bar at the entrance to the river, and its crooked navigation. Hence large ships anchor outside in the Ta-koo roadstead, where their cargoes are transhipped to native craft. In addition to these drawbacks to the free navigation of the channel, the river is frozen up from four to

five months in the year, from October until February or March, during which period all external trade is cut off. Nevertheless a large import trade is carried on during the open season, between seven and eight months, chiefly in

A STREET IN TIENTSIN.—From Fleming's *Mantchu Tartary*.

European merchandise, through foreign houses, but principally by native merchants, with the traders who flock to this mart from the interior. It was a knowledge of this traffic which caused this port to be the first named in the famous treaty of Tientsin in 1858, by which eight ports were opened to foreign commerce, in addition to five previously existing. Its proximity to Peking, however, made the concession obnoxious to the Chinese government; and hence it was one of the causes of their resistance to the British and French plenipotentiaries, when they proceeded, in 1860, to put the treaty into effect by force of arms. After the capture of the Ta-koo forts, and the rout of the Tartar army under San-ko-lin-sin, the allied forces occupied Tientsin without opposition, when the inhabitants freely supplied them with provisions, and even volunteered for pay to aid their enemy in his campaign, by carrying commissariat stores. On the ratification of the treaty, with supplementary clauses added at the convention of Peking, in October, 1860, the allies took military possession of Tientsin, until the indemnity money of £4,650,000—equally divided between the British and French—for the cost of the war, should be paid. As this would have taken five years to accomplish, and the Chinese punctually paid the first instalments, the allied troops evacuated Tientsin in April, 1862, after an occupation of eighteen months. According to the terms of the treaty a portion of land adjacent to the city was laid apart for a British settlement, where a branch of the Maritime Customs, a consulate, and numerous warehouses, built by merchants for storing merchandise and produce, have been established. At the opening of the port a considerable import trade was done by English residents, and other foreigners renting the land from them, as it was well known that Tientsin supplied a very large extent of country, where the products of western looms, as well as opium and metals, find a ready market amongst the natives of Pechili, Shan-see, and Southern Mongolia. Goods landed at this port even find their way into Tibet, on the borders of India, from whence and from the Mongol territory are brought wool and camel's hair in return. Large fairs are also held at stated periods, at which a system of barter prevails, gold forming one of the native products given in exchange, to a large extent. In 1861 the trade was so considerable that most of the old-established merchants in the south opened branches, and new traders located themselves in the expectation of an increasing business. In this they were deceived by a serious falling off in 1862, which threatened a total extinction

of commerce, as far as foreigners were concerned. Trade rallied in 1864, when the imports amounted in the aggregate to £2,385,661, of which £1,250,867 passed through the hands of foreigners, and £1,134,794 through native hands. These consisted chiefly of Manchester goods (£437,757), opium (£528,741), silk piece-goods (£316,882), metals, brass buttons, tea, sugar, tobacco, &c. The exports are few, and of small value, gold and silver being the chief medium of exchange. Of the bulky articles the value in 1864 was £570,262, the principal items being cotton (£313,983), tobacco (£44,423), and medicine (£26,735). It is noticeable that in this part of China, tea, instead of being an export, is an import to the value of £126,922. This consists almost entirely of brick tea for the use of the Mongolians, who live in a state of pastoral simplicity. Comparing the year 1865 with 1864, there was a large increase in the imports of manufactured goods and opium; the total amounting in value to £3,950,812, or £1,565,151 more, but this includes imports from Japan. The value of the exports was somewhat less, amounting to £563,987, exclusive of the gold and sycee silver, of which no record was then taken. The returns of shipping since the opening of the port are as follow:—1861, 111 vessels, 26,561 tons; 1862, 87 vessels, 21,921 tons; 1863, 134 vessels, 36,276 tons; 1864, 185 vessels, 45,968 tons; 1865, 209 vessels, 60,049 tons. In 1866 the imports amounted to £5,251,428, of which three-fourths were foreign merchandise; and the exports were produce £851,188, treasure £1,965,666, besides gold unaccounted for.

The foreign population in 1864 comprised 49 persons, of whom 34 were British, 9 German, and 2 American. There are consulates of Britain, France, and Russia; and one mission, English. The population of the walled city and suburbs has been computed in round numbers at 400,000.—(*Chinese Customs Returns*; Rennie, *The British Arms in China and Japan*.)

TIGGER-URTIN, a vil. N. Africa, pach. Fezzan, inhabited by the tribe of Tynykum, about 20 m. W.N.W. Mourzouk. It consists of a number of huts partly grouped and partly detached, some with pointed others with flat roofs, but all of a neat and orderly appearance. Beside camels, which constitute the chief wealth of the inhabitants, and enable them annually to make long and profitable journeys to Soudan, they possess a good many sheep. They must in their way be very devout, for in the morning, when Dr. Barth took a walk round the village, 'all the men were saying their prayers together upon a sandhill on the north side of the principal cluster of cottages.'

TIGRE, or **CONAMBO**, a river, S. America, Ecuador, which rises on the E. slopes of the Andes not far from Chimborazo, enters the territory inhabited by the Zaparos Indians, and taking the S.E. course common to all the affluents of the Amazon coming from Ecuador, joins that river on its left bank, after a course of 150 m. It flows along alluvial banks thickly covered with magnificent forest trees.

TIHANY, a tn. Austrian empire, Hungary, co. Zala, on a peninsula which projects from the N.W. shore of Lake Balaton; with an old abbey, a Benedictine monastery, a dilapidated castle crowning a hill, the remains of fortifications by which King Andreas I., who is buried here, secured the neck of the peninsula; several caverns, and a remarkable echo. Pop. 840.

TILANTONGO, a tn. Mexico, state and about 40 m. W. Oajaca, in a fertile plain. It was once the residence of the great chief who ruled Misteka Alta, and in 1572, when the Dominicans founded a monastery here, contained about 2000 Indian families. At present the number does not exceed 3000.

TILLI, a tn. Western Africa, Hausa States, about 60 m. S.W. Sokoto. It is walled, and entered by two gates, one of them so narrow that a loaded camel cannot pass it. Its market is well supplied, and its inhabitants, numerous and apparently prosperous, possess large herds of cattle, and raise heavy crops of grain.

TILSONBURGH, a vil. British America, Canada West, co. Oxford, on the Big Otter Creek, 72 m. S.W. Toronto; with two churches, a foundry, a tannery, manufactures of sashes, harness, and hardware, saw and grist mills, a pump factory, and a trade in lumber. Pop. about 800.

TILWARA, a tn. India, Rajpootana, state and 65 m. S.W. Joodpoor, l. bank Lonee; is celebrated for its fair, held

annually about the vernal equinox, for the sale of live-stock, chiefly camels, horses, and bullocks, and attended by about 8000 persons.

TIMBA, a tn. S. W. Africa, Kimbunda country, territory Sumbe, at a short distance from the point where the Kupo, Cuvo, or Keve falls into the Atlantic, 100 m. N. Benguela. Though a very unhealthy place it is the residence of an independent chief, and contains 1500 industrious inhabitants, who employ themselves in agriculture and the rearing of cattle, and, living on good terms with the Europeans, carry on some trade with them in gum-copal, wax, and orchil.

TIMBUKTOO [add.], a tn. Western Africa, about 6 m. N. of the principal branch of the Niger; lat. $17^{\circ} 37' N.$; lon. $3^{\circ} 5' W.$ It stands on a flat only a few feet above the average level of the river, and has a circuit of about three miles. Its shape is nearly that of a triangle, of which the base stretches from E. to W. nearly parallel to the river, and the apex points towards the N. At present it is not walled, its former wall, which was destroyed by the Fulbe in the beginning of 1826, not having been replaced. The streets are partly rectangular, partly winding, and all so extremely narrow as scarcely to admit of two horses going abreast. They are all unpaved, and some of them have a sort of gutter in the middle; the large and small market, and a small square in front of a mosque, are almost the only open areas. The dwellings, consisting of about 1000 clay-houses, are for the most part substantially built and in good repair. Among them are many low in height and of limited dimensions, but not a few have a second story in front and a terraced roof, and even make some attempt at architectural ornament. Besides the clay-houses there are about 200 conical mat-huts, a few of them scattered promiscuously over the town; but the far greater part of them constituting its outskirts on the N. and N.E. sides, where rubbish has been accumulated in such quantities, and for so long a period, as to form several conspicuous mounds. The only remarkable public buildings are three

chiefly by the butchers, occupies the site of the royal palace already referred to; the latter, situated on the S. side of the town, between the Jingeré-ber and the Sidi Yahia mosques, covers a considerable space, and furnishes accommodation for a very extensive trade. Unlike Kano, Timbuktoo has few manufactures, and none of the least consequence, except provision or luggage bags, cushions, tobacco-pouches, and some other articles in leather. The chief staples of trade are gold, which, however, if compared with a European standard, seems paltry, the annual average export probably not exceeding £20,000; salt, brought from the mines of Taodenni, which have been worked for upwards of two centuries and a half, and bartered here for cloth manufactured in Kano; and the guro or kola nut, brought from the provinces of Tangrera, Teuté, and Kani, to the S. of Timé. The leading articles of produce exposed for sale in the market are rice and negro-corn, vegetable butter, much used in cookery and as oil for lamps; pepper, ginger, and a small quantity of cotton. Of the caravans which visit Timbuktoo, the most important are those from Marocco, which bring many articles of European manufacture, particularly calico bleached and unbleached, much of it with the name of a Manchester firm printed upon it in Arabic letters; red cloth, coarse coverings, sashes, looking-glasses, and cutlery. Timbuktoo was long regarded in Europe as the centre and capital of a great negro empire. This was a mistake, since it has never acted more than a secondary part. It is undoubtedly of high antiquity, and possessed a kind of rude independence under its Imoshagh or Tawarek founders, till the beginning of the fourteenth century, when Mansa Musa added it to his other conquests, and incorporated it with his kingdom of Melle, which under him attained its greatest extent and prosperity. After a century of subjection Timbuktoo returned to the Tawarek, its original founders, and about the middle of the fifteenth century became a chief entrepôt for the salt brought from the mines of Teghuza. When the Songhay kingdom rose on the ruins of that

GENERAL VIEW OF TIMBUKTOO.—From Barth's Africa.

mosques—the Jingeré-ber, situated near the S. W. extremity of the town; the Sankoré in the N.; and the Sidi Yahia in the S. The Jingeré-ber, or great mosque, begun by Mansa Musa, king of Melle, in 1327, is a large and imposing pile of building, about 270 ft. long by 200 wide, surmounted by two towers, and composed of nine naves of various size and structure; the Sankoré, 120 ft. long by 80 wide, has five naves, and is said to have been built by a wealthy lady; the Sidi Yahia, much less than the other two, was built at the expense of a *cadi* or judge of the town. Of the royal palace of Ma-dugu, in which the kings of Songhay occasionally resided, and the Kasbah, not a trace remains. There are two market-places, a smaller and a larger. The former, now appropriated

of Melle, Timbuktoo passed to it, and received a great accession of wealth and importance in consequence of a general migration of merchants from Walata. When the Songhay kingdom was broken up its conquerors, the Fulbe or Fellatah, became masters of Timbuktoo, allowing it to be governed as before by an officer who had the title of Timbutu-koy, and appears to have been all but nominally independent. At present Timbuktoo, which has suffered much from the rivalry of the Fulbe and Tawarek, who have repeatedly made it their battle-field, is governed in accordance with a compromise which was agreed to in 1846. It pays tribute to the Fulbe or Pulls, who collect it by two *kadis*, the one Fulbe and the other Songhay, but it is not garrisoned by any military force, and it has one or two Songhay magistrates, with the title of *emir*. To these the municipal administration, and more especially the police, properly belong; but placed as they are between rival Fulbe and Tawarek, ever ready to assert their supremacy, and maintain it by any means, however violent, their authority exists more in name than in reality. As recently as 1855 the Fulbe, dissatisfied with the state

of matters in Timbuktoo, undertook a great expedition against it. The regular inhabitants of the seven quarters into which the town is divided are estimated at 13,000; besides these there is a floating population, which, during the busy season, from November to January, may average 5000, and amount occasionally to double that number.

TIMIMUN [add.], a tn. N. Africa, Great Sahara, cap. dist. Gurara; lat. $30^{\circ} 38' N.$; lon. $1^{\circ} 45' W.$ It consists of 500 or 600 houses, which, from the number and size of the gardens attached to them, occupy a very large area, and is surrounded by a dry ditch 12 ft. deep and 7 or 8 ft. wide, and a crenellated wall surmounted by towers or small forts, each capable of containing from thirty to forty combatants.

The entrance to the town is by three principal and five minor gates, and the division of it is into nine distinct quarters, each possessing its own mosque. Of these mosques the largest and most remarkable is that of the district of Amagh-rebour. Besides seven large squares, which are the common resort of all the merchants, the principal streets are appropriated to particular corporations or trades. Thus one called Suk Semen is occupied by the butchers and butter merchants; another, Suk Serrajdin, by the shoemakers and saddlers; a third by the dealers in wool and clothing; a fourth by the dealers in grain and dates; and others in like manner by grocers, tobacco-sellers, jewellers, slave-dealers, &c. The trade, export and import, carried on chiefly with the Tell, the Sahara, Soudan, Tunis, and Morocco, partly by individual travellers and partly by caravans, is very extensive, and includes almost every article of necessity and luxury. Among the articles produced within Timimun itself, one of the most important is gunpowder, the nitre for which is obtained from a salt lake (Sehka) situated some miles to the west. Near the centre of the town a square fortress or kasbah has been erected on a natural mound. It is of small dimensions, but well answers its purpose as a place of security, in which the inhabitants deposit their most valuable effects in the event of a sudden attack by the Berbers. Such attacks are frequent, and notwithstanding the precautions used, have repeatedly had disastrous results. Timimun, long subject only in name to Morocco, has asserted its independence, and is governed by a *djemaa* or council, composed of the principal inhabitants of each quarter, with a president at their head. In administering justice the *djemaa* imposes fines and inflicts bodily punishments, but does not in any instance condemn criminals to death. Even murder is atoned for by a pecuniary fine and banishment for a long or short period.—(Dunas, *Le Grand Desert*.)

TIMOAN, or **TIMUN**, the largest of a chain of islets, Indian Archipelago, lying off the E. coast of the peninsula of Malacca, and belonging to the territory of Pahang. It has a total length of about 12 m. and a breadth of 6 m.; and consists of bold and precipitous masses of trap, which, though not picturesque, have an air of grandeur, some of the peaks rising more than 3000 ft. above the sea. It contains a pop. of not more than 200, and produces nothing for export except edible nests, ratans, and damar.

TINDIRMA, a tn. Western Africa, cap. prov. Kurmina, 70 m. S.S.W. Timbuktoo. It is one of the original seats of the Songhay, and is now inhabited chiefly by the Choqe. During the flourishing period of the Songhay empire it was a favourite royal residence. While thus virtually the capital, it derived additional importance from being the first town in a province which not only furnished Songhay proper with a large number of soldiers, but also supplied it with grain, and was hence designated the King's Provider. At Tindirma the branch of Gundam separates from the main trunk of the river.

TINGE, a tn. Western Africa, Songhay country, 230 m. S.W. Timbuktoo. Its walls, constructed with reeding and projecting angles and occasional semicircles like bastions, give it all the appearance of a fort. The houses, which are flat-roofed, have walls of sun-dried clay, which is formed in regular lumps like stones, and placed in uniform layers, with loose clay between. Thus constructed, their exterior is by no means attractive, but the interior is better, and in some of the houses the accommodation is very ample. The inhabitants, who are Songhay, have resisted all the efforts of the Fellatah to subdue them. They are industrious cultivators and weavers, and seem at the same time disposed to make life pass as pleasantly as possible. Smoking, indulged in alike by males and females, is their great luxury, and dancing their favourite amusement.

TINNEVELLY [add.], a tn. India, presid. Madras, cap. dist. of same name, l. bank Tambrapoorni, opposite to Palnacottah. It is a populous place, containing nearly 20,000 inhabitants, and possessing one large pagoda and several small ones. The intercourse between Tinnevelly and Palnacottah, which during the monsoon was maintained only by a ferry, is now carried on without interruption by means of a substantial bridge of eleven arches, erected by a wealthy and public-spirited native. Cotton is largely cultivated in the vicinity. Many of the inhabitants profess Christianity.

TINO, or **TENOS**, a tn. Greece, nomarch Cyclades, cap. SUPP. IMP. GAZ.—VOL. II.

island of same name, on a small bay of the S.W. coast. It is the see of a R. Catholic bishop, and has two R. Catholic churches, a Franciscan monastery, a Hellenist and a parish school. On its N.E. side stands the famous monastery of Panagia, with a handsome church, which is built of marble, and attracts crowds of pilgrims, particularly at its yearly festival. Pop. 3100.

TINTAGH-ODE, a vil. Western Africa, on the N. frontiers of the country of Air or Asben. It extends in a long line over the low offshoots of a mountain range, and consists of about 100 huts, only a few of them built of stone, and the rest lightly made of grass and the leaves of the date-palm. Small as the place is, it is very important for the intercourse between Central and Northern Africa, as it is inhabited by Merabetin or Anislimen, a class of devotees called by Dr. Barth 'learned and devout men,' whose influence over the wild and predatory hordes of the desert gives a security to commerce which would otherwise be impossible. He adds, however, not very consistently, that the Anislimen, 'though they style themselves "devout men," have not therefore relinquished all concern about the affairs of this world; but, by their ambitious intrigues and warlike proceedings, exercise a great influence upon the affairs of the country.'

TINTELLUST, a vil. Western Africa, in the country of the Kelowi, on the N. frontiers of Asben. It stands in a beautiful mountain valley, and though insignificant in itself, is important as the residence of a powerful chief. Such at least was the state of matters when Dr. Barth first visited the place when proceeding to Agades. Before his return a change had taken place. He was expecting a hospitable reception, and was astonished to learn that Tintellust was completely deserted. The chief, Annar, had suddenly started off and formed a new encampment considerably to the southward in the valley of Tinteganna.

TIRANA, a tn. Turkey in Europe, Albania, eyalet Rum-ili, pleasantly situated near the source of the Ishmi, 19 m. E.N.E. Durazzo. It contains about 4000 inhabitants, who are largely engaged in the culture of the olive.

TIRGOVEST, a tn. Turkey in Europe, Walachia, cap. circle Dumbovitza, on the Yalomitza, 45 m. N.W. Bucharest. It was once the capital of Walachia, and counted 30,000 inhabitants, though it does not now contain above 2600. Its ramparts and larger houses lie in ruins, but it is still the seat of a court of primary jurisdiction, and has a normal school.

TIRKOONUM, a tn. India, presid. Madras, Tondiman's Country, on the edge of a wood rather more than a mile N.W. Poodoocottah. It is a small place, celebrated for its pagoda, which is held in the highest veneration throughout the province, and draws a large revenue from devotees. The inhabitants are chiefly Brahmins.

TIRNOVA, a tn. Turkey in Europe, Bulgaria, eyalet and 140 m. S.E. Widin. It was once the capital of Bulgaria, and towards the end of the last century one of the most active manufacturing towns in Europe, giving employment to about 2000 looms. Though greatly declined, it still contains 6000 houses, with 12,000 inhabitants; is the seat of a kaimakan and a Greek bishop, and has manufactures of coarse woollens, silks, and leather.

TIROOWALLA, a tn. India, presid. Madras, Travancore, cap. dist. of same name, 46 m. S.E. Cochin. It consists of an extensive and tolerably regular town, with a large pagoda near its centre. This pagoda, which is surrounded by a high wall nearly a furlong square, ranks, in respect of magnitude and the veneration in which it is held, next to that of Trivandrum. The other chief buildings are the cotarum, the cutcherry, police-office, custom-house, tobacco depôt, choultry, and a church recently erected by the Syrian Christians to supply the place of one burned down. Tiroowalla had once a considerable trade, but has gradually declined since Changanacherry became the principal mart for this part of the country.

TIRUMPALLANI, a tn. India, presid. Madras, dist. and 6 m. S. Madura, on an elevated plain. It consists of a main street, about $\frac{1}{2}$ m. long and 40 ft. wide, and of four other streets; and contains a celebrated temple, the festivals of which, held twice a year, attract large numbers of devotees. Almost all the inhabitants are Brahmins or persons employed in connection with the temple.

TIRUVADANARI, a vil. India, presid. Madras, dist. and 60 m. E.S.E. Madura. It consists of houses which are tolerably well built, and has a weekly market, but derives its chief claim to notice from its grand Hindoo temple.

TISCHNOWITZ [add.], a tn. Austrian empire, Moravia, circle and 12 m. N.W. Brünn, on the Schwarza. It contains in its suburb Vorkloster a beautiful church in the Basilica form, and has a castle, manufactures of linen and liqueurs, a paper-mill, and dyeworks. Amethysts and fine rock-crystals are found in the vicinity. Pop. including Vorkloster, 4037.

TISHIT, a tn. Western Africa, situated at one extremity of the Moorish district of El Hodh, of which it is the principal place, and near the S. foot of the range of rocky hills called El Kodia. Dates of various quality are its only produce, but it has extensive communication with other districts, deriving supplies from Nyamina, and disposing of them in its market to dealers from Wadan and other places. In its vicinity an inferior kind of salt is obtained. Pop. estimated at 3000.

TISZOLCZ, a tn. Austrian empire, Hungary, co. Gömör, 42 m. N.E. Schemnitz; with manufactures of cloth, iron-works, a paper-mill, a mineral spring, and a trade in cattle and cheese. In the vicinity are remains of a castle built by Matthew Corvinus. Pop. 3135, mostly Lutherans.

TITALIYA, a tn. India, presid. Bengal, dist. and 65 m. N. by W. Dinajepore, l. bank Mahanunda, in a level country about 25 m. S. from the base of the outermost range of the Himalaya. It was once the seat of a British cantonment, which was abandoned on account of its insalubrity. An annual fair recently established here is said to have been eminently successful. Pop. 2500.

TIUMEN [add.], a tn. Russian empire, W. Siberia, gov. and 125 m. S.W. Tobolsk, cap. circle of same name, on an affluent of the Tobol. It is an ancient place, which figures much in the early history of the country, is inclosed by a ditch and a wall flanked by towers, is regularly and handsomely built, extending above 2 m. from E. to W., with a proportional breadth; and contains among its principal buildings ten stone churches, a monastery, a townhouse, a school for the circle, and a market hall. As the principal seat of the W. Siberian traffic, it carries on a very extensive trade. Its chief manufactures are leather, soap, and woollens. Pop. 9336.

TIXTLAN, **TEXTLA**, or **GUERRERO**, a tn. Mexico, cap. state Guerrero, in a narrow valley, 130 m. S. by W. Mexico. Erected into a capital only in 1849, when the state was first formed, it has not yet acquired much importance, and has no buildings either private or public entitled to special notice. The pop. does not exceed 6000.

TLALPUJAHUA [add.], a tn. Mexico, state Mechoacan, 60 m. E.N.E. Morelia, in a beautiful mountain district at the foot of the Cerro or Campo de Gallo, and at the height of 8000 ft. above the sea. It was once a flourishing mining town, and though greatly decayed, still contains 4000 inhabitants. Its principal buildings are a beautiful parish church, several chapels, and a Franciscan monastery. It was here that the pastor Morelles first raised the standard of independence, and commenced the war of liberation.

TLEMEN [add.], a tn. N. Africa, Algeria, prov. and 70 m. S.S.W. Oran, on a plateau which slopes gently towards the N., is watered by the Salsaf and Hanaia, affluents of the Tafna, and rising towards the S. terminates in a mountain range. The natural strength of its position, and its proximity to the frontier of Morocco, have induced the French to make it their chief military station in the W. of Algeria. It is surrounded by a wall with nine gates, and consists properly of three quarters, one containing the Mechouar, or ancient citadel, which has recently been repaired, and contains most of the military establishment; a second in the centre, allotted chiefly to business, and mostly inhabited by Europeans and Jews; and a third, forming the native town properly so called, and presenting the usual characteristic features. The streets, particularly in this quarter, are narrow and tortuous, and the houses, though substantially built, are for the most part only of one story, and from the absence of sufficient apertures for light and air, have a dull comfortless appearance. At present the place cannot be said to possess any modern building deserving of notice, but its ancient grandeur is still attested by numerous mosques, of which thirty-two are counted, and

the remains of aqueducts, baths, and extensive cemeteries. Its manufactures consist of burnouses and other textile fabrics, common and marocco leather, carpets, &c. The new colonists, leaving these to the natives, employ themselves chiefly in agriculture, and have recently erected a number of oil and flour mills. The markets, which are held twice a week, attract great numbers of the inhabitants of the surrounding districts, and produce a considerable amount both of retail and wholesale trade. There is much beautiful and picturesque scenery in the vicinity. A complete forest of olive-trees extends on almost every side; and the Salsaf, in pursuing its course through the valley, forms no fewer than six cascades, the aggregate descent of which is estimated at 900 ft. Tlemcen is said to have been founded by the Zenites, and to have become the capital of an independent kingdom. In the days of its greatest prosperity it had 80,000 inhabitants. Subsequently the possession of it being contested by the Spaniards, the Dey of Algiers, and the Emperor of Morocco, its prosperity was destroyed. Its present pop. is about 13,699, of whom rather more than 2000 are Europeans.

TLUMACZ, a tn. Austrian empire, Galicia, circle and 12 m. E. by S. Stanislaw, cap. dist. of same name; has a large manufactory of sugar from beet-root, and contains 4539 inhabitants.

TODOS LOS SANTOS, or **ESMERALDA**, a lake, Chili, in the E. of prov. Valdivia, surrounded by the Osorno and other volcanic mountains, from which its supplies of water are received. It is about 18 m. long by 6 m. broad, and has its outlet into the Gulf of Reloncavi.

TODOS SANTOS, a tn. Mexico, Lower California, near the S. extremity of the peninsula, 30 m. S.S.E. La Paz. It stands in a valley on a river of same name, and was founded by the Jesuits in the beginning of the 18th century. The buildings of the order are still by far the most important in the place, and consist of a church, a monastery, and several offices, all inclosed by a high wall. The church is crowned by a dome 125 ft. high, and possesses an altar of great beauty. An annual festival here attracts great crowds of people.

TODUPULLY, or **TODUVULLA**, a tn. India, presid. Madras, Travancore, cap. dist. of same name, 55 m. S.E. Cochin. It stands on the banks of the Perryaur, amid grand and romantic scenery, and has a considerable trade, exporting areca-nut and cocoa-nut oils, which find a ready sale on the E. side of the Ghauts, and importing cloth, cumblies, iron, grain, and condiments.

TOKOD, a tn. Austrian empire, Hungary, co. and about 6 m. S. Gran. It is a small place, with only 750 inhabitants, but has several distilleries of brandy, mills, and a very valuable coal-mine. The Turks were defeated here by the Imperialists in 1685.

TOLLOGO, a vil. E. Africa, in a valley of same name, 37 m. S.E. Gondokoro. The valley is extremely picturesque. An abrupt wall of gray granite rises on the E. side of it to a height of about 1000 ft.; from this perpendicular wall huge blocks have fallen, strewing the base with a confused mass of granite lumps, 10 to 40 ft. in diameter, and among these natural fortresses are numerous villages, of which Tollogo is the chief. The bottom of the valley is a meadow, in which enormous fig-trees grow by the side of a sluggish and in some places stagnant brook. The valley is not more than half a mile wide, and is also walled in by mountains on the W., thus having the appearance of a vast street.

TOLTEN, a river, Chili, which issues from Lake Villarica, on the N. frontiers of Valdivia, flows circuitously W. across the Indian territory of Araucania, and falls into the Pacific. It has never been explored, but travellers between Concepcion and Valdivia state that at 15 m. from its mouth it has a breadth of 150 yards and sufficient depth for steam-boats. The bar at its mouth is the great obstacle to its navigation.

TOLUCA [add.], a tn. Mexico, 30 m. W.S.W. of the capital, in a beautiful valley, which is terminated by lofty volcanic mountains, partly covered with snow. It stands at the height of 8500 ft. above the sea, on the W. side of the mountain of same name, which attains in its culminating point, Pico del Frayle, a height of about 15,000 ft. The town is tolerably well built in spacious paved streets, and a public square with fine porticoes, and possesses several handsome churches, but is a dull lifeless place, with no appearance

of activity except on festival or market days. At one period it was the capital of the province of Mexico, and attained a high degree of prosperity, possessing several important branches of industry, and carrying on a considerable trade, but with the loss of its political status a rapid decline commenced, and grass is now growing in the streets. The market is, however, much frequented and well supplied, particularly with fruits, both of the temperate and the torrid zone. Many of the inhabitants of the valley who supply the market are Aztecs and Indians of the Otomite tribe. The latter are in a very low state of civilization, and much addicted to the use of intoxicating drinks. Pop. about 10,000.

TOMASOVAC, a tn. Austrian empire, German Banat Military Frontier, on the Temes, about 30 m. N. by E. Belgrade; with a Greek non-united parish church, and 2680 inhabitants.

TONDI [add.], a tn. India, presid. Madras, on Palk's Strait, dist. and 62 m. E.S.E. Madura. It consists of narrow and irregular streets and low-built houses, but carries on an active trade with Colombo and other ports, exporting grain, tamarinds, long cloths, and chanks. The cloths are the produce of its own looms, and the chanks are obtained in great abundance by its own fishermen.

TONG-CHOO, a tn. China, prov. Pechele, on an affluent of the Peiho, 12 m. E. Pekin. Its principal streets are straight, and paved with large square stones, and it carries on a very extensive trade. Among its most conspicuous buildings are granaries and salt magazines. One branch of trade of considerable importance is the transmission of the fry or ova of fish in bottles to all parts of the interior.

TONGONI, a vil. on the E. coast of Africa, not far from the mouth of the Pangani. Though now a paltry place, it occupies the site of a ruined city. Remains of houses everywhere cumber the ground, and old mosques, spacious and well built, with columns of neatly cut coralline blocks and elaborate arches, are still seen; while an extensive cemetery, containing many tombs of rather costly erection, bears testimony both to the number and wealth of the inhabitants.

TONI, a tn. Western Africa, Hausa States, prov. Zegzeg, 170 m. S. by W. Kano. It is a large place, surrounded by a wall, and stands in a well-cultivated and populous district.

TONK, a tn. India, Rajpootana, within the territory granted to Ameer Khan, r. bank Bunass, 152 m. S.W. Agra. It is a place of considerable size, surrounded by a wall, and defended by a mud fort, and rose to importance under Ameer Khan, who fixed his residence about a mile to the S. of it, and embellished it with various public buildings. The revenue of dist. Tonk is about £20,000.

TONS, two rivers, India:—1, *South-western Tons*, rises in the Saugor and Nerbudda territory, in lat. 24° N.; lon. 80° 30' E., and flowing through a ravine in the Kutra range, plunges over a precipice 200 ft. in height. Thereafter it flows N.E., enters the valley of the Ganges, and joins this river on the right, about 20 m. below Allahabad. Its whole course is about 165 m.—2, *North-eastern Tons*, a large offset of the Gogra, leaves this river on the right, about 10 m. above the town of Oude, flows S.E. past Azimgurh, and uniting with the Surjoo, falls into the Ganges on the left, after a total course of 240 m. It is navigable up to Azimgurh, a distance of 120 m.

TONSE, or **SUPIN**, a river, India, which rises at the N. of the Jumnotri Peaks in Gurwhal, not far from the source of the Jumna. It issues from a snow-bed 12,784 ft. above the sea, and descends so rapidly as to be almost a continuous cascade. Its course is S.W. till it receives the Pabur, when it changes its course to S., which it continues, but very tortuously, to its junction with the Jumna, in lat. 30° 30' N.; lon. 77° 53' E. Its total course is about 100 m.; its descent is at the enormous rate of 100 ft. per mile.

TOO-CHEAOU, a tn. China, prov. Nganhoei, on the N. or left bank of the Yang-tze-kiang, about 110 m. above Nankin. It stands nearly a mile from the river, and is surrounded by a white wall, and defended by fortifications, both so recent that they have in all probability been erected by the rebels after the place fell into their hands. The mass of ruins and debris lying between the present wall and the river doubtless formed part of the town before ruin overtook it.

TOONG-LEW, a tn. China, on the N. frontiers of Kiangsee, on the r. bank of the Yang-tze-kiang, about 32 m. S.

Ngan-king. It is beautifully situated, is surrounded by a wall which, dipping and rising over the undulating ground, finally descends to a lake. This lake, which half encircles the town, is fringed with trees, and adds much to the beauty of the site. The most conspicuous objects are two pagodas overtopping the houses. The one of eight stories stands close to the shore; the other on an eminence some distance inland. Toong-lew, though it was taken by the rebels, escaped better than most of the other towns which have experienced the same disaster. Whole acres of charred ruins attest their destructive propensities; but for some cause they held it only for a short time, and departed before they had completed the work of destruction. Part of it accordingly still remains entire, and judging from the multitudes who flocked to the shore to gaze at the British ships of war as they passed, must be densely peopled.

TOPARE, the modern name of the ancient ruined city Pollanarrua, Ceylon, 53 m. N.E. Kandy. It was a place of importance at a very early period, and in the eighth century became the favourite residence of the kings of Ceylon. In 1023 it was captured and sacked by invaders from the south of India, now generally designated by the name of Malabars or Tamils. It recovered this disaster, and attained its greatest magnificence in the latter part of the twelfth century, under the renowned sovereign Prakrama Bahu I. In his time, according to the Mahawanso, a metrical chronicle containing a dynastic history of Ceylon from B.C. 543 to A.D. 1758, Pollanarrua was about 30 m. long by 4 m. broad, surrounded by a wall, and containing within its inclosure a citadel, a palace, and numerous temples, hospitals, and schools. A second irruption of the Tamils proved still more disastrous than the first, and the native sovereigns, compelled to retire to the south, left their capital in ruins. These are still the most remarkable in Ceylon, not only from the number and dimensions, but from the superior architecture, of the buildings. Among others may be mentioned the remains of Prakrama's palace, the Dulada Malagawa, in which the sacred tooth was enshrined; the Rankot and Jayta-wana-rama dagobas, and the Galwihara, a rock-temple hollowed in the face of a granite cliff. These ruins form such enormous mounds of brickwork, that when viewed from a distance they form as striking objects as the hills among which they stand.

TOPEKA, a tn. U. States, cap. Kansas, on r. bank Kansas River, and on the Union Pacific railway, 48 m. W.S.W. Leavenworth. It is memorable as the place at which the first free-state constitution of Kansas was formed. Pop. (1865), 2400.

TOPLICE, a tn. Austrian empire, kingdom of Croatia and Slavonia, co. and 8 m. S.S.E. Warasdin; with glass-works, much-frequented thermal springs, which were known to the Romans, and 950 inhabitants.

TORBAY, British America, on the S.E. shore of Nova Scotia, is a large expanse of water, about 9 m. long from N.E. to S.W., and 4 m. across from S.E. to N.W. At its N.E. extremity a very narrow isthmus separates it from Whitehaven Harbour. On its N.W. shore are three small harbours, affording secure anchorage for small vessels, and each possessing a wooden church. At one of them, called Molasses Harbour, the settlers are Acadians. At these settlements the drift boulder clay is cultivated sufficiently to afford pasture to cattle, but immediately behind barren granite hills rise to the height of 360 ft., and give the whole district a somewhat desolate aspect. Whitehaven Harbour, immediately adjoining, is secure, and has depth and capacity sufficient for a fleet of the largest ships, but the narrowness and indirectness of the channel, and a large number of sunken rocks, make access dangerous, unless by day and in clear weather.

TORCEGNO, a tn. Austrian empire, Tyrol, circle and about 16 m. E. by N. Trent; with a remarkable parish church, and 1400 inhabitants. The vicinity is famous for its artichokes.

TORISZKA, a tn. Austrian empire, Hungary, co. Zips, 5 m. N.E. Leutschau; with a saw-mill, a brewery, a distillery, and 1200 inhabitants.

TORJA, a tn. Austrian empire, Transylvania, circle and 30 m. N.E. Kronstadt. It consists properly of two distinct places situated opposite to each other, and has in its vicinity a volcanic mountain, with veins of sulphur, and sulphur and alum springs. Pop. 2130.

TORNOCZ, a tn. Austrian empire, Hungary, co. Lower Neutra, 38 m. E. Presburg, on the Waag and on the railway to Pesth. It contains 1100 inhabitants, who have several mills, but are engaged chiefly in rearing sheep.

TORREBELVICINO, a tn. Italy, Venetia, prov. and 18 m. W.N.W. Vicenza; with a parish church, a mineral spring, a paper mill, and 2085 inhabitants.

TORRI, a tn. Italy, Venetia, prov. and 16 m. N.W. Verona. It is surrounded by old walls, and has a castle, built in 1383, but still in good repair; a harbour somewhat silted up, and a quarry of beautiful yellow and red marble. The surrounding hills are covered with vineyards, oliveyards, and fig-trees.

TORSHOK, or **TORJOK**, a tn. Russia, gov. and 40 m. E.N.E. Tver, cap. circle of same name, on the Tyerza. It is a handsome town, with thirty churches, one of them an elegant cathedral; a monastery, secular and religious schools for the circle and the parish, numerous tanneries and mills, potteries, tileworks, vinegar works, manufactures of wax and tallow candles, shoes, gloves, &c. The trade in these articles and in grain is very extensive. Pop. 12,137.

TÖRZBURG, a tn. Austrian empire, Transylvania, circle and 11 m. S.W. Kronstadt, on the Törz, at the entrance of the pass of same name leading across the mountains into Walachia. It is a large straggling place, with 8390 inhabitants, chiefly from Walachia; and the fine old castle and fort of Dietrichstein, seated on a lofty limestone rock.

TOSAYE, a vil. Central Africa, 180 m. E. Timbuktoo, on the Niger, which here runs with a rapid current between steep banks, and is of such a depth that the natives have never found the bottom. The locality is very important, on account of the intercourse between the desert and the province of Libtako, the Arabs of Azawabad preferring to cross at this point, because their camels and cattle have a comparatively short distance to swim.

TOSZEG, a tn. Austrian empire, Hungary, co. and 4 m. S. Szolnok, on the Theiss; with 2839 inhabitants, chiefly employed in agriculture, the rearing of cattle, fishing, and cutting cane.

TOTO, a tn. Western Africa, Hausa States, 40 m. N. of the right bank of the Benuwe, and 240 m. S. by W. Kano. According to native information it is of immense size, and densely peopled. On three sides it is surrounded by a clay wall, and on the fourth side protected by a woody *faddama* or valley. It is divided into two quarters—an eastern, inhabited by natives, who speak a distinct language, and are pagans; and a western, inhabited by Mahometans from Katsena, Kano, and Bornou, who have a chief of their own. Toto is engaged in a perpetual and almost hopeless struggle with the conquering Fellatah. Other places in the same quarter have already yielded, and it will probably be obliged to follow.

TOTONTEPEC, a tn. Mexico, state and 40 m. E.N.E. Oajaca, on an elevated plateau at the foot of Mount Zempualtepec. It has a handsome parish church, which belonged to a ruined Dominican monastery; and contains about 1200 inhabitants.

TOURKINSK, a tn. Russian empire, E. Siberia, gov. and 175 m. N.E. Irkutsk, on the E. shore of Lake Baikal. It is famous for its thermal springs, which have made it the Siberian Buxton. Many families from Irkutsk spend their summers here, and visitors come from a distance of more than 1000 m. The springs of Tourkinsk belong to a series which extended along the E. shore of the lake as far as Ust Bargouzin. Some of them are so hot as to scald the hand if placed in them. The presence of volcanic agency is attested by the frequency of earthquakes, and also an extinct crater, from which vast quantities of lava have flowed.

TOUSTE, a tn. Austrian empire, Galicia, circle and 29 m. S.E. Tarnopol; with manufactures of rosoglio, and 2694 inhabitants. In the vicinity, near the Russian frontier, there is a hermitage on a steep hill, with several remarkable passages and caverns.

TOVOS, a tn. Austrian empire, Transylvania, circle and 10 m. N. by E. Karlsburg, cap. dist. of same name; with several fine mansions, an evangelical, a R. Catholic, and a Greek united parish church, and 1750 inhabitants.

TRAMIN, a tn. Austrian empire, Tyrol, circle Brixen, r. bank Etsch or Adige, 20 m. N. Trent; with an institute of

the Sisters of Mercy, and a considerable trade in wine. On an isolated eminence in the vicinity are the ruins of a church, containing frescoes of the painter Egnilt of St. Paul's, with the date of 1440. Pop. 1400.

TRANQUE, an isl. S. America, Chili, off the S. coast of the island of Chiloe, about lat. 43° 17' 10" S.; lon. 74° 26' W. It is 13 m. long by about 3 m. broad, is traversed by a ridge which attains the height of 300 ft., and is well wooded, but appears to be thinly inhabited. At its N.W. point there is a bay with tolerable anchorage. The channel between this island and Quelan Point, at the S. extremity of Chiloe, is about a mile wide; in neap tides the ebb runs westward through this channel at the rate of 2 knots an hour.

TRAUERSDORF, a tn. Austrian empire, Hungary, co. and 9 m. N. Oedenburg, on the Wulka; with 1160 inhabitants, who make tobacco pipes, and trade in wine.

TRECHOVA, a tn. Austrian empire, Hungary, co. and 22 m. E.N.E. Trenesiu; with limestone quarries, extensive forests, and 3158 inhabitants.

TREBINYE, a tn. Turkey in Europe, Bosnia, 16 m. E.N.E. Ragusa. It stands on a well-watered plain at the foot of Mount Gliwa, and consists of the town proper and a suburb. The former, which was once the capital of an independent principality, is surrounded by a dilapidated wall and a ditch, and contains about fifty dirty half-ruinous houses, occupied exclusively by Mahometans, and placed in streets so narrow that the projecting fronts above almost meet. Outside the wall is a bazar or market-hall, containing about seventy shops. The suburb contains several Christian families and a number of gipsies, who have professedly embraced Mahometanism. In the surrounding district Christians are numerous, but in the town and its environs Mussulmans greatly predominate, Trebinje being considered the capital of Islamism in E. Herzegovina.

TREBNITZ, a tn. Austrian empire, Bohemia, circle and about 12 m. S.W. Leitmeritz; with an old parish church, an hospital for the poor, and a brewery. Field-marshal Radetzky was born here. Pop. 1100.

TREGH, a tn. Austrian empire, Banat, circle and 12 m. S. Neusatz; with extensive mulberry plantations, a trade in wine and silk, and 4374 inhabitants.

TREGNAGO, a tn. Italy, Venetia, prov. and 8 m. N.E. Verona, cap. dist. of same name, on the Proguo, and on Mounts Contro and Garzon; with a court of justice, a parish church, an old castle, and 2575 inhabitants.

TREVENZUOLO, a tn. Italy, Venetia, prov. and 8 m. S S.W. Verona, on the Tion; with a parish church, containing a fine Magdalen by Ridolfi.

TRIEBITZ, a tn. Austrian empire, Bohemia, circle Chrudim, 4 m. from Rudelsdorf, and a station on the Vienna, Olmutz, and Prague railway; with a church, two mills, and 1100 inhabitants.

TRIESCH, a tn. Austrian empire, Moravia, circle and 7 m. S. Iglau. It is divided into two parts by a sheet of water, which is crossed by a bridge; has an ancient parish church, a synagogue, a castle with beautiful gardens, manufactures of linen and matches, cattle and other yearly markets, and contains 4500 inhabitants, of whom nearly 700 are Jews.

TRIKALA, a tn. Turkey in Europe, eyalet and 90 m. S.W. Saloniki, on the slope of a hill crowned by the ruins of an ancient castle. The market is most abundantly supplied with fruit from the gardens of the vicinity, and cotton is extensively grown in the district. It is the seat of a Turkish governor and of a Greek archbishop, and contains 10,000 inhabitants, mostly Greeks, with a mixture of Zingari and Albanians.

TRINGANO, or **TRINGANU** [add.], a tn. Malacca peninsula, cap. native state of same name, on a small river, not far from its mouth in the China Sea. It has a computed pop. of 15,000 to 20,000, of whom about 600 are Chinese settlers. The state, situated between Kalantan on the N., Pahang on the S., and Perak on the W., is claimed by the Siamese as one of their hereditary privileges, but at present asserts and successfully maintains its independence. It is mostly a continuous jungle, and produces nothing for export, except a little gold, some black pepper, and some tin. The last, which is its staple, amounts annually to about 480 tons. Pop. about 37,500.

TRINOMALEE [add.], a tn. India, presid. and 103 m. S.W. Madras, dist. S. Arcot, at the foot of a hill crowned by an old fort. It is a large and tolerably well-built place, possessed of some historical interest from the figure which it makes in the wars of the Carnatic. At present its chief attraction to the natives is its large and beautiful pagoda, which is situated near the E. base of the hill, and has an annual festival, which is said to be attended by nearly 80,000 persons. During the festival a large cattle fair is held.

TRIPASSOOR, a tn. India, presid. and 26 m. W. by N. Madras, dist. Chingleput. It is a decayed place, with the remains of an old stone fort, three churches, one of them R. Catholic, and two Protestant; a school, and a large Hindoo temple. It was once a station for cadets, but the only Europeans now inhabiting it are non-commissioned officers and privates who, on being pensioned, prefer remaining in India. For their use a number of cottages has been erected. There is also a bungalow for travellers.

TRIPETTY, a tn. India, presid. and 70 m. N.W. Madras, dist. N. Arcot, in a valley near the centre of a long range of hills running almost N. and S. The only celebrity which it still possesses, and has possessed from early times, is derived from a pagoda, which is situated at the distance of about 8 m. among the hills, and appears to be more venerated than any other Hindoo temple south of the Kistna. The access to it is by a path leading up to the hill on which it stands, through three gopurams or portals. Hindoos only are allowed to enter, and so strict a watch is kept against profanation, that neither Christian nor Mahometan has ever gained admittance. It is known, however, that the pagoda is constructed of cut granite, and in a costly style. The idol is an erect stone figure, about 7 ft. high, with four arms, and is meant to represent Vishnu. The offerings made to it are of every conceivable diversity, and must in the aggregate amount to a very large value. They consist, among others, of lamps, and various other articles in gold, silver, jewels, bags of rupees, single coins of all sorts, spices, &c. Besides these sources of revenue there are many lands and villages held by the great officers of the temple by hereditary right. At one time the British government managed the temple, providing for its customary services out of the revenues and offerings, and pocketing the surplus. This abomination was finally abolished in 1843.

TRIVADY, a tn. India, presid. and 105 m. S.S.W. Madras, dist. S. Arcot, on the Guddelum. It is a small place, possessed of historical interest in consequence of the figure which it makes in the wars between the British and the French when contending for supremacy in India. Its pagoda having been fortified stood several sieges, and was repeatedly the scene of desperate struggles.

TRIVICARY, a vil. India, presid. Madras, dist. S. Arcot, on the Arriancoopum or Villanore, about 13 m. W.N.W. Pondicherry. It now consists only of a few scattered huts, but the remains in its vicinity prove that it occupies the site of a much more important place, while it has still its own claim to notice in the remarkable fossils found in its vicinity. They consist chiefly of large silicified trees, which are often finely veined and coloured, and so strongly resemble cornelian and agate, that they are made into beads, bracelets, and other ornaments.

TROIS PISTOLES, a vil. British America, Canada East, co. Temiscouata, r. bank St. Lawrence, 120 m. N.E. Quebec. It is a large and flourishing place, with a R. Catholic church, an academy of the Frères du Saint Viateur, several industrial establishments, and an extensive trade in lumber. Pop. about 3000.

TROITSKA-SELO, a tn. Russian empire, E. Siberia, gov. Irkutsk, near the frontiers of China, 3 m. N. Kiachta. It stands among hills on a plateau about 2500 ft. above the sea, and is a place of great commercial activity, containing the custom-house and the warehouses, where all the merchandise, whether from Russia or China, must be deposited under government custody, and where the sale or barter of the different commodities is carried on.

TRONA, one of a series of natron lakes in Fezzan, N. Africa, N.W. Murzuk. They are all situated along the N. side of the Wadi Shergi and Wadi Garbi. Oudney and Clapperton represented that they were shut up by inaccessible sandhills; but, though Vogel, by actually visiting them,

proved this report to be inaccurate, he found the desert in which they are situated to be of 'the most terrific character—a labyrinth of hills, undulations, valleys, precipices—presenting not one square yard of level ground, formed entirely of drifting sand, in which the camels sank up to their bellies. For carrying my tent and cooking apparatus, together with two water-pipes, in all about 350 lbs. weight, I required no less than five camels, and nevertheless performed only 9½ m. in eighteen hours.' As according to native report the Trona Lakes, particularly the most easterly, called Bahr-el-Dud, were bottomless, and every living being that ventured in inevitably perished, Vogel's attendants were horrified when they saw him jump in. His object was to ascertain the depth, which proved to be only 24 ft. at the greatest, and to average not more than 18 ft. The Bahr-el-Dud is remarkable for containing red worms, which are caught with cotton nets, in which are hauled up at the same time innumerable flies and other insects, with which the lake is filled. The whole is mixed with a red kind of date into a paste, which has a similar smell and taste to salt herring, and is used by the inhabitants of Fezzan in the place of meat along with bazeen.

TROPPEAU [add.], a tn. Austrian empire, cap. duchy Silesia, pleasantly situated r. bank Oppa, near the Prussian frontiers, and on a branch communicating with the Vienna and Oderberg railway, 78 m. N.E. Briinn. It is well built, containing in particular two very handsome squares, and consists of an inner town surrounded by walls, and of three suburbs. The principal buildings and establishments are the palace of the Prince of Liechtenstein, the high-church, an ancient structure of basalt, with two modern towers, one of them unfinished; a beautiful church which belonged to the Jesuits, a Minorite convent with a fine church, a nunnery, an upper gymnasium, with a museum and a library of 20,000 volumes; a high-school and other educational institutes, an old and spacious town-house, a state-house, an elegant tower rising conspicuously in the centre of the town, a handsome guardhouse, a theatre, three hospitals and infirmaries, an institute for the poor, an asylum for orphan children, a beautiful garden called the Kiosk, and a large public park. The manufactures consist chiefly of woollen and linen cloth, beet-root sugar, beer, liqueurs, paper, and brick and tile works. The trade, particularly in woollen and linen goods, is extensive, and there are several large wool, cattle, and other yearly markets. A congress of sovereigns was held here in 1820. Pop. 13,861.

TRUMAU, a vil. Austrian empire, Lower Austria, on the Triesting; with 1700 inhabitants, and a large cotton mill.

TRUSKAWIEC, a tn. Austrian empire, Galicia, circle and about 20 m. S.E. Sambor. It has mineral springs, of which the principal ingredients are sulphur and naphtha. There are several springs of rock-oil in the vicinity. Pop. 900.

TSAE-SHIH-KE, a tn. China, on the Yang-tze-kiang, near the frontiers of Kiangsoo and Nganhoei, between Nankin and Taiping. It stands on a low eminence in a recess formed by hills, and is surrounded by a wall, and defended by some circular stone redoubts. When Lord Elgin passed up the river it was in the hands of the insurgents, who, totally unprovoked, and as if by way of bravado, first fired off a number of gingals at the British vessels, but from such a distance that no harm could be done, and then shot a ball from one of their brass guns. The insult of the gingals was treated with contempt, but the firing of the ball provoked a retaliation, during which a Moorsom shell dropped into the centre of the fort, and sent the whole erection into the air.

TSCHERKOWITZ, a tn. Austrian empire, Moravia, circle and about 13 m. S.W. Hradisch; with an ancient castle, and 2653 inhabitants.

TSCHERNEMBL, a tn. Austrian empire, duchy Carniola, on a height above a small stream which joins the Kulpa, an affluent of the Save, 47 m. S.E. Laybacl. It has a castle, some trade in wine and fruit, and 1300 inhabitants.

TSCHERNOWITZ, a tn. Austrian empire, Bohemia, circle and 9 m. E.S.E. Tabor; with a deanery church, a castle, a townhouse, a brewery, and five mills. Pop. 1700.

TSCHUPRIA, or **TYUPRIYA**, a tn. Turkey in Europe, Servia, cap. circle of same name, at the confluence of the Ravanitza with the Morava, 71 m. S.S.E. Belgrade. It is the seat of a civil and criminal court, and has a new church, a school, and important yearly markets. Pop. 2000.

TSE-KEE, a tn. China, prov. Chekiang, near one of the branches of the river, and 15 m. N.W. of the town of Ningpo. It is partly inclosed by a canal or moat, and surrounded by walls, which have a circuit of about 3 m. The space within being only partially built upon, contains a number of gardens, and even cultivated fields. It is a very ancient place, beautifully situated on a flat plain surrounded by hills, which rise above it with heights varying from 300 to 1000 ft., and are in many instances crowned with temples, which, viewed from below, have a most imposing appearance. The streets are narrow, and the shops generally have a poor appearance, but the market is remarkably well supplied with vegetables, fruit, fish, pork, &c. Many of the wealthiest inhabitants of this part of China reside in Tse-kee. Their houses, however, though the best in the place, make no appearance externally, in consequence of the custom of surrounding them with high walls, so that they are not visible from the street. Outside the walls, beyond the N. gate, there is a pretty lake, crossed by a causeway with arches and alcoves, and leading to a range of temples at the base of the hills. 'A side view of this causeway,' says Mr. Fortune, 'with its round-arched bridge and alcove, the smooth water of the lake, the rich vegetation of its banks, and the temples at the foot of the hills, would form a lovely picture worthy of the pencil of our first European artists—a more fairy-like spot it would be most difficult to find.'

TSHERNETZ, a tn. Turkey in Europe, l. bank Danube, on the W. frontiers of Walachia, cap. circle Mehedinitz, 42 m. N.N.W. Widin. It is the seat of a court of primary jurisdiction, has a church and a normal school, and was once a place of importance, though now reduced to one long winding street. Pop. 3170.

TSIEN-TANG, a river, China, formed by two branches at the town of Yen-chow, in prov. Chekiang, flows circuitously first N. past the town of Hang-choo-foo, then E.N.E., and falls into a broad estuary of same name, called also Hang-chu Bay, after a course of about 120 m. below Yen-chow. Of the two branches by which it is formed, the more southerly has its sources among the Bohea Mountains on the N. frontiers of Fokien, and among some hills N.W. of the town of Chang-shan, where the three provinces of Chekiang, Kiangsee, and Nganhoei meet. The other branch rises in the N.W. among the green-tea hills of Hoi-choo. Both branches are navigable by country flat-bottomed boats for about 150 m. above Yen-chow. There is a bore in the Tsientang so remarkable that, according to a Chinese proverb, it is one of the three wonders of the world. Dr. Macgowan, medical missionary at Ningpo, who witnessed it at Hang-choo-foo, thus describes it, 'Loud shouting from the fleet announced the appearance of the flood, which seemed like a glistening white cable stretched athwart the river at its mouth as far down as the eye could reach. Its noise, compared by Chinese poets to that of thunder, speedily drowned that of the boatsmen, and as it advanced with prodigious velocity—at the rate, I should judge, of 25 m. an hour—it assumed the appearance of an alabaster wall, or rather of a cataract four or five miles across and about 30 ft. high, moving bodily onward.' It seemed as if the boats, which, in anticipation of its approach had moved out into the centre of the stream, would inevitably be swamped, but by keeping their prows toward the wave they all vaulted, as it were, to the summit with perfect safety.

TSUSIMA [add.], an isl. in the Strait of Corea, between Japan and the Corea, is about 35 m. long from N. to S., and from 8 to 10 m. broad. A singular two-pointed peak rises from the centre to a height of 1760 ft., and another mountain to the southward has an elevation of about 2500 ft., the highest in the island. The S. part of the island consists of two broad valleys, divided by a spur covered with timber, and partially inhabited and cultivated; the higher lands are covered with virgin forest. The E. shore is sparsely inhabited, and presents an abrupt and rocky coast line. On the western side a deep sound almost bisects the island, the northern and larger division being connected with the southern by a low sandy spit, dry at low-water. About the sound a reticulation of deep channels, dividing the hilly country in all directions, forms a labyrinth of waters; the scenery, instead of being wild and rugged, is soft and rounded, massive foliage everywhere drooping into the water. The shores are so steep-to,

that large ships might be moored in safety to the trees on the banks. A few fishermen's huts line the margin of the bays here and there; but for the most part the hills are clothed with forests of evergreen oak, sycamore, maple, cypresses, and conifers of every variety. The island possesses wild cats and deer, and pheasants of species unknown in Japan. A road connects Tsusima Sound with Tatchio, the capital, about 9 m. distant. The prince, who is absolute proprietor and independent chief, maintains a garrison of 300 men at Chosan, a town in the Corea, with which he enjoys a monopoly of the trade, consisting of tiger skins, hides, rice, silver, and gold. Pop. of Tsusima about 30,000.

TUCUMAN, a tn. La Plata, cap. prov. of same name, beautifully situated 2490 ft. above the sea, on a plain covered with orange-trees and gardens at the foot of a lofty mountain range; lat. 26° 51' S.; lon. 66° W. It is built with great regularity in somewhat narrow streets, and contains a number of houses of a more elegant appearance than is usual in a provincial town. Most of the better description are of two stories, and open from the interior into spacious *patios* or courts. The principal public buildings are the high-church, which has two lofty towers fronting the plaza and a lofty dome crowning its centre nave; several other churches and chapels, a Franciscan and a Dominican monastery, a newly erected *cabildo*, with a circular front and a tower terminating in a spire; the college of San Miguel, the Casa de Jesus, a kind of retreat for penitents, and another religious building which bears the name of the Pantheon. The chief industrial establishments are tanneries and leather factories, sugar-works, and brandy distilleries. The manufacture of saddle covers, known by the name of *pellones*, woven and finished entirely by women, is famous. Tucuman early took an important part in the war with Spain, and was selected as the place of meeting for the congress which, on the 9th July, 1816, issued the declaration of independence. Pop. about 8000.

TULA, a tn. Mexico, cap. dist. and 40 m. N.N.W. Mexico, cap. dist. and on the l. bank of a river of same name, at the height of 6500 ft. above the sea. It stands at the N. outlet of the valley of Mexico, is regularly built in broad streets, and has a large market-place, surrounded partly by substantial buildings and partly by others of very indifferent appearance; a church, founded at the period of the Spanish conquest, and a Franciscan monastery which has all the appearance of a regular fortification. Tula occupies the site of the ancient Toltan, capital of the Toltecs.

TULANCINGO, a tn. Mexican Confederation, state and 85 m. N.E. Mexico, at the height of 5800 ft. above the sea. It stands in a beautiful district, has a handsome parish church and a monastery, and contains 5000 inhabitants, chiefly engaged in agriculture and rearing cattle.

TULCAN, a tn. S. America, Ecuador, on the S. frontiers of Granada, 95 m. N.E. Quito. It is the capital of a canton of same name, and contains some good houses. In its vicinity are several thermal springs. Its height above the sea exceeds 9000 ft.

TUMBA, a tn. S.W. Africa, Kimbunda country, territory Bihé, seated on a hill which rises in the midst of the Bulum Bulu Steppe, and is surrounded by incendiary-trees, a species of *platamus*. It contains about 800 huts, occupied by fugitives from the neighbouring lands who have adopted it as their residence. Though the place has no external defence, it proves a secure asylum in consequence of some superstitious feeling on the part of the natives, who regard it as a sanctuary which must not be violated. The inhabitants, nominally subject to Bihé, live by agriculture, trade, and hunting; to strangers they are friendly and hospitable.

TUMEN-KIANG, or TSIANG-HING, a river, Asia, which separates Corea from Manchouria, and is now, by treaty concluded on 14th November, 1860, the N.E. boundary between the Russian and the Chinese empire, has its mouth in the Sea of Japan, in lat. 42° 19' N. It is said to have a course of 180 m., but has only been properly examined for the first 10 m. In this part of its course its r. bank is lilly and terminates in steep sandy slopes, while its l. bank presents an extensive plain covered with brackish lakes or marshes. A long sand-spit extending from the l. bank narrows the entrance and forms a bar, and the channel is so winding and encumbered with shoals that navigation is extremely difficult from the first, and soon becomes altogether impracticable.

TUNDA, a tn. S.W. Africa, Kimbunda country, territory Selles, 40 m. E.N.E. Benguela. It is built on the summit of a conical hill, is the residence of a chief who claims to be independent, and contains 2000 inhabitants, who are as industrious cultivators as their predatory tastes and habits allow them to be.

TUNG-CHOW, or **TONG-CHOO**, a walled tn. China, prov. Pechele, l. bank Peiho, 12 m. E. Pekin. It is a large place, comprising the old and new cities, one thick wall, 35 ft. in height, encircling the whole. A narrow stream from the Peiho runs through it; the houses are small, dirty, and squalid, and the temples second-rate. On the north wall is a lofty minaret of twelve stories, 150 ft. high, constituting the chief object of interest in the place.

TUNKA, a tn. Russian empire, Siberia, gov. and 120 m. W.S.W. Irkutsk, on a stream of same name, at its confluence with the Irkut, near the Chinese frontiers. It consists of 300 houses, which, lying scattered and isolated, cover a large extent of ground. It was once defended by a fort inclosed by strong palisades, and mounting cannon at the four angles of its square, but the fort has been dismantled, and the old wooden church which stood near its centre is now in open ground. The inhabitants are partly Cossacks, but the majority being Mongols, the Mongolian element so far prevails that even the Cossacks and serfs use the language, dress, and manners of Mongols. The chief wealth of the place is in its cattle. Corn is cultivated but does not always ripen.

TUNNIUM, a fort, India, presid. Madras, Tondiman's Country, 10 m. S. Poodoocottah. It was built nearly a century and a half ago, and is still a place of some strength, consisting mainly of a fortified rock, inclosed by an outer ditch and a wall of a circular form flanked with 21 bastions. The wall at its S.E. side is washed by a large lake, and immediately beneath the rock there is a pagoda. Gunpowder is manufactured here for the Tondiman rajah.

TURCHAL, a tn. Turkey in Asia, prov. Sivas, between and nearly equidistant from Amasia and Tokat. It was once defended by a castle, finely seated on a commanding height but now in ruins; and consists of about 200 houses in tolerable condition. Apparently it has at one time been much more extensive, but the inhabitants seem prosperous, and besides weaving linen, for which flax is extensively grown in the vicinity, take advantage of the great thoroughfare passing the town to carry on a considerable general trade.

TURGOVKA, a tn. Austrian empire, Hungary, co. and about 50 m. N.E. Trencsin, in the neighbourhood of extensive pine forests; with 5906 inhabitants, who are chiefly employed in felling and sawing timber.

TURK, a group of islands, West Indies, the most easterly of the Bahamas. It consists of nine islets, situated on a narrow bank, and extending about 35 m. from N.N.E. to S.S.W. They are all composed of sand and sandstone, clothed with stunted bushes and a peculiar species of cactus, which, somewhat resembling a Turkish cap, has probably given them their name. The largest of the group, and the only ones inhabited, are Grand Turk Island, which is about $5\frac{1}{2}$ m. long by 1 m. broad, and is much resorted to for the salt made in an extensive pond in front of a small town of

same name lying on its W. shore; and Salt Cay, which is almost triangular in form, and has a small town, which is situated near its N.W. extremity, and possesses a valuable salt-pond. The islands have no fresh water except what is collected in tanks during rain, and are so barren that the inhabitants derive all their supplies from without—from America, Hayti, and the Caicos group.

TÜRNTZ, a tn. Austrian empire, Lower Austria, circle Upper Wienerwald, near the source of the Traisen, 44 m. S.W. Vienna; has manufactures of scythes, a quarry of beautiful marble, several saw-mills, a considerable trade in gypsum, which abounds in the vicinity; and contains 2370 inhabitants.

TURNOVA, a tn. Turkey in Europe, eyalet and 60 m. S.S.W. Saloniki. It was once a place of importance, but now contains only 4000 inhabitants, who are chiefly employed in weaving cotton and silk and in dyeing yarn.

TUSIJA [anc. *Decaa*], a tn. Turkey in Asia, Anatolia, on an affluent of the Halys, in a fertile and well-cultivated valley, 95 m. S.S.W. Sinope. It consists of about 2000 houses, and has manufactures of shawls from goats' hair.

TUSNAD, a tn. Austrian empire, Transylvania, circle and about 23 m. S.E. Udvarhely; with mineral springs in a narrow pass of the Aluta, and 1650 inhabitants.

TUTACORIN, or **TUTICORN**, a tn. India, presid. Madras, dist. and 30 m. E.N.E. Tinnevely, on the Gulf of Manaar. It was built by the Dutch, who had a factory here at the time when the island of Ceylon was in their possession. The native merchants still carry on a coasting trade, and European agents make considerable shipments of the cotton grown in the province. The chank-fishery here is annually let out by government, and the produce is sent chiefly to Calcutta. There was also a pearl-fishery so ancient that it is distinctly mentioned by Marco Polo. The pearls had a bluish or greenish tint which diminished their value, but still a considerable sum was realized. This fishery no longer exists, the improvement of the Paumben Pass having created currents fatal to the pearl-banks.

TUTUTEPEC, a tn. Mexico, state and 87 m. S.S.W. Oajaca. It stands on a height, has a number of handsome houses, and contains about 1000 inhabitants, who are chiefly employed in fishing, and salting fish to be sent into the interior.

TWONICZ, a tn. Austrian empire, Galicia, circle and W. Sanok; with 1850 inhabitants, the descendants of Swedish prisoners.

TYCZYN, a tn. Austrian empire, circle and 7 m. S.S.E. Rzeszow, cap. dist. of same name; with an elegant castle, and 1400 inhabitants.

TYNIEC, a tn. Austrian empire, Galicia, circle Wadowice, on the Vistula, 6 m. S.W. Cracow; with a Benedictine abbey, which, founded by Boleslaus the Valorous in 1015, and suppressed in 1815, is now the summer residence of the Bishop of Tarnow. Pop. 1050.

TZINTZONTIN, a tn. Mexico, state Michoacan, on the N. side of the lake and about 20 m. W.S.W. of the town of Morellia. It was once the capital of the native kings of Michoacan, but is now only an Indian village with about 2000 inhabitants.

U.

UALAN, or **STRONG**, an isl. of the N. Pacific, the most easterly of the Caroline group; lat. $5^{\circ} 19' N.$; lon. $163^{\circ} 6' E.$ It is about 30 m. in circuit, and attains an elevation of about 2000 ft., is well-wooded and fertile, and is inhabited by a race among whom civilization has made good progress. Most of them speak good English and make a profession of Christianity, but their numbers seem to be rapidly declining, as they once amounted to 1500 and now fall short of 1000. Their chief employment is fishing. They are governed by a chief or king, who resides in Lela. The harbour is well-sheltered, and frequently visited by foreign vessels.

UBA, a tn. W. Africa, on the N. frontiers of Adamawa or Fumbina, 165 m. S. by W. Kukawa. It consists of two quarters, an east and a west. The former is inclosed by a double thorn-fence and a low earthen wall, but consists only of a few huts scattered over a wide space, and presenting a cheerless appearance; the latter is more densely and comfortably occupied: each cluster of huts is surrounded with a little cornfield, carefully fenced. The only buildings deserving of notice are the governor's house, on one side of a small square, and the mosque, in the form of a spacious quadrangle.

UBWARI, by far the largest isl. of Lake Tanganyika in

Central Africa, lies off its N.W. shore, separated from the mainland by a channel with an average width of 6 to 7 m. It is about 25 m. long by 4 broad, and consists of a high rocky ridge which stretches from N. to S., and descends on either side towards the water in slopes, which are sometimes intersected by ravines, and terminate in abrupt precipices. It is richly clothed with vegetation, and partially cultivated. At the N.E. extremity is a landing-place called Mzimu, where a strip of land divides the waters from a grassy slope, through which a line of road leads from the hills above. On the arrival of trading canoes the islanders flock from their hamlets to barter their ivory, slaves, goats, and provisions for salt, beads, wire, and cloth. They are by no means a comely race, and do not improve their appearance by their dress, which consists of the usual mbugu, tigered with black stripes, and tailed like leopard skins; their waists, wrists, and ankles, their knobsticks, spears, and daggers, are bound with rattan bark. Nearly opposite to Mzimu, on the N.W. extremity of the island, is another similar landing-place, called Mutuwwa, from which the canoes paddle over in nine hours to Murwumba, a place situated on the mainland, and inhabited by a race of cannibals called Wabembe.

UDBINJA, a tn. Anstrian empire, Military Frontiers, 67 m. S. by E. Karlstadt; with an interesting parish church, a trivial school, and the ruins of an ancient castle with massive walls, towers, and bulwarks. Old coins and other antiquities have been found here. Pop. 810.

UDUNG, a tn. cap. Cambodia. See OODUNG.

UDVARHELY, or ODERHELIEN [add.], a tn. Austrian empire, Transylvania, cap. circle of same name, on the Great Kokel, 63 m. N.E. Hermannstadt. It is the seat of courts of justice for the circle and town, and of several important public offices, and has a Protestant and two R. Catholic churches, a Franciscan monastery, a Protestant and a R. Catholic gymnasium, a normal school, a civil hospital, numerous tanneries, and a trade in tobacco and other produce. To the W. of the town is an old castle, which was built by Sigismund Zapolya to keep the Szeklers in check, and was a place of strength, till in course of several sieges its fortifications were in a great measure demolished. Pop. 4340.—The village of Szombathfalva in the vicinity is a great holiday resort, and has a sulphur spring.

UGANDA, a territory, East Africa, lying along the N.W. part of the Victoria Nyanza, between the Kitangulé River on the S.W., lat. 1° S., and the Victoria Nile on the N.E., lat. 1° N. It is a rich and fertile country, and where it skirts the supposed borders of the lake is intersected by many rush drains or marshes, with central streams flowing sluggishly northwards. The inhabitants of Uganda, called Waganda, are often well dressed, and wear neat bark cloaks resembling the best yellow corduroy cloth, crimp, and as if stiffened with starch, and over these as upper cloaks a patchwork of small antelope skins very neatly sewn together; whilst their head-dresses are abrus turbans, set off with highly polished boar-tusks, stick-charms, seeds, beads, or shells; and on their necks, arms, and ankles they wear other charms of wood, or small horns stuffed with magic powder, and fastened with strings generally covered with snake-skin. The Waganda also keep their huts and gardens in excellent order, with screens and inclosures for privacy, a clearance in front, and a *baraza* or reception-hut facing the buildings. Uganda was formerly a portion of the larger kingdom of Unyoro, and is now under the rule of a despotic chief or king. The traditional account of the rise of the kingdom of Uganda is thus related by Captain Speke:—"Eight generations back a sportsman from Unyoro, by name Uganda, came with a pack of dogs, a woman, a spear, and a shield, hunting on the left bank of Katonga valley, not far from the lake. He was but a poor man, though so successful in hunting that vast numbers flocked to him for flesh, and became so fond of him as to invite him to be their king, saying, "Of what use to us is our present king, living so far away?" At first Uganda hesitated, but on being further pressed consented; when the people, hearing his name, said, "Well, for the future, let this country between the Nile and Katonga be called Uganda, and let your name be Kiméra, the first king of Uganda." The report of these proceedings soon reached the great king of Unyoro, who in his magnificence merely said, "The poor creature must be starving; allow him to feed there if he likes."

Kiméra, suddenly risen to eminence, grew proud and headstrong, formed a strong clan around him, rewarded well, punished severely, and soon became magnificent. Nothing

PEOPLE OF UGANDA.—From Speke's Journal.

short of the grandest palace, a throne to sit upon, the largest harem, the smartest officers, the best-dressed people, even a menagerie for pleasure,—in fact, only the best of everything would content him. Fleets of boats, not canoes, were built for war, and armies formed. In short, the system of government according to barbarous ideas was perfect. Highways were cut from one extremity of the country to the other, and all rivers bridged. No house could be built without its necessary appendages for cleanliness; no person however poor could expose his person; and to disobey these laws was death. After the death of Kiméra the prosperity of Uganda never decreased, but rather improved.

UGOGO, a territory, E. Africa, bounded on the E. by the Rubeho Mountains, which form the most westerly portion of the Usagara chain, and on the W. by the Mgunda Mkhali Desert; its N. and S. boundaries are undefined. It is the most favoured portion of a table-land which, commencing eastwards in the dense jungle of the Marenga Mkhali, stretches W. to Tura, on the confines of Unyamwezi, in lon. 33° 57' E. The surface, when in a state of nature, is covered by dense bush and stunted forests, but in these a number of small and carefully cultivated clearings have been made, on which considerable quantities of sorghum and maize are grown. The climate is decidedly arid. During almost the whole year a violent wind sweeps from the eastern mountains. In the long summer, succulent vegetation is shrivelled up, and the crackling covering of clayey earth and thin sand is carried aloft in whirling columns like waterspouts. In the winter season, which seldom exceeds three months, the fall of rain is uncertain and deficient, and famine not unfrequently ensues. It is thought, however, that the aridity of Ugogo has improved the physical development of the Wagogo, its inhabitants.

UJÉ KASUKULA, a tn. W. Africa, situated in one of the finest districts of Bornou, 80 m. S. by W. Kukawa. Every large place in the district which takes the common name of Ujé has a market of its own, but by far the most important is that of Ujé Kasukula, and hence its name, 'kasuka' meaning market. Ujé was once the chief province of the Gamerghu, a tribe frequently mentioned in history, and closely related to the Wandala or Mandara. The tribe has lost its national independence, while its brethren in Mora and the places around have hitherto succeeded, though not without the utmost difficulty, in defending their mountain homes against the assaults of the Kanuri and Fulbé.

UJJI, a dist. East Africa, bounded N. by the moun-

tains of Urundi, E. Ubuha, S. the Ukaranga country, and W. Lake Tanganyika. Abundance of humidity and a fertile soil, evidenced by the size of the forest-trees and the numerous ferns, render it the most productive district in this part of the continent. The principal crops are holcus, the Indian nagli (*Elevsine coracana*), pulse, ground-nuts, beans, and haricots. There is neither millet nor rice, though the latter was at one time grown by the Arabs on the shores of the lake, and is said to have attained the height of 8 or 9 ft. The depredations of the monkey, the elephant, and the hippopotamus were among the main causes of abandoning its cultivation. Sugar-cane, tobacco, and cotton are always to be purchased. The principal fruits are the plantain and the Guinea-palm; the principal vegetables, the manioc, the egg-plant, the sweet-potato, the yam, the cucumber, and an edible white fungus growing subterraneously. The inhabitants, or Wajiji, are a burly race, with dark skins, plain features, and straight strong limbs. Their feet and hands are large and flat, their voices harsh, and their manners independent even to insolence. They are extensively tattooed. Their arms are small battle-axes, daggers, spears, and bows and arrows. Before Burton visited the country Ujiji was generally spoken of as a city. It is now needless to say that it has no title to the name. At best it is but a collection of villages, composed for the most part of mere hovels. The only thing which reminds one of a town is the bazaar, which, however, is only a relic of Arab civilization, and though much frequented and well-supplied, is little more than a raised plot of ground, where, between 10 A.M. and 3 P.M., a mass of standing and squatting negroes buy and sell, barter and exchange, with a hubbub heard for miles. The direct distance of Ujiji from the E. coast is 590 m., and the indirect, allowing for the sinuities of the route, 955 m. The Arab caravans, owing to various causes of detention, usually take six months to reach it; Burton and his party accomplished the distance in 100 days, travelling at the average rate of $4\frac{1}{2}$ hours per day, and 2·27 m. per hour.

UKARANGA, a dist. Central Africa, extending eastward from the Unguwwé, an affluent of the Malagarazi, to the E. shores of Lake Tanganyika. On the S. it is bounded by the territory of Uthougwe, and on the N. by the Ruche, a feeder of Tanganyika. The villages, scattered in clumps over the plain, are wretched places, with a few cultivated fields in the drier parts of the swamps. The so-called port of Ukaranga, on the E. shore of the lake, is an open roadstead, where even a single canoe is seldom seen. This roadstead is separated from Ujiji by the mouth of the Ruche, in a deep hollow bay from 5 to 6 miles across. It swarms with crocodiles and hippopotami, which are said to be singularly bold and fierce. The voyage across from Ukaranga port to Ujiji or Kawele is performed in three hours, and is rendered attractive by the picturesque forms and gorgeous tints of the mountains around the lake.

UKERWE, an island in the S.E. of Victoria Nyanza, East Africa, about lat. 2° S.; lon. 33° E. It is of a triangular shape, with a surface which, though diversified in some parts, is generally flat. So little, however, is ascertained, that it remains a question whether Ukerwe and the adjacent Mazita are really two islands, and not rather a single peninsula of the mainland. The ground of the latter opinion is the Arab allegation that they are connected with each other and with the eastern shore by a low neck of land, which is dry in the hot season, and even during the rains is never so deeply flooded that cattle cannot ford it. Be this as it may, a fact of greater consequence is, that Ukerwe is exceedingly populous, and carries on a considerable trade in ivory, which is collected in the country toward the E., and stored up against the arrival of a caravan, when it is disposed of chiefly for beads.

ULANOW, a tn. Austrian empire, Galicia, circle and 30 m. N.E. Rzeszow, cap. dist. of same name, at the confluence of the Tanew with the San. It is the central entrepôt of the Galician trade in wood and corn, and contains 2807 inhabitants.

ULASZKOWCE, a tn. Austrian empire, Galicia, circle and S.W. Czortkow; with a Basilian monastery, a large yearly market, and 2125 inhabitants.

ULUCZ, a tn. Austrian empire, Galicia, circle and 9 m. N.E. Sanok, on the San; with extensive glass-works, and 1600 inhabitants.

SUPP. IMP. GAZ.—VOL. II.

UMAGO, a tn. Austrian empire, circle Istria, on the Adriatic, 19 m. S.W. Trieste. It has a charitable endowment, and a harbour at which some trade is carried on. Pop. 1900.

UMANDA, a prov. East Africa, territory Usukuma, situated N. of Nyamwesi, and S. of Victoria Nyanza. It forms a long oval, with a length of 80 m. and a breadth of about 2 marches, and consists chiefly of a well-cleared and populous valley. The inhabitants are a turbulent and quarrelsome race, combining the unsettled and predatory habits of the pastoral, with the debauchery and greed of gain characteristic of the half-agricultural tribes. They are, however, disposed to trade, and occasionally send caravans to the E. coast.

UMBALLA, a tn. India, Sirhind, cap. dist. of same name, in a level and well-cultivated country near the Guggur, 122 m. N. by W. Agra. It is a large place surrounded by walls, and defended by a fort, and consists of brick houses, ranged in streets so narrow that an elephant can scarcely pass along them. Immediately beneath the walls of the fort is the encamping ground of the British troops. The dist., of which Umballa is the capital, has an area of 293 sq. m., and a pop. of 67,134. This area, however, is said to be that only of the government lands; the area under police control is 2175 sq. m.

UM-EL-JEMAL, an ancient city, Asiatic Turkey, in the Hauran, about 75 m. S. Damascus. Standing alone in the desert, it has scarcely suffered from the ravages either of man or of time, and is still so perfect in all its parts, that in walking through it it is scarcely possible to believe that it is totally uninhabited. It is surrounded by a high wall, inclosing a rectangular area equal in dimensions to modern Jerusalem. Many of the streets are paved, and in different parts are seen open spaces resembling our modern squares. The houses contain usually three rooms on the ground floor, and two on the first story; and some of the public buildings are very large. Um-el-Jemal is conjectured to have been the 'Beth Gamul' of Scripture. There can be no doubt of its having been a place of great importance, both long before and during the Roman dominion, and yet its history is a perfect blank.

UMROHAH, a tn. India, N.W. Provinces, dist. and 20 m. N.W. Moradabad. It stands in an open country surrounded by large plantations of sugar and cotton; but, though it contains 72,677 inhabitants, so little seems to be known of it, that it is only described by one writer as having a neat mosque and an extensive garden, and by another as abundantly supplied with provisions and water.

UNGÁVA, a bay, British America, an indentation of Hudson's Strait, N. of Labrador, between Cape Chudleigh (lat. 60° 14' N.; lon. 65° 25' W.), on the N.E., and Cape Hope's Advance (lat. 61° 17' N.; lon. 70° 20' W.), on the W. Its shores have an extent of 400 m., and it is generally free from islands except near the entrance, where the large island of Akpatok occupies the central and western part. The navigation of the bay is rendered peculiarly difficult by the great violence of the currents, which run in many places with great velocity, and are increased by the strength of a tide which rises 60 ft. perpendicularly; these currents are supposed to be attributable to the strong current which sets out of Davis' Straits along the coast of Labrador, and rushes round Resolution Island into Ungava Bay, from which it has no outlet, and consequently causes the prodigious rise of tide, and the numerous eddies and currents that are met with all over the bay. To the same cause are attributable the immense quantities of ice which encumber the bay till late in the summer, it being late in August before the bay is safely navigable, and by the end of September it is again dangerous, owing to the fury of the wind blowing constantly from the N. at this season. The rivers falling into Ungava Bay are the Kokoak or South River, George's River, Whale River, and a few others; the South River, entering the bottom of the bay from the south, being the largest. Bleak and barren rocks are the distinguishing features of the coast, with a few stunted trees at the mouths of the rivers. The general appearance of the country at the bottom of the bay is hilly rather than mountainous, but rough and rugged.

UNITED STATES [add.] The long existing contention between the two great sections of the U. States, the southern slave states on the one hand, and the northern free

states on the other, for ascendancy in the national government, reached its climax when, in 1860-1, the North carried the election of president after a hot contest. The question of slavery was the great cause of difference; and when the rule came into the hands of the party pledged to bring about the abolition of slavery, the southern states at once, and almost unanimously, determined on secession from the union, alleging the constitutional right of every state to secede if it thought proper. South Carolina took the lead, and was rapidly followed by Mississippi, Alabama, Florida, Georgia, Louisiana, and Texas: the whole, with the subsequently seceding states, forming themselves into a southern confederation, with Mr. Jefferson Davis and Mr. Alexander H. Stephens for president and vice-president. The custom-houses, arsenals, and U. States buildings generally, were seized and occupied by Confederate officers, and every preparation made to organize a separate government. Defections of officers and men, naval and military, and of other public servants of the union, took place far and wide; and a very large volunteer army was speedily in readiness to maintain the independence of the seceded states. At the time of the outbreak the U. States army consisted of only 14,000 regular troops, scattered over the country in all directions; and the navy numbered only 5000 seamen, in all parts of the world. The troops in garrisons in the Confederate states either surrendered or joined the Confederate cause. The garrison, however, at Charleston, in South Carolina, was an exception; for, taking possession of Fort Sumter, under Major Anderson, this small body of troops determined to make a stand. Here the first blow was struck on April 12, 1861: the Confederates proceeded to bombard the fort, which, after thirty-two hours' resistance, was forced to surrender, without a life being lost on either side. This episode aroused the North to active measures. The president, Mr. Abraham Lincoln, called out by proclamation 75,000 volunteers, who were organized into an army with great rapidity. This measure precipitated the secession of Virginia, Arkansas, North Carolina, and Tennessee, states which up to this period had hesitated to openly join the first seceders. Maryland was held back by force; in Missouri the people were divided; and Kentucky proclaimed itself to be neutral. Hostilities commenced in Virginia, the Federal General Butler being defeated at Big Bethel, in the east, and M'Clellan being successful in the west. But the first action on a large scale took place at Bull Run, about 25 m. S. of Washington, between the newly levied Federal army of 50,000 men under General M'Dowall, and the Confederate army of 30,000 men under General Beauregard. During the action a panic seized the Federal troops, and a most disorderly retreat at once commenced, the men throwing away their arms and accoutrements, and hurrying back terror-stricken to the capital. General Beauregard did not follow up his advantage; and the president of the Northern states immediately prepared to recover the disaster, and took far larger measures, by calling out two levies successively of 500,000 each. During the remainder of 1861 frequent collisions took place between the rival forces at different points, almost always to the disadvantage of the North; so much so, that at the close of the year the Federals had possession of very few places in the seceded territory. In the following spring of 1862, however, besides the capture of Fort Donnellson on the Cumberland River by General Grant, the same commander obtained a signal victory over the Confederates at Pittsburg Landing, in Tennessee. The naval operations comprised the capture of Roanoke Island, and of Forts Pulaski and Macon, and engagements on March 9th and 10th in Hampton Roads, in the James River, in which the *Merrimac*, an iron-clad steam ram, made great havoc of the Federal fleet, but, on attempting to renew her attacks the next day, was encountered by the *Monitor*, a Federal iron-clad turret ship, and obliged to retire. On April 28 the Federal fleet, under Admiral Farragut, having passed the forts at the entrance of the Mississippi below New Orleans, that city was evacuated by the Confederates, after burning vast quantities of cotton and other property, and formally surrendered to the Northern forces. An attempt was then made by General M'Clellan to invest Richmond, the capital of the Confederacy, from the peninsula between the York and James rivers; the Federal lines were established along the Chickahominy, within sight of the capital. But after a determined onset by the Confederates, under Generals

Lee and 'Stonewall' Jackson, maintained for several days, the Northern army was driven back to the James River and the shelter of the gunboats. The southern forces under General Jackson then turned northward, and repulsed with great energy and success a Federal army under General Pope, which was pushing on with some hardihood without a base of operations. General Lee then assumed the offensive and threatened Washington, necessitating the recall of M'Clellan from the James River for the defence of the Northern capital. After a successful engagement with the advanced guard of the Confederates at South Mountain, and a second and obstinate fight on the banks of the Antietam, which, however, was attended with no decisive result, the Federals had the satisfaction of seeing the Confederates recross the Potomac. In the meantime the Federal General Rosecrans obtained advantages in the north of Mississippi, and elsewhere the Northern forces had success. After a pause M'Clellan was superseded by Burnside, and in December another advance to Richmond was commenced; this General Lee had anticipated, and intrenched himself behind the town of Fredericksburg, south of the Rappahannock. The Federals attacked this position with immense energy, but could make no impression upon it; and at last, baffled and demoralized, they were forced to recross the Rappahannock, to the great consternation of the North. The year 1862 thus closed with no material progress made on either side, but with heavy losses and disasters to both combatants in turn. The first days of 1863 were signalized by a struggle prolonged over three days at Murfreesboro, in Tennessee, at the close of which the Confederates fell back defeated. At the end of April, General Hooker, superseding Burnside in the command of the army of the Potomac, commenced another movement towards the Confederate capital, and crossing the Rappahannock some distance above Fredericksburg, thought to turn the left of Lee's army. Lee, however, despatched 'Stonewall' Jackson to intercept this movement, and so suddenly and impetuously was this effected, on two successive days, near Chancellorsville, that Hooker with difficulty saved his army from total defeat. This done, Lee turned back and drove a Federal force out of the position at Fredericksburg, which he had just left and they had occupied. The success at Chancellorsville was attended with irreparable loss to the Confederates in 'Stonewall' Jackson, who was mortally wounded by a chance shot from his own division. Flushed with this success, General Lee transferred his army to the valley of the Shenandoah, entered Maryland, and crossed into Pennsylvania; but at Gettysburg he was obliged to turn upon the Federals under Meade, their new commander, who were following him. On the first three days of July prolonged and desperate encounters took place between the two armies; on the third the Confederates, with whom the balance of advantage thus far rested, prepared for a grand and desperate attack upon the high ground on which the Federals were posted, but, Meade bringing up his reserves, the almost superhuman efforts of the Southern army were of no avail, and the battle ended in favour of the North. Lee slowly retreated into Virginia, having lost nearly 15,000 men of the flower of his army in a week's fighting. On the Mississippi the fortune of war was also in favour of the Federals. Vicksburg and Port Hudson were the strongholds of the Confederacy in this direction. Against the former General Grant commenced operations in the beginning of 1863, but was unsuccessful until Admiral Farragut with his fleet dashed past the batteries of Port Hudson, as he had done at New Orleans, captured Natchez, drove away the Southern fleet, and effected a junction with Admiral Porter below Vicksburg. Grant suddenly resumed the offensive, and after failing to carry the place by storm, at last, in conjunction with the fleet, reduced it by regular siege to a surrender on July 4. Soon after the whole length of the Mississippi was in the hands of the Federals. In the spring a Federal iron-clad fleet bombarded Charleston and was signally repulsed; in July a bombardment of Fort Sumter and the other forts was commenced by a land force, but an attempt to capture Sumter, which had been battered to pieces, by assault was unsuccessful. In September the Federals were beaten on the banks of the Chickamauga, and under Rosecrans fled in total rout to Chattanooga in Tennessee, where they were beset by the Confederates posted on Lookout Mountain and Missionary Ridge. Grant replaced Rosecrans,

and having received large reinforcements, prepared for a grand sortie on November 25. On that day a vast army issued from the besieged town, drove the Confederates from Lookout Mountain into the valley behind, one division with some difficulty also dislodging the Confederates from Missionary Ridge. The Southern army fled wildly from the field of battle, and left the Federals masters of the situation in this quarter.

In the early months of 1864 numerous engagements took place in various directions, resulting for the most part in Confederate success, but having little influence upon the issue of the conflict. The chief interest now centred in the army of the Potomac, over which Grant was appointed commander-in-chief, and which he at once set himself to reorganize. In May he moved his main force across the Rapidan against Lee, who awaited him on the S. bank. A co-operating column advanced down the Shenandoah, while Butler with a large force moved up the James River towards Richmond. On May 6th the fighting began at the Wilderness, and lasted throughout the 6th, 7th, 8th, 9th, 10th, and 11th, Grant displaying marvellous tenacity and fertility of resource, and Lee exhibiting surpassing skill in baffling every attempt of his antagonist. Unable to rout the Confederates, Grant endeavoured by a flank movement to cut them off from Richmond, but Lee anticipated the attempt and foiled it. This was repeated again and again, till, reaching the Chickahominy, Grant dashed upon the Confederate lines, but so deadly was the Southern fire, that in ten minutes the assailants were totally repulsed. Thus baffled, Grant by a circuit crossed the James River, joined Butler, and attacked Petersburg, but was repelled, and obliged to begin a regular siege. Thus relieved from immediate attack, Lee despatched Ewell against the Shenandoah army, which he defeated, marched up to the very walls of Washington, and leisurely retired with enormous booty. Meantime Sherman with a large Federal force in Georgia, after much successful fighting and excellent strategy, reached Atlanta, and forced the Confederates to evacuate it. Admiral Farragut, too, executed another dash, passing the forts at the entrance of Mobile Bay, and with wooden vessels compelled the iron ram *Tennessee* to surrender. Grant having failed in two assaults upon Petersburg, endeavoured to cut off its communications with the South, and established himself strongly on the Weldon railroad. On November 14th Sherman abandoned Atlanta, and after several weeks of public uncertainty as to his course, he reappeared on December 14th before Savannah, which, Fort M'Alister being taken by storm, was shortly after abandoned by the Confederates. In the middle of January, 1865, Sherman advanced with the main column of his army towards Charleston, which was evacuated in the night of February 17th, and entered by the Federals the next day; and on the 22d Wilmington was captured by a combined naval and military force. In the meantime, severe fighting had taken place between Grant and the defenders of Petersburg and Richmond; till at length, after three days' sanguinary conflict, the Confederate lines were broken, and Richmond lay at the mercy of the Northern armies. Lee retreated north of the Appomattox, while Grant occupied Richmond and Petersburg on Monday, April 3d, and then followed in close pursuit of Lee, who four days after, seeing that further resistance was hopeless, surrendered with his army as prisoners of war. The remaining Confederate armies in the field soon after surrendered likewise, or disbanded themselves. Thus hostilities ceased, and the four years' war ended in the complete subjection of the Southern states to the Federal government. In the course of the war the total and unconditional abolition of slavery had been proclaimed by President Lincoln, and at the end of it every slave found himself absolutely free.

On April 14th President Lincoln was assassinated in Ford's theatre at Washington by a Southern fanatic named Booth. He was at once succeeded by Vice-president Johnson, who prepared to carry out the wise and moderate measures which Mr. Lincoln had contemplated for the pacification and revival of the exhausted country. As the states returned to their allegiance to the union, they were re-admitted to their state and national privileges; but soon party spirit in the North began to rise, and in the congressional struggles of the rival Democrats and Republicans, the liberties of the Southern states have been sorely infringed, and many of the states sub-

jected to the rule of military governors nominated by the Northern cabinet. The restoration of prosperity to the South has thus been greatly impeded, and the condition of both negroes and whites has been one of great privation, and often almost of destitution.

The following statistics will show the present condition of the U. States, and also, where they are comparative, the effects of the civil war upon the commerce and progress of the country.

The increase in the amounts of both revenue and expenditure in the years 1861-5 is thus shown:—

Years ended June 30.	Revenue.	Expenditure.
1861.....	£17,369,092	£17,789,023
1862.....	121,172,537	118,925,354
1863.....	185,287,426	186,624,258
1864.....	288,699,711	270,428,354
1865.....	375,378,464	395,348,797

The public debt in the same years increased as follows:—

Years.	Amount of Debt.
1861.....	£18,930,797
1862.....	107,127,369
1863.....	228,915,246
1864.....	362,643,852
1865.....	558,873,546

On May 1, 1867, the amount was £556,015,645.

The registered shipping of the United States in the years 1860 and 1864, distinguishing sailing and steam vessels, was of the following tonnage:—

	Sailing.	Steam.	Total.
1860....	4,485,931 tons.	807,937 tons.	5,353,868 tons.
1864....	4,026,066 "	960,335 "	4,986,401 "

The tonnage of American and foreign vessels entered and cleared at ports in the United States in the years 1860-4 is thus stated:—

TONNAGE ENTERED.

Years.	American.	Foreign.	Total.
1860.....	5,921,285	2,353,911	8,275,196
1861.....	5,023,917	2,217,554	7,241,471
1862.....	5,117,665	2,245,278	7,362,943
1863.....	4,614,698	2,640,378	7,255,076
1864.....	3,066,434	3,471,219	6,537,653

TONNAGE CLEARED.

1860.....	6,165,924	2,624,005	8,789,929
1861.....	4,889,313	2,262,042	7,151,355
1862.....	4,901,818	2,376,999	7,338,817
1863.....	4,447,261	3,064,023	7,511,284
1864.....	3,090,948	3,741,131	6,832,079

The British vessels entered in 1864 were 13,502, of 2,868,761 tons, and cleared 18,606, of 3,120,566 tons.

The value of the imports and exports (exclusive of coin and bullion) in the years 1860-4 was as follows:—

	Imports.	Exports.
1860.....	£73,669,251	£69,495,011
1861.....	63,694,984	79,388,674
1862.....	39,459,327	40,219,028
1863.....	50,542,392	55,768,259
1864.....	65,699,761	49,070,797

The imports for the first three months of 1867 are given as £19,740,513, and the exports £22,226,936.

The amount of bullion and specie imported in 1864 was £2,740,772, and of that exported £21,901,197.

The quantity of cotton exported from the United States, as well as the prices of it, varied excessively during the continuance of the civil war, as the following table will show:—

Years.	Quantities.	Price per lb.
1860.....	1,767,636,333 lbs.	10·85 cents.
1861.....	307,516,099 "	11·07 "
1862.....	5,064,564 "	23·30 "
1863.....	11,384,986 "	58·43 "
1864.....	10,840,534 "	83·43 "

During the first three months of 1867, 288,000,000 lbs. of cotton, valued at £18,797,917, were exported.—(*Hunt's Mag.*)

The acreage, quantities, and value of the various kinds of agricultural produce raised in the United States in the year 1864 are returned as follows:—

Produce.	Acres.	Bushels.	Value.
			Dollars.
Indian Corn.....	17,433,752	530,451,403	527,718,183
Wheat.....	13,158,089	160,695,823	294,815,119
Rye.....	1,410,983	19,872,975	81,975,013
Oats.....	6,461,750	175,990,194	139,881,247
Barley.....	540,317	10,716,328	16,941,023
Buckwheat.....	1,051,700	18,700,540	21,986,763
Potatoes.....	902,295	96,532,029	77,184,043
		Tons.	
Hay.....	15,034,564	18,116,691	365,707,075
		Lbs.	
Tobacco.....	239,826	197,460,229	29,335,225

The rapid increase of the population may be seen in these figures:—

Years.	Total Population.	Proportion of Slaves.
1800.....	5,305,925	893,041
1830.....	12,866,020	2,069,043
1860.....	31,445,089	3,953,760

The statistics of population according to the census of the States in 1860 are given in the subjoined table. Of some of the territories organized since that date, only approximate statements can be made:—

TOTAL POPULATION of each STATE and TERRITORY of the UNITED STATES, distinguishing WHITE, FREE COLOURED, and SLAVE, in the year 1860. N.B.—The figures following the names of the States and Territories show the dates of their constitution or first settlement.

STATES AND TERRITORIES.	WHITE.			FREE COLOURED.	INDIANS.	TOTAL FREE.	SLAVES.			TOTAL.

* Chinese and half-breeds.

† Half-breeds.

‡ The territory of Arizona, cap. Tucson, was organized in 1863, with an estimated area of 130,800 sq. m.—pop. not ascertained. The territory of Idaho, with an area of 326,373 sq. m., was organized in 1863. An accession of territory by the transference of the Russian territory in N. America to the United States for the sum of 7,000,000 dollars was effected in 1867.

UNKOFSKY, a bay, Chinese empire, in the Sea of Japan. Its entrance, formed on the S. by Cape Clonard, a bold promontory which is the easternmost point of the peninsula of Corea, and on the N. by Crown Point, is 4 m. wide, and has a depth of 7 to 12 fathoms. At 2 m. from the shore there is good anchoring ground in 7 fathoms, with the important drawback, however, that it is open to the prevalent winds in autumn, and to those of the N.W. in winter. The S. shore is bold and lofty; the N. shore is of moderate height,

consisting chiefly of abrupt or steep sandy cliffs, which, with the adjoining hills, are of snowy whiteness. The interior of the bay is so little explored that its extent has not been determined, but several large settlements are seen along the shores.

UN-NA, a vil. island of Great Loo-Choo in the N. Pacific, about lat. 26° 30' N.; lon. 147° 40' E. It is beautifully situated on a bold promontory overhanging the S. shore of Barrow's Bay, and forming the entrance of a picturesque

valley, terminating in a lofty mountain, is a large and thriving place, as neatly laid out and hedged in as an English garden, and contains a fine *cung-qua*, or public lodge, provided by government for the accommodation of strangers.

UNOULA, a tn. India, dist. and 13 m. S. Goruckpore, cap. pergunnah of same name, in a level country overrun with forest and jungle. It is a paltry place, consisting chiefly of thatched huts. Even the mud castle in which the rajah resides can scarcely be called an exception, for though surrounded by a ditch and an almost impenetrable hedge, its buildings are huts of the same description as those of the town.

UN-Y-AMÉ, a river, E. Africa, a tributary of the Nile, which it joins in lat. 3° 32' N. It rises in the country between Shooa and Unyoro, is a perennial stream, receiving many rivulets from Shooa, and forms in the rainy season a considerable torrent, flowing in a N.N.W. direction to its junction with the Nile, just where the navigation of the latter downwards from the Albert Nyanza ceases and the cataracts commence, the Nile here suddenly entering a pass between two chains of hills, and shortly after rapidly contracting through a narrow gorge, and becoming a roaring torrent.

UNYAMWESI, a country, E. Africa, extending from the W. edge of the Mgunda Mkhali Desert westward to the banks of the Malagarazi, in lon. 31° 10' E., a distance of 155 geo. m., and bounded N. by Usui and the Victoria Nyanza, S.E. Ugara, S. Ukinabu, and S.W. Uwende. This vast territory, included under the common name of Unyamwesi, or 'Land of the Moon,' once, according to tradition, formed a powerful empire, and still possesses a kind of unity in the language spoken by its inhabitants, which, though diversified by numerous dialects, is evidently the same. Its political state, however, is entirely changed, for instead of a single empire, it is now broken up into petty principalities, each ruled by its own chief or by a number of chiefs, who are sometimes nominally, and for the most part virtually, independent. The names of the leading principalities are Usukuma to the extreme N., Utakama on the S., Unyanembe in the centre, Ufyoma and Utumbara in the S.W., Unyangwira in the S.E., and Usagozi and Usumbwa to the westward. The general character of the country is rolling ground, intersected with low, conical, and tabular hills, the lines of which ramify in all directions. There are no mountains, but the general elevation of the surface is considerable. Burton found its absolute height nowhere less than 2850 ft., and at the greatest 4050 ft. The subsoil is clay overlying sandstone, based on granite rocks, which sometimes crop out and assume picturesque and fantastic shapes. Ironstone occurs at the depth of 5 to 12 ft. During the rains the surface is covered with vegetation of many-tinted greens; in the dry season it is gray, lighted up by golden stubbles, and dotted with wind-distorted trees, with shallow swamps of emerald green, and with wide sheets of dark mud. The fields are sometimes ditched or hedged in, and the reclaimed tracts and clearings are divided from one another by strips of primeval jungle from 2 to 12 m. long. The crops, consisting chiefly of holcus, maize, millet, rice, beans, and ground-nuts, give an average return of sixty fold. There are no perennial streams and few springs, and in the dry season water for ordinary purposes or irrigation is obtained only from shallow ponds or wells; during the rains watercourses carry the superfluous moisture either S.E. to the Rwaha, or W. to the Malagarazi, the principal eastern feeder of Lake Tanganyika. The inhabitants, or Wanyamwesi, have a large portion of negro, with only a slight tinge of Semitic or Arab blood; they are distinguished for industry and commercial activity, which give them a decided superiority over the other kindred tribes. They may be regarded as the typical race in this part of the country. They are usually of a dark sepia brown, and have negroid features evidently less Semitic than those of the people of the E. coast. Their hair curls crisply, but grows to the length of 4 or 5 in. before it splits. They usually twist it into many ringlets or hanks, which hang down to the neck like a fringe, and comb it off the forehead like the ancient Egyptians and modern Hottentots. The race is generally tall and stout, long-lived, and not deficient in bodily strength and courage. The clan mark is a double line of little cuts, like the marks of cupping, extending from the external edges of the eyebrows to the middle of the cheeks, or to the lower jaws. Sometimes a

third line is drawn down the forehead to the bridge of the nose. In the mouth a triangular or wedge-shaped opening is formed by chipping away the internal corners of the two front incisors; the women extract the lower central teeth. Both sexes enlarge the lobes of the ears. In many parts skins are more commonly worn than cloth. The favourite ornaments are beads, of which the red coral, the pink, and the 'pigeon's egg,' are preferred. The arms are slender assegais, with the shoulders of the blade rounded off, the long two-edged knives called *sime*, and *runga*, or knob-berries, are also used. Neither the shield nor the dwarf-axe is common. The dwellings of the eastern Wanyamwesi are the *tembe*, of the western the circular African hut, the latter usually with two entrances; the hut of the poorer sub-tribes is a mere stack of straw. Where the huts are so contiguous as to form a village the characteristic building is the *iwanza*, or 'public house.' It is a large hut, somewhat more substantial than those adjoining, often smeared with smooth clay, and rudely decorated. Here the villagers spend their days and nights chatting, gambling, eating, drinking pombe, and smoking bang and tobacco. Besides the public-house thus described, and used only by males, there is generally a second of the same character built opposite to it, and intended only for females. The *iwanza* seems to be peculiar to Unyamwesi. It is, perhaps, partly the cause and partly the result of a strange custom which prevails here. The sexes do not eat together. To such an extent is this rule carried that even the boys, it is said, would disdain to sit at meat with their mothers. The Unyamwesi are the only professional porters of E. Africa, and in this capacity three of their sub-tribes regularly visit the coast. Their manufactures are confined to coarse unbleached cottons, neatly woven baskets, wooden milk-bowls, saddle-bags for asses, and arms. The government is held by a number of petty chiefs, whose rank is marked by their titles. Of these the highest is the hereditary dignity of *mtemi*, which gives its possessor the power of life and death over his subjects.

UNYANYEMBE, the central and principal province of Unyamwesi, is 356 m. W. of the E. coast of Africa, and has a maximum elevation of about 3840 ft. above sea-level. It consists chiefly of the large plain or basin of Ihara, bounded by low, rolling, and rounded hills of primitive formation. It is the great *bunder* or meeting-place of merchants, and the point of departure for caravans which radiate into the interior of central intertropical Africa. It has thus become the headquarters of the Omani, or pure Arabs, who in many cases settle in it for years, remaining in charge of their depôts while their factors and slaves travel the country and collect the items of traffic. Contrary to what might be expected, Unyanembe, though well peopled, and containing many villages and hamlets, has nothing that can properly be called a town. The sultan or *mtemi*, the most powerful of the Wanyamwesi chiefs, inhabits a *tembe* or square settlement, called Ititenya, on the W. slope of the southern hills. At Mawiti, a neighbouring place, a little colony of Arab merchants has four large houses. Kazeli, in the centre of the plain, is a scattered collection of six large hollow oblongs, with central courts, garden-plots, store-rooms, and out-houses for slaves. Around these settlements are clusters of villages composed of Wanyamwesi hovels. The Arab settlers live comfortably, and even splendidly. Their houses, though of one story, are large, substantial, and capable of defence. Their gardens are large and well planted; they are regularly supplied with merchandise, comforts, and luxuries from the coast, and are surrounded by troops of concubines and slaves, whom they train to divers crafts and callings. The great drawback to the Arab's happiness is the climate, to which his constitution is so unsuited, that he seldom escapes illness for two months in succession. The market at Unyanembe varies greatly. A dry season, or a few unexpected caravans, will treble prices, and corn immediately after harvest will often cost only the half of what it did before.

UNYORO, a territory, East Africa, on the E. side of the Albert Nyanza, or Luta Nzigé Lake, lat. (centre) 1° 30' N.; lon. 32° E. The northern district of it is called Chopi, and the language there differs from that in the central and southern parts. The inhabitants are superior to the more northern tribes, and better clothed. They are good blacksmiths, and skilful in making earthenware. Their huts are very large, 20 ft. in diameter, lofty, and of bee-hive shape.

They also prepare the skins of goats very beautifully, rendering them as soft as chamois leather, and make them up neatly into mantles; manufacturing their needles by sharpening the end into a fine point, and then turning it over and hammering it into a small cut in the body of the needle, to form the eye. The capital, at which Kamrasi, the ruler, resides, stands at the junction of the Kafoor or the Somerset or Victoria Nile, in lat. 1° 40' N.; lon. 32° 20' E. It is a large village of grass huts, situated upon a barren slope.

UPATA, a tn. S. America, Venezuela, among the Imataca Mountains, on the watershed between the basins of the Orinoco and the Essequibo, 100 m. E.S.E. Angostura. It stands at the height of 1150 ft. above the sea, consists of about a dozen streets, formed by houses of a single story covered with tiles; and has a stirring thriving appearance, caused mainly by its position on the direct line of route to the gold-washings of Caratal.

UPSTART, a cape and bay, Australia, on the E. coast of Queensland, opposite to the Great Barrier Reef:—1, *Cape Upstart*, so named by Captain Cook, from the remarkable abruptness with which it rises from the narrow neck of swampy ground connecting it with the mainland, consists of a peninsula or rather island, as a narrow creek intersects the isthmus, about 5 m. long from N. to S., by 4½ m. broad, and composed chiefly of a mass of granite scantily covered with stunted trees and scrub. Its summit, somewhat table-topped, is cleft by a deep gorge, and attains in Station Hill, its culminating point, the height of 1900 ft. above the sea.—2, *Upstart Bay*, lying between the mainland on the W. and the above peninsula on the E., is 10 m. broad from E. to W., and 8 m. deep from N. to S. It has not been minutely surveyed, but immediately within its entrance has an average depth of 7 fathoms. About 10 m. S. from its head Mount Abbott rises to the approximately estimated height of 3460 ft. The Wickham, a small barred river, has its mouth on the W. shore of the bay.

UR, a river, Russian empire, East Siberia, which rises in a mountainous district, pursues a S.E. course nearly parallel to that of the Amoor, and joins the Zeya on its r. bank in lat. 54° N.; lon. 125° E. It flows very tortuously: at one time between steep and rocky banks in an undulating country, at others along low and swampy tracts with small lakes. The principal branch, among several into which it divides, has a width of 50 yards.

URES, a tn. Mexico, cap. dep. Sonora, situated near its centre, in a romantic valley of the same name, inclosed by lofty mountains; lat. 29° 37' N.; lon. 111° 12' W. It lies along the banks of the Sonora, among beautiful gardens, copiously irrigated by canals; but though deriving much importance from having been selected as the seat of government, it possesses little trade. Its only buildings of any note are the governor's residence and the government offices.

URFAHR, a tn. Austrian empire, Upper Austria, l. bank Danube, opposite to Linz, with which it is connected by a long bridge. It has an hospital, a machine-factory, a spinning-mill, and some trade in fruit and vegetables. Pop. 3600.

URIQUE, a river, Mexico, which, rising in the central cordillera of the Andes, in dist. Huacaybo, prov. Chihuahua, winds round the mountains, passes the town of Urique, and then flowing S.W. in a large and rapid stream, joins the Fuerte on its r. bank.

URIQUE, a tn. Mexico, dep. and 110 m. S.W. Chihuahua, on the Urique or Fuerte, in the centre of a valley 1500 ft. above the sea. It is an old town, which before the expulsion of the Spaniards was the centre of extensive mining districts rich in silver, and had a pop. of about 5000, which, since the mines ceased to be productive, has dwindled down to about 800. For this decay the indolence of the inhabitants is chiefly to blame, since, independently of its mines, Urique has sources of wealth which only want industry and enterprise to develop them. The soil is fertile, and being well adapted both for agriculture and pasture, might easily be made to yield heavy crops of maize, and rear great numbers of cattle.

URMENY, a tn. Austrian empire, Hungary, co. Lower Neutra, 45 m. E. by N. Presburg; with a fine castle with a famous stud, and 2928 inhabitants.

URTSCHITZ, a tn. Austrian empire, Moravia, circle and 12 m. S.W. Olmütz; with a parish church, and 1400 inhabitants.

URUGUAYANE, a tn. Brazil, prov. Saõ Pedro do Sul, l. bank Uruguay, close to the frontiers of La Plata. It is a well-built thriving place, with about 1500 inhabitants. Opposite to it, on the other side of the river, which is here about a mile wide, and runs with a rapid current between lofty banks, is the small town of Restauracion, belonging to La Plata.

URUNDI, a territory, East Africa, which lies N. of Ujiji, and on the W. stretches for about 50 m. along the E. shores of Lake Tanganyika. It consists of a low strip of exceeding fertility bordering the lake, and a mountain range which, rising from it, stretches N.E. till it becomes linked with the mountains of Karagwah. The Warundi, its inhabitants, are evidently natives of a high cold country. Their complexion varies from tawny yellow to a clear dark brown, so brightened by the daily use of a mixture of ochre and palm-oil that the real tint is scarcely discernible. Their limbs are stout and well proportioned, many of them standing upwards of 6 ft. high, and bearing a manly and martial appearance. The men tattoo with circles and lines like cupping-cuts. Their dress is the mbugu, worn in the loosest way; their ornaments are beads, brass wire, and streaks of a carmine-coloured substance across the head and forehead; their arms are heavy spears and unusually strong arrows. The Waganga, or priests, wear a curious hood, a thatch of long white grass or fibre, cut away at the face, and allowed to hang behind the shoulders; their half-naked figures, occasionally rattling with wooden clappers, and capering causelessly like madmen, present a savage appearance. The government is held by a single chief or *muvami*, whose warriors, forming a large host easily mustered, are the terror of the neighbouring tribes.

URWUL, a tn. India, presid. Bengal, dist. Behar, r. bank Sone, 40 m. S.W. Patna. It stands in a well-cultivated country, in which grain and opium are largely produced, and possesses an indigo factory, and manufactures of good paper. Pop. about 1000.

USAGARA, a territory, E. Africa, bounded by Khutu on the E. and Ugogo on the W., between which it extends about 95 m.; its breadth from N. to S. cannot be defined. It is covered almost throughout by the mountain range of same name, and is for the most part a beautiful and romantic region, traversed by lofty ridges, which are clothed with the noblest forest-trees, and separated from each other by plains of great extent and fertility. In the lower grounds the soil consists of decomposed granite, greenstone schist, or a coarse incipient sandstone; higher up, where it varies in depth from a few inches to 30 ft., it is of an ochreous brick-red colour, or of a dull gray, which, in the sun's rays, becomes dazzlingly white. Indications of strong volcanic action are evident in the upheaval of the granitic and other igneous rocks above the prevailing sandstone and alluvial clay. In the basins where water is near the surface, and on the banks of streams, there is a richly green vegetation and a growth of gigantic timber. Flowers and fruit abound. The air is heavy with the delicious perfume of the jessamine, the strong odour of a kind of sage, and the sweet scent of mimosa flowers, which stand like golden balls on the bright green boughs. Among the trees are the tamarind, which, everywhere growing wild, attains enormous size; the myombo, a fine forest-tree with a green flower, smelling like jessamine; the mfuu, bearing an edible fruit; the calabash, from 40 to 50 ft. in girth; and the mkuyu or sycamore, which, rising with a pillared trunk, sometimes overshadows a circuit of 500 ft. Cultivation, carried on chiefly in patches with the aid of irrigation, raises luxuriant crops of grain and pulse. Numerous small rivers provide for the irrigation of this torrid tract; they abound with fish, and their banks are beautifully clothed with groves of blooming acacia. The climate, generally cold and damp, varies according to altitude, being healthy in the higher, and the very opposite in the lower grounds, where the people suffer severely from ulcerations, cutaneous disorders, and other ailments. The country is occupied by several independent tribes. Differing considerably in character and condition, they are frequently engaged in destructive hostilities. Most of the villages are built on the projecting spurs of a range of hills, where their inhabitants can more easily resist attack, or, if defeated, secure shelter and concealment. The normal habitation is the small circular hut of matted grass,

and the size of each village entirely depends upon the wealth and power of its headman or chief.

USAGARA, a range of mountains, E. Africa, becomes linked towards the E. with the Nguru Mountains, and extends far towards the S., where it is said to culminate. Some of its peaks have an absolute height of 6500 ft. The flanks of the chain, composed of large rounded cones, intersected by plains and valleys, which have been formed not by denudation, but fracture, indicate a primary and igneous origin. Towards the internal nucleus they are irregularly disposed, the ridges preserving no general direction, and crossing each other confusedly. The highest summits are generally well-wooded. From the slopes of the chain numerous streams descend, some flowing eastward into the basin of the Kingani, and others flowing southwards into that of the Rwaha, the name given to the Rufiji in the upper part of its course.

USHITZA [add.], a tn. Turkey in Europe, Servia, cap. circle of same name, near one of the streams which contribute to form the Servian Morava, 76 m. S.S.W. Belgrade. It stands among orchards, and is of some strategic importance, being defended by a castle which commands three important roads, leading respectively N. to Belgrade, W. to Bosna Serai in Bosnia, and E. to Nish or Nissa in Turkish Servia. It is the seat of a court of justice and other public establishments, and contains a Greek church, fifteen mosques, a Servian and two Turkish schools. Pop. 5300, of whom 3700 are Turks.

USTRON, a tn. Austrian empire Silesia, dist. Skotschau, on the Vistula, 42 m. E.S.E. Troppau; with a Protestant and a R. Catholic parish church, a castle, a bathing establishment, a paper-mill, and extensive ironworks. Pop. 3291.

USTRZYKI, a tn. Austrian empire, Galicia, circle and 22 m. S.E. Sanok, cap. dist. of same name; with a potash refinery, and 1100 inhabitants.

USUKUMA, an extensive but ill-defined territory, East Africa. It has been explained to signify the lands bounded S. by Unyamwesi, and extending N. to the borders of the Victoria Nyanza, or Ukerewe. It thus forms an extensive region, contained between lat. 2° 24' and 5° S. Like Unyamwesi, generally it is a rolling plateau of primitive and sandstone formation, with lower levels of brown clay or sand, mixed with vegetable matter. The undulations resemble long waves from 3 to 6 m. in length, with ascents and descents equally gradual; while the low rocky hills, irregular as if disposed by conflicting currents, may be compared to the small curling breakers of a short and chopping sea. In some places huge outcrops of syenitic granite appear. The hill-tops are bare, and the slopes are only dotted with a thin bush of cactus and aloe; but the plains, though deficient in large timber, have a profuse growth, and when cleared are of extreme fertility. Owing to this fertility, and one main cause of it—the excellence and abundance of spring-water, Usukuma is well peopled, and, in regard to cattle, is the richest territory in this part of Africa. It has also an inexhaustible source of wealth in its iron, which is both abundant and of excellent quality, though the present yield is but small, as the natives, instead of mining it, content themselves with picking up and smelting the pieces of ore which lie scattered on the surface. The quantity, however, is sufficient to admit of a considerable export to W. Unyamwesi. It is supposed that besides iron coal might be found. While iron is thus brought from the N., ivory is the great staple of the E., and cattle and cereals abound in every quarter. The principal crops are maize, millet, and holcus, which grow so profusely that the people can afford to live almost entirely on the intoxicating drink pombe, which is made from them, and is at least as much the national beverage as beer is in England. Pulse, water-melons, manioc, tomatoes, sweet-potatoes, pumpkins, and cucumbers abound. Tobacco is grown on the richest soils, and superior cotton is raised, particularly on the S. frontiers of the Victoria Nyanza. The inhabitants, or Wasukuma, are a boisterous and barbarous race, cunning, covetous, and unceiv. Their dress is rude and scanty, and their mode of articulation is so explosive and unpleasant, that a stranger might think the speaker was spitting at him. Considerations of self-interest, however, and a fear of probable retribution, prevent the Wasukuma from plundering and molesting travellers; and those who allow themselves to be fleeced to a certain extent by the exactions of the chief, generally find him both able and willing to afford them sufficient protection.

USUNDSHOVA, a vil. Turkey in Europe, eyalet and about 40 m. N.W. Adrianople, is celebrated for its annual fair, which is the largest in the country, and is said to be attended by about 100,000 persons.

USURI, a river, E. Asia, forming part of the boundary between Chinese and Russian Manchouria, and after the Songari the largest affluent which the Amoor receives on its r. bank, has its source in the W. slope of the mountains which run N.N.E., parallel to the W. shore of the Sea of Japan. At first, under the name of the Sandugu or Upper Usuri, it flows with great rapidity, hemmed in by mountains on both banks. At some distance below it begins to flow through a wide plain, till it again enters the mountains. Having traversed them for 100 m., it enters a vast and in part swampy prairie, similar in character to that of the Amoor, which it finally joins at the town of Khabarofka, after a course, windings included, of 497 m. The Dobikan, one of its earliest affluents, is remarkable on account of the gold found in its sands, but the principal affluent is the Songahon, which issues from Lake Kingka.

USZTYE, a tn. Austrian empire, Hungary, co. Arva-Thurocz, at the confluence of the Black Arva with the Arva, 20 m. S.W. Neumark in Galicia. It contains 1000 inhabitants, who work a coal-mine, and have a trade in linen.

UTOROP, a tn. Austrian empire, Galicia, circle and about 20 m. S.W. Kolomea; with salt-springs, a large trade in salt, and 1300 inhabitants.

UTSCH-KILISSA, a vil. Asiatic Turkey, Armenia, near the Murad-tchai or Eastern Euphrates, 95 m. E.S.E. Erzeroum. Close to it is a celebrated Armenian convent and church. The convent is a paltry place, but the church, consisting of a nave resting on sixteen columns, possesses an attraction which renders it one of the most venerated and frequented pilgrimages in Asiatic Christendom. This attraction is the grave of John Baptist, whose reputed bones are shown as relics. The inhabitants of the village are Armenians, and a mixed race called Tere-Kameh, strongly resembling gipsies.

UVINZA, a territory, E. Africa, bounding on the E. with Unyamwesi, and extending W. to the country of the Wukaranga. Its N. and S. limits are not defined. It formerly included both sides of the Malagarazi River, but the incursions of the Watuta having rendered the N. or r. bank untenable, the inhabitants, or Waviza, now confine themselves to the fertile grounds of the l. bank. Here the sultan, who bears the title of 'Lord of the River,' takes advantage of his position to levy black-mail on the caravans proceeding to or from Ujiji. At Mpete, within his territory, there is a ferry over the Malagarazi, which it is necessary to cross, and he has only to withdraw his canoes in order to have the caravans at his mercy. From the one with which Burton travelled, Sultan Mzogera, after a week's haggling, exacted about forty cloths, blue and white, six wire bracelets, and ten funds of coral beads, equivalent in that country to about £50 in Great Britain.

UVIRA, a settlement and landing-place near the N.W. extremity of Lake Tanganyika in Central Africa. It possesses only a few tattered hovels, and hence when traders arrive they have no alternative but to provide themselves with temporary booths made of boughs. On a neighbouring height better accommodation might be found in a village belonging to the Mwami, or Sultan Maruta; but the traders hesitate to accept the welcome which he offers them, because they fear the violence of his people. The imports to Uvira are brass wire armlets, salt, beads, tobacco, and cotton cloths; the exports, provisions, ivory, slaves, bark-cloth, and ironware. The last, for which the raw material is obtained from a locality a little west of the lake, is the principal manufacture of the people. They also make neat panniers or baskets, and cut light and pretty bowls out of various soft woods.

UYSAL, a tn. Austrian empire, Galicia, circle Wadowice, about 45 m. S.W. Cracow; with 2800 inhabitants, employed chiefly in preparing match-wood.

UZURAMO, a territory, E. Africa, extending westward from the Indian Ocean, in lon. 39° E., along the banks and basin of the Kingani, to the point where this river is joined by the Mgeta, about lon. 38°. It has thus a total length from E. to W. of about 70 m. On the W. it is bounded by the territories of Khutu and Uziraha. The general character

of the country is a rolling ground, with no eminences worthy of notice; the surface, which is generally covered with a luxuriant vegetation, and nowhere rises more than 330 ft. above sea-level, sloping gradually eastward, and only presenting a few short and abrupt precipices on approaching the sea-shore. The climate, though somewhat mitigated on the higher grounds, is hot and oppressive. The strata on the coast consist of corallines, limestones, calcareous tufa, and rude gravelly conglomerates; inland sandstone and primitive rocks prevail; in the river-beds blocks of fine black hornblende abound, and are used by the natives as whetstones; there, too, occur beds of clay, which they employ in making

pottery. The soil is generally a rich brown or black loam, which under cultivation yields excellent crops, and in a state of nature becomes covered with a most luxuriant vegetation, the grass in the swamps and marshes rising to the height of 12 ft., and the larger growths becoming so close and entwined as to be impervious till paths are cut through them. Black cattle are unknown; but sheep, goats, and poultry are plentiful, and near the jungle are protected from the leopards or ounces by large wooden huts like cages, raised for cleanliness on piles. The principal diseases are severe ulcerations and fevers, generally of a tertian type. The latter usually yield to mild remedies.

V.

VAAL, a tn. Austrian empire, Hungary, co. and 18 m. N.E. Stuhlweissenburg; with a castle, which in early times was an important point in the Turkish lines; manufactures of linen, tile-works, a trade in wine, and four yearly markets. Pop. 2492.

VACOVIA, a fishing vil. Central Africa, on E. shore of the Victoria Nyanza, in lat. 1° 15' N.; lon. 30° 50' E. It is a miserable place, standing about $\frac{1}{2}$ m. from the edge of the lake. The soil is so impregnated with salt that cultivation of it is impossible; hence fishing, the implements and tackle for which are everywhere visible, forms the main resource of the inhabitants. Salt also, being the natural production of the country, gives employment to many of the people in its manufacture, and forms an important staple of trade, being exchanged for supplies from the interior. The flat sandy plain that extends from the lake for about 1 m., to the foot of the precipitous cliffs 1500 ft. high, appears to have been at one time a part of the bottom of the lake. In fact, the flat land of Vacovia looks like a bay, as the mountain cliffs about 5 m. N. and S. descend abruptly to the water's edge, and were the level of the lake 15 ft. higher, this flat would be flooded to the base of the hills. At Vacovia it was that Sir S. W. Baker first came in sight of the Albert Nyanza.

VALDIVIA, or **CALLE-CALLE**, a river, Chili, which issues from Lake Huanchue or Guanegue, flows W., receiving the Quinchillo and Cotileufu on its left, and the Cruces on its right bank, falls into the Pacific, forming an estuary, which is regarded as the securest roadstead on the coast. It is navigable for 15 m. from the junction of the Cruces, a little above the town of Valdivia.

VALDOBBIADENE [add.], a tn. Italy, Venetia, 21 m. N.N.W. Treviso, at the S. foot of Mount Cunione, and not far from l. bank Piave. It is the seat of a court of justice and other public offices, has a high church with beautiful paintings, a civil hospital, and several silk and walk mills. Pop. 4252.

VALENI, a tn. Turkey in Europe, Wallachia, circle Busco, on an affluent of the Yalomitza, 43 m. N. Bucharest. It stands in a beautiful mountain district, and has a church and a parish school. There are mineral springs in the vicinity. Pop. 3000.

VALENTIN (Str.), a tn. Austrian empire, circle Upper Wienerwald, on the Erla; has an hospital, limekilns, and a saw-mill, and contains 2630 inhabitants.

VALLEJO, a tn. U. States, California, at the mouth of Napa Creek, on N.E. side of San Pablo Bay, 28 m. N.N.E. San Francisco. It has a large and safe harbour accessible by the largest sea-going ships; the U. States navy-yard is on Mare Island, adjacent to the harbour. The town is built on the slopes of hills rising gently from the water to a height of 100 ft. or more, and contains several churches and stores. Pop. 1600.

VALSTAGNO, a tn. Italy, Venetia, 23 m. N.N.E. Vicenza, on the Brenta; with a beautiful parish church and paper and silk mills. Pop. 2980.

VALVASONE, a tn. Italy, Venetia, prov. Udine, 2 m.

N. Casarsa, near the Tagliamento, which is here crossed by a long bridge. It is memorable for the victory gained on 16th March, 1797, by Napoleon I. over the Archduke Charles.

VALVETTI-TORRE, a vil. on the N. shore of Ceylon, 3 m. W. of Point Pedro, its northernmost extremity. It is a populous, industrious, and enterprising place, with building-yards, in which vessels of considerable tonnage are turned out by the Tamils, who are among the most skilful and successful ship-builders in Ceylon.

VALYEVO, a tn. Turkey in Europe, Servia, cap. circle of same name, on the Kolubara; with a court of justice, a church, and a school. Pop. 1200.

VAMACHICHE, a vil. British America, Canada East, co. St. Maurice, on the river of its name, 58 m. N.E. Montreal; with a R. Catholic church, an agricultural society, several tanneries and mills, and a considerable trade in oats and lumber. Pop. about 1000.

VANCOUVER, or **QUADRA** and **VANCOUVER** [add.], an isl. W. coast British America; lat. 48° 19' to 50° 53' N.; lon. 123° 17' to 128° 28' W.; length, N.W. to S.E., 278 m.; breadth varying from 50 m. to 65 m. On the E. and N.E. it is separated from the mainland of British America by the Gulf of Georgia and Queen Charlotte's Sound, and on the S. from that of the U. States by the Strait of Juan-de-Fuca; on the N. and W. it lies open to the Pacific. From its somewhat analogous position it has been named 'the England of the Pacific,' but the comparison is not borne out by its appearance from the sea. Instead of the white cliffs of Albion, dark and gloomy rocks start abruptly from the waters, and behind this natural sea-wall a series of rounded hills retire inland, covered with the monotonous fir. The scene is backed, says a recent writer, by a loftier range of bare rocky mountain, which traverses the entire centre of the island, and culminates in a rough uneven sierra of pointed peaks. There are, however, some occasional bits of English-like scenery, clothed with groves, and rejoicing in green meadows; and the central highlands not unfrequently remind the traveller of the features of Scottish scenery. On the banks of the rivers, and in the valleys and open tracts, the soil is surprisingly rich, and wheat, potatoes, turnips, and other vegetables thrive amazingly. Oats and more northern grain crops are, however, less successful. The climate is healthy, mild, and genial. A short spring is the prelude to a long uninterrupted summer, when rain seldom falls, and the heat is moderated by gentle breezes. A cold and misty autumn follows, and that, in its turn, is succeeded by winter, which, though not without its days of rain, has its periods of fine weather, and is seldom extremely cold. 'Actual observation,' says Dr. Rattray, 'goes far to show that the climate is superior to that of England, both in physical character and salubrity; and experience proves that it is equally well adapted for agricultural and pastoral farming.' The chief town is Victoria, situated on undulating ground to the S. of the island. Its harbour, of the same name, is not, however, adapted for an increasing commerce, and the principal port is that of Esquimalt, about 3 m. from it. The whole coast is indented with excellent

inlets, creeks, and channels, which afford a safe shelter for ships, and absolutely swarm with herrings, salmon, sturgeon, mackerel, and cod. A great element in the future prosperity of the island will be its abundance of coal. Coal of good quality has been discovered at Nanaimo Harbour, and on Newcastle and Douglas Islands. At Nanaimo two seams, of from 6 to 8 ft. in thickness, have been worked at an average depth of 50 ft. from the surface. Vessels drawing 16 ft. of water can approach within a few yards of the pit's mouth, while the harbour itself is well protected, and can safely be entered by ships of considerable burden. A great demand for coal has arisen on the W. coast of N. America, and the existence of a supply on Vancouver Island must largely augment the prosperity of the colony.

VANCOUVER, a vil. U. States, Washington territory, on r. bank Columbia River, 90 m. from its mouth, and 10 m. N. Portland. It contains several churches, and large vessels can ascend to it.

VARDA (Kis), a tn. Austrian empire, Hungary, co. Szabolcs, 50 m. N.N.E. Debreczin, cap. dist of same name, in a marshy district; with a court of justice, an old castle, a distillery, and 3662 inhabitants.

VARNA, a tn. Austrian empire, Hungary, co. and 16 m. S.S.W. Trencsin, on the Waag; with 1700 inhabitants, mostly employed in agriculture, fishing, and quarrying limestone.

VARNAVIN, a tn. Russia, gov. and 160 m. E.S.E. Kostroma, cap. circle of same name, on the Wetluga; with two churches, a school for the circle, and 1008 inhabitants. Many of the inhabitants of the circle are engaged in making mats.

VAROSHI, or **DOLATZ**, a tn. Turkey in Europe, Bosnia, near Travnik. It consists of about 300 houses built on a slope, and occupied by R. Catholics, who obtained it as their residence by an arrangement with the Mahometans. It is connected by a good road with Travnik, where many of the inhabitants have shops.

VASGAR, a tn. Austrian empire, Hungary, co. and 20 m. N.W. Veszprim; with a trade in corn, wine, and tobacco, and 1700 R. Catholic inhabitants.

VASILKOV, a tn. Russia, gov. and 20 m. S. by W. Kiev, cap. circle of same name, on the Stugna, an affluent of the Dnieper. It has three churches, a circle and a parish school, and a charitable institute. Pop. 8972.

VASLUI, a tn. Turkey in Europe, Moldavia, cap. circle and on a stream of same name, 23 m. S. by E. Jassy. It is the seat of a court of justice, has a normal school, and was once the residence of the Moldavian princes. Pop. 3500.

VASZECZ, a tn. Austrian empire, Hungary, co. Liptau, on the Waag, among forests in which large quantities of truffles are found. It contains 2100 inhabitants, who are mostly Lutherans, and carry on a large trade in timber and laths.

VEDDAHs, a semi-barbarous race, Ceylon, believed to be a remnant of its aborigines. The country at present inhabited by them is in the S.E. portion of the island, extending for about 90 m. in length, by half that breadth, from the base of the Badulla and Oovah Hills towards the sea; but their range within a comparatively recent period was much larger, and in the time of the Dutch, to whom they paid a tribute in elephants, they were found far N. in the Wannu, within a short distance of the peninsula of Jaffna. They consist of two great divisions—the village Veddahs, and the rock Veddahs. The village Veddahs approach the confines of the European settlements on the E. coast, and dwell in huts of mud and bark. They are somewhat migratory in their habits, removing their huts as facilities vary for the cultivation of a little Indian corn and yams, and occasionally accepting wages in kind from the Moors for watching the paddy fields at night, in order to drive away wild elephants. Some who, as they may almost be considered a third class, are called coast Veddahs, have settled in the jungles between Batticaloa and Trincomalee, and subsist by aiding the fishermen in their operations, or by felling timber for the Moors, to be floated down the rivers to the sea. The rock Veddahs remain concealed in the forests, subsisting on roots, fish, honey, and the produce of the chase, lodging in caves or under the shelter of overhanging rocks, and sometimes sleeping on stages which they erect among the trees. They are divided into small clans, who partition the forest among themselves for hunting-grounds,

marking the limits of each possession by natural objects, as streams, hills, rocks, or well-known trees. In their food they are almost omnivorous, subsisting on roots, grain, fruits, vermin, and carrion of every kind, however repulsive, and yet, from some unexplained cause, rejecting the flesh of the bear, elephant, and buffalo. The iguana lizard and monkeys, both roasted, are their favourite dainties. Their only weapons are a hatchet and a bow, in the use of which they are very dexterous. The produce of the chase not required or suitable for their own use they dry and reserve for barter. This traffic they carry on in a very singular manner, attesting their aversion to intercourse with civilized life. When disposed to barter they repair by night to the village nearest their hunting field, and indicating by well-understood signs and models the articles required, deposit an equivalent value of honey or deer's flesh near the door of the dealer, and retire to the jungles. After a reasonable delay they return stealthily as before, and find the required articles on the same spot. This mode of dealing must be very ancient, since it is not only mentioned by a writer of the eleventh century, but distinctly alluded to by Pliny. Though ignorant in the extreme, and without any idea of God or a future state, they are described as a quiet and submissive race, obedient to the slightest intimation of a wish, and very grateful for attention or assistance. Government and the Wesleyan missionaries have made some attempts to reclaim these poor outcasts, and with no small measure of success. As they refused to leave the vicinity of their native forests, cottages were built for them on the spot, wells dug, cocoa-nuts planted, and rice-land assigned them. In this way settlements were formed at Vippam-Madoo, Oomany, and Villen-gelavelly, and school-houses erected, and teachers provided to give instruction through the medium of the Singhalese language. The settlement at the first place failed through the misconduct of the teachers, but not till such an impression had been made that the Veddahs who had belonged to it did not, even when dispersed, return to their savage habits, but built huts and continued to cultivate the ground as they had been taught. The settlement at Oomany continues to prosper. Twenty-five families reside in its cottages, cocoa-nut trees are growing beside them, and as much rice and other grain is raised as suffices for the consumption.

VEIT (St. [add.], a tn. Austrian empire, duchy Carinthia, in the valley of the Glan, 11 m. N. Klagenfurt. It is surrounded by walls, and has a market-place with a fine marble fountain, an old town-house, fine gardens, and important horse-markets. It was once the residence of the Dukes of Carinthia, and is still the central entrepôt for the iron made and manufactured in the duchy. In the vicinity are many feudal castles, of which the most important, Hohen-Osterwitz, is maintained in excellent condition, and has a beautiful chapel, with various monuments and other objects of interest.

VEIT (Sr.), a tn. Austrian empire, Lower Austria, circle Upper Wienerwald, on the Golsen; with numerous saw and other mills, a considerable trade in wood, and a seam of lignite. Pop. 2370.

VELLORE, or **RACE VELLORE**, a tn. and fort, India, presid. and 80 m. W.S.W. Madras, dist. N. Arcot. The town or pettah, situated close to the foot of a range of hills, is large, and contains many good houses and a very busy bazar, but has no edifice deserving of notice, except the white-washed mosque of Chunda Sahib. The fort, situated W. of the pettah, is of considerable extent, inclosed by a broad and deep ditch, and high, broad, and strongly built ramparts, flanked at intervals with towers and bastions. It is also provided with a fausse-braye, but this and all other means of defence are useless, as it is completely commanded by the adjoining hills, and so near them that a six-pounder planted on them can throw its shot over and beyond it. Within are a great pagoda, forming one side of its square, and now used as an arsenal; the hospital, which is somewhat low in the roof, but well ventilated, and generally dry; the barracks, magazine, and quarters for staff-officers. The soil of the neighbourhood, a rich dark-brown mould, produces heavy crops of rice and tobacco. Vellore is famous for a revolt of the native troops, which occurred on the 10th of July, 1806, and in some of its features, more especially in the savage and bloodthirsty spirit manifested, bears some resemblance to the Sepoy mutiny of 1857-8. Pop. of town, 51,408.

VENEV, a tn. Russia, gov. and 15 m. N.E. Tula, cap. circle of same name, l. bank Venevka. It has seven churches, schools for the circle and parish, a charitable institute, several manufactures, and a large trade in horned cattle. Pop. 3661.

VENLOOS, or VENDELOOS, a bay, on the E. coast of Ceylon, 45 m. S.S.E. Trincomalee. It is formed on the N. by Elephant Point, and on the S. by a point of its own name, and receives the Natoor, a wide and rapid stream. A bar of rocks, stretching across it at a short distance from the shore, is frequented all day long by pelicans, that come at sunrise to fish, and return at evening to their solitary breeding-places remote from the sea. The surrounding scenery is beautiful, gentle acclivities wooded to the summit rising from the shore, while the river is seen flowing through an opening among a cluster of little islands covered with mangroves and acacias. The bay is famous for its shells, which literally cover the strand in endless variety, and furnishes the shell-dealers of Trincomalee with their principal supplies. This trade is exclusively in the hands of the Moors, who clean the shells with great expertness, arrange them in satin-wood boxes, and send them to Colombo and all parts of the island for sale.

VERDACHELUM, a tn. India, presid. and 135 m. S.S.W. Madras, dist. S. Arcot, on the Manymootah Nuddee. Its position on the road from Trichinopoly to the British encampment at Trivady, made it a place of some importance in the Carnatic wars. Its pagoda was accordingly well fortified, and some severe struggles took place in its vicinity. It has again become comparatively insignificant.

VERKNE-ISSETZKOI, Russia, gov. Perm, 2 m. from Ekaterineburg. Though it has the appearance of a considerable town, with its churches and other buildings, it is only the central establishment for the ironworks belonging to the Yakovlif family. Among its buildings are an enormous pile containing all the offices for the administration of the family mining property, warehouses for iron and other produce, blast-furnaces, forging, tilting and rolling mills. The sheet-iron made here is said to surpass the best that is made in any other part of the Oural. Large quantities of it, both raw and manufactured into utensils of various sorts, are exported to America.—Another Zavod, called *Nijne-Issetzkoi*, situated lower down in the valley of the Issetz, about 8 m. from Ekaterineburg, is the seat of extensive blast-furnaces belonging to the crown. To obtain the necessary supply of water, a large lake has been formed by throwing an embankment across the river.

VERÖCZE, a tn. Austrian empire, Hungary, co. Neograd, 20 m. S.S.W. Balassa Gyarmath, on the Danube and the railway from Presburg to Pesh; with 1540 inhabitants, who grow an excellent wine. There is a pleasure-palace in the vicinity.

VEROVITICA, a tn. Austrian empire, kingdom of Croatia and Slavonia, co. and 15 m. N.N.E. Posega, on the Brana. It was once fortified, has a fine castle, a high-school, and a trade in wine, and contains 4200 inhabitants.

VERRIA, or KARAVERIA, a tn. Turkey in Enrope, cyalet and 40 m. W.S.W. Saloniki. It contains 8000 inhabitants, whose chief employment is in weaving a cloth composed of a mixture of linen and cotton, and much used as towelling for baths.

VESENBERG, a tn. Russia, gov. Esthonia, in its most fertile district, 60 m. E. Revel; has a church, a ruined castle, a circle and an elementary school, and two charitable establishments. Pop. 4360.

VESGEGONSK, a tn. Russia, gov. and 78 m. N.N.E. Tver, cap. circle of same name, on the Mologa. It stands on the N.E. extremity of the gov.; has four churches, a parish school, two charitable endowments, and a large annual fair, from the 6th to the 16th of January, at which a great deal of business is done. In the circle immense numbers of nails and boots and shoes are manufactured. Pop. of town, 2583.

VETLUGA, a tn. Russia, gov. and 180 m. E. Kostroma, cap. circle and on the river of same name. It has two churches, a parish school, and a charitable endowment, and contains 2277 inhabitants. Large numbers of mats are made within the circle.

VIASNIKI, a tn. Russia, gov. and 68 m. E. Vladimir, cap. circle of same name, on the Kliasma. It has seven churches, a circle school, numerous manufactures, particularly of linen, and a large trade in corn. Pop. 3543.

VICHTWANG, a tn. Austrian empire, Upper Austria, circle Hansruck, 23 m. S.W. Steyer; with an elegant parish church, an hospital, and a pop. of 1800.

VICTORIA, a prov. Australia [add.] In 1851 this province, which had previously formed part of New South Wales, was erected into an independent government, with a lieutenant-governor, executive council, and two legislative chambers. At this period the total number of inhabitants, exclusive of aborigines, was 77,345. Owing to the fertility of the soil, the produce of food had become so super-abundant, and the influx of settlers comparatively so small, that the produce could not be consumed, and sheep were bred solely for their wool, of which, in 1850, 18,091,207 lbs. were exported to England. But the discovery of gold in the province, immediately after that in New South Wales, and almost contemporaneously with the establishment of its independence, attracted an enormous immigration. The first discoveries were made nearly simultaneously at Ballarat, then a sheep station 70 m. W. of Melbourne; at Anderson Creek, 16 m. from Melbourne; and at the Clunes Station on the Hoddon River, about 100 m. N.W. of the city. The rush to these rich fields of gold speedily emptied Melbourne of its male population, and was swelled by immigrants from the other colonies, Tasmania, New Zealand, California, and after some months from England; so that, in twelve months from the date of the gold discovery, about 65,000 had been added to the number of the population. In one fortnight in 1852, 45 vessels sailed from England, with not less than 15,000 emigrants, to Australia. This extraordinary influx naturally threw things into confusion, and lawlessness, as well as much privation and distress, prevailed. The powers of the government were unequal to the emergency, and deeds of violence, and formidable gangs of robbers, set law and order at defiance for a time. Resistance to the licence fee of 30s. a month, exacted by the government from every digger, produced serious riots at Ballarat and elsewhere at the end of 1854, which had to be suppressed with the aid of the military. An increased and more efficient police, aided by a special police force derived from England, was at length successful in restoring public order and personal safety. The accession of population gave fresh impetus to agriculture, and the large demand and high prices of food induced many of the pastoral and agricultural classes, who had forsaken their calling and taken to the gold-fields, to return to their proper occupation, which could now be carried on most profitably. From the time of the discovery of gold at Ballarat in August, 1851, to the end of the year, the estimated quantity dug was valued at £845,523. In 1852 the value of the gold produce was £15,899,733; in 1853, £14,100,083; in 1854, £9,568,262, a considerable falling off, owing to the disturbed state of the population in the gold-fields; in 1855, £11,172,261; and in 1856, £11,942,783; from which date there was a gradual decrease to £6,635,192 in 1862. The progress of commerce and manufactures was correspondingly rapid during the same period. The shipping entered was as follows:—

	Vessels.	Tons.
1851.....	712	129,406
1852.....	1657	408,216
1853.....	2594	721,473
1854.....	2596	794,604
1855.....	1907	551,726

The value of the imports and exports during the same period is also stated thus:—

	Imports.	Exports.
1851.....	£1,056,437	£1,422,909
1852.....	4,069,742	7,451,549
1853.....	15,842,637	11,061,544
1854.....	17,659,051	11,775,204
1855.....	12,007,939	13,493,338

Where the exports were less than the value of the product of gold, it is accounted for by there being at the time no duty on gold, and the official returns taking no account of the large quantities carried away by private hand.

At the close of 1851 the population was estimated at 97,489; in 1852, at 168,321; in 1853, at 222,436; in 1854, at 312,307; and in 1855, at 364,325. The proportion of the sexes in the last-named year was 234,450 males to 129,874 females. At the commencement of 1856 there were in the province 349 churches and chapels, accommodating 76,549

persons; and 438 schools, attended by 24,478 scholars. In March, 1857, when the population had reached 410,766, the religious denominations were ascertained to be—

Church of England.....	175,418
Presbyterians.....	65,935
Wesleyans.....	20,395
Independents.....	10,658
Baptists.....	6,484
Lutherans.....	6,574
Unitarians.....	1,480
R. Catholics.....	77,351
Jews.....	2,208
Mahometans, &c.....	27,254
Unspecified.....	6,774*

* Chiefly Chinese.

The revenue of the province for the years under consideration was as follows:—

1850.....	£259,433	1853.....	£3,490,932
1851.....	486,332	1854.....	6,154,928
1852.....	1,577,181	1855.....	4,716,696

The expenditure was principally made on roads, bridges, and other public works; and railways have been constructed to the principal gold-fields, the cost of which has been raised by loans. The following more recent statistics will show the position which the province has maintained to recent times. The total quantity of land sold by the government up to the 31st December, 1865, was 6,049,703 acres; and the extent

remaining unalienated was estimated at 49,594,456 acres. The extent of land leased in 1865 was 1,820,173 acres, and the amount of rent received £112,709. The number of acres in sheep-runs was 29,354,436; the number of acres attached to runs was 2,856,000; the extent of land under cultivation in 1864 was 479,463 acres, and in 1865, 530,196 acres, showing an increase of 50,733 acres. There were in the colony in March, 1865, 640,625 cattle and 8,406,234 sheep; and in March, 1866, 621,337 cattle, showing a decrease of 18,288, and 8,835,380 sheep, being an increase of 429,146. The number of immigrants who arrived in the colony by sea in 1865 was 38,976, of whom there came from the neighbouring colonies 18,405, from the United Kingdom 18,862, and from foreign countries 1709. The population of the colony on the 1st of January, 1865, was 605,501, and on the 31st December, 1865, 626,639, being an increase of 21,238. The estimated population on the gold-fields on the 30th September, 1866, was 258,247, of whom 227,486 were Europeans, and 30,401 Chinese. The trade of the colony had apparently not been in a prosperous condition in 1865, the imports and exports in that year having fallen off considerably. The imports amounted to £13,257,537, and the exports to £13,150,748. The value of the imports was lower than in any of the preceding nine years; and the value of the exports was less than in any year of the same period except 1860 and 1862.

VICTORIA, a tn. British N. America, cap. Vancouver Island, on the N. side of the Strait of Juan de Fuca, and on the S.E. end of the island; lat. 48° 27' N.; lon. 123° 25' W.

A STREET IN VICTORIA.—From Mayne's British Columbia.

The inlet which forms the harbour runs northerly for some miles with an average breadth of a few hundred yards. The country around is undulating, in the distance thickly timbered, but in the immediate vicinity open, and covered with fertile grassy pastures. The town lies on the eastern side of the harbour. The site was selected about eighteen years ago by the officers of the Hudson Bay Company, for a fort and dépôt, on account of the safe harbour for small vessels, and the quantity of good clear land in the neighbourhood for the support of the establishment. Since then the influence of the neighbouring gold-fields and other natural advantages have made it a place of considerable importance. It has become the seat of government of the island, and contains several churches and other public buildings, but from the unsuitableness of its harbour will not become a place of commerce. The entrance of this harbour is narrow and shoaly, the channel tortuous and, without a pilot, dangerous, notwithstanding the erection of buoys and other means of improvement; and the bay itself scarcely affords convenient anchorage for six large vessels. For these reasons, and the difficulty of procuring water, the harbour has been abandoned for large vessels, and Esquimalt, about 3 m. to the S., has become the port. Pop.

about 6000. Fort Victoria, in the immediate vicinity, consists of a square inclosure with octagonal bastions.

VICTORIA, a tn. Mexico, cap. state Tamaulipas, near the river Santander, and at the foot of a mountain range which bounds it on the S. and S.W.; lat. 23° 45' N.; lon. 99° 10' W. It stands at the height of about 1000 ft. above the sea, is regularly built, consisting of a large central square, with a number of streets radiating from it, and has a church built in the Moorish style, a town-house, and a number of handsome private mansions. From being commanded by adjacent heights, it possesses little military importance, but its position near the Santander, which is here navigable for large boats, and at the point where several important roads meet, gives it great facilities for trade. Victoria was founded by Escandon in 1748, and after being called New Santander and Aquayo, received its present name in 1825, in honour of the president Guadalupe Victoria. Pop. 6164.

VICTORIA, a tn. La Plata, prov. Entre Rios, on a small stream of its own name, forming a branch of the Parana Cito, 200 m. N.W. Buenos Ayres. It stands on the top of an elevated ridge, is a flourishing place, carrying on an active trade in hides, wood, and lime, and has a pop. of about 4000.

VICTORIA, or PETER THE GREAT, a bay, Russian empire, in the Sea of Japan, on the S.W. coast of Manchuria, is a large indentation which looks towards the S., and is divided into the two gulfs of Napoleon on the E. and Guerin on the W., by the Albert Peninsula, projecting S. from the mainland, and continued in the same direction by a group of islands called the Eugénie Archipelago. In Hamelin Strait, near the S. extremity of the peninsula, is situated Port May or Vladivostok, completely sheltered by hills. The whole coast line, consisting chiefly of clay-slate heaved up by rocks of red porphyry, exhibits marks of volcanic action. The surrounding country is well wooded with oaks, elms, and walnut, and has large tracts of fine grazing land, abounding in various coloured flowers. The vine grows luxuriantly, and matures its fruit.

VICTORIA, or COOPER (native, *Tewhaka*), a harbour, New Zealand, E. side of Middle Island, on the N.W. of Banks' Peninsula. The entrance, the heads of which are bold and steep-to, is $2\frac{1}{2}$ m. from the S. end of Pegasus Bay, and the harbour runs 7 m. in a S.W. by W. direction. The town and port of Lyttelton is situated on the N. shore, in a small bay 4 m. from the heads; above it there is sufficient depth for small coasting vessels only. The entrance is 1 m. wide, and retains this width to the anchorage off Lyttelton. The harbour is easy of access in most weathers, except in S.W. gales, which draw out with great violence. Opposite Lyttelton, and connected at low-water with the S. shore, is Quail Island, midway between which and the town is a reef.

VICTORIA (PORT), a magnificent harbour and roadstead on the E. side of the island of Mahé, the largest of a group of twenty-nine islands forming the Seychelles Archipelago, about lat. 5° S.; lon. 55° E. The harbour is capable of safely mooring five or six sail of the line, while the bay in which it lies, about 4 m. deep by $3\frac{1}{2}$ m. wide, furnishes a roadstead completely inclosed by little islands on all sides except the N. The excellence of the harbour has given rise to a town of the name of Victoria, which, however, has not made much progress, consisting merely of wooden houses covered with shingles.

VICTORIA FALLS (native name *Mosioutunya*), S. Africa, in the Liambye or Zambesi, about 25 m. below the confluence of the Chobe. The falls have been formed by a crack right across the river in the hard black basaltic rock which forms the bed of the Zambesi. The lips of the crack are still quite sharp, save about 3 ft. of the edge over which the river rolls. The walls go sheer down from the lips without any projecting crag or sign of stratification or dislocation. No change of level took place when the vast rift occurred between the two parts of the river's bed thus rent asunder, the part of it on the opposite side of the cleft, in descending the river, being on the same level with that over which the water still flows, and covered with grass and trees where the stream formerly ran. The first crack is in length a few yards more than the breadth of the river, which on his second visit Dr. Livingstone found to be a little over 1860 yards. The main stream is here running nearly due N. and S., and the cleft across it lies nearly E. and W. The depth to the surface of the water at the bottom of the chasm was found by measurement to be about 360 ft., the actual bottom being, of course, still lower. The width of the cleft at its narrowest part is about 80 yards, and at its broadest somewhat more. Into this chasm the river, more than a mile wide, rolls with a deafening roar. The water is then seen in the bottom of the fissure flowing from each end of it towards the centre, where the two currents unite, forming a fearful boiling whirlpool, and then find an outlet by a crack at right angles to the great fissure; this outlet is about 1170 yards from the W. end, and 600 yards from the E. end of the chasm. The river, now apparently not more than 20 or 30 yards wide, surges and rushes S. through this narrow channel for about 130 yards, and then enters a second chasm somewhat deeper, and nearly parallel with the first. Leaving the eastern half of this second chasm to the growth of large trees, the stream turns sharply to the W., and forms a promontory between it and the first fissure of 1170 yards in length, and 416 yards in breadth at its base. Reaching this base the river runs abruptly round the head of another promontory, and flows to the E. in a third chasm, then turns round a third and much narrower promontory, and goes to the W. in a fourth chasm,

and appears again to sweep round yet another promontory towards the E. In this huge zigzag, yet narrow trough, the rocks are all so sharply cut and angular that the idea at once arises that the hard basaltic trap must have been riven asunder by some force acting from beneath. The land below or S. of the falls retains, as stated before, the same level as when the rent was made. The tops of the promontories are in general flat, smooth, and studded with trees. Viewing the falls from the first promontory, that is, facing them, at the W. end of the chasm there is first a fall 36 yards in breadth, and of course, as all are, 360 ft. in depth; then intervenes Boaruka, a small island, and next a great fall, 573 yards broad; a projecting rock separates this from the third fall, 325 yards in breadth; in all, upwards of 900 yards of perennial falls. Then comes Garden Island, eastward of which, in the dry season, when the river is at its lowest, comes a good deal of the bare rock of the river's bed, with a score of narrow falls, which in the floods of the wet season constitute one enormous cascade nearly half a mile in extent. Near the E. end of the chasm are two other large falls, but not to be compared at low-water with the western ones between the islands. The whole body of water rolls clear over quite unbroken; but after a descent of 10 or more ft., the entire mass suddenly becomes like a huge sheet of driven snow. 'Pieces of water leap off it in the form of comets with tails streaming behind till the whole snowy sheet becomes myriads of rushing, leaping, aqueous comets. This peculiarity was not observed by Charles Livingstone at Niagara; and here it happens possibly from the dryness of the atmosphere, or whatever the cause may be, which makes every drop of Zambesi water appear to possess a sort of individuality. It runs off the ends of the paddles, and glides in beads along the smooth surface, like drops of quicksilver on a table.' The vast body of water, separating into the comet-like forms described, necessarily incloses in its descent a large volume of air, which, forced into the cleft to an unknown depth, rebounds and rushes up loaded with vapour to form from three to six columns, as if of steam, visible 21 m. distant. Rising 200 or 300 ft. above the cascade, this vapour becomes condensed, and falls in a perpetual shower of spray on the grove of evergreen trees opposite; the heavy drops from the leaves of which collect and form little rills which run down the steep face of the rock until they are blown off and carried up again by the columns of vapour.

VICTORIA NILE. See SOMERSET RIVER in *Supp.*

VICTORIA NYANZA, a large fresh-water lake, Eastern Africa, about 400 m. E.N.E. Lake Tanganyika. Its S. extremity is in lat. $2^{\circ} 24'$ S.; lon. 33° E., and the height of its water is 3750 ft. above sea-level, but its extent to the N. is unknown. According to some native accounts it extends to 1° or $1^{\circ} 30'$ N. This would give it a total length of 250 m. At its S. extremity, where it receives the Muungwira, it forms a creek almost completely choked up with an archipelago of brown rocky tree-clad islets, but immediately beyond it widens out into a magnificent expanse, roughly estimated at 85 m. In this part of the lake, about lat. 2° S., there are two islands of some size—Masita, not far from the S.E. shore; and a little to the W. of it, and at least double its size, Ukerewe, which sometimes gives its name to the lake. Nyanza lies open and elevated, rather resembling the drainage and temporary deposit of extensive floods than a volcanic depression, as Tanganyika seems to be. Its shores are low and flat, dotted here and there with little hills, and its water is universally commended for its lightness and smoothness. The depth is said to be great, but as yet this can only be regarded as conjecture.

VIEJO, a tn. Central America, Nicaragua, dep. Occidental, in the vicinity of the volcanic mountain of same name, about 20 m. N.W. Leon. While one of the oldest, it is also one of the best-built places in the state, many ancient and wealthy families having selected it for their residence. It has two churches, one of them a building of some merit. Pop. about 3000.

VIERZIGHUBEN, a tn. Austrian empire, Moravia, circle and 40 m. N. Brünn, on the frontiers of Bohemia; with a castle, and a pop. of 1200.

VIGAY, a river, India, presid. Madras, which rises among the mountains which separate Travancore from dist. Madura, and flows first N.E., receiving numerous small tributaries,

and then S.E. past the town of Madura. In the lower part of its course it expands into a large lake called Periyakolan, and thereafter proceeding E. for 6 m., loses itself in a salt marsh. Re-appearing at the E. end of the marsh, and still retaining its name, it pursues a serpentine course S.E. for about 5 m., and finally enters Palk's Strait a little below the village of Autankarai. Its whole length is about 140 m. It is generally in flood from October to December, and possessing water throughout the whole year, contributes greatly to the fertility of the districts through which it flows.

VIGITA-POORA, a ruined city, Ceylon, 50 m. N. by W. Kandy. It stood near the N. shore of the abortive tank of Kalaweva, became a royal residence 500 years before the Christian era, and was a city and a fortress when Anarajapoor was still a village. It was surrounded, according to the Mahawanso, by a triple battlement and entered by a gate of iron, and after various vicissitudes was rebuilt as late as the twelfth century by Prakrama. So rapid, however, and so complete has been its decay, that nothing now remains except the foundations of the fort, a dagoba evidently built of bricks taken from the city wall, a few stone troughs, and chiselled pillars and mounds of earth and debris.

VIHODNA, a tn. Austrian empire, Hungary, co. Liptau, on the road to Zips; with 1500 Lutheran inhabitants, who rear sheep, and make famous ewe-milk cheese.

VILEIKA, a tn. Russia, gov. and 60 m. E.S.E. Vilna, cap. circle of same name, on the Vilja; with three churches, a charitable institute, and a pop. of 2042.

VILHELI, a tn. S.W. Africa, Kimbunda country, territory Bailundo, on a stream of same name to the W. of the Kutatu, about lat. 11° 35' S.; lon. 16° 40' E. It is situated in the midst of dense woods, is surrounded by a palisade and a ditch, and contains about 2000 inhabitants, who, besides cultivating the soil, carry on a considerable trade in bees'-wax.

VILKOMIRS, a tn. Russia, gov. and 45 m. N.N.E. Kovno; with a church, a circle and a parish school, two charitable institutes, and 4182 inhabitants.

VILLA-DE-VICUNA, a tn. Chili, prov. Coquimbo, in a fertile vale, r. bank Elqui, 40 m. E.N.E. La Serena; with a parish church, a town-house, two normal and three primary schools. Pop. 2076.

VILLA FONTANA, a tn. Italy, Venetia, prov. and about 9 m. S.E. Verona, on the Menago; with a parish church, which contains good paintings by Giolfino and Farinato.

VILLAFRANCA, a tn. Italy, Venetia, prov. and 9 m. S.W. Verona, cap. dist. of same name, on the railway to Mantua. It is the seat of a court of justice, has two parish churches, a Capucin convent, and an hospital, and contains 7147 inhabitants. The French and Austrian emperors met here on 25th July, 1858, and settled the preliminaries of a peace which deprived Austria of the greater part of Lombardy.

VILLALTA, or SAN ILDEFONSO DE VILLA ALTA, a tn. Mexico, state and about 45 m. N.E. Oajaca, in a beautiful and healthy district at the height of 4000 ft. above the sea. It was established by Cortes in 1531 as a military post or *presidio*, and continued long to be one of the most important places of New Spain. The present inhabitants, not above 1000 in number, weave coarse cloth out of *pita* (the fibres of the agave), and show considerable skill in carving articles of wood. Coffee, cotton, tobacco, and fruit are grown, and gold and silver were once mined in the district.

VILLA MOLINA, a tn. Chili, prov. Talca, 120 m. S.S.W. Valparaiso. It is a clean little town, built chiefly along the main road, with an indifferent-looking church, and a pop. estimated at 2000. A broken plain, almost utterly barren, commences near the town and extends to Talca.

VILLANDERS, a tn. Austrian empire, Tyrol, circle and about 8 m. W. Brixen; with 1800 inhabitants, and a church containing a number of remarkable tombs. In the Pfunderer Mountain in the vicinity are mines of silver, lead, and copper.

VILLA RICA, a tn. Paraguay, 85 m. S.E. Asuncion, equidistant from the Tibiquari on the E., and its tributary the Tibiquarimini on the W. It is picturesquely situated amid fertile plains, which terminate E. and W. in a low mountain range covered with noble forests.

VILLARICA, a lake, Chili, in the N. of prov. Valdivia,

and at the N.W. foot of the volcanic mountain of its name. Its area is estimated at rather more than 100 sq. m. It was originally called Llanquen, but Valdivia, in consequence of the quantity of gold found in its vicinity, formed a settlement on its shore, of which, notwithstanding its repeated devastation by the Indians, the ruins may still be traced. Its surplus waters are carried W. to the Pacific by the Tolten.

VILS, a tn. Austrian empire, Tyrol, circle and 38 m. N.W. Innsbruck, on the frontiers of Bavaria; with a beautiful parish church, and an old castle. Up to the seventeenth century Vils was an imperial free town. Pop. 1000.

VINELAND, a vil. U. States, New Jersey, on the Millville and Glassboro' railway, 32 m. S. by E. Philadelphia. It contains three churches, several manufactories, &c.; the cultivation of fruit forms the principal occupation of the people.

VIRACHOLEN, a vil. India, presid. Madras, dist. and 34 m. S.S.E. Madura, on the S. bank of the Kredamanadi. It was anciently the residence of the rajahs of the country, and indicates its importance by the extent and magnificence of its remains, though it is now insignificant, with no existing building worthy of note except a small Hindoo temple. The manufactures consist of long cloths.

VIRGIN-GORDA, an isl. W. Indies, Leeward Islands, the most easterly of the Virgin group, has a very irregular outline, and is occupied towards its centre by an immense hill, which rises gradually and terminates in a peak 1370 ft. high. On its W. side is a peninsula, broken up by some convulsion of nature into vast granite blocks, which lie scattered on the shore. To the southward are several cays and islets, similarly composed of disrupted granite. The largest of these islets, having the appearance of a town in ruins, is named Fallen Jerusalem. The inhabitants, about 764, are engaged in raising stock and vegetables, cutting wood, and burning charcoal for the markets of St. Thomas and St. Croix.

VIRGINIA CITY, two places, U. States:—1, A tn. Nevada, situated among rocky ledges and ravines, on the E. slope of Mount Davidson, 15 m. N.N.E. Carson, and 274 m. N.E. San Francisco; 6205 ft. above the level of the sea. The principal streets, in many instances cut through the solid rock, are level, and those devoted to business are lined with blocks of substantial stone and brick fire-proof buildings three to five stories high. The environs are adorned with many handsome private residences. Virginia City owes its origin and rapid growth to the rich veins of silver discovered in 1859, from which upwards of £2,000,000 of silver was obtained in 1864. A vein near the city is the largest yet discovered, being 156 ft. thick and 4 m. long. The city is lighted with gas, and well supplied with water; and good roads have been constructed in various directions. Pop. (1860), 2345; (1865), about 15,000.—2, A tn. Idaho, near the Rocky Mountains, 225 m. E.N.E. Idaho City, has productive gold-mines, and the adjacent country is said to be well supplied with wood.

VISONTA, a tn. Austrian empire, Hungary, co. Heves, E. Gyongyos; is famous for the wine of its name, strongly resembling Burgundy. Pop. 900.

VISUCZ, a tn. Austrian empire, Military Frontiers, Licca district, about 69 m. S.S.E. Karlstadt, on a narrow mountain pass; with a Greek non-unioned parish church, and the extensive ruins of an ancient castle. Pop. 1220.

VITENDA, a tn. S.W. Africa, Kimbunda country, territory Bailundo. It is situated on the Kutatu and Mungoya, about 33 m. above its confluence with the Coanza, is enclosed by a strong palisade and a ditch, and contains 2000 inhabitants, under the rule of a powerful chief, nominally subject to that of Bailundo.

VITZA, or VISA, a tn. Turkey in Europe, eyalet Adrianople, 75 m. N.W. Constantinople. It has a picturesque site on a mountain slope, is surrounded with walls, and is the seat of a Greek archbishop. The onions grown here are famous. Pop. 5000.

VIZAKNA, or SALZBURG, a tn. Austrian empire, Transylvania, circle and 6 m. N.W. Hermannstadt; with large salt-works, and 3441 inhabitants.

VLADIMIR (Sr.), a bay, Russian empire, on the W. coast of the Sea of Japan; lat. 43° 53' 40" N.; lon. 135° 27' 21" E. It opens between the rocky promontories of Baliuzeka on the N., and Vachofski on the S., which are 1½ m. apart, and ex-

tending westward, forms three inlets—N., S., and W. The last is the smallest; the other two are vast circular basins, separated from each other by a hilly and wooded peninsula, and both of them surrounded and sheltered by adjacent wooded heights. The S. inlet, the largest and most completely sheltered, affords every facility for careening and repairing a ship. It is said that these inlets are only frozen over from the middle of December to the middle of February, and that the effect of the offing-swell is to keep the entrance of the bay almost free from ice.

VLOSKAVEK, a tn. Russian Poland, gov. and 85 m. N.W. Warsaw, on the Vistula. It has a cathedral and three other churches, a circle and an elementary school, and a considerable trade in corn; and contains 6162 inhabitants.

VOINITZA, a tn. European Turkey, Bosnia, eyalet Bosna, 29 m. W. by N. Bosna-Serai. It lies among mountains, and contains 4000 inhabitants, mostly R. Catholic Bosniaks, who are chiefly employed in mining and smelting. To the N.W. the largest R. Catholic monastery in Bosnia is situated.

VOITELSBRÜNN, a tn. Austrian empire, Moravia, circle and 24 m. E.S.E. Znaim, on the frontiers of Lower Austria; with an ancient parish church, a sulphur spring, a trade in wine, and 1000 inhabitants.

VÖKLABRUCK, a tn. Austrian empire, Upper Austria, circle Hansruck, on the Vökla, 35 m. W. Sleyer; has a female educational institute, a town-hospital, an infirmary, and manufactures of fllice and wooden ware. Pop. 1300.

VOLCANO BAY, in the S.W. of Yesso, one of the Japan Isles, is nearly of a circular shape, and has a width of about 33 m. at its entrance, which is formed by Cape Yetomo on the N. and Point Esarmi on the S. Its depth, which is 50 fathoms near the centre, decreases gradually towards the shore. Captain Broughton, who visited it in 1796, gave it its name, because he then saw three volcanoes in activity. The U. States expedition to Japan in 1854 saw only two,

which were situated in the N.E., and throwing out convulsively volumes of thick smoke. The scenery of the bay is very beautiful, presenting an amphitheatre of lofty mountains, their summits covered with snow, and their lower slopes clothed with the richest verdure. At the N.E. entrance of the bay, in lat. 42° 21' N.; lon. 140° 56' 30" E., is the small but snug harbour of Endermo, which affords good shelter to vessels entering it.

VOLOKLAMSK, a tn. Russia, gov. and 65 m. N.W. Moscow, cap. circle of same name, on the Lana, at its confluence with the Shasha. It has seven churches, a circle and a parish school, and a benevolent endowment. In the vicinity there is a wealthy monastery of the same name, which was founded in 1479. Pop. 1290.

VÖLS, a tn. Austrian empire, Tyrol, circle and to the S.W. of Brixen; with 1300 inhabitants. In the vicinity are much-frequented mineral springs.

VOSKRESENSK, a tn. Russia, gov. and 28 m. N.W. Moscow, circle Svenigorod, on the Istva. It has a church, but its chief claim to notice is derived from the monastery of same name, which lies in the vicinity, and, from a supposed resemblance to the ancient Jewish capital, has been designated New Jerusalem. Within the walls which inclose it are two cathedrals and two churches. Pop. 1073.

VRANYA, a tn. Turkey in Europe, in the S. of Turkish Servia, eyalet and 35 m. N.N.E. Uskub, on the Morava. It contains about 7000 inhabitants, chiefly Bulgarians and Albanians, who have iron-works, and manufacture arms.

VYSA [anc. *Bysia*], a tn. Turkey in Europe, picturesquely situated at the foot of the Stranja ridge, and near the headwaters of the Erkene or Ergina, 75 m. N.W. Constantinople. It is the seat of a third-rate Turkish governor and a Greek bishop, and has good schools both for Bulgarian and Greek, but none for Turkish. The ancient town, which stands on an eminence overlooking the modern, has extensive ruins, which are freely used as quarries.

W.

WABASHA, a tn. U. States, Minnesota, cap. co. of same name, r. bank Mississippi, 2 m. below Lake Pepin, and 36 m. N.E. Rochester. It is built on sloping ground between the river and a high bluff about $\frac{1}{2}$ m. from the shore. It contains a handsome court-house, three churches, two banks, a public library, flour-mill, five grain warehouses, and a lumber yard. Pop. 2200.

WABUHA, a comparatively insignificant tribe, Central Africa, inhabiting the district of Ubaha, which is washed by Lake Tanganyika on the W., and bounded N. by Uhha, E. by Ututa, and S. by the Malagarazi. Their principal settlement, Uyonwa, is merely a clearing in the jungle, with a few paupers huts dotting fields of sweet-potatoes. They are a harmless but oppressed race, dark, curly-headed, and hard-favoured. They dress in skins and tree-barks, wear the *shushah* or top-knot of hair, use for ornaments brass and copper armlets, ivory disks and beads, and are never without their weapons—spears, assegais, daggers, and small battle-axes. They suffer much from the Watuta.

WADAN, a tn. Western Africa, on the E. frontier of the Moorish dist. Aderer; lat. 20° 40' N.; lon. 10° 55' W. It has a rugged and elevated site on the E. side of the celebrated valley which intersects the district, consists of houses built of stone and mud, and has a Moorish population of about 5000, who supply themselves with necessaries from Tishit. The Portuguese attempted to establish a factory here in the latter part of the fifteenth century.

WADI, a tn. Western Africa, Bornou, 125 m. W. by N. Kukawa. It is of considerable size, and consists of two distinct quarters, walled all round, and separated from each other by a wide open space, where the cattle are secured.

WADI SHATI, or **WADI SHIATI**, a tn. N. Africa, re-

gency of Tripoli, on the route to, and 100 m. N.N.W. Mourzouk. It stands on the top of a steep terraced hill in the midst of a valley, and consists of an old and a new town. The former, crowning the hill, is in ruins, but gives indications of having once been densely peopled; the latter is entered by two gates, and has several well-cultivated gardens, together with a large grove of date-trees; in the fields the chief crops are wheat and barley.

WADOE, a tribe, E. Africa, occupy a tract of country coterminous on the N. with that of the Wazegura, that of the Wakhwere near Khutu on the W., and on the E. by that of the Watondwe or tribes of Saadani; the Gama and Kingani rivers form their boundary on the S. The tract of country thus defined has few cattle, but produces grain in such abundance as to leave a surplus of sorghum and maize, which is exported to Zanzibar. The Wadoe were once a powerful tribe, and the terror of their neighbours—a terror, however, produced not so much by their prowess as by their horrible mode of warfare. When engaged with their mortal enemies, the Wakamba, and fearing defeat, they began to cut slices from the bodies of those whom they had slain, and then roast and eat them. This abominable device so far succeeded that the Wakamba, terror-struck, took to flight; but vengeance soon overtook the disgusting cannibals, and they lost all power. The Wadoe differ much in colour and form, some being tall, well-made negroids with a light complexion, while others are almost black. The distinctive mark of both sexes is a pair of long cuts down both cheeks from the temple to the jaw. They have a wild look, dress in softened skins stained yellow with mimosa bark, and are said to drink out of human skulls, without preparing them in any way for so singular a use. When a chief dies, a male and female slave

are buried alive with him. This custom has been abolished by some of the tribes, either entirely or by substituting a dog for the slaves. The Wadoe have numerous sub-tribes.

WADOWICE, a tn. Austrian empire, Galicia, cap. circle of same name, in a fertile district on the Skawa, 24 m. S.W. Cracow. It is the seat of several public offices, and has large barracks, a military hospital, a high-school for the circle, a lower school, and an infirmary. Pop. 3171.

WADY SOFEJIN, a valley, N. Africa, Tripoli, which commences near Zintan, near the S. slope of the Jebel range, about 90 m. S.W. Tripoli, and extending with a considerable curve from W. to E., terminates in the Gulf of Sidra. On the N. it is limited by low sand-hills, and on the S. by a limestone range, which separates it from Wadi Zenzim, and contains the well of Enfad. It has an average width of about 8 m., and during the rainy season is almost entirely inundated. Thus secured against sterility by copious supplies of water, it forms the most fertile tract of the regency of Tripoli; its upper portion being particularly rich in figs, its middle portion in barley and wheat, and its lower portion, near the sea, in forests of date-trees.

WAGOGO, the name of a tribe in E. Africa, inhabiting a territory which extends from the W. base of the Usagara Mountains to Mbabura, about lon. 35° E., and from the country of the Watutura on the N., to that of the Wabena tribes on the S., a distance computed at 8 stages. This territory, however, they partly share with others, being mingled in the N. with the Wahumba, in the S.E. with the Wahebe, and in the S. with the Warori. As usual among slave-purchasing races, the Wagogo display great variety of colour. In the E. and N. settlements they have fine stout forms and light complexions; in other directions many of them are black as negroes. Their features in general are not uncomely, and the upper part of the face is often fine. The most prominent defects are thick lips and a coarse mouth; the expression also is wild and angry, and the eyes are often reddened and bleared by drink. The distinctive marks of the tribe are the absence of the two lower incisors, and an extraordinary distension of the lobes of the ears, in which pieces of cane an inch or two long, and nearly twice the thickness of a man's finger, are inserted, so as to look like handles to the head. The dress of the Wagogo far surpasses that of most of their neighbours. The men usually wear some Arab check or dyed Indian cotton, and many of them wear sandals of single hide. The women of the wealthier class are clothed in cotton; of the poorer, in skins. Even the children are generally dressed. As usual, the males, when they appear in public, are armed. Their chief weapons are a long bow and a spear. They have no shield. The dwellings are square huts, formed externally of poles driven into the ground and puddled with mud, and divided internally into several compartments, which the inmates share with the domestic animals, dogs and goats. They are, of course, dirty in the extreme. The Wagogo, though not devoid of a rude hospitality, and accustomed to trade regularly in salt and ivory, which they barter for slaves, are notorious for their pilfering propensities. Government is in the hands of a chief or sultan, with the title of *mtemi*. He exercises great authority.

WAHA, a tribe, Central Africa, so-called from their original seat, Uhha, a large tract bounded N. by the Mountains of Urundi, W. the northern parts of Ujiji, and S. and E. the Malagarazi. Having been plundered and driven from their country by the terrible Watuta, they have quitted its fertile plains, which have in consequence been converted into a waste of jungle, and are now dispersed over the country between Unyanyembe and Lake Tanganyika. A part of them retiring to the Mountains of Urundi, have found a sufficient protection against their enemies in their fastnesses. They are fair, and not uncomely, but, partly perhaps in con-

sequence of a tradition that they came originally from a southern region, the most ancient seat of slavery in E. Africa, they are universally regarded and treated as a vile and servile race.

WAHEBE, a tribe, E. Africa, dwelling between the Wasagara on the E. and the Wagogo on the W., and bearing some resemblance to both. They have plain features, but are stout and well grown. Though seemingly good-humoured and good-hearted, their plundering propensities are largely developed, and they have more than once attacked caravans, and threatened to close their route. Their distinctive mark is two cicatrized incisions on both cheeks. Rearing of cattle and slave-dealing are their chief employments. They are on bad terms with all their neighbours, and more especially with the Warori, whom, however, they dare not meet in the field.

WAHUMBA, a tribe, E. Africa, occupying a territory which extends from the N. of Usagara to the E. shores of the Victoria Nyanza or Ukerewe. Being generally mountainous, the surface is more adapted for pasture than agriculture, and the tribe, adapting themselves to their position, are generally employed in rearing cattle, milk and flesh constituting their sole food. As they have little ivory, the Arab merchants have no attraction, and hence their highlands remain almost entirely unexplored. In features they are fair and comely, and though lightly made, possess a martial spirit which makes them somewhat troublesome neighbours. On more than one occasion the lands of Usagara and Ugogo have been ravaged by them. Like the Wagogo, they pierce and distend their ear-lobes; and like the Wazaramo, they stain their clothing with an ochreish clay. Their huts are singular, each consisting of a hemisphere of boughs roofed with a bull's hide, and so small that the legs of the occupant may be seen protruding beyond the entrance. Their weapons are broad-headed spears, long *sime* or two-edged daggers, and *rungu* or knob-kerries, with double bulges in the wood as large as a man's fist to weight them in whirling through the air. They have no bows and arrows, but use the *pavoise*, or large hide-shield which distinguishes the Caffres of the Cape.

WAIAPU, a river, New Zealand, which takes its rise under Mount Ikaurangi, in the E. peninsula of North Island or Ulster, and forces its way through a sandy beach into the sea 6 m. S. of East Cape. Draining a considerable extent of country, it assumes the appearance of a large stream at high-water, but the freshes come down with such violence as to render it an unsafe anchorage even for the smallest vessels.

WAIKATO, a river, New Zealand, W. side of North

SCENE ON THE WAIKATO RIVER.—From Reise der Oester. Fregatte Novara.

Island or New Ulster, prov. Auckland, rises in Lake Taupo, about the centre of the island, a fine expanse of water nearly 100 m. in circumference, and overtopped by the snow-capped mountain Tongariro, 7000 ft. high, and flowing N.W. until it reaches the parallel of its embouchure, when it turns westward to the sea. It is navigable for vessels of considerable

size for 60 or 70 m., where it is joined from the S. by the Waipa, up which boats can ascend for 60 m. further. At its outlet the Waikato is a considerable stream; it does not form a bar, but has a narrow channel by which, at low-water, only vessels of about 30 tons can enter; inside the headlands it is a stately river. The left or S. shore consists, for about 8 m. from the sea, of shifting sand; the right shore is hilly, and at the foot of the hills, near the embouchure of the river, is, or was, the station of the Church Missionary Society, established in 1840. But the adjacent district, named from the river, and remarkable for its genial climate and pastoral and agricultural capabilities, has long been in a disturbed state from the war with the natives; but with the cessation of hostilities it is probable that the country will be re-occupied by the settlers, and its prosperity restored.

WAIMATE, a small bay, New Zealand, North Island or Ulster, on the S. shore of the peninsula occupied by Mount Egmont. The bay, forming only a slight indentation in a coast bordered by an unbroken line of cliffs, averaging 100 ft. in height, affords no shelter for vessels, and deserves notice only on account of the celebrated pah situated at its N. extremity. This pah, formerly one of the strongholds of the natives, and the scene of many a sanguinary struggle, occupies an almost impregnable position. Being joined to the mainland only by two narrow shingle spits, it is nearly insulated. On the outer side it is a perpendicular cliff, 100 ft. high, while on the land side there is a natural ditch with apparently deep water in it. The summit, which does not cover more than 100 square yards, is covered with pits for the reception of provision as well as for shelter.

WAIMEA, a river, New Zealand, which rises among the mountains in the N. of the Middle Island or Munster, flows N. and enters the head of Blind Bay by three channels. The easternmost of these, aided by the waters from Nelson Haven, has hollowed out a deep space, known by the name of Bolton Hole, where there is good and sheltered anchorage in 6 and 7 fathoms. The central and western channels, situated respectively $2\frac{1}{2}$ and $6\frac{1}{2}$ m. W. of Nelson, are both navigable for coasters. About 2 m. beyond the W. channel the coast, previously low, rises into bold white cliffs, which in some places rise to the height of 250 ft., and are seen far off at sea.

WAITANGI, the name of two rivers, New Zealand:—1, *Waitangi*, in the N. of North Island, has its mouth in the Bay of Islands. It can be entered and ascended for a short distance by small vessels, having never less than 5 ft. water at the entrance, and 12 ft. inside.—2, *Waitangi*, Middle Island, fed by the numerous lakes and mountain ranges of the interior, becomes a considerable stream, and flows first S. and then E., forming the natural boundary between the settlements of Canterbury and Otago. In spring and summer the melting of the snows makes its current so rapid that it is unsafe even for boats to enter it.

WAITERA, a river, New Zealand, which has its mouth on the W. coast of the North Island, 8 m. N.E. New Plymouth. At low springs it has not more than 2 ft. of water on its bar, but the tide ranges 12 ft. It is thus rendered navigable by coasters, and is often resorted to both for shelter and for trade with the natives, who have a village situated a quarter of a mile within the entrance, where there is good anchorage in 3 or 4 fathoms.

WAITZENKIRCHEN, a tn. Austrian empire, Upper Austria, circle Hausruck, 20 m. W. Linz. It has a town-hospital, an endowment for the poor, and in the vicinity an old castle situated on a lake. Pop. 1000.

WAKHUTU, a tribe, E. Africa, so called from inhabiting specially the province of Khutu, which bounds on the E. with Uzuramo. They are not, however, confined to it, but spread over a territory which extends from the Mgeta W. to the Mountains of Usagara, and from the Duthumi Hills S. to the Rufiji. They are evidently allied to the Wazaramo, wearing their peculiar head-dress and ornaments, but are inferior to them physically and mentally. Their colour is exceedingly dark; their eyes are bleared and red with intoxication; their fare, if not scanty, is indifferent in quality, consisting chiefly of holcus porridge without ghee, and of mud-fish; and they bear many marks of degradation, the effect partly of humid heat and miasma, and partly of the bondage in which they are held by tyrannical rulers. Their usual dwellings are low circular huts, from 12 to 15 ft. in diameter,

and the straggling villages formed by them are slovenly and dirty. Many of the Wakhutu used to find employment as porters, but became so notorious for treachery that few are now disposed to trust them. They are, however, much more peaceful than the Wazaramo, and hence the caravans, which are kept in a state of feverish anxiety while passing through the territory of the latter, feel secure as soon as they enter Khutu.

WAKIMBU, a tribe, E. Africa, who claim a noble origin, and according to their own account, emigrated into Unyamwezi about thirty-five years ago, accompanied by their neighbours the Wakononga and the Wamia. Their previous settlements were in Nguru, Usanga, and Usenga, which they were obliged to abandon in consequence of the repeated attacks of the Warori. They settled first at Kipiri, a district lying S. of Turu, and have since extended into Mgunda, Mkhali, and Unyanembe, where they hold the land by sufferance from the Wanyamesi. They are apparently poor, being generally clad in skins; but they build firmly stockaded villages, grow sorghum, maize, millet, pulse, cucumbers, and water-melons, rear cattle, and barter slaves, and ivory in small quantities, either through the merchants, or by personal visits to the coast. In features they are dark and uncomely, and have for their distinctive mark a number of small lines formed between the hair of the temples and the eyebrows, by raising the skin with a needle, and opening it by points laterally. Some wear necklaces of curiously plaited straw, others a strip of white cow-skin bound around the brow. Their arms are bows and arrows, spears, and knives stuck in their leathern waistband. Their neighbours accuse them of being treacherous.

WAKKALA, a vil. E. Africa, Latooka country, near the Kanieti River, 60 m. S.E. Gondokoro. The village or town, in a fine forest of large timber, is composed of about 700 houses, strongly protected by a palisade of the hard iron-wood of the country, with the addition of a hedge of imperious thorns growing to a height of 20 ft. The entrance is a curious archway, 10 ft. deep, formed of the iron-wood palisades with a sharp turn to the right and left, making a zigzag. The inhabitants, governed by an independent chief, are great hunters, and the neighbourhood abounds with elephants, giraffes, buffaloes, rhinoceroses, and large antelopes. The soil is rich with abundance of fine grass and good pasturage, and a plentiful supply of water.

WALATA, or BIRU, a tn. W. Africa, situated at the N.E. extremity of the district of El-Ijodh, and at the foot of a range of hills overlooking a large valley, 250 m. W.N.W. Timbuktoo; lat. 18° N.; lon. 7° W. It is a large place, consisting of well-built clay houses, with a rough cast of plaster, but is extremely unhealthy, and owing to this and other causes has become a seat of poverty and wretchedness. The inhabitants include a mixture of blacks and whites, the latter Berbers and Arabs of various tribes, and the former belonging to the widely scattered nation of the Swaninki or Azer. About a mile W. of Walata are the ruins of an ancient place, supposed to have been identified with the celebrated capital of the Ghanata empire. In Walata itself there is a spacious mosque of high antiquity.

WALFISH, or WALVISCH [add.], a bay on the S.W. coast of Africa; lat. $22^{\circ} 50'$ S; lon. $14^{\circ} 30'$ E. It is spacious and tolerably safe, being protected on three sides by a sandy shore, and exposed only to the N. and N.W. winds, which here blow seldom. Large ships find good anchorage under the lee of a sandy peninsula, terminating W. in Pelican Point, and smaller craft ride safely within half a mile of the shore. The great disadvantage of the bay as a harbour is that it is destitute of fresh water, which must be brought from a distance of 3 m. inland. While African guano was in repute, Walfish Bay was much resorted to for provisions by the ships engaged in that trade, and a large establishment, erected for salting and curing beef, and also providing live cattle, found full employment in supplying the ships, and also in executing a contract with the British government for sending live cattle to St. Helena. Both branches of trade having ceased, the establishment was broken up, but the house and store, which were left standing, have recently been occupied by merchants at Cape Town. The bay abounds with fish, and at certain seasons is much frequented by a smaller species of whale known by the name of 'humpbacks.'

Both the fish and the oil obtained from the whales promise to become valuable as exports. Situated on the coast of the Damarah country, Walfish Bay affords an easy communication with the interior, and was used with success for that purpose by the travellers Galton and Anderson.

WALKER, an isl. American Polynesia, Pacific Ocean; lat. $3^{\circ} 58' N.$; lon. $149^{\circ} 10' W.$; discovered by Captain Walker in 1814. It has also been named 'Low Woody' Island, an appellation which graphically indicates its natural characteristics.

WALLACE, a vil. British America, Nova Scotia, on the N. coast, at the mouth of the Pensheg, which falls into a bay, and forms an excellent harbour. It is a prettily situated but straggling place, in which the only conspicuous object is its Scotch church. Its harbour, having 16 ft. of water on its bar at the ebb of ordinary spring-tides, and then rising 8 ft., admits vessels of large draught, and was much frequented by timber ships, till the supply failed. The inhabitants have compensated for the decline of this trade by turning their attention to agriculture.

WALLAGAHBAD, a tn. and cantonment, India, presid. and 39 m. S.W. Madras, dist. Chingleput, near l. bank Palar. The town consists chiefly of one street, running E. and W., and both from its vicinity to the river and a nullah which intersects it, is well drained and tolerably clean, airy, and dry. The cantonment, situated about half a mile N.W. of the town, occupies a piece of ground rising gently above the surrounding plain, and is about three-quarters of a mile long by half a mile broad. Rice is grown to some extent in the vicinity.

WAMA, a tn. Austrian empire, duchy Bukowina, dist. and about 58 m. S.W. Czernowitz; with 2346 inhabitants, who are chiefly employed in the surrounding forests. In the vicinity is a pillar commemorating the victory of the Moldavian woivod Rakowetz over the Turks.

WAN, or **VAN-HIEN**, a tn. China, prov. Sechuen, l. bank Yang-tze-kiang, about 110 m. above Quaichow. It is a small place surrounded by a wall, and contains an apparently industrious and thriving population. Its shops are well-stocked, and expose for sale, among other articles, coal, sulphur, sugarcane, and blue cotton prints. The hills in the vicinity are well-watered, and produce good crops of rice, wheat, barley, beans, vetches, cotton, tobacco, &c. Between Quaichow and Wan the breadth of the river is nowhere less than 150 yards, but it is encumbered by reefs, which however generally leave a clear channel of considerable depth. The rapids are not so impetuous as below Quaichow.

WANDALA, a mountain range, Western Africa, which, commencing in the E. of Bornou, near its S. frontier, stretches S.S.W. along the N.W. frontier of Adamawa, and is succeeded by a number of isolated mountain masses, with which it does not seem to be connected. Magar, its culminating point, has an estimated height of 3000 ft., which is probably 500 ft. more than the average of the range. The isolated mountains beyond are much loftier, one of them, Mindefi, being not less than 6000 ft.

WANGANUI, a tn. New Zealand, New Ulster, prov. Wellington, on a river of same name, about 2 m. above its mouth on the W. coast. It is a military post, a leading mission station, and being accessible to vessels of 100 to 200 tons, is the centre of a large and flourishing native trade. A small steamer belonging to it plies regularly to Wellington and Nelson, and many of its inhabitants, who already number about 1000, carry on a direct traffic with Sydney and Melbourne.

WANGANUI, a river, New Zealand, which rises in the mountain range which traverses the N. Island from N. to S., flows S., and falls into Cook Strait towards its N.E. entrance, 4 m. below the town of Petre; lat. (N. head) $39^{\circ} 57' 20'' S.$; lon. $175^{\circ} 1' E.$ It has 8 ft. over its bar at low-water, and is entered by vessels of 10 to 12 ft. draught, which can ascend as far as Petre, but most of the coasting trade is carried by vessels of about 25 tons burden. The entrance should not be attempted except in fine weather, with a leading wind.

WANGARI, a river, New Zealand, which has its mouth in a bay of the same name in the N.E. of the North Island, N.W. of the entrance of the Gulf of Hauraki. The river at its entrance, between Lost Point on the E. and a point of Mare Bank on the W., is $\frac{1}{2}$ m. wide, but immediately opens out to a width of 2 m. Much of this width, however, is laid dry, SUPP. IMP. GAZ.—VOL. II.

or nearly so, at low-water, and the real channel is diminished to $\frac{1}{4}$ m. The shore on the S. is low and swampy, but on the N. is overlooked by hills of considerable height. Within Wangari Bay there is a large harbour with good anchorage.

WANGAROA, a bay and harbour, New Zealand, on the W. of North Island or Ulster. It has high and steep shores on either side, is well sheltered by Stephenson Island, is entered by a narrow channel, and has in its main branch an average width of about $\frac{1}{2}$ m., with a depth of more than 2 m. On its E. side are three bays, every one of which affords good anchorage.

WASHINGTON, a tn. U. States, Iowa cap. co. of same name, in a prairie 40 m. W.S.W. Muscatine, with which it is connected by a branch of the Mississippi and Missouri railway. It contains nine churches, a bank, a steam-mill, machine shops, and several manufactories, and is surrounded by a rich agricultural district. Pop. (1865), 3000.

WASIN, a small coralline isl. about $2\frac{1}{2}$ m. long by 1 m. broad, off the E. coast of Africa, S. of Mombaza, and N. of Zanzibar, to the latter of which it belongs. The only settlement is built upon the N. shore, and consists of stone and lime mosques, long rooms with flat roofs, and a few large houses of mangrove timber scattered among paltry huts. Huge calabashes, some of them 40 and 45 ft. in girth, give a pleasant air to an otherwise squalid settlement. The inhabitants suffer severely from fevers, sores, and small-pox.

WASKOUTZ, a tn. Austrian empire, duchy Bukowina, dist. and W.N.W. Czernowitz, on the Czeremosz; with a paper-mill, and a pop. of 3696.

WATERLOO, the name of four places, British America, Canada West. The most important are—1, A vil. co. Ottawa, 85 m. W. Montreal; with a R. Catholic church, a school, and a steam saw-mill.—2, A vil. cap. co. of same name, within 1 m. of a station of the Grand Trunk railway, 51 m. W.S.W. Toronto. It is a flourishing place, inhabited almost exclusively by Germans, who have their own Lutheran church and vernacular newspaper; cabinet and chair, carriage, sash, blind, and door factories, a brewery, a tannery, an iron-foundry, and grist and steam saw-mills. Pop. about 1500.

WATKINS, or **JEFFERSON**, a vil. U. States, New York, at the S. end of Seneca Lake, and on the Canandaigua and Elmira railway, 21 m. N. Elmira. It contains five churches and two banks, and steamboats ply between it and Geneva. A large quantity of coal is shipped here. Pop. 3000.

WATLING, an isl. West Indies, Bahamas, 50 m. E. San Salvador, or Cat Island, about lat. $23^{\circ} 57' N.$; lon. $74^{\circ} 28' W.$ It is about 12 m. long from N. to S., by 6 to 7 m. broad, and has slightly indented shores, with an interior largely cut up by salt-water lagoons, which are separated from each other by small woody hills from 100 to 140 ft. high. It is, however, considered the most fertile of the Bahamas, and raises the best breed of sheep. The E. shore is fringed with a reef, and the only safe anchorage is at the N. end. The inhabitants, 450 in number, are scattered over the island. Captain A. B. Becher, in an article in vol. xxvi. of the *Journal of the R. G.S.*, has endeavoured to prove that not San Salvador, as Humboldt and Washington Irving maintain, but Watling is what is called the *landfall* of Columbus, or the first land which he reached on his first voyage across the Atlantic.

WAZEERABAD, a tn. India, Punjab, about 3 m. from l. bank Chenab, 60 m. N. by W. Lahore. It stands in a fertile district, commanding beautiful views of the Himalaya, and is described as one of the handsomest towns in India, Avituble, a European officer in Runjeet Singh's service, having rebuilt it in the European style, with wide streets, and an elegant and commodious bazar. Runjeet Singh had a pleasure-ground here, and a palace of singular construction, covered externally with rude fresco full-length figures of the ten Sikh Gooroos.

WAZEGURA, a tribe, E. Africa, occupying the land S. of the Pangani River to Cape Utundwe, and extending as far W. as the Nguru Hills. They were originally a peaceful tribe, but the possession of firearms has made them terrible to their neighbours, whom they are constantly kidnapping for the slave-market. One of them, originally of low origin, having succeeded in conquering the Ukami, occupying a district which extends eastwards from the Duthumi Hills, has almost depopulated it to supply the slave-market of Zanzibar,

and still carries on his depredations to such an extent that the security of the caravan route to Unyanyembe is seriously endangered. The Wazegura, instead of owing hereditary sultans, obey the loudest tongue, the most open hand, and the sharpest spear; hence, in every quarter bloody feuds prevail.

WEICHELSEL, a tn. Austrian empire, Silesia, 55 m. S.E. Troppau. It is a straggling place, situated among the Carpathian Mountains, at the sources of the Weichsel or Vistula, whose head-streams uniting here, form a remarkable waterfall 180 ft. high. The place has a Protestant parish church, and contains 3412 inhabitants.

WEIDENAU, a tn. Austrian empire, Silesia, cap. dist. of same name, 40 m. N.W. Troppau; with manufactures of linen and hosiery, and four yearly markets. Pop. 2000.

WEISS, a tn. Austrian empire, duchy Styria, cap. dist. and on a stream of same name, in a very romantic district 13 m. N.E. Gratz. It has two churches, one very ancient, and the other with a fine high-altar, an hospital, manufactures of scythes and other articles in iron, and a saw-mill. There are several old castles in the vicinity. Pop. 1200.

WEISSENKIRCHEN, a tn. Austrian empire, Lower Austria, circle Upper Manhartsberg, S. bank Danube, 43 m. W.N.W. Vienna. It contains 1060 inhabitants, employed chiefly in weaving, and in growing wine and fruit.

WEISSENSTEIN, a tn. Russia, gov. Esthonia, cap. circle and on a stream of same name, 52 m. S.S.E. Revel. It stands among gardens, has a church, a circle and an elementary school, and two benevolent endowments, and contains 3637 inhabitants.

WELLAWEY, a river, Ceylon, which rises among the mountains to the E. of Adam's Peak, flows S.S.E., and reaches the sea on the S. shore of the island near Hambangtotte, after a course of 69 m. It drains an area of 763 sq. m.

WELLINGTON, the name of three places in British America, Canada West:—1, A vil. co. Prince Edward, on West Lake, a bay of Lake Ontario, 84 m. E.N.E. Toronto; with a Protestant church, a public school, an iron foundry, a tannery, saw-mills, and a fishery in the bay, where great numbers of white fish are taken. Pop. about 600.—2, *Wellington Square*, a vil. co. Halton, on Lake Erie, 26 m. S.S.E. Toronto. It possesses Church of England and Wesleyan churches, a ladies' seminary, an iron foundry, a pottery, and a carriage factory. The surrounding country is celebrated for its wheat and cattle. Of the latter great numbers are sent to the eastern markets. Pop. about 750.—3, *Wellington Mines*, a vil. so called from the copper mines in its vicinity. They are situated between Lakes Huron and Superior, and belong to the Montreal Mining Company. Including that of the contiguous Bruce Mines, the produce is said to average 100 tons of copper ore monthly.

WELLINGTON, a prov. New Zealand, forming the S. portion of New Ulster, bounded N.W. by Taranaki, N. by Auckland, and N.E. by Hawke's Bay prov., and washed in all other directions by the sea, has an extreme length from N. to S. of 200 m., an extreme breadth of 80 m., and a coastline of about 300 m. It is bordered on its E. and W. coasts by two parallel ranges, inclosing an interior valley, but almost precluding access to it by the dense forests with which they are clothed. Evidences of volcanic action are seen in many localities, and earthquakes, particularly in the direction of Cook's Strait, where Wellington, the capital, is situated, are not unfrequent. The narrow belt interposed between the mountains and the shore, particularly on the W., while it is the most accessible, is also among the most fertile parts of the province, and on it accordingly most of its settlements have been formed. One of these, Manawatu, situated about 70 m. N. by E. Wellington, lies along the banks of a river of its name, which is navigable for coasting craft. The most important, however, is Wanganui, situated about 50 m. further N. Pop. 13,000, of whom 8000 are natives.

WELLINGTON, cap. of above prov., standing at the entrance of Cook's Strait, midway between the N. and S. extremities of the two larger islands, occupies the most central position in New Zealand. The harbour, named Port Nicholson, is a noble sea-lake 6 m. in length, surrounded by wooded hills, and opening by a deep channel into the strait. The town stands in a fine situation at the western side of the lake, and displays a line of stores, shops, and substantial ware-

houses upon the margin of the water, with some important public buildings, and many private residences on the hilly terraces above. Wooded steeps rise almost perpendicularly from the harbour-lake, and the country for 20 m. around consists mainly of densely-timbered mountain ranges, cut up by gullies and ravines. The district of the Hutt, with its rich valley and thriving village, about 8 m. N.E. of the town

along the shores of the harbour, is the only agricultural one in connection with Wellington. Evidences of volcanic action still remain, and two or three considerable shocks have been felt within the last twenty years, but have had no injurious effect. Situated at the entrance of Cook's Strait, the town is often swept by heavy gales of wind, which, however, conduce to its healthiness. Enjoying important facilities for trade, Wellington is making rapid progress; it is the scene of much commercial activity, and already contains 6000 inhabitants.

WEMRITSCH, a tn. Austrian empire, Bohemia, circle and about 20 m. N.E. Gitschin; with a parish church, a mill, and 1200 inhabitants.

WEQUAMIKOONG, a vil. British America, Canada West, on a deep bay of same name, near the N.E. extremity of Great Manitoulin Island. It is a missionary station of the Jesuits, and contains a large stone church. The inhabitants, about 600 Indians, are mostly emigrants from a longer established R. Catholic mission on Lake Michigan.

WERDNIK, a tn. Austrian empire, Banat, circle and 13 m. S. Neusatz; with a Basilian monastery, a coal-mine, and 1000 inhabitants.

WERFEN, a tn. Austrian empire, duchy and 25 m. S. by E. Salzburg, cap. dist. of same name, on the Salzach; with a Capuchin monastery, and iron-works. In the vicinity is the old feudal castle of Hohenwerfen. Pop. 1600.

WEST FARNHAM, a vil. British America, Canada East, co. Missiquoi, 37 m. S.E. Montreal. It is a thriving place, with Church of England, Wesleyan, and R. Catholic churches, an academy, manufactures of potash, mill-work, carriages, and woollens, and a number of saw-mills, employed in sawing lumber, which is drawn to St. John's, and thence exported to the States. Pop. about 700.

WESTFIELD, a vil. U. States, New York, 1 m. S. Barcelona Harbour, on Lake Erie, and on the Lake Shore railway, 57 m. S.W. Buffalo. It has five churches, several mills, and factories of mowing-machines, steam engines, and malleable iron. Pop. 2000.

WESTMINSTER (New), a tn. British N. America, and capital of British Columbia. It lies in about lat. 49° 12' N., on r. bank Fraser River, about 18 m. above its mouth, and on the site of Fort Langley. The ground rises to the rear of it, and is covered with a forest of large pine-trees. It has a court-house, assay office, and several places of worship. It is the see of a bishop, and had a new cathedral, which was burned down in 1866.

WESTON, a vil. British America, Canada West, co. York, on the Humber, and on the Grand Trunk, as well as the Ontario, Simcoe, and Huron railway, 40 m. N.E. Toronto. It possesses Church of England, Wesleyan, and Baptist churches, manufactures of woollens, harness, waggons, and machines, an iron-foundry, a brewery, and a distillery. The manufacture of lumber, once very large, now suffices only for local consumption. There is an extensive turf bog in the vicinity. Pop. about 800.

WEST WINSTED, a vil. U. States, Connecticut, on the outlet of Long Lake, 30 m. by railway N. Waterbury. It is adjacent to Winsted, and contains several factories; large numbers of scythes are made here. Pop. 3000.

WETTENDORF, a tn. Austrian empire, Hungary, co. Eisenburg, 4 m. E. Steinamanger, in a fertile district; with an old castle, and 1400 inhabitants, many of whom are gipsies.

WETTER [add.], an isl. Indian Archipelago, Flores Sea, on the N. of Timor, towards its E. end, in lat. (N. point) 8° 6' S.; lon. 125° 58' E. It is about 70 m. long by 20 m. broad, is mountainous towards the N., but has on the S. some open plains and valleys. The inhabitants, like those of Timor, are an intermediate race between the Malay and the Negro, and in a very rude state. The only export of any consequence is bees'-wax. Pop. roughly estimated at 82,000.

WHALEFISH, a group of islands off the W. coast of Greenland, to the S. of Disco Island, and in the entrance of Disco Bay; lat. (Boat Island) 68° 58' 42" N.; lon. 53° 13' W. The two main islands are about 600 ft. high, and afford good anchorage in the channel which separates them. On the S. island, called Krou-Prins, the Danes have an establishment, and carry on the seal fishery. Most of the persons employed are Esquimaux.

WHITE, or **WIAKARI**, an isl. New Zealand, in the Bay of Plenty, 28 m. off the coast of North Island or Ulster; lat. 37° 30' S.; lon. 177° 12' E. It is an active volcano, about 3½ m. in circuit and 860 ft. high. The base of the crater, 1½ m. in circuit and level with the sea, has in its centre a boiling spring, which is about 100 ft. in diameter, and sends volumes of steam fully 2000 ft. high in calm weather; and round its edges numerous small geysers, which sound like so many high-pressure engines, and emit steam with so much force that a stone thrown into the vortex would be immediately shot into the air. Looking down the crater the appearance is that of a well-dressed meadow of gorgeous green, with meandering streams feeding the boiling caldron below. On examination this green is found to be the purest crystallized sulphur. The whole island is so heated that it is difficult to walk upon it, and animal life may be said to be extinct, scarcely a limpet being found on the stones. White Island is the E. limit of an extensive belt of subterranean agitation, stretching from Mount Egmont through Tongariro, and the Taupo and Roto Mahana Lakes, to Whale Island or Motu Hora in the Bay of Plenty.

WHITE MUD RIVER, British America, rises in a swampy district about lat. 50° 20' N.; lon. 99° 30' W., and flowing very circuitously, first N.E. and then E., enters Lake Manitoba at its S.W. extremity. It drains an extensive area of the richest prairie land, is well timbered on its banks with oak, elm, ash, maple, aspen, and balsam poplar; possesses valuable fisheries, and is navigated by canoes for 30 m. above its mouth.

WHITSUNDAY, an isl. off the N.E. coast of Australia, Queensland, and the largest and highest of the Cumberland group, 11 m. long N. to S., and near its S. end 9 m. broad, gradually diminishing northwards to not more than 3 m. Its culminating point is 1504 ft. above the sea.

WHYDAH [add.] (native *Gre-hwe* or *Gle-hwe*, 'plantation house'), a tn. W. Africa, Dahomey. It stands about 2 m. N. of the sea, from which it is separated by a narrow lagoon, a swamp, and a lofty sand-bank; and extends 2 m. from S.E. to N.W., and is about ¼ m. broad. The streets are formed by the walls of compounds and blocks of houses built uniformly of sun-dried clay in three or four courses, from 1½ ft. to 2 ft. thick, and thatched with palm-leaves or grass. The outside soon crumbles, but inside the houses are often convenient and comfortable. The houses are scattered, and the place generally has a ruinous appearance, everything showing decay; the slave-trade, upon which its prosperity depended, being suppressed by the strict blockade of the seaboard. Whydah is really a group of villages divided into five quarters, each under its own 'caboccer,' subject to the headship of the viceroy. Though filthy, it is not a very unhealthy place, there being a strong day-breeze, and the nights cool; the highest part, the W. end, is about 40 ft. above sea-level. The soil is argillaceous clay and sand. There are four forts, or rather factories, French, Brazilian, English, and Portuguese. The great market covers a large space. The approach to the town from the sea is by three roads, the right leading to the Portuguese fort, the left to the French, and the middle one to the market and the English fort. There is an excellent local police, and quietude and good order prevail; crimes of serious violence or theft are rare, but pilfering is universal. In February, 1864, three fires, on successive days, destroyed a great part of the town, with a serious loss of life. The native inhabitants are snake-worshippers, venerating a non-venomous python called *dankgywe*. The population is estimated variously from 12,000 to 25,000; the former probably being more nearly correct. There are 600 R. Catholics among them, 200 boys under missionary teaching, and about 110 annually baptized.—(Burton.)

WICHAU, a tn. Austrian empire, Bohemia, circle and about 25 m. N.E. Gitschin; with 1100 inhabitants, employed chiefly in spinning, weaving, and the culture of flax.

WIELKIE-OCZY, a tn. Austrian empire, Galicia, circle and 24 m. N.E. Przemyśl; with a Dominican monastery, and 1500 inhabitants.

WIEPRZ, a tn. Austrian empire, Galicia, circle Wadowice, 29 m. S.W. Cracow, on a stream of same name; with 2500 inhabitants, most of whom are employed in weaving drills and table-cloths.

WIEROWAN, a tn. Austrian empire, Moravia, circle and about 7 m. S. Olmütz; with a mineral spring, and 1000 inhabitants.

WIERZBOWIEC, a tn. Austrian empire, Galicia, circle and 10 m. S. by E. Kolomea; with a fine baronial castle, containing a valuable library and picture-gallery. The manufactures consist of cloth and morocco leather. Pop. 1200.

WIESEN, a tn. Austrian empire, Bohemia, circle and 36 m. N.E. Königgrätz, on the frontiers of Silesia; with 1100 inhabitants, who are mostly employed in weaving and spinning. For the latter there is a model spinning-school.

WIESMATH, a tn. Austrian empire, Lower Austria, 40 m. S. Vienna; with manufactures of linen, several mills, and 1400 inhabitants.

WIGSTADTL, a tn. Austrian empire, Silesia, cap. dist. of same name, 13 m. S.S.W. Troppau; with manufactures of linen and cotton goods, and important cattle-markets. The old feudal castle of Wigstein is in the vicinity. Pop. 2556.

WILDSCHITZ, a tn. Austrian empire, Silesia, dist. Sauernig, 46 m. N.W. Troppau; with a castle, an hospital, and 2109 inhabitants.

WILDSTEIN, a tn. Austrian empire, Bohemia, circle and 10 m. N. Eger, cap. dist. of same name; with a parish church, a castle, manufactures of calico, two cotton and five other mills. Pop. 3786.

WILLIAM, a port, New Zealand, in Foveaux Strait, on the N.E. of the South Island or Stewart, and nearly opposite to Bluff Harbour in Middle Island. The coast about Bluff Harbour, Ruapuke Island, and the rocks and islets between it and Paterson's Inlet shelter it from easterly winds, and it is also so effectually protected from the swell rolling round both ends of the island that it becomes a perfectly secure haven. The schooners engaged in whaling and sealing make it their head-quarters.

WILTEN [add.], a tn. Austrian empire, Tyrol, on the

Sill, circle and S. of Innsbruck. It occupies the site of the Roman town of Veldidena, and has among its principal buildings a Premonstratensian abbey, a beautiful endowed and a parish church, the latter with fine paintings; a Carmelite monastery, and the station of the Innsbruck and Kufstein railway. S.W. from the town, on the road to Italy, is Mount Iscl, remarkable as the scene of three victories gained in 1809 by the Tyrolese under Hofer and Haspinger. Pop. 1600.

WINDIG-JENIKAU, a tn. Austrian empire, Bohemia, circle Czeslau; with a deanery church, a mill, and 1000 inhabitants.

WINDISCHGARSTEN, a tn. Austrian empire, Upper Austria, circle Traun, on the Teichl, 20 m. S. Steyer; has a central institute for the poor, an endowed school, manufactures of scythes, and much-frequented sulphur baths. Pop. 1200.

WINDISCHGRATZ, a tn. Austrian empire, duchy Styria, cap. dist. of same name, on the Misslingbach, 44 m. S.S.W. Gratz; with a very ancient parish church, a high-school, an hospital, a castle, and 1200 inhabitants.

WINNIPEG [add.], the largest of a chain of lakes which form one of the most characteristic features of British America; between lat. 51° 25' and 54° 30' N.; lon. 96° 10' and 99° 15' W. It lies between S.E. and N.E., the usual direction of the lakes with which it is connected, but it is of very irregular shape, and so deeply indented that its N. and S. portions are only connected by a narrow channel, and might without impropriety be considered as two distinct lakes, of which the N. and larger, if the deep bays and creeks at its extremities are excluded, is somewhat elliptical in form, and the S. makes some approach to a parallelogram. Taken as one whole, the approximate leading dimensions of the lake are as follows:—length, 280 m.; greatest breadth, 57 m.; length of coast line, 930 m.; area of water, 8500 sq. m.; area of basin, 400,000 sq. m.; height above the sea, 628 ft., or only 28 ft. more than Lake Superior. The coast line is very much diversified, presenting at one time low swampy beaches, and at another rugged precipices and bold promontories. Towards the N.W. the coast is very low, and much broken by deep and narrow bays, but in proceeding southward beyond the mouth of the Saskatchewan, the great headland of Kilch-nashi comes into view, stretching so far into the lake that its extreme point is 23 m. E. of the general coast line. For some distance S. of Kilch-nashi the shore continues comparatively high and abrupt, presenting a series of limestone ridges, generally wooded with aspen and other deciduous trees, with intervening swamps timbered with tamarack and spruce. The S. coast consists for many miles of alternate strips of sand sustaining willows, and narrow reedy marshes running parallel to the coast line. Some of these sand strips, well protected by drift-timber, are evidently of considerable age; others of them are recent, inclosing ponds in which rushes are just beginning to show themselves, and furnishing a clear indication of the process by which the land is making encroachments on the water, and gradually diminishing its area. The E. coast consists generally of a succession of knolls or low domes of granite and gneiss, rising generally 8 to 10 ft. above the water, and having on their flanks a scrubby growth of timber, chiefly Banksian pine and spruce. Between the knolls ponds and swamps often occur, and the whole line of coast is much broken by deep inlets and well-sheltered bays, which, should the lake come to be navigated, may be turned to good account. The great feeders of the lake are the Saskatchewan, which enters it on the N.W., the Dauphin or Little Saskatchewan on the W., and the united Red River and Assiniboin on the S. Its only outlet is through the contracted and rocky channel of the Nelson, which flows N.E. to Hudson's Bay. The finest scenery of the lake is furnished not so much by its shores and the adjacent mainland, as by some of the many islands which it contains. Of these the two largest and most important, both situated in the S. portion of the lake, are Big Black Island, by far the largest of all, and Deer Island, the latter particularly deserving of notice, both for its beauty and its valuable fishery, where sturgeons and great numbers of white fish are taken. Lake Winnipeg freezes every winter, the ice frequently becoming 5 ft. thick, and not leaving the upper end of the lake before the 10th of June.

WINNIPEG [add.], a river, British America, which, issuing through several gaps in the N. river of the Lake of the Woods, flows at first in numerous tortuous channels, which successively uniting with the main stream, convert it into a mighty river, unfortunately rendered almost useless for navigation by numerous rapids and falls. In its course of 165 m., which it pursues very circuitously, though mainly in a N.W. direction, it descends 349 ft. by a series of magnificent cataracts, bounded by precipitous cliffs or rounded hills of granite, and not unfrequently expands into large deep lakes full of islands. At each extremity of the river the Hudson's Bay Company have a station, the one at its outlet, called Rat Portage, and the other at its mouth, Fort Alexander. Both are finely situated, but more especially the former, which stands on an island surrounded by hills about 200 ft. high, and near it are some tall red and white pine, the remains of an ancient forest. On the left bank of the river, 25 m. below Rat Portage, stands Islington Mission, in connection with the Church of England. It was held for several years by the R. Catholics, who were driven away by the Indians in consequence of the death of a young girl in the nunnery at Red River settlement. Besides the mission-house and a school-house, which is used as a chapel, five other houses have been built, and some progress has been made, as the congregation, composed almost entirely of Swampy Cree Indians, numbers 45. The country around Islington being like most of that through which the Winnipeg flows, wholly granitic, has a dreary look; but the Mission itself is a favoured spot, its domain extending over 250 acres of a fertile clay, on which all kinds of farm and garden crops succeed well. The Winnipeg opposite to Islington is about 250 yards wide, and flows past with a rapid current.

WINNIPEGO-SIS, or **LITTLE WINNIPEG** [add.], a lake, British America, about 50 m. W. of Lake Winnipeg, to which it is not only nearly parallel, but bears, though on a diminished scale, a marked resemblance in shape; greatest length, 110 m.; greatest breadth about 25 m. The shores of the lake are low and swampy, particularly towards the E., where the whole tract which intervenes between it and Lake Winnipeg is of the same character. The monotonous features of the lake are occasionally exchanged for others of a more pleasing description, particularly towards the S., where some fine old elms, crooked and gnarled, are seen, and where Snake Island, one of the many which the lake contains, presents some very interesting rocky exposures of a limestone which is highly fossiliferous, beautifully stratified, very hard and bituminous. Winnipegosis receives two important feeders—the Swan, which enters it on the W., through a lake of same name; and the Red Deer, which enters it on the N.W. Both of these rivers open communication to an important tract of country E. and N.E. of the head-waters of the Assiniboin; and discharges itself into the Manitobah through the Water Hen River, which is very broad, shallow, and reedy. On a neck of land which projects from the S. shore of the lake towards the N., salt-works have long been established, and are still carried on with some spirit, though the competition with British salt has so much lowered the price as almost to annihilate the profit. The saline bed, which must be of large extent, since it is found far to the N.W., and is worked by the Hudson's Bay Company on the Swan River, is a very retentive yellowish-white clay, containing both non-fossiliferous and limestone boulders. The salt is obtained in the form of brine, by sinking wells in the clay wherever a small bubbling spring is observed to issue from it. The brine is so strong that thirty gallons of it, when evaporated, produce a bushel of salt.

WINONA, a tn. U. States, Wisconsin, cap. co. of same name, r. bank Mississippi, 44 m. E. Rochester. It contains a courthouse, eight churches, three banks, steam saw-mills, &c., and is the E. terminus of the Winona and St. Peter's railway. Wheat and other grains are shipped here, and timber and limestone abound in the county. Pop. (1865), about 5000.

WINTERBERG, a tn. Austrian empire, circle and 24 m. S.W. Pisek, in a valley on the Wolinkabach; with a parish church, a castle, a town-house, a brewery, and manufactures of leather, paper, and spirits. The town is ancient, and has still some remains of its old walls and other antiquities. Near it are glassworks and smelting furnaces. Pop. 2960.

WOAD- or **WOLED-MEDINE**, a tn. Africa, Nubia, prov. Snaar, l. bank Blue Nile, at the confluence of the Rahad, 90 m. S.E. Khartoom. It is a large place, composed chiefly of huts huddled together without any regard to order, in ill-formed unpaved streets. Its principal buildings are a mosque of sun-dried bricks, with a minaret, the residence of the commandant; and barracks. In front of the last, and on the banks of the river, is a large open place, recently planted with date, citron, fig, and other fruit trees.

WODINA, a market village, Turkey in Europe, at the foot of Mount Rhodope in Roumelia, not far from Philippopolis. It occupies a beautiful and salubrious site; contains about 2000 inhabitants, who are all Greek Christians; and possesses an educational establishment, attended by about one hundred pupils.

WODNIAN [add.], a tn. Austrian empire, Bohemia, circle and 12 m. S. Pisek, l. bank Blanitz. It is an ancient place, partly surrounded by walls and a deep ditch; is the seat of several public offices, and has two churches, a townhouse, a superior and ordinary school, an hospital, military barracks, and four important yearly markets, chiefly for horses and cattle. Pop. 3990.

WOJNILOW, a tn. Austrian empire, Galicia, circle and 32 m. E.S.E. Stry; with 1780 inhabitants, chiefly employed in making earthenware.

WOLCZYNIC, a tn. Austrian empire, Galicia, circle and 2 m. N.E. Stanislaw; with a gypsum mill, and 1000 inhabitants.

WOLFERSDORF, a tn. Austrian empire, Bohemia, circle and 22 m. N.E. Leitmeritz; with a parish church, two mills, and 2403 inhabitants.

WOLFGANG (Str.), a tn. Austrian empire, Upper Austria, circle Hausruck, on the lake of same name, on the frontiers of the duchy, and 19 m. E.S.E. of the duchy of Salzburg. It possesses a large and ancient Gothic church, with a beautiful high-altar, which dates from 1481, fine paintings and carvings; and has some industrial establishments. Pop. 800.

WOLKOVUSK, a tn. Russia, gov. and 40 m. S.S.E. Grodno, cap. circle and on a river of same name. It has two churches, a secular parish school, two charitable institutes, several factories, and contains 3416 inhabitants. An important annual fair is held within the circle at the village of Selva.

WOLLEIN, a tn. Austrian empire, Moravia, circle and about 10 m. E.N.E. Iglan. It was once the seat of a Benedictine abbey, has an old church and manufactures of linen, and contains 1500 inhabitants.

WOLLOWETZ, a tn. Austrian empire, duchy Bukovina, dist. and S.W. Cernowitz; with a very ancient church, containing the remains of Prince Dragoș, the founder of the Moldavian state.

WOO-CHANG, or **WU-CHANG**, a departmental city, capital of prov. Hoo-pee, China; lat. 30° 31' N.; lon. 113° 46' E.; situated on the r. bank of the Yang-tze-kiang, facing Hanyang and Hankow. It is divided by a ridge of hills trending S. and N., through which a tunnel is cut to facilitate the traffic between the E. and W. quarters, the former containing the greatest number of shops, dwellings, and public buildings. The main streets are wider than usually exist in Chinese cities, and have paved foot-paths; the shops are spacious and well stocked with merchandise and produce; and the government edifices are extensive, and built in the best style of native architecture. It is surrounded by a crenellated wall 30 ft. high, about 7 m. in circuit, with nine gates entering by the land, and one by the river. The latter entrance is in the middle of a fortified rampart washed by the stream, about a quarter of a mile in width, and from 25 to 50 ft. in height, constructed of solid masonry, at a cost of half a million

sterling, after the imperialists re-captured the city from the Taipings in 1859. The view from the hills that intersect the city is unequalled in the whole empire, as it commands the prospect of Hankow and Hanyang on the opposite bank, together with the confluence of the Han and the Yang-tze, both streams crowded at all times and seasons with junks, and where the foreign steamers and sailing vessels lie at anchor. Looking within the precincts of the walls from these

WOO-CHANG.—From Oliphant's China and Japan.

heights, an immense area is seen covered with the quaint turned-up roofs of the houses, here and there diversified by the more elevated roofs of temples, pagodas, *ya-meens* or official palaces, all more or less surrounded by trees and gardens. On the hill facing the river stands a group of newly-built edifices, profusely ornamented with florid and gilded carvings of Chinese design; with a battery of foreign ordnance commanding the approaches by land and water. Woo-chang is the residence of the provincial governor of Hoo-pee; also the *foo*, or intendant of the department, who has jurisdiction over ten districts, including one city of the second order and nine of the third. It is a place of much repute for its educational establishments, with a hall of examination capable of accommodating 7000 students during the triennial competitions for degrees admitting to the Hanlin College at Peking. A large contingent of Chinese troops are quartered within the gates of the city, which are closed at night, and guarded by sentinels. In time of war or rebellion immense numbers of the inhabitants from the adjacent towns flock into Woo-chang for protection, when a dense population throngs the streets and open places. At such times the people may number 1,500,000, or, as some authorities state, 2,000,000, but in time of peace the settled inhabitants do not exceed 800,000, including the garrison. Being the most central spot in China, it has communication with all parts of the empire, forming, in conjunction with Hankow and Hanyang, a vast emporium of native and foreign commerce; but it is not opened as a place of trade or residence for foreigners, although they may freely visit the city under protection of the authorities.—(Mossman, *MS. Notes*.)

WOOD, a small island, British America, off the coast of Labrador, in the Strait of Belle Isle, about 7 m. W. of Forteau Point. It is 1½ m. long, by 1 m. wide at its S.E. where broadest, is composed of sandstone much less elevated than the mainland; and is covered with moss and coarse grass, the woods to which it owed its name having been all cut down by the fishermen, who are in consequence obliged to go to Newfoundland for their staves, &c. It possesses two large fishing establishments belonging to Jersey merchants, who, in addition to that of cod, which forms the staple, carry on both the seal and the herring fishery. The fishing vessels

arrive from home in the beginning of June, and often are many days drifting about in the ice before they reach their posts. They all return to Europe in the fall of the year, leaving only a man or two in charge of each post, with numerous dogs, mostly of the Esquimaux crossed with the Newfoundland breed, which draw their sledges with firewood, or go over to the main and hunt bears, foxes, deer, &c. The climate is very severe, and also uncertain.

WOO-HOO, a tn. China, prov. Nganhoei, near r. bank Yang-tze-kiang, about 60 m. above Nankin. It consists of the town proper, situated about $1\frac{1}{2}$ m. inland, and a suburb extending some distance along the margin of the river. The town is surrounded by white walls, and the suburb is not only also surrounded by a wall, but forms a military post defended by three forts erected on separate eminences. The town, capital of a district of same name, is said to have been one of the largest of its class in China, with many good streets and handsome shops. During the Taiping rebellion it was one of the head-quarters of the rebels, who have left little of it standing except the wall and a part of the two principal streets, each extending about $\frac{1}{2}$ m. inside the gates, and nearly as far outside. Since its suppression in 1864 the inhabitants have been returning, and the authorities are restoring the public buildings; but it will be a long time before the place resumes its former prosperity.

WOO-SUNG, or Wu-sung [add.] Since the opening of Shanghai to foreign commerce, Woo-sung has risen into importance from its situation at the mouth of the Whang-poo, 13 m. by water and 8 m. by land from the British settlement. At the entrance to that inlet from the sea a bar stretches across the channel above Woo-sung, over which ships of large tonnage cannot float except at high-water or spring-tides. Hence the anchorage at this place is always crowded with shipping waiting to cross the bar, which, if heavily laden, they cannot accomplish for some days, or even weeks. This drawback to the navigation of the channel to Shanghai places Woo-sung in a favourable position to become the natural seaport of that emporium, with a railway 8 m. long across a level country. From the immense quantity of sediment deposited by the stream, the water across the bar is becoming shallower, and the channel narrower, while an island has been formed near Woo-sung, several acres in extent, since foreigners visited the port. On a rampart facing the anchorage are the remains of a battery which mounted one hundred guns, and was captured by Admiral Parker in the expedition under Sir Hugh Gough in June, 1842. Vessels inward-bound are piloted up to the roadstead by a staff of foreign pilots, and they are boarded by the officers of the harbour-master's department and maritime customs. These are the only foreign residents at Woo-sung; while the native village, from whence it derives its name, is a squalid place, inhabited by a sea-faring population.—(Mossman, *MS. Notes*.)

WOTITZ, a tn. Austrian empire, Bohemia, circle Tabor, cap. dist. of same name, 30 m. S.S.E. Prague. It has a

parish church, a synagogue, a Franciscan monastery, a castle, a townhouse, a brewery, and two mills. Pop. 2246.

WU-CHU, a tn. China, on the S.E. frontier of prov. Quangsee, at the confluence of the Kwei-ling with the Si-kiang. It is the most important commercial town of the province, being the entrepôt for all the traffic by the Si-kiang, consisting chiefly of wood, rice, cassia, cassia-oil, &c., from Quangsee, and salt and manufactures from Canton. The Si-kiang was explored by a British squadron of gunboats in 1859 as far up as Wu-chu, and found to be there scarcely navigable for junks, though its clear channel was between 500 and 600 yards wide. The trade of Wu-chu, and of the Si-kiang generally, was almost destroyed by the civil war, but it is now recovering.

WUKARI, a tn. Central Africa, cap. prov. Kororofa, on a branch of the Benuwe, about 10 m. from its S. or l. bank, and 300 m. S.S.W. Kano. According to native information it is a very large place, about 15 m. in circuit, and densely inhabited to the very walls. Its government is an absolute despotism. All the handicrafts are under the immediate control of the king, who permits none but his own people to exercise them. He also monopolizes the foreign trade. The chief manufacture is cotton cloth, said to be made of a peculiar kind of cotton. There seems also to be a kind of indigenous coffee. Yams are much cultivated.

WUNGABEJEWUNG, a vil. British America, Canada West, on the Great Manitoulin Island. It is a missionary station of the Church of England, and as yet only in embryo. The Indian inhabitants, about seventy, formerly dwelt at Mahnetooahung, 25 m. distant. They live partly by agriculture, but chiefly by furnishing firewood to the steamers plying between Collingwood and Sault Ste. Marie.

WUNZEN-TAKE, the most celebrated of the five active volcanoes now existing in Kiusiu, the most southern and westerly of the isles of Japan. It is situated in prov. Fizen, near the N.W. extremity of the island, and has had repeated eruptions in modern times. In one of these, which destroyed the city of Sima Barra, 35,000 persons are said to have perished. In 1793 the summit of the mountain sank entirely down, and torrents of boiling water issued from the deep cavity thus formed.

WUSHEK, a tn. Central Africa, Bornou, prov. Muniyo, on the S. Tawarek frontier, 178 m. N.E. Kano. It stands at the foot of a mountain range, among groves of date and tamarind trees, fields of wheat, cotton grounds, and kitchen gardens; and consists of four distinct groups of buildings within a light fence, embracing a circuit of about 3 m., and containing a pop. of about 8000. Wushek is the principal place for the cultivation of wheat in W. Bornou, and has an important weekly market.

WYANDOT, a tn. U. States, Kansas, cap. co. of same name, on W. bank Missouri, just above the mouth of Kansas River, and 3 m. above Kansas city. It is on the Union Pacific railway, and is a place of active trade. Pop. (1865), 2500.

X.

XAMILTEPEC, or JAMILTEPEC, a tn. Mexico, state and 93 m. S.W. Oajaca, on the Chicometepec. It is situated near a series of lagoons which deeply indent the coast, is of pleasing appearance, and contains about 4000 inhabitants, who trade in honey, wax, cotton, and salt. In the maritime plains of the dep. of which it is the capital much sugar is produced, and many cattle are reared.

XARRAL (El), or JARRAL, a tn. Mexico, state and about 55 m. N. Guanajuato, in a beautiful valley on the frontiers of San Luis de Potosi. It has a castle belonging to the Marquis of Jarral, one of the largest proprietors in Mexico, and contains 3000 inhabitants.

XAVIER, an isl. S. America, off the S.W. coast of Chili, lat. (N.E. extremity) $47^{\circ} 3' 15''$ S.; lon. $74^{\circ} 16'$ W. It lies 4 m. W. of the mainland, from which it is separated by Cheupe Channel, is high and thickly wooded, rising into hills 1200 to 1400 ft. high, and crowned with large and tall trees, and has

two good anchorages, Port Xavier in the N., and Ignacio Bay in the S. The W. coast is lined with reefs, on which the sea breaks with violence.

XIENGMAL, or CHIANG-MAI, a tn. Siam, the largest in the Laos States, on the Menam, about lat. $18^{\circ} 30' N.$; lon. $99^{\circ} E.$ It is surrounded by walls about 3 m. in circuit, and annually exports teak wood to the value of £400,000. This timber, which is floated down the Salween to Moulmein, is the chief source from which teak is supplied to the navy-yards of Great Britain.

XIMBA, a tn. S.W. Africa, Kimbunda country, territory Bailundo, on the E. slope of the Djamba range; lat. $12^{\circ} 25' S.$; lon. $16^{\circ} 28' E.$ It belongs as a kind of appanage to the heir-apparent of Bailundo, who resides at it; is surrounded by a palisade and a ditch, and contains 2000 inhabitants, who, as more especially under the jurisdiction of the prince, possess some special privileges.

Y.

YABRUD, a vil. Syria, 55 m. N.N.E. Damascus, at the entrance of a wild ravine. It occupies the site of the *Jabruda* of Ptolemy, and exhibits in the bevelled stones of its cathedral the remains of one of the earliest Syrian churches.

YAGODINA, a tn. Turkey in Asia, Serbia, cap. circle of same name, in a semicircular basin surrounded by mountains, near the Servian Morava, 66 m. S.S.E. Belgrade; with a court of justice, a church, and a school. Pop. 3741.

YALE, a tn. British Columbia, Western N. America, about 90 m. up the Fraser River, on r. bank. It is a gold-mining station, and a central place for the surrounding district. The navigation of the river is obstructed by some rocks about 6 or 8 m. below it, and immediately above it is the 'Little Cañon,' a mountain gorge which contracts the river so much as to render the stream a torrent with immense velocity, and therefore impassable. Yale is useful chiefly for slipping and unloading materials from and to the gold-fields.

YANG-CHOW, or **CHANG-CHOO-FOO**, a tn. China, prov. Kiangsoo, on the Imperial canal, 110 m. W.N.W. Shanghai. It was reputed to be a place of great wealth and splendour, but having been in the hands of the insurgents on three separate occasions, must have suffered severely. Little more is known of it than that it had a famous imperial library, of which there were only two duplicates in existence, the one at Peking, and the other at Hang-chow. This library, if not destroyed, has been completely dispersed. The pagoda of Yang-chow still forms a conspicuous object in the distance.

YANG-TZE-KIANG [add.], a river, China. This river and the ports of Chin-kiang, Kiu-kiang, and Hankow, situated

ruary, 1861, a British squadron of six vessels, under Admiral Hope, ascended this great river upwards of 800 m. from its mouth, where it is a deep-flowing stream $\frac{1}{2}$ m. wide at Yo-chow, the entrance to Tung-ting, the greatest lake in China. From this point an expedition traced its course to Ping-shan, a distance of 1782 statute m. from Shanghai. Above its confluence with Tung-ting the navigation of the river for large vessels is interrupted by rapids, which could only be ascended during high floods. Native craft, however, are taken up at all times by trackers, who ascend the stream to within a comparatively short distance of its source. The country through which the Upper Yang-tze flows is bold and mountainous, running between precipitous gorges, presenting wild and varied scenery. In its lower reaches, the banks are annually flooded to such an extent that boats sail over the level lands for hundreds and thousands of square miles, where the herbage grows when the waters retire. At Hankow the river reaches its highest flood in September, which is from 35 to 40 ft. above its lowest, in February, when the tidal influence reaches as far as the entrance to Lake Po-yang, 436 m. from the sea.—(Blakiston, *The Yang-tze*; Mossman, *MS. Notes*.)

YANGUITLAN, a tn. Mexico, state and 45 m. W.N.W. Oajaca. It occupies a cool and lofty site, is an ancient place, which, when the Spaniards first visited it, contained 12,000 inhabitants, and has a fine Dominican monastery, which was founded by one of the companions of Cortes in 1542. The surrounding district though elevated is fertile, and rears great numbers of cattle.

YANITZA, a tn. Turkey in Europe, eyalet and 30 m. W.N.W. Saloniki. It stands on a height, has several mosques, and contains 6000 inhabitants. The best tobacco of Macedonia is grown in its vicinity. Near the town is the village of Allah Kilissin, containing the ruins of Pella, the residence of Philip of Macedon, and the birth-place of Alexander the Great.

YAO-CHANG, a tn. China, prov. Sechuen, at some distance from l. bank Yang-tze-kiang, and 175 m. S.E. Tching-too-fow. Though of considerable extent it is not surrounded by walls, or otherwise defended. Among its buildings are a principal pagoda and a great Bonze monastery. Part of this monastery is appropriated as a theatre, consisting of a vast square platform, supported by twelve granite columns, and surmounted by a richly ornamented pavilion, resting on pillars of varnished wood.

YARANSK, a tn. Russia, gov. Perm, cap. circle of same name, on the Yarana; with five churches, secular and religious schools for the circle and the parish, a charitable endowment, and a yearly market, which lasts from the 2d of September to the 1st of October, and at which goods to a great amount are disposed of. Pop. 1330.

YARAPISSON, or **ARABISSON**, a tn. Turkey in Asia, Karamania, 330 m. S.E. Constantinople, on a rugged limestone height with numerous caverns. It consists of 200 houses, occupied by about 1200 inhabitants, who, in addition to the ordinary labours of agriculture, cultivate the vine, and take advantage of the high-road passing along the banks of the Halys to carry on some trade.

YARMOUTH, a seaport tn. Nova Scotia, 130 m. S.W. Halifax; lat. 43° 50' N.; lon. 60° W. The public edifices are good and substantial, especially the educational, possessing all modern improvements, and capable of accommodating 2000 pupils. There are eight churches, Episcopalian, Presbyterian, Methodist, Baptist, Congregationalist, and R. Catholic. A lighthouse, with a revolving light 135 ft. above the level of the sea, is on Cape Foucher, a short distance to the west of the entrance to the harbour. The harbour is safe, and accessible to vessels drawing 18 ft. of water. It has direct steamboat and sailing packet communication with Halifax, St. John's, N.B., and Boston, U.S. Its shipping, which is very extensive, has increased with marked success, the 199 vessels, with a tonnage of 73,055, owned in the town of Yarmouth, being one-quarter of the entire shipping of Nova

ENTRANCE OF LU-KAN GORGE, UPPER YANG-TZE.—From Blakiston.

on its banks, were opened to foreign navigation by the treaty of Tientsin, ratified in 1860. Previous to that date very little was known of its upper waters beyond Nanking. In Feb-

Scotia. The people are noted for business enterprise, and at present it is considered the most thriving town in Nova Scotia.

YASSI-HUK, a tn. Turkey in Asia, Anatolia. It stands on a height about 100 ft. above the Sakaria, which here makes a sudden bend to the W., and then widens out, forming several small islands. The district around is more pastoral than agricultural, and rears great numbers of sheep and Angora goats.

YEDDO, or **YEDO**, or **JEDDO** (Dutch) [add.] In the same year (1858) that Lord Elgin and Baron Gros negotiated the treaty of Tientsin, in China, these plenipotentiaries concluded the treaty of Yedo, in Japan, which opened the ports of Nagasaki, Yokohama, and Hakodadi; with permission for ministers representing Great Britain and France to reside at Yedo. This was accomplished in 1861; and the legations were being built on a commanding site in the city, so obnoxiously to the populace and some of the authorities, that they were burned down by incendiaries before they were finished. At the same time the members of the British legation, leaving their abode in a native dwelling, were repeatedly attacked, and several killed and wounded, which rendered it so unsafe to live in Yedo, that the two embassies left the city and resided at Yokohama; while the allied fleet threatened to bombard Yedo unless reparation was given, and a heavy indemnity paid. These were ultimately acceded to, and in 1865 the British and French ministers returned to Yedo, and took up their residence in Japanese temples fitted for their accommodation. During these transactions it was found that the treaty of Yedo was not concluded with the hereditary monarch of Japan, the mikado, who resides at Kioto, the imperial capital, but with the shiogoon, or prince elected by the daimios—who form an oligarchy of nobles, subject to the mikado. This grave error was rectified by the British minister, Sir Harry Parkes, in 1866, who skilfully obtained the emperor's signature to the original treaty.

Yedo is the place of residence of the shiogoon or tycoon, and the powerful daimios or native princes are obliged to reside at his court during stated periods; hence their retinues form a considerable portion of the population—which has been estimated as under for the year 1862:—

Followers of the daimios.....	432,000
Imperial officials.....	150,000
Priests belonging to temples.....	200,000
General inhabitants.....	572,848
Floating population.....	200,000
Total inhabitants.....	1,554,848

Yedo has a circumference of 24 m., and covers a surface of 36 sq. m. The O-kava or 'Great River' divides the city into two parts; the eastern part is called *Hondjo*; the western part bears more especially the name of *Yedo*. *Hondjo* has a circumference of about 9 m., with an area of 8 sq. m. It is completely surrounded by water, and intersected with canals, three large and numerous small ones cutting each other at right angles, and dividing the island into eight principal districts. Of these the four upper are chiefly occupied by the palaces of the daimios, with thirty temples; the two middle are exclusively palaces, with thirteen temples; and the two south districts contain twenty-one temples, whose gardens and outbuildings cover a large surface. The remainder of these districts is occupied by government stores, and the dwellings of artisans, fishermen, and workmen connected with the warehouses. *Hondjo* is a very quiet part of the capital, as the residence of the Japanese aristocracy; and the quay along the left bank of the O-kava forms a long and beautiful street. It is connected with the western quarter of the city by four great wooden bridges of very simple but solid construction.

Yedo proper is divided into three parts:—*Siro*, 'the castle;' *Soto-siro*, 'outside the castle;' and *Midzi*, 'town and suburbs.' The castle has a circumference of nearly 5 m., with an area of 1½ sq. m., and contains the palaces of the shiogoon and the royal family, the members of the council of state, and about twenty of the highest daimios; but not a temple, priest, or simple citizen. The space which contains the two imperial palaces is surrounded by a high wall and several canals, which the public is not allowed to pass; and almost every palace is inclosed by a moat, across which there is a large number of

small bridges, besides eighteen public ones. The walks round the castle are very agreeable and picturesque; and one along the banks of the principal canal opens to view thousands of aquatic birds on the water. The palaces of the daimios are long buildings of one single high story, generally white-washed, and having the appearance of large warehouses, without any pretensions to fine architecture. The only imposing features are the massive doors, which are sometimes ornamented with earvings, or covered with small plates of copper, forming various designs, such as the proprietor's coat of arms. The interior of these palaces is of great simplicity; the beauty and fineness of the mats, carvings, and paintings are the only points of distinction between them and the houses of the citizens. There is little or no furniture in them, and their principal ornament is their cleanliness.

'Outside the castle,' or *Soto-siro* quarter, 10 m. in circumference, with an area of 5 sq. m.; the greater part is occupied

by daimios' palaces, but of lesser rank. Besides the bridges which connect it with *Siro* and *Hondjo*, and the rest of Yedo, there are twenty within its own precincts, one of which is the celebrated *Nip-hon Bashi*, or 'Bridge of Japan,' which is considered the central point of the empire, and from whence all geographical distances are calculated. Here are fifteen temples, mostly Buddhist, covering about 1 sq. m. The remaining space is very densely inhabited, and may be considered the mercantile quarter of Yedo. This interesting district is situated on the E. of the castle, and has the form of a parallelogram. It is traversed in its whole length by the *To-kai-do*, or main-road of Japan, and communicates by fifteen bridges with the rest of Yedo. It contains five longitudinal and twenty-two transverse streets, cutting each other at right angles, and forming seventy-eight districts, separated from one another by wooden gates, ordinarily kept open, but always guarded by a small police force, who at any moment can isolate any given part of it. There are no daimios' palaces nor any large temples in this quarter. Here the principal commerce of the city is concentrated; and it is only in this part that regular streets are to be found. They are very animated, though the total absence of wheeled vehicles makes them less bustling than the great thoroughfares of Western cities.

The *Midzi* quarter, or town and suburbs, contains those

parts situated to the N., S., and W. of the castle, Hondjo being on the E. The northern district covers an area of 11 sq. m., and is remarkable for the number and extent of the temples spread over nearly one-third of its surface, including the mausoleum of the shogoons, surrounded by thirty-six temples; the temple of *Kansa*, the tutelary deity of Yedo, and a temple dedicated to Confucius, which forms the university of the capital. A great part of this quarter is under cultivation; many picturesque houses are seen in it; and extensive pleasure-gardens with neat little villages, which are to Yedo what St. Cloud is to Paris. The dwellings of citizens in this district cover scarcely 1 sq. m., and even from this must be deducted the grounds on which stand the great theatre of Yedo and *Yosivara*. The latter place is set apart exclusively for the residence of prostitutes and their servants, the houses forming a regular parallelogram 0·8 of 1 m. sq. It contains four longitudinal and three transverse streets, cutting each other at right angles; the whole being surrounded by walls and a wide ditch, with only one entrance, which is strongly guarded by a police force; no foreigners are allowed to enter. It is said to contain 5000 public women; but this does not include all of that class in Yedo, as there are similar places in the western suburb, nominally called 'houses of rest.' In that part W. of the castle are a great number of daimios' palaces, covering an area of more than 2 sq. m., and about fifty temples, extending over less than that. Among these are the palaces of the princes of *Ovari*, *Kiusai*, and the *Go-tairo*—the late regent of Japan. The part S. of the castle contains the palace of *Satsuma*—the most powerful prince in Japan—which is said to be the finest in Yedo. Here are the temples which the Japanese government has given as temporary residences to the representatives of the foreign treaty powers. The British legation is conveniently situated on the main road near the bay, at the S.W. entrance of Yedo; the French minister resides about $\frac{1}{2}$ m. distant; and the American legation is about $1\frac{1}{2}$ m. further in the city.

Yedo, as viewed from the bay, is a very picturesque city, as it rises and falls over undulating ground, covered with fine old trees. Its large temples, numbering about 1500, surmounted by gilded globes, produce a beautiful effect. The pagodas, the large daimio palaces, the long line of well-constructed quays, the fortifications kept in perfect order, all these together present an imposing *coup d'œil*. On arriving in the city itself, however, the visitor is disappointed. The temples disappear behind the trees by which they are surrounded, the palaces resemble scarcely anything better than large fire-proof warehouses, and the dwellings of the merchants and other citizens, though extremely clean, are small, and look rather poor. There are no handsome shops, no grand establishments, no triumphal arches, no statues, no monuments; nothing of what constitutes generally the beauty of European capitals. The environs are very picturesque, especially at the northern and western sides of the city, where the country is surrounded by beautiful hills, with a distant view of the Hankoni Mountains, beyond which rises the snowy peak of the volcano Fusi-yama.—(*North China Herald*; Mossman, *MS. Notes*.)

YEDI, a tn. Western Africa, Bornou, near the S.W. extremity of Lake Chad, 30 m. S. by E. Kukawa. It is a large place, which stands on a rising ground overlooking a continuous sandy plain, is surrounded by a clay wall in good repair, and has extensive gardens of onions, which are cultivated by means of irrigation. To the S. of Yedi is a wide plain, on which nothing grows except some mimosas.

YEGORLUSKAIA, a tn. Russia, gov. Don Cossacks, circle and 65 m. S.S.E. Novo-Teherkask; with a yearly market, and 2034 inhabitants.

YELKAZA, a tn. Western Africa, Bornou, dist. Maschena, 80 m. N.E. Kano. It is approached through a monotonous tract of country, covered with tall reed-grass and the *asclepias*, and is inclosed by two walls and three ditches, one between the walls, and the others outside.

YEMETHON, a tn. Burmah, 40 m. S. Ava, between the Toungdwen range on the W., and r. bank Pongloun or Sitang on the E. It is surrounded by a dilapidated wall, and ranks among the Burmese as a place of great importance, though the number of its houses is said not to exceed 400. In its district, which is well peopled, wheat, cotton, and rice are cultivated.

SUPP. IMP. GAZ.—VOL. II.

YENANGYOUNG, a tn. Burmah, l. bank Irawadi, 60 m. S.W. Ava. It is noted as the depôt of petroleum, which is found in its vicinity, and is extensively used for burning and many more uses all over the country. It is also exported from Rangoon. The quantity obtained by means of shafts sunk to the depth of 80 to 300 ft. is estimated at 25,000,000 lbs. Pop. reckoned at nearly 10,000.

YENDI, a tn. Western Africa, 240 m. N. of the Bight of Benin. Though exaggerated ideas were formerly entertained of it, it is still an important place, with a pop. of about 5000, who are idolaters, and seem to pay a sort of worship to vultures, since two baskets of meat for them are daily set down before the governor's house.

YENE, a tn. European Turkey, 50 m. E.S.E. Adrianople, near the sources of the Simer or Tearus. It consists of 150 Greek, 50 Bulgarian, and 20 Turkish houses, and appears to occupy the site of a more ancient town, of whose walls and buildings traces still exist.

YENIJE-KOI, a vil. European Turkey, near the N. shore of Lake Devne, and 3 m. W.N.W. Varna; is famous for the great battle fought in its vicinity on 10th November, 1444, between the Christians under Vadislas and Hunyades, and the Turks under Sultan Murad. The former were defeated and the king was slain.

YIMAHA, a tn. W. Africa, r. bank Benuwe, 40 m. above its confluence with the Kwara. It contains many substantial-looking huts, and has an industrious pop. of about 3500, who, however, suffer much from the depredations of the Fellatah, and are at times obliged to abandon the town to their mercy, while they themselves find a temporary asylum on an island in the river. Here Dr. Baikie found them in a hastily-constructed encampment, busily pursuing their various occupations of weaving, picking cotton, &c.

YING-TSZU, a treaty port, on the Sua muren or Liaou River, in the province of Shing-king, Chinese Manchooria, Gulf of Liaou-tung. This port has been substituted for that of New-chwang, which is named in the treaty of Tientsin, as the one open to foreign trade; but the channel of the river not admitting vessels of large tonnage so high up, it was abandoned for Ying-tszu, 18 m. from the entrance. It is the most northerly port in China with which foreigners are allowed to traffic, lying within the frigid regions of Manchoo Tartary, where all water communication is suspended for nineteen weeks in the year, namely, from November to March inclusive, during which period the river and its approaches are blocked up by ice. The town itself is a place of small importance, containing about 10,000 inhabitants, but it leads foreign trade on to Moukden, the capital of Manchooria, and forms the outport of the surrounding country, to which the inhabitants flock in immense numbers during the winter season, when the muddy plains are frozen hard. The traffic during that period is facilitated by the construction of bridges over the large mountain streams whose deeper and rapid current prevents their freezing, so as to offer a safe passage over the ice. During about 100 days of each cold season 60,000 large carts, drawn probably by about 300,000 draught cattle, and accompanied by 130,000 men, discharge their loads at this port-town. These consist almost entirely of pease and beans, bean-cake, and bean-oil; the articles of export to the middle and southern provinces. The quantities of pease and beans shipped in foreign vessels in 1864 weighed 108,832,632 lbs., and 119,875,811 lbs. in 1865; and of bean-cake respectively, 112,288,768 lbs. and 114,430,144 lbs. The imports comprise cotton fabrics, iron, lead, tin, glass, opium (£97,715), and sugar (£43,008); making a total value in 1864 of £236,646. The exports for the same year were valued at £570,133, of which £293,648 was for the item pease and beans, and £174,836 bean-cake. The number of foreign vessels, or at least the amount of tonnage, has steadily increased since the opening of the port in 1861, as follows:—1861, 33 ships, 11,346 tons; 1862, 86 ships, 27,747 tons; 1863, 201 ships, 61,155 tons; 1864, 302 ships, 88,281 tons; and 1865, 274 ships, 91,118 tons. During the five years the customs revenues rose from £764 to £53,688. The import and export trade is carried on by four foreign firms—two British, one American, and one German—and ten important native honges. The trade may be said virtually to be in the hands of the Chinese, as out of the 274 ships in 1865, only 37 were consigned to foreigners. This native monopoly

is shown by the fact that of the £55,688 derived by the customs as revenue in 1865, only £3400 was paid by foreigners. Formerly about 3000 junks arrived and departed annually, but no more than 1300 entered in 1865, the native shippers preferring foreign bottoms. The producing districts in the neighbourhood of Ying-tszu lie along a line drawn through S.E. Mongolia from the Great Wall to Songari.—(*Consular Reports; Customs Returns.*)

YO, or Jo, a tn. Western Africa, on the N.E. frontiers of Bornou, 35 m. N. by W. Kukawa. It rises from the flat on which it stands so as to form a conspicuous object at a great distance, and consists of the town proper, with closely packed streets, and a little suburb, situated on the banks of a stream running eastward with a strong current to Lake Chad. Cotton, of which a very good kind is grown, and wheat in small quantities, are the only articles of agricultural produce. Fish obtained from the river and the lake forms the principal food of the inhabitants.

YOJOA, or TAULEBE, a lake, Central America, Honduras, between lat. 14° 40' and 15° 5' N.; lon 88° 3' and 88° 15' W. It is about 25 m. long by 8 broad, and stands at the height of about 2000 ft. above the sea. Its average depth is from 18 to 24 ft. Its basin is one of those to which the name of *bolsones*, or pockets, is not inappropriately given, being formed by the contortions of the mountain system of the country, the ranges of which frequently bend back on themselves, and make inclosures, in which the waters of the mountain springs and torrents are collected. The mountains which thus inclose Yojoa are Miambar on the S. and E., and Santa Barbara on the N. and W. These mountains, which have an average height of about 6000 ft. above the sea, hem in the lake so completely as to leave only a narrow marshy rim, which itself becomes flooded during the rains. Facing the lake the slopes are too abrupt for cultivation, but on the other side they descend gradually by a series of terraces towards the rivers Humuya and Santa Barbara, and being well watered by springs derived apparently from the lake by a process of natural filtration, are both cultivable and productive. Yojoa is fed by numerous small torrents, and discharges itself at its S.E. extremity by the Jactique, which winds round, describing an arc of a circle, and joins the Santa Barbara.

YOKOHAMA, a foreign settlement and treaty-port, Bay of Yedo, Japan, about 17 m., by the road skirting the bay, to the S.W. of the city of Yedo, and adjoining the town of Kanagawa. The last-named place was the port fixed on by the treaty, but it was abandoned on account of its unsuitableness for the purpose. Before that the present site of Yokohama was a small village, which was removed to another spot, and the ground laid out for the foreign settlement by the Japanese authorities, in the form of an oblong square, about 1½ m. long and 1 m. wide. It is completely surrounded by water, across which are several bridges on the landward side, with gates, where native sentries are posted day and night. The dwelling-houses and warehouses of the foreign residents are chiefly built of wood, along the frontage facing the bay, each proprietor having his ground walled in; the whole forming three lines of houses, with streets intersecting at right angles. All the buildings are of one story, with the plots of ground around them laid out as gardens, more or less tastefully arranged, according to the ideas of the occupiers. Their pretensions to architectural ornamentation vary in like manner. The warehouses are substantially built, but only one of them is fire-proof, and escaped destruction during a conflagration in 1866, that nearly swept the settlement of its buildings, and destroyed property and merchandise to the value of half a million sterling. This accident has induced the residents to erect structures of stone and brick instead of wood; but it is feared that these may suffer from the earthquakes which shake the volcanic district on which they stand, and within view of Fusi-yama, an active volcano. Beyond the third row of houses the ground is laid out as a race-course, where races are held by the residents during spring and autumn, in which the Japanese take a part with native ponies. Across the canal that separates the settlement from the mainland, the *To-kai-do*, or great official highway of Japan, passes from N. to S., communicating with Yedo. Beyond the road the ground rises into hills about 400 ft. high, which are covered during the summer with

flowers of surpassing beauty, and fine old trees to the top of the ridge. A flight of stone steps leads up to these heights, from whence a comprehensive view is seen of the bay and the surrounding country. Here stands a small temple where the devotees turn their faces towards Fusi-yama, the 'sacred mountain,' and mumble their orisons. Persons landing from the shipping have to pass through the town of Kanagawa to reach the foreign settlement. Hence the port is sometimes called Yokohama-Kanagawa.

Since the opening of the port in 1861 trade has fluctuated on account of the unsettled relations between foreigners and the government, who threatened on several occasions to expel them from Japan. This feeling no longer exists, and commerce is placed upon a more equitable footing; still, it is subject to many restrictions, which the officials manage to render still more troublesome by exactions and monopolies. The chief exports are silk and tea, as follows:—

Export of Silk.		Export of Tea.	
Year.	Bales.	Year.	Lbs.
1861-62.....	11,915	1861-62.....	5,796,388
1862-63.....	25,891	1862-63.....	5,847,133
1863-64.....	13,511	1863-64.....	4,521,104
1864-65.....	10,235	1864-65.....	7,899,793

The imports are chiefly cotton manufactures and metals. The following table exhibits the value of imports and exports:—

Year	Imports.	Exports.	Total.
1863.....	£588,811	£1,349,045	£1,937,856
1864.....	1,484,445	2,290,648	3,775,093
1865.....	3,075,533	4,006,216	7,081,749

During 1865 the number of ships entered was 165, of 75,486 tons, chiefly British; and the customs duties amounted to £47,488 on imports, and £67,178 on exports. The British trade constitutes $\frac{1}{3}$ of the whole, the Americans, Dutch, French, and Prussians are the others, comprising thirty-two firms, half English. The foreign residents number about 300 persons, of whom 140 are British, 80 American, and 40 Dutch, including the consuls of Great Britain, France, America, &c.—(*Consular Reports; Mossman, MS. Notes.*)

In the vicinity of Yokohama, and off the *To-kai-do*, or main road, near Kamakura, on the way to Yedo, is a colossal bronze

COLOSSAL BRONZE IMAGE OF BUDDHA, NEAR YOKOHAMA. From a Photograph.

image of Buddha, the most remarkable idol of the kind in Japan, which is shown in the illustration. In ancient times

Kamakura was the site of an opulent city, but now it is only a straggling village, with the remains of numerous temples that once flourished there. Of these, the bronze image in question is the principal, and named 'Dai Budz,' signifying *Great Buddha*. It is not less than 30 ft. in diameter at the base, and fully 40 ft. in height, the thumbs measuring 9 inches in circumference. The proportions of the figure are admirable, and it is composed entirely of copper, cast in numerous pieces, neatly joined together, the image being hollow inside. A door at one end leads into the interior, lighted with windows at the back; and there are seen hanging up many strips of paper, and small gilded images of Buddha; with boxes for the offerings of the devotees who visit the shrine. Outside, the image is surrounded by a picturesque garden, with fine specimens of trees and shrubs, many of which are trained and clipped into curious forms. It is said to have been erected upwards of six centuries ago. At that period it was inclosed in a temple, the walls and roof of which were rent afterwards by a severe earthquake, when they were removed. Altogether, the place, the scenery, and the sublime repose of this image in the open air, is unrivalled in the far East; and it is associated with a recent tragedy, when two British officers were assassinated while on a visit to the spot.—(Fortune's *Visits to Japan and China*; Mossinan, *MS. Notes*.)

YOLA [add.], a tn. Western Africa, cap. kingdom of Adamawa or Fumbina, near its W. frontiers, about 12 m. S. from l. bank Benuwe. It stands on a swampy plain near an inlet of the Benuwe, which when flooded inundates it, and occupies a space which in length from E. to W. is not less than 3 m. The residences of the prince and his brothers are large dwellings built entirely of clay, but all the other houses, though they have clay walls as a protection against the rains, are mere huts. Each, however, has a large and spacious courtyard, which, as it is not wanted for any other purpose, is not unfrequently sown with grain. The market is very indifferently supplied, and there is no industry. Turkedes, beads, and salt are the chief articles exposed for sale; and the export trade is confined almost entirely to slaves and ivory. The pop., notwithstanding the size of the place, does not exceed 12,000.

YOMARU, a tn. Central Africa, l. bank Niger, 190 m. S.W. Timbuktoo. It is one of the two chief places of the Fermagha, and though consisting entirely of reed huts, is said to be nearly as populous as Timbuktoo. Its importance may be inferred from the amount of tribute which it pays, estimated at 4000 head of cattle. During the rains Lake Deba is so much increased that its shore is close to Yomaru, but during the dry season there is about 1 m. between them. A great many Fulbe live in the neighbourhood of Yomaru.

YOSEMITY, a cascade, U. States, California, co. Mariposa, formed by the river Merced, in the range of the Sierra Nevada, S.E. of Coulterville. From the surprising elevation of these romantic falls, and the wild and picturesque character of the scenery which surrounds them, they are not unjustly regarded as one of the natural wonders of the American continent. To obtain a view of them the traveller has to traverse a dense forest of gigantic cedars (*Sequoia gigantea*), the mammoth-trees of the Americans, unrivalled in size and beauty, averaging upwards of 400 ft. in height, and exceeding 100 ft. in circumference. He then emerges in the fertile evergreen valley of Yosemite, diversified by trees and thickets, like the park of an English mansion, and surrounded on three sides by almost perpendicular walls of rock 3000 ft. high. Over one of the highest of these, at the extremity of the valley, the river Merced pours its waters sheer down an unbroken cataract 2100 ft. in height, and thence by two further leaps of 200 and 400 ft., reaches a miniature lake below, after a total descent of 900 yards. The volume of water of these Yosemite Falls is far inferior to that which makes up the cataract of Niagara; but the latter is not more than 54 yards in height, so that the Californian cascade, which claims our admiration as the highest in the world, need not fear comparison with the Canadian falls. From the small lake already mentioned, the Merced issues again in a narrow stream, and with many a bend and curve rolls between the dark rocky mountain walls of the valley, or glides through the deep shadow of the woods of oak, and pine, and poplar, which clothe its banks, and afford as yet undisturbed shelter to elk, squirrels, and Californian hares; to gray and tufted

partridges and golden pheasants, and to innumerable ducks and other waterfowl. It is an important affluent of the San

YOSEMITY WATERFALL, 2700 ft. high.—From L'Illustration.

Joaquim, and by that river discharges its waters into the bay of San Francisco.

YREKA, a tn. U. States, California, in the valley of Shasta River, 125 m. N. Red Bluff. It is on the main-road from Sacramento to the Willamette Valley, and is surrounded by mountains. The principal resources of Yreka and the adjacent country are gold-mines. Pop. (1865), 2400.

YTAPUA, or **ENCARNACION**, a tn. Paraguay, r. bank Parana, which is here $1\frac{1}{4}$ m. wide, and rolls on majestically between a bordering of lofty trees. It was one of the most famous of the Jesuit settlements, but having been abandoned and dilapidated by a despotic and avaricious government, now consists of only a few ruined houses and the remains of a church, which, when the Jesuits were in their glory, was one of the most beautiful and gorgeous belonging to them.

YUEN-HWA, a tn. China, near the N. frontiers of Chekiang, on the borders of the great silk country. It stands on the banks of a canal leading E. towards Chapoo, on the N. side of Hang-chu Bay, and is an important place, with about 100,000 inhabitants, who are largely engaged in the silk trade. A few isolated hills in the vicinity form the S. boundary of an immense alluvial plain stretching to the N. and E., and are apparently a schistose formation of disintegrated granite combined with porphyry.

YUNG, a river, China, prov. Chekiang. Opposite to its mouth in the Pacific, in lat. $29^{\circ} 57' N.$; lon. $121^{\circ} 43' E.$, are three islets, called the Yew Islands or Triangles, which form three separate entrances. On the W. side, immediately within the entrance, is the seaport of Chin-hai, where the width of the channel is about 400 yards. This width, with depths varying from 5 to 2 fathoms, it retains for 11 m. up to Ningpo. Here it separates into two branches, the Yuyao or Tsie-kie, coming from the N.W., and the Funghwa from the S. by W. The Funghwa, barely 200 yards wide, is crossed by a bridge of boats about $\frac{1}{2}$ m. above the fork. The Tsie-kie, from the sharpness of the turn, the crowded state of the

river, and the setting of the flood-tide towards the Funghwa, is very difficult to take. In December, 1841, three British war steamers proceeded up this branch to clear it of fire-junks. The British consulate is situated on its l. bank, opposite to Ningpo.

YUTU, a tn. S.W. Africa, Kimbunda country, territory Ambuim, between the Mujinji, an affluent of the Longa, and the Kupo, 160 m. N.N.E. Benguela. It crowns the very summit of the Hama range, and contains 2000 inhabitants.

YU-YAOU, a tn. China, prov. Chekiang, on the N.

branch of the river and about 150 m. above the town of Ningpo. It consists of two portions, or rather separate towns, one on the S. and the other on the N. side of the river. The town on the S. side appears to be very ancient, and is in ruins—its walls broken down, and covered with weeds and brushwood. The town on the N. side is comparatively modern, and apparently flourishing. Within its walls is a hill about 300 ft. high, crowned by a temple dedicated to a minister of state who flourished in the Ming dynasty. There is nothing else remarkable about the place.

Z.

ZABERMA, or ZERMA, a prov. of the Hausa States. Western Africa, is bounded towards the S.W. by the Niger, towards the S. by prov. Dendina and dist. Tamkala, and towards the S.E. by prov. Mauri; the N. and N.W. boundary cannot in our present state of knowledge be properly defined. It is inhabited by a race of Songhay and Tawarek, apparently of a degraded and mixed character. With the exception of one or two open places, the country scarcely appears to have any centres of a settled population; the most interesting portion of it is the broad valley, rich in natron, by which it is intersected. This valley is said to be girt by fine tamarind trees. The prov. has rich pasture grounds, which induce many of the Fellatah to visit it annually for some months.

ZACUALPAN, a tn. Mexico, dep. and 50 m. S.W. Mexico, in a mountainous district 6000 ft. above the sea. It consists of well-built stone houses ranged in regular streets, and a public square, adorned with a handsome church, and commanding a splendid view, which embraces on the left the Nevado of Toluca, in the centre the twin volcanoes of Puebla—Popocatepetl and Itztaeciuati—and on the right the snow-fields of the Orizaba. There are many silver mines in the vicinity of Zacualpan.

ZADWERZITZ, a tn. Austrian empire, Moravia, circle and about 20 m. N.E. Hradisch; with 1000 inhabitants, who are all Protestants, and have a Reformed parish church.

ZAGHOUAN, or ZAGHWAN, a large vil. regency of Tunis, at the extremity of the mountain chain which separates the districts of Tunis and Susa, built on the site of Zuchara, a Roman town about eight hours' march from Tunis and twelve from Susa. The houses are built in the form of an amphitheatre, on the slope of a hill at the foot of the elevated peaks of the Jebel Zaghouan, and between the blocks of buildings narrow streets lead down in a serpentine path to the valley beneath, which presents the vegetation of Europe in all its luxury, allied with the date, the aloe, &c. The population, only a few hundreds in number, is largely composed of Jews.

ZAIHERANY, a river, Palestine, which issues from several perennial fountains in a great gorge on the W. slope of Lebanon, runs S.W. along the W. base of Jebel Riham, and suddenly breaking through a low ridge which forms its W. bank, runs off W. to the Mediterranean.

ZALAVAR, a tn. Austrian empire, Hungary, co. Zala, 20 m. S.E. Zala Egerszeg, between the river Zala and the marshes at the S.W. extremity of Lake Platten or Balaton. It has two remarkable ruins, the one of the old castle of Zala, from which the county takes its name; and the other of a famous abbey, which has now its seat in Apati. Pop. 1000.

ZALOSCE, a tn. Austrian empire, Galicia, circle and 23 m. E. Zloczew, cap. dist. of same name. It is traversed by the Sereth, which divides it into an old and a new town; has an institution of the Sisters of Mercy, an infirmary, and an asylum for orphan girls. Pop. 4820.

ZALOZNICA, a tn. Austrian empire, Military Frontiers, Croatia, dist. Ottochatz; with 980 inhabitants. The Turks were defeated here in 1663 by Peter Zrini. There is a famous cavern in the vicinity.

ZAMBALES [add.], a prov. Philippine Isles, the most westerly part of the island of Luzon, lies between the Gulf

of Lingayen on the N., and the Bay of Subig on the S., and consists of a long and narrow maritime strip of land stretching along the foot of a mountain range of same name. It is about 100 m. long by 20 m. broad, and has a computed area of 1200 geo. sq. m. The mountains themselves are too steep and rugged to admit of cultivation, but the land between them and the sea, forming the main part of the province, is fertile and well watered, suited to the growth of rice and sugar-cane, and even producing wheat on the higher slopes. The capital, Iba or Yba, situated near the mouth of a river navigable only for small craft, is in lat. 15° 19' 45" N.; lon. 119° 51' E. The inhabitants speak a peculiar dialect, but in their manners and social state resemble the other civilized nations of Luzon. It is said that the Spaniards, when they first arrived, found them in possession of a written language and some poetical compositions. Pop. 95,260.

ZAMBESI [add.], a river, South Africa. The Zambesi pours its water into the Mosambique Channel, between lat. 18° and 19° S., by four mouths, namely, the Milambe, which is the most westerly, the Kongone, the Luabo, and the Timbwe or Muselo. The immense amount of sand brought down by the river has formed a sort of promontory, with bars, which, acting against the waters of the delta, have led to their exit sideways. The Kongone, which is the best entrance, is one of these lateral branches, and its bar has nearly 2 fathoms at low-water, and the rise at spring-tides is 12 to 14 ft. Proceeding up the Kongone, which has a straight and deep channel for 20 m., and is lined with mangrove jungle, after 25 m. the broad Zambesi is reached. The mangroves are soon left behind, and vast level plains of dark rich soil, covered with gigantic grasses, succeed. Native huts stand on piles a few feet above the ground, and are surrounded with excellent gardens. Rice is largely cultivated, and sweet potatoes, pumpkins, tomatoes, cabbages, onions, pease, a little cotton, and sugar-cane are also raised. The whole of the fertile region from the Kongone canal to beyond Mazaro, an extent of 80 m. in length and 50 m. in breadth, is admirably adapted for the growth of sugar-cane. The deep channel of the Zambesi is winding, and the bottom of the river appears to be a succession of immense submerged sandbanks, having, when the stream is low, from 1 ft. to 4 ft. of water on them. The main channel runs for some distance between the sandbank and the river's bank, with a depth in the dry season varying from 5 to 15 ft., and a current of nearly 2 knots an hour. The channel then turns and flows in a diagonal direction across the river, winding constantly from bank to bank. In these crossings the depth is shallowest. Approaching Mazaro the scenery improves, and the well-wooded Shupanga ridge is seen stretching to the left, and in front blue hills rise dimly in the distance. To Mazaro all the merchandise of Senna and Tette is brought, and thence carried six miles across the country to be re-shipped on a small stream that flows into the Kwakwa or Quillimane River, which is entirely distinct from the Zambesi; but a narrow natural canal, the Mutu, allows canoes to pass from the Zambesi to the Quillimane River occasionally during the highest floods. The Landeens or Zulus hold the right bank of the Zambesi, and annually receive a considerable tribute from

the Portuguese. In the neighbourhood of Shupanga-house African ebony and lignum-vitæ abound, the latter growing to a very large size; caoutchouc is also found in abundance inland, and calumba-root is plentiful in the district; and indigo propagates itself abundantly close to the banks of the river. From Shupanga to Tette the Zambesi is wide and full of islands, and is therefore difficult of navigation. At the confluence of the Shire, about 20 m. above Shupanga, the quartz hills are covered with trees and gigantic grasses. At Tette the river is 964 yards wide, and has a current of about 2½ knots an hour.

Some distance above Tette the river is confined between mountains 2000 to 3000 ft. high, to a bed scarcely a quarter of a mile broad, and higher up to a still narrower one, along which it rushes in the Kebrabasa rapids. The river-bed viewed from a height appears covered with huge blocks of rock, interspersed with great rounded boulders. Large patches of the underlying rock, which is porphyry and various metamorphic masses huddled together in wild confusion, are also seen on the surface; and winding from side to side in this upper bed is a deep narrow groove. Though the perpendicular sides of this channel are generally of hard porphyry or syenite, they are ground into deep pot-holes, or drilled into numerous vertical grooves similar to those worn by the draw-ropes in Eastern wells. The breadth of this channel in the dry season is from 30 to 60 yards, and its walls from 50 to 80 ft. high. One of the principal rapids is the cataract of Morumbwa, between perpendicular walls of rock 500 or 600 ft. high. It presents a fall of about 30 ft., and the water comes down at an angle of 30°. When the river is full the water rises at least 80 ft. higher, and no cataract is then visible. Above the Kebrabasa pass, as far as Chicova, the Zambesi again has a flood-bed and a deep water-worn groove, but the flood-bed is only 200 or 300 yards broad, and the stream has a number of small rapids. Ranges of lofty tree-covered mountains stretch from the N.W., with deep narrow valleys, and are prolonged on the opposite side of the river in a S.E. direction. The river suddenly expands at Chicova, and assumes the size and appearance it has at Tette. Near this point a large seam of coal is exposed in the left bank. The Chicova plains are very fertile, have rich dark soil, and formerly supported a large population; but desolating wars and the slave-trade have swept away most of the inhabitants. At Chicova a dike of basalt stretches across the river at an acute angle like an artificial dam, but there are two openings in it from 25 to 30 yards wide, and deep enough to allow the whole body of water to pass in the dry season. Above Chicova the range of vision is bounded by mountains between 2000 and 3000 ft. high, and covered with grass and forest to their summits. Between them and the river are plains varying very much in breadth as the furrowed and wooded hills recede from or approach the river. On the S. side is the long level wooded ridge of Nyangombe, the first of a series-bending from the S.E. to the N.W. past the Zambesi. At Zumbo, on the l. bank of the Loangwa, at its confluence with the Zambesi from the N., and a charming site, are the vestiges of a Portuguese settlement and chapel. In the country westward buffaloes, antelopes, guinea-fowls, ducks, geese, and game of many kinds are very abundant. At the junction of the Kafue, on the l. bank from the W., where the Zambesi bends to the S., a high ridge commands a splendid view of the two great rivers and the rich country beyond. Behind on the N. and E. is the high mountain range, the base of which skirts the river for a long distance. It is covered with trees even on its highest peaks, and bends away to the N.W. The Kafue flows between steep banks, with fertile lands on both sides. The rapids of Kansalo and Kariba, about 30 m. above the confluence of the Kafue, are of the same nature as that of Chicova. From the Kafue hills encircle the river more or less closely. They are generally of igneous or metamorphic rocks, clay-slate, or trap, with porcellanite and zeolite; the principal rock in this central part of the country, where no syenite or gneiss has been upheaved, seems to be the coarse gray Tette sandstone. The igneous rocks often form dykes, one of which stretches across the entrance to the Kariba gorge, through which the Zambesi passes between mountains lying N.E. and S.W. across the river. On the islands and on the l. bank of the Zambesi, all the way from the Kafue, the country is fertile,

and there is a large population; the r. bank, however, though fertile is deserted.

From the confluence of the Zungwe, a small river from the W., the Zambesi soon bends into a nearly W. direction, and lies in a vast valley which appears nearly all forest, with a few grassy glades, until the Victoria Falls are reached. Of these wonderful Falls a description will be found under their proper head. Dividing the Zambesi into three reaches, viz. from the sea to Kebrabasa, from Kebrabasa to Kansalo, and thence to Victoria Falls, each reach is abundantly supplied with coal.

From the Victoria Falls upwards to the N.W. the river, there called the Leeambye, lies along the Barotse valley to its junction with the Leeba from the N.W., in about lat. 14° 10' S., and lon. 24° E. Above this point little or nothing is known of it, but it appears to come from the north-eastward, and probably has its rise among the hills of the country of Cazembe. Throughout the whole of its course the Zambesi receives numerous tributaries from both sides.

ZANZIBAR [add.], a territory, isl, and tn. E. coast Africa. The possessions of the Sultan of Zanzibar comprise the whole coast between Mugadosha, about lat. 2° N., and Cape Delgado, lat. 10° 42' S. They are bounded on the N. by the independent Somali and Galla tribes, and on the S. by the Portuguese possessions under the governor of Mozambique. Inland they have no precise limits, the interior being occupied by native tribes, yielding but slender obedience to the sultan, except when immediately within reach of his power. It is a fine healthy country, producing large quantities of cotton, gums, coffee, grain, and vegetables. The whole coast-line has an extent of 1100 m. Off the coast the islands of Zanzibar, Pemba, and Monfaa likewise belong to the sultan.

—The ISLAND, named Ungojo by the natives, lies 20 to 30 m. from the coast, from which it is separated by a channel having depth of water for the largest vessels. In this channel there are many islands and sand-banks, which, however, can easily be avoided by keeping close to the island, along the W. coast of which there is good anchorage everywhere; but on the E. coast there is no anchoring ground, it being covered with reefs to a considerable distance. The N. point of the island, Ugoovy, lies in lat. 5° 42' S.; lon. 39° 15' 6" E., and the S. point, Ras Kizamkaz, in lat. 0° 37' S.; lon. 39° 27' E.; total area about 400,000 acres. The soil is exceedingly fertile. The slopes, which, at a distance of 2 or 3 m. from the coast, rise to a height of 300 to 400 ft., are covered with clove and orange trees; and the plains and valleys, watered by perennial streams, are clothed with rice, sugar-cane, cassava, jowary, &c. Viewed from the sea the island has the appearance of an unbroken forest of cocoa-nut, mango, and other trees, with a back-ground of clove-trees upon the rising grounds; but still it is intersected in all directions by roads and green pathways, which present an endless variety for riding or walking. There are numerous small streams, which water the valleys, and in many places are led into the gardens and country-houses of the Arabs. Two of these are led by aqueducts to the sea N. of the harbour; from one of them, named Bububu, 6 m. off, a good supply of excellent water is obtained by the shipping at all seasons of the year. Before these aqueducts were built, vessels used to obtain water near the town from muddy wells, the drinking of which produced diarrhoea and other diseases. By this means the climate got a bad name, which later researches have shown to be undeserved. The population is of a very mixed character. The Arab landowners form the basis, and at the same time a kind of aristocracy, being proprietors of large plantations and numerous slaves, which latter constitute the great bulk of the population; there are likewise many natives of the Comoros, and of the W. coast of Madagascar, and a considerable number of the natives from the coast of Hadramaut in Arabia. About 5000 to 6000 Indians are permanent residents, and their numbers increase yearly. During the N.E. monsoon the population is temporarily increased several thousands by the arrival of traders, and the total population of the island may be taken at about 250,000, of whom 60,000 belong to the town.—The town lies on a promontory on the W. coast of the island. Like other eastern towns it is composed of narrow, crooked, and badly-made streets, which never being cleaned except by flood-rains, are usually in a very filthy state. The only public buildings are the mosques, plain but substantial

edifices erected in the same line as the houses; one of them has a minaret, which serves as a landmark to entering vessels. The bazars are large, and well filled with articles of foreign manufacture. Nearly all the shopkeepers and workmen are natives of India. The palace of the sultan and the houses of the wealthier Arabs and foreigners lie close to the sea, opposite the harbour, and are generally flat-roofed, and have a court in the centre. The streets here are better laid and

THE PORT OF ZANZIBAR, showing the Fort and Custom-house.—From *Le Tour du Monde*.

better kept, and are provided with a foot-path of chunam. Probably the most interesting points are the fort erected by the Portuguese, and now partly used as a prison, and the custom-house near it on the shore; the latter being one of the busiest localities of the place. The town, being exposed to the sea-breeze, and supplied with good water, is healthy; but even a single night spent in the interior by Europeans is often followed by the most serious consequences.

The harbour is very convenient, and secure at all seasons of the year, being protected on the W. and N. side by four islands, which are united with each other by coral reefs, upon which the surf breaks, so that the water in the harbour is always quiet. It is protected from the S. wind by the tongue of land upon which the town is situated. Vessels anchor a few yards from the shore in 7 to 9 fathoms, and may be laid for repair without danger upon the sandy shore. N.E. from the town is an extensive bay, in which vessels of 300 to 400 tons may be overhauled with safety. Zanzibar is now the chief market for the supply of ivory, gum-copal, and cloves; and it exports likewise a considerable and increasing quantity of sesamum, besides red pepper, cocoa-nuts, cocoa-nut oil, &c.; the total value of the exports amounts to above £800,000 yearly. The imports consist of large quantities of gray and coloured cottons, Indian coloured cottons, Muscat silks, cotton longees and turbans, Venetian pearls, brass wire, muskets, gunpowder, rice, wheat, jowary, and ghee, of the total value of above a million sterling. The population of the town is about 60,000, largely increased, as already stated, by the arrival of traders during the N.E. monsoon.

ZAOUIA SIDI OMAR, a vil. N. Africa, Sahara, oasis of Tuat, dist. Augerst, situated between Timimou and Kasbal-Hamra, about lat. 30° 20' N.; lon. 1° 22' W. It is a place of pleasing appearance, protected by a wall about 6 ft. high, and a small castle, situated near the centre of the place. In this castle the inhabitants deposit their valuables, and hither, in the event of an assault by the Berbers, they repair for safety. Adjoining the castle is the marabout of Sidi Omar, which is held in the highest veneration in Tuat, and throughout the whole Sahara. In the autumn of every year it is visited by great numbers of pilgrims. The position of the village on a principal caravan route between the great markets of Timimou on the N., and Tidikelt on the S., and the abundance and excellence of its dates, make it one of the most frequented localities in the W. of the Sahara.—(Dumas.)

ZAPOTLAN (EL GRANDE), a tn. Mexico, state Jalisco, 80 m. S. by W. Guadalajara, near the frontiers of the territory of Colima. It is a place of considerable importance, with a pop of 12,800.

ZAREV, or TZAREVSK. a tn. Russia, gov. and 180 m. N.N.W. Astracan, cap. circle of same name, on the Aktuba. It occupies the site of what was once the capital of the khan of the Golden Horde, and still contains many of its ruins.

ZARZIS [add.], a small seaport, N. Africa, Tripoli, near the S.E. entrance of the Gulf of Cabes. It consists of five separate villages, each with its own date-grove, and with houses in tolerable repair, and neatly whitewashed. In the vicinity are some Roman ruins, especially a cistern of very great length. Near the same place Lake Biban communicates with the sea by a narrow channel. Some suppose that this lake, which is now of the nature of a deep gulf or fiord, was once dry land, and there is accordingly a native tradition that it was covered with towns and rich corn-fields, which, owing to a subsidence of the ground, were suddenly swallowed up. The Bedouins of the neighbourhood belong to the tribe of the Akara.

ZATOR, a tn. Austrian empire, Galicia, circle Wadowice, 22 m. W.S.W. Cracow, near the confluence of the Skawa with the Vistula. It has a beautiful Gothic parish church, and an ancient castle, still habitable, finely seated on a steep height. Zator was once the capital of a Silesian duchy, which passed to the Poles in 1457. Pop. 2000.

ZAWOJA, a tn. Austrian empire, Galicia, circle Wadowice, 40 m. S.W. Cracow; with iron-works, and 3775 inhabitants. In the vicinity Mount Babia Gora, on the frontiers of Hungary, rises to the height of 5660 ft. above the sea.

ZAYLA, or ZEYLEH [add.], a small seaport, on the E. coast of Africa, 120 m. S.W. Aden. Seen from the sea, its whitewashed houses and minarets peering above a long low line of brown wall, flanked with round towers, has a pleasing appearance. This is not confirmed by actual inspection. Its site is a low and level spit of sand, which high-tides make almost an island; its streets are merely dusty roads; and its dwellings, with the exception of a dozen large whitewashed stone houses, consist of 200 Arish or thatched huts, each surrounded by a fence of wattle and matting. The walls, built of coralline rubble and mud, and pierced with five gates, are in places dilapidated, and have neither guns nor embrasures for them. The public buildings include six mosques, none of them deserving particular notice. Zayla, though its roadstead is exposed, and it cannot be said to have a harbour, as vessels of 250 tons cannot approach within a mile of the landing-place, is from its position the northern port of Aussa in Adel, of Harar, and of S. Abyssinia. It sends caravans northwards to the Dankali, and south-eastwards as far as Efat and Gurague. Its exports, which are valuable, consist of slaves, ivory, hides, honey, antelope horns, clarified butter, and gums; on the coast, sponge, coral, and small pearls are found, and are collected in the fair season by Arab divers. The inhabitants, exclusive of a large floating population, amount to about 1500.—(Burton's *First Footsteps in E. Africa*.)

ZBORO, a tn. Austrian empire, Hungary, co. Saros, on the S. slope of the Carpathians, on the frontiers of Galicia, 28 m. N. Eperies; has two castellated mansions, a distillery, a brewery, and a trade in corn, linen, hides, and honey, and contains 2000 inhabitants.

ZBOROW, a tn. Austrian empire, Galicia, circle and 16 m. S.E. Zloczow, cap. dist. of same name. It had once a strong castle, and is memorable for a victory gained by the Poles over the Cossacks and Tartars in 1642. Pop. 3078.

ZDAUNEK, a tn. Austrian empire, Moravia, circle and 10 m. N.W. Hradisch, in a valley between lofty heights; with a deanery church, a castle, and 1100 inhabitants.

ZEBRAK, a tn. Austrian empire, Bohemia, circle and 26 m. S.W. Prague, on the railway from Prague to Pilsen. It has a deanery church, a town-house, a town-hospital, a brewery, and a flour-mill. The ruined castle of Zebrak, where King Wenzel often resided, is situated a little N. of the town. Pop. 1800.

ZEIDLER, a tn. Austrian empire, Bohemia, circle and 30 m. N.N.E. Leitmeritz, on a stream of same name; with 1500 inhabitants, who are mostly employed in the manufacture of linen, hosiery, and sieves.

ZEIL, a tn. Austrian empire, Hungary, co. and about 12 m. N.E. Presburg; with a paper-mill, and 1200 inhabitants, Slovaks and Jews. On a vine-clad hill in the vicinity there is a chalybeate spring, with a bathing establishment.

ZELL, a tn. Austrian empire, Upper Austria, circle of the Inn, on the Pram, an affluent of the Salza, 30 m. W. Linz. It has a handsome church with a large organ, a castle with beautiful frescoes, and several industrial establishments. Pop. 1200.

ZELL (LITTLE), a tn. Austrian empire, Lower Austria, circle Upper Wienerwald; with manufactures of iron-wire, nine saw-mills, and a large trade in wood and charcoal. Pop. 1340.

ZEMBRZYCE, a tn. Austrian empire, Galicia, circle Wadowice, r. bank Skawa, about 44 m. S.W. Cracow; with a remarkable parish church, and 1300 inhabitants.

ZEMEINOGORSK, a tn. Russia, W. Siberia, gov. and 250 m. S.W. Tomsk, on the Ouba, a tributary of the Irtysh. It stands on very high ground, overlooking a vast steppe to the W., and exposed to the hurricanes which blow frequently from that quarter. It contains a church, several large buildings connected with the administration of the mines, and smelting furnaces. The last, situated in the valley below, are employed in smelting the ore of a mine which is said to be the richest in silver within the Russian empire.

ZENONE DI MOZZO, a tn. Italy, Venetia, prov. and 11 m. S.S.W. Verona; with a parish church and handsome villas, is memorable for the league which was here formed on 2d March, 1226, by sixteen towns of Lombardy against Frederick II.

ZERMEN, a tn. Italy, Venetia, prov. and 15 m. S.W. Belluno; with a parish church, a convent of Minorites, and 2155 inhabitants.

ZERNEST, a tn. Austrian empire, Transylvania, circle and about 8 m. W.S.W. Kronstadt; with a cotton-mill, a lead-mine, and 2519 inhabitants, many of whom are carriers. The united Austrian and Siebenburg forces were here signally defeated, in 1690, by Tököly and the Turks.

ZEYA, a river, Manchooria, which, though the fact is not well ascertained, appears to rise in a branch of the Yablonoi Mountains, flows circuitously S., augmented particularly on the left by several large affluents, and finally throws its accumulated waters by a wide mouth into the Amoor, about lat. 50° N. Russia has recently founded the town of Blagovschensk at the point of junction, and declared it to be the seat of government. Near the sources of the Zeya the finest sables are obtained.

ZHIBU, or SHIBU, a tn. W. Africa, cap. dist. of same name, prov. Kororofa, near l. bank Benue, 230 m. above its confluence with the Kwara. It stands about 1 m. from the river on a rising ground, which gives it a commanding view; is inclosed by strong palisading, and entered by gates; and consists of circular huts arranged with some regularity in streets or lanes, which are kept very clean. The inhabitants, about 4000, though mostly Mahometans, are said to dispense with mosques, and perform their devotions in the open air. Maize and corn are extensively cultivated in the neighbourhood.

ZIBALCHE, a tn. N. America, Yucatan, 40 m. N.E. Campeachy; with 3406 inhabitants, of whom 2000 are Indians.

ZIERAWITZ, a tn. Austrian empire, Moravia, circle and 12 m. S.W. Hradisch; with a castle, a mine of lignite, and 1000 inhabitants.

ZIMAPAN, a tn. Mexico, state and 92 m. N.N.W. Mexico, at the height of 5400 ft. above the sea. It was a flourishing place before the expulsion of the Spaniards, having

numerous mines both of gold and silver, which were extensively worked. It has since fallen into decay, though mining is still the chief employment of the inhabitants.

ZINKENDORF (GREAT), a tn. Austrian empire, Hungary, co. and 9 m. S.E. Oedenburg, near the S. shore of Lake Neusiedl; with a fine castle with gardens, an hospital, manufactures of beet-root sugar, a machine factory, and a silk-mill. Pop. 1000.

ZIRL, a tn. Austrian empire, Tyrol, circle and 6 m. W. Innsbruck, on the Inn. It stands at the foot of a precipice known by the name of Martin's Dyke, from the wonderful escape of the Emperor Maximilian I.; and has in its vicinity the ruins of the once extensive castle of Fragenstein, and a church, to which numerous pilgrimages are made. Pop. 1700.

ZIS, or Zys, a river, N. Africa, Morocco, which rises on the S. slope of the Great Atlas, flows S. to Taflet, where it makes a remarkable bend nearly in the form of a horse-shoe, and thereafter resuming its S. direction, is lost in the sands of the Sahara. Its whole course is about 250 m.

ZITACUARO, a tn. Mexico, state Michoacan, about 20 m. W. Morellia. It stands at the height of 6000 ft. above sea-level, and was a flourishing mining town before the expulsion of the Spaniards. It has since fallen into decay, and contains only 2000 inhabitants.

ZLATAOUST, or ZLATOUSK, a tn. Russia, gov. Perm, on the banks of the Ai, in a very narrow part of the valley, nestled between mountains, one of which, the Urenga, rises far above it. It ranks as the Birmingham and Sheffield of the Ural. Among its public buildings is a museum erected by the emperor Alexander I., containing a fine collection of arms, cuirasses, and similar curiosities, with specimens of every variety of sword or other arm manufactured at the works, a library, and a well-arranged collection of minerals. The works themselves include blast-furnaces, forging-mills, and every requisite for converting iron into steel, and an enormous fire-proof building of three stories, where sabres, swords, daggers, and helmets are forged and finished. The art of damascening having been discovered anew by Colonel Anossoff, who had long the management of the works, the etching and ornamenting on some of the swords are most exquisitely finished.

ZOGIRMA, a tn. Western Africa, Hausa States, prov. Kebbi, and near the edge of the shallow swampy valley which intersects it, 95 m. S.W. Sokoto. It has a clay wall in good repair, and is under a governor, whose residence makes some approach in its style of architecture to the Gothic, though its fine and well ornamented clay walls are only loosely held together by a framework of boards and branches. The inhabitants, from 7000 to 8000, suffer much from the troubled state of the country.

ZOLYNIA, a tn. Austrian empire, Galicia, circle and 12 m. N.E. Rzeszow; contains 4700 inhabitants, chiefly employed in weaving cloth and making soap.

ZOMBA, a mountain, S.E. Africa, between Lake Shirwa and the Shire; lat. 15° 25' S.; lon. 35° 15' E. It is 20 m. long, and from 7000 to 8000 ft. high, and has a beautiful stream flowing through a verdant valley on its summit, and running down into Lake Shirwa. The highlands are well wooded, and many fine trees grow on the various water-courses, and there is abundance of grass suitable for cattle pasture. The western side is the most imposing, with the plateau about 3000 ft. high stretching away to the S. The climate is healthy.

ZOMBOR [add.], a tn. Austrian empire, Banat, cap. circle of same name, near the Francis canal, 100 m. W. Temesvar. It consists of the tn. proper and four suburbs, and has handsome county buildings, a fine town-house, a non-united Greek preparatory institute, an under school, a public library, a town-hospital, some culture of silk; and an important trade in corn, cattle, and articles of manufacture. Pop. 22,436.

ZOOD, a tn. Austrian empire, Transylvania, circle and 12 m. S. Hermannstadt; with extensive manufactures of alcohol and powder, wool and walk mills. Pop. 1530.

ZOUGA, a river, S. Africa, which being properly only a prolongation of the Tamunakle, commences at the point where it communicates with an arm of Lake Ngami, flows first E. and then S.S.E. for about 200 m., and discharges itself into Lake Kumadau. As it approaches the lake, which is only 12 m. long and 4 m. broad, the volume of water in

the river is very small, whereas at its commencement it forms a considerable stream, at once broad and deep. Sometimes, when the rains have been more than usually abundant, a little water flows beyond Kumadan into a dry rocky bed continued eastward. The banks of the Zouga, perpendicular on the one side and sloping and grassy on the other, are lined with magnificent trees, and are very beautiful. The sloping bank is selected by the Bayeyi, a native tribe, for the pitfalls in which they entrap the animals that come to drink. The Zouga swarms with alligators.

ZSERCZ, a tn. Austrian empire, Hungary, co. Borsod, about 10 m. S. Miskolez; with 1100 inhabitants, who belong mostly to the Reformed church, and have extensive vineyards, and slate and limestone quarries.

ZUMBO, a tn. S. Africa, situated near the confluence of the Loangwa with the Zambesi; lat. $15^{\circ}37'2''$ S.; lon. $30^{\circ}32'$ E. It was at one time possessed, and seems still to be claimed, by the Portuguese, who, attracted by its advantageous site, made it the seat of an important trade. With this view they formed commercial establishments, and built a number of large stone houses facing the river, and yet high enough up the flanks of the range of Manzawe to command a pleasant view. Besides these there was a church seated at a central point, and a fort on the opposite or r. bank of the stream. To complete these establishments a number of fine gardens lined the banks of both rivers. Zumbo, the town thus founded, had water communication by three different channels—by the Loangwa to the N.N.W., by the Kafne to the W., and by the Zambesi to the S.W. Londa, however, situated to the N., seems to have been the chief point of attraction, as it furnished what were then the great Portuguese staples—ivory and slaves. Unfortunately the detail now given is only a record of the past. The Portuguese establishments have been withdrawn, and the buildings exist only as ruins. Natives in sufficient numbers to form a new village cling to the place, and though sometimes spoken of as Portuguese subjects, are ruled by the chief of Mburumi. The site of the village is one of the most picturesque in the country. The chapel, near which lies a broken church-bell, commands a glorious view of the two noble rivers, the green fields, the undulating forest, the pleasant hills, and magnificent mountains in the distance. It is an utter ruin now. The whole place is overgrown with rank weeds and bushes.

ZUMPANGO, a tn. Mexico, state and N.N.E. Mexico, on the S.W. shore of the Lake of Zumpango. It contains 4000 inhabitants, who raise large quantities of maize and other produce.

ZUNGOMERO, a dist. E. Africa, bounded by Duthumi on the E., and bordering on the province of Usagara on the W.; about lat. $7^{\circ}30'$ S.; lon. $37^{\circ}20'$ E. It lies at the head of the great valley through which the Mgeta and the Kingani flow, and consists of a plain open towards the E., or the line of drainage, but inclosed in all other directions, having the

peaks of Duthumi on the N., the Wigo Hills and other spurs of the Usagara chain on the W., and detached cones, steep, rocky, and densely wooded, on the S. Owing to excessive heat and moisture, and the malaria produced by decaying vegetation, the climate is unhealthy in the extreme; and hence when from any cause a caravan travelling through the district makes a prolonged halt great sickness prevails. Notwithstanding this serious drawback Zungomero is the great *bandari*, or centre of traffic, in the eastern, as Unyanyembe and Ujiji are in the middle and western regions of Africa. Lying on the main route from the E. coast, it must be traversed by up and down caravans; and hence, during the travelling season, thousands of men in large bodies pass through it every week. To the caravans the main attraction of Zungomero is the cheapness of provisions. Other attractions which many find equally strong is the abundance and cheapness of an intoxicating liquor made from the grain of the holcus, and called *ponbe*, and the quantities of bhang and *Datura Stramonium* growing wild, and of course to be had for the gathering.

ZUNGOMERO [add.], an important vil. E. Africa, in the country of Usagara, in lat. $7^{\circ}26'$ S.; lon. $37^{\circ}36'$ E. The neighbouring country is exceedingly fertile, amply rewarding the exertions of its cultivators; but agricultural pursuits are now almost wholly neglected, the population having been so diminished by the baneful operations of the slave-trade. The plateau on which the grass huts of Zungomero cluster is watered by the Mgeta, and surrounded by an amphitheatre of swelling hills.

ZUNGWE, a river, Central Africa, Batoka country, a tributary of the Zambezi, which it enters from the W. on its l. bank, in lat. $17^{\circ}17'$ S.; lon. $27^{\circ}34'$ E. Ascending it from its mouth in the dry season Dr. Livingstone found no water in its sandy channel for the first 8 or 10 m. Willows were growing upon the banks, and water soon began to appear in the hollows, and a few miles further up it was a fine flowing stream. Shale and coal crop out in its banks, as in many other parts of the country, and the large roots of stigmara and allied plants are found. The river takes its rise in the highlands of the Batoka country.

ZUPANJE, a tn. Austrian empire, Brood Military Frontier, on the borders of Turkey, about 35 m. S. Eszeg, and on the Save. It has two R. Catholic churches and a considerable trade, and contains 2280 inhabitants.

ZURAWICE, a tn. Austrian empire, Galicia, circle and 4 m. N. Przemysl; with a model farm. In the vicinity the earthen entrenchments thrown up during the Swedish war still remain. Pop. 1100.

ZURAWNO, a tn. Austrian empire, Galicia, circle and 22 m. E. Stry, at the confluence of the Swica with the Dniester. Here, in 1676, the Polish king John Sobieski held his ground magnanimously against the Turks, and compelled them to grant an honourable peace.

ABSTRACT OF THE CENSUS

OF THE

UNITED KINGDOM OF GREAT BRITAIN AND IRELAND

IN 1851 AND 1861.

THE IMPERIAL BIBLE-DICTIONARY,

HISTORICAL, BIOGRAPHICAL, GEOGRAPHICAL, AND DOCTRINAL.

EDITED BY

REV. PATRICK FAIRBAIRN, D.D.,

AUTHOR OF "TYPOLOGY OF SCRIPTURE;" "COMMENTARY ON EZEKIEL," ETC.

WITH MANY HUNDRED ILLUSTRATIVE ENGRAVINGS.

THE general object of this Work is the elucidation of Scripture. It takes up in alphabetical order, all the subjects, whether in HISTORY or DOCTRINE, in BIOGRAPHY, GEOGRAPHY, NATURAL SCIENCE, and the RITES and CUSTOMS of ANTIQUITY, which enter by way of direct statement or allusion into the contents of the Bible, and require to be known that it may be intelligently read and studied, while the several books of which the Bible is composed, in every case receive careful and attentive consideration.

In the treatment of the different topics, full advantage is taken of the materials which modern criticism and research have accumulated. Within a comparatively recent period much has been done by Biblical scholars to establish the authentic text of Scripture, to explicate its meaning, and illustrate the events and customs of which it speaks; and the increased light and certainty thus obtained are here made accessible, in a convenient form, to those who, though not without scientific or religious culture, have neither the time nor the opportunities requisite for minute or lengthened investigations. The difficulties and the objections which modern Rationalism has raised concerning many parts of Scripture, are also noticed in their proper places, and are met with solutions which, it is hoped, may satisfy reasonable minds.

The Bible being predominantly practical in its character and aim—keeping constantly in view, amid all its variety of matter and form, the high purposes of a revelation from Heaven—no work devoted to its illustration can be altogether satisfactory, or in proper conformity with its design, unless it breathe in this respect the spirit of the Bible, and interweave with all its instruction the great moral and religious principles by which the Bible itself is pervaded. The present Work never loses sight of this important object. Based on the inspiration of Scripture, as the record of God's mind and will to men, it never evades, while it does not needlessly obtrude, the all-important doctrines of vital Christianity, but endeavours to unfold and vindicate them. Several topics of this nature, which are sometimes totally omitted in works of this description, are here formally discussed; and in the lives of the more prominent actors in sacred history, respect is constantly had to the spiritual ideas developed in their course, and to the parts they respectively played in the divine administration.

The divided state of Christian sentiment no doubt imposes difficulties in the execution of such a plan; and it is scarcely to be expected that all the leading topics of the Bible can be handled with much life and independence, without occasionally trenching on the cherished

positions of even some evangelical Christians. But this is a result which may be pronounced inevitable, whatever particular method be adopted; negations on certain points will offend—justly offend—as well as positive deliverances; and it were surely a poor compromise, most unlike the spirit of the Bible, for the sake of a few minor differences, to practise a reserve upon the great themes of Revelation, and throw what is dearest to all genuine believers into the back-ground. Much necessarily depends upon the discretion and catholic spirit of the writers; if these are what they should be, there may be large freedom of discourse on all that is most important in the Bible, and yet comparatively little said to offend those who, though of different religious denominations, are agreed on its fundamental principles.

In the management of such a work, it will be understood, there is both a general and an individual responsibility—the one that of the Editor, the other that of the several Contributors. The Editor is responsible for whatever may be said to bear on the professed scope and distinctive principles of the undertaking: the blame is his if anything should appear at variance with the inspiration of Scripture, inconsistent with its essential doctrines of truth and duty, or palpably defective and erroneous even in the mode of treating common topics. But within these limits each writer is responsible for his own contributions; and as it is of more importance to have a marked freedom and individuality in the several treatises, than a measured and mechanical uniformity, so occasional expressions of opinion, and occasional interpretations or applications of texts, may be found, to which the Editor does not feel bound to commit himself; as there may be also, in his own portions of the Work, certain things in which his fellow-labourers would be inclined to differ from him. But such differences, he is confident, are extremely few, and make no serious abatement from the general concord of sentiment.

The Work has been in preparation during nine years. The plan on which it was projected, and which has in the main been carried out, was to intrust a considerable number of articles—as far as possible a connected series—to a single individual, rather than to secure a large body of contributors, with but a few miscellaneous articles from each. Thus, for example, the Life and Epistles of St. Paul, with several kindred subjects, are from the pen of the Rev. E. A. LITTON, M.A.; the Zoological articles by the well-known naturalist, PHILIP H. GOSSE, F.R.S.; all the Botanical by one who is well known as an enthusiast in this department of science, JAMES HAMILTON, D.D., F.L.S.; and the more elaborate Topographical articles by the Rev. HORATIUS BONAR, D.D., the Rev. E. WILTON, and the Rev. J. ROWLANDS, who have enriched the Work with the results of much personal observation, painstaking research, and discriminating study.

ILLUSTRATIONS.—Special attention has been devoted to the Illustrations, which include representations of particular plants and animals, notable scenes and places, manners of social life, and the manifold productions of human skill and handicraft; also Maps and Plans serving to elucidate the topography of special localities. In addition to these illustrations, interspersed through the text, a Series of Views of places that figure prominently in the Bible narrative, engraved on steel in the most finished manner, accompanies the work.

This Work forms one of the IMPERIAL SERIES issued by the Publishers, comprising also the *Imperial Bible*, the *Imperial English Dictionary*, the *Imperial Gazetteer*, and the *Imperial Atlas*, all of them specially adapted to meet the wants at once of the scholar and of the family. It is issued in 27 Parts at 2s. 6d. each, or 9 Divisions at 7s. 6d., forming Two large Volumes, imperial 8vo, price, in cloth, £3, 12s.

BLACKIE & SON:

PATERNOSTER ROW, LONDON; FREDERICK STREET, GLASGOW; AND SOUTH COLLEGE STREET, EDINBURGH

LIST OF THE WRITERS.

With the Initials affixed to their Articles. The Articles written by the Editor have no Initials.

- ARNOLD, REV. J. MUEHLEISEN, B.D., J. M. A.
Author of "English Criticism and the Pentateuch,"
"History of the Rise and Progress of Islamism," &c.
- ARTHUR, REV. WILLIAM, M.A., W. A.
Author of "The Tongue of Fire," &c.
- AYRE, REV. JOHN, M.A., J. A.
Of Gonville and Caius College, Cambridge; author
of "The Treasury of Bible Knowledge," &c.
- BONAR, REV. HORATIUS, D.D., H. B.
Author of "The Land of Promise," "The Desert of
Sinai," &c.
- BONOMI, JOSEPH, F.R.S.L. J. B.
Author of "Nineveh and its Palaces," &c.
- BUCHANAN, REV. ROBERT, D.D., R. B.
Author of "Ecclesiastes: Its Meaning and its Les-
sons," "A Clerical Furlough in the Holy Land," &c.
- CHRISTMAS, REV. HENRY, M.A., F.R.S., H. C-3.
Author of "Sin: Its Causes and Consequences,"
"Echoes of the Universe," &c.
- CONSTABLE, REV. HENRY, M.A., H. C.
Rector of Desertmore and Prebendary of Cork.
- DAVIDSON, REV. A. B., M.A., A. B. D.
Professor of Hebrew, New College, Edinburgh;
author of "A Commentary on the Book of Job."
- DELITZSCH, DR. FRANZ, F. D.
Professor of Theology, Erlangen; author of Com-
mentaries on Habakkuk, Genesis, Psalms, Bib-
lische Psychologie, &c.
- DICKSON, REV. WILLIAM P., D.D., W. P. D.
Professor of Biblical Criticism, University of Glas-
gow.
- DOUGLAS, REV. GEORGE C. M., G. C. M. D.
Professor of Hebrew, Free Church College, Glasgow.
- DREW, REV. G. S., M.A., G. S. D.
Incumbent of St. Barnabas, South Kennington;
author of "Scripture Lands in Connection with
their History," &c.
- EADIE, REV. JOHN, D.D., LL.D., J. E.
Professor of Theology, United Presbyterian Church;
Author of Commentaries on St. Paul's Epistles to
the Ephesians, Philippians, and Colossians.
- FALDING, REV. F. J., D.D., M.A., F. J. F.
Professor of Theology, Rotherham Independent
College.
- FREW, REV. ROBERT, D.D., R. F.
Editor of "Barnes' Notes on the New Testament."
- GIRDLESTONE, REV. R. BAKER, R. B. G.
Author of "The Anatomy of Scepticism."
- GOSSE, PHILIP HENRY, F.R.S., P. H. G.
.....
- HAMILTON, REV. JAMES, D.D., F.L.S., J. H.
Author of "Life in Earnest," &c.
- HENDERSON, REV. JAMES, D.D., J. He.
Free St. Enoch's Church, Glasgow.
- HUNTER, REV. ROBERT, R. H.
Formerly Missionary in India.
- JENNINGS, REV. ISAAC, I. J.
Author of Primitive Romanism, &c.
- KING, REV. DAVID, LL.D., D. K.
Author of "Principles of Geology in Relation to Religion,"
"A Treatise on the Lord's Supper," &c.
- LAUGHTON, REV. WILLIAM, W. L.
Free St. Thomas' Church, Greenock.
- LINDSAY, REV. WILLIAM, D.D., W. L.Y.
Professor of Theology, United Presbyterian Church;
author of "An Inquiry into the Law of Christian
Marriage."
- LITTON, REV. EDW. ARTHUR, M.A., E. A. L.
Rector of St. Clements, Oxford; author of "A
Guide to the Study of Holy Scripture," &c.
- LORIMER, REV. PETER, D.D., P. L.
Professor of Exegetical Theology and Hebrew,
Presbyterian College, London.
- MACDONALD, REV. DONALD, M.A., D. M.
Author of "An Introduction to the Pentateuch."
- MACDONNELL, VERY REV. J. C., D.D., J. C. M.
Dean of Cashel; author of "Donellan Lectures" for
the year 1857.
- MAYO, REV. CHARLES THEODORE, M.A., C. T. M.
Incumbent of Hillingden, near Uxbridge.
- MILLIGAN, REV. WILLIAM, D.D., W. M.
Professor of Divinity and Biblical Criticism, Uni-
versity of Aberdeen.
- MILLS, REV. JOHN, F.R.G.S., M.R.A.S., J. M.
Author of "Nablous and the Modern Samaritans,"
"The British Jews," &c.
- MURPHY, REV. JAMES G., LL.D., J. G. M.
Professor of Oriental Languages, Presbyterian Col-
lege, Belfast.
- OEHLER, GUST. FR., Dr. Theol., Oehl.
Professor, University of Tübingen.
- PATON, REV. JOHN BROWN, M.A., J. B. P.
Principal of the Congregational Institute for Theo-
logical and Missionary Training, Nottingham.
- ROWLANDS, REV. JOHN, B.D., J. R.
Late Fellow of Queen's College, Cambridge, and
Rector of Grimston, Norfolk.
- SAVILE, REV. BOURCHIER WREY, M.A., B. W. S.
Author of "The Introduction of Christianity into
Britain," &c.
- SCOTT, REV. THOMAS, M.A., T. S.
Rector of Wappenham, Northamptonshire.
- SMEATON; REV. GEORGE, G. S.
Professor of Exegetical Theology, New College,
Edinburgh.
- SMITH, JAMES, F.R.S., of Jordanhill, J. S.
Author of "A Treatise on the Voyage and Ship-
wreck of St. Paul."
- WEBSTER, REV. WILLIAM, M.A., W. W.
Joint Author of "Grammatical and Exegetical
Notes on the New Testament."
- WEIR, REV. DUNCAN H., D.D., D. H. W.
Professor of Hebrew, University of Glasgow.
- WILTON, REV. EDWARD, M.A., E. W.
Incumbent of Softon, Notts; author of "The
Negeb, or South Country of Scripture."

RECOMMENDATIONS.

From the Rev. GEORGE THOMPSON, B.A., *Head-Master of the Wisbeach Grammar School, &c.*

I have closely and critically examined the *Imperial Bible-Dictionary*, published by Messrs. Blackie & Son, and edited by the Rev. Dr. Fairbairn, a well-known and distinguished divine. The work is beautifully got up with first-rate illustrations, full of Biblical information from the pens of some of the most able and eminent writers of the age, and most attractive and interesting in its various historical details. The language is clear, good, sound English, correct and elegant in construction, instructive and convincing in argument.

The general matter of the book wins upon the reader, fascinates and fixes the attention, and induces a determination to study the work with eager and lively research for the fund of new and valuable knowledge which it contains.

To clergymen especially, as well as to general scholars of every denomination, this Bible-Dictionary is an invaluable encyclopedia of Scripture History, Biography, Geography, and Doctrine, &c. Hence I infer there is little doubt of this extraordinary contribution to sacred literature and science shortly becoming a favourite *sine quâ non* in every student's library.

GEORGE THOMPSON, B.A.

From the Rev. JAMES MORGAN, D.D., *Belfast.*

I am in possession of the first two divisions of the *Imperial Bible-Dictionary*, by the Rev. Patrick Fairbairn, D.D. If the work shall be completed as it has been commenced, it will be an invaluable treasure to the student of the Scriptures. I am especially gratified by the author's announcement that he holds himself responsible for the exclusion of whatsoever may be "at variance with the inspiration of Scripture, inconsistent with its essential doctrines of truth and duty, or palpably defective and erroneous even in the mode of treating common topics." There has been a false liberality in the admission of erroneous views into some of our otherwise valuable Bible dictionaries. It is pleasant to find that the eye of a faithful editor is to be upon every article in the new work, and that nothing is to have a place in it that is contrary to truth and righteousness, any more than what is in opposition to true science or the verity of history or the attainments of the present advanced literature.

JAMES MORGAN, D.D.

From the Rev. JAMES M'COSE, LL.D., *Belfast.*

I can concur in the testimonies by Dr. Morgan and Dr. Cooke in favour of the *Imperial Bible-Dictionary*.

JAMES M'COSE, LL.D.

From the Rev. HENRY COOKE, D.D., LL.D., *Belfast.*

I have examined some parts of the *Imperial Bible-Dictionary*, and most cordially join with my friend the Rev. Dr. Morgan, in recommending it to public patronage. I consider it by far the best work of the kind that has come under my notice.

H. COOKE, D.D., LL.D.

From the Rev. JOHN JEFFREY, *Presbyterian Church, Gateshead-on-Tyne.*

It is with great pleasure that I recommend the *Imperial Bible-Dictionary* as a most excellent and valuable work, full of instruction and research, and in every respect calculated to advance the great object it has in view, the dissemination of information on all Biblical subjects. It forms a most trustworthy guide in all these matters, and merits therefore a large measure of encouragement and success.

JOHN JEFFREY.

From the Rev. WILLIAM WILSON, *Dumfries.*

I have great pleasure in recommending the *Imperial Bible-Dictionary*. I have no doubt that it will prove the best of all works of a similar character; as complete in its details as any other, and having the eminent advantage of being sound in its representations of Bible truth.

WILLIAM WILSON.

From the Rev. ALEXANDER MUNRO, D.D., *Presbyterian Church, Manchester.*

I have great confidence in recommending the *Imperial Bible-Dictionary*, edited by the Rev. Dr. Fairbairn, as an able and profitable work, well fitted to illustrate the Holy Scriptures.

ALEXANDER MUNRO, D.D.

We have pleasure in giving our hearty recommendation to the *Biblical Dictionary* edited by Prof. Fairbairn.

Students will find it a great assistance in prosecuting independent inquiries, and men of business who have no time for such inquiries will find it a safe and intelligent guide. The articles are carefully written, and embrace the latest researches in the various departments of knowledge by which so much fresh light is thrown upon many parts of the Scripture. We need scarcely add that it is sound in its theology and reverential in its handling of all Biblical questions.

Rev. GEORGE JOHNSON, M.A., *Trinity Presbyterian Church, Princes Park, Liverpool.*

Rev. JAMES PATERSON, *Minister of St. Peter's Presbyterian Church, Great Oxford Street, Liverpool.*

Rev. DAVID HENDERSON, *Minister of Presbyterian Church, Rock Ferry, Liverpool.*

Rev. WILLIAM HUNTER, *Minister of the Presbyterian Church, Chester.*

From the Rev. W. MILTON, M.A. *Oxon, Incumbent of New Radford, Nottinghamshire.*

I have looked with some care into the first two parts of the *Imperial Bible-Dictionary*, and very cordially recommend the work to all who desire to possess the best work of this kind in the English language. More copious than Eadie's valuable little Cyclopaedia, and possessing the results without the cumbersome processes of learning exhibited in Kitto's and Smith's works of a similar nature, while it is very superior to them both in its tone of theology—I cannot but think that this Dictionary, when complete, will be a treasury, not only of Biblical information, but also of the whole science of Divinity.

W. MILTON, M.A.

From the Rev. DONALD FRASER, M.A., *Inverness.*

The *Imperial Bible-Dictionary*, edited by Dr. Patrick Fairbairn, and published by Messrs. Blackie & Son, will be reckoned, I have no doubt, a work of very great value to ministers of the word, and to all intelligent Bible students. Its information, while copious and well arranged, is brought down to the latest results of investigation. Not professing to be an ecclesiastical cyclopaedia, it does not discuss those subjects which rise out of church history, as councils and creeds; but all the topics suggested in Holy Scripture are treated with sufficient minuteness, and ripe and careful scholarship, by various celebrated writers as well as by the learned and judicious editor.

DONALD FRASER.

From the Rev. JAMES CARVER, M.A., *Chaplain to the Lying-in-Hospital, City Road, London.*

I have attentively perused a considerable portion of the first part of the *Imperial Bible-Dictionary*, and am astonished at the extent, variety, and accuracy of the literary materials communicated by its many learned and eloquent contributors. The great superiority of the illustrative engravings forms an additional charm to this very interesting and instructive work, and which, I think, ought to be in the library of every Biblical student.

JAMES CARVER, M.A.

From the Rev. HEATON EDWARD VON STURMER, *Baptist Minister, Worcester.*

Judged by the portion of the work already issued, its clear and accurate type, its numerous and valuable illustrations, and its copiousness of detail, or estimated by the talent and successes of the editor and publishers, the number and learning of the contributors, and the maintenance and elucidation of truth constantly kept in view, the *Imperial Bible-Dictionary* merits a place upon the book shelves of every Biblical student, every Christian scholar, and every religious household.

HEATON EDWARD VON STURMER.

From the Rev. OCTAVIUS NICHOLSON, *Curate of St. Augustine's, Everton, Liverpool.*

I have great pleasure in testifying to the soundness of the *Imperial Bible-Dictionary*, edited by Dr. Fairbairn; and I have no hesitation in saying that in those families where it is circulated it will be found most useful as a guide to the proper understanding of the Word of God.

OCTAVIUS NICHOLSON.

From the Rev. A. M. HENDERSON, Minister of Claremont Chapel, Pentonville, London.

After a careful examination of the first division of the *Imperial Bible-Dictionary* I have much pleasure in declaring my deep conviction of its great value as a repository of the knowledge most requisite in our day to the enlightened study of the sacred books. Without ostentation, it is learned, simple, and clear, without superficiality, and even when treating of trite subjects investing them with an air of interest, which gives this work a kind of speciality. The theological portion, which is the distinguishing feature of the work, is, so far as I have seen, well executed, giving a history of the doctrine, and stating the points upon which it is believed; and while liberal and careful not to offend, it is orthodox.

A. M. HENDERSON.

From the Rev. A. M'AUFLANE, Finsbury Chapel, London.

The *Imperial Bible-Dictionary*, published by Blackie & Son, is decidedly superior to all its predecessors, and is a most invaluable assistance to every student of the Bible. It should, if possible, find a place in the home of every Christian family.

A. M'AUFLANE.

From the Rev. EVAN DAVIES, LL D., Principal, Normal College, Swansea.

I have examined a portion of the *Imperial Bible-Dictionary*, and from the execution of that part, and the general plan of the work, can venture to recommend it as a very useful book of reference. The typography and illustrations (both in number and excellence) are all one can desire. The articles seem to have hit a very useful medium between the unnecessary minuteness of the more elaborate works, and the unsatisfactory and useless brevity of the minor dictionaries.

EVAN DAVIES, Principal.

From the Rev. JAMES DODDS, Free Church, Dunbar.

I have formed a very high opinion of the *Imperial Bible-Dictionary* now in course of publication by Messrs. Blackie & Son of Glasgow. Its articles, furnished by men of high eminence in the Christian world, are written with great care and in an excellent spirit. They uniformly show a learning and a literary taste worthy of the age, and suited to the requirements of the most cultivated readers of the Scriptures. Nothing in the shape of antiquarian research or scientific knowledge fitted to make such a dictionary at once valuable and attractive is neglected by the accomplished editor and his distinguished fellow-labourers. In point of orthodoxy and evangelical feeling this dictionary is also all that can be desired.

JAMES DODDS.

From the Rev. JOHN TURNBULL, Curate of St. Jude's Church, Liverpool.

I have much pleasure in bearing my humble testimony to the sterling worth of Messrs. Blackie's *Imperial Bible-Dictionary*. The imperial series of works published by those gentlemen are calculated to do great good, and in my opinion Principal Fairbairn's Bible-Dictionary is one of the most valuable of its kind. Many of the writers are personally known to me, as holding the soundest doctrinal views of divine truth, and their writings are eminently fitted to refute the scepticism of the present day.

JOHN TURNBULL.

From the Rev. J. T. CAMPBELL GULLAN, Minister of St. Andrew's Presbyterian Church, Swansea.

I have had frequent occasion to refer to and examine the *Imperial Bible-Dictionary*, and have thorough satisfaction in giving it my hearty recommendation.

It is sound in its theology; mature in its scholarship; minute in its detailed information; it embraces all that recent research has done to throw new light on the Scriptures; is most attractive in its numerous and admirably executed engravings; and altogether will prove a reliable and learned guide to Bible students.

J. T. CAMPBELL GULLAN.

From the Rev. THOMAS HARKING, Minister of the United Methodist Free Churches, Bristol.

I have examined the first part of the *Imperial Bible-Dictionary* published by Messrs. Blackie & Son, and while its typography and illustrations are of the first class, many of its engravings being gems of art, the manner in which Dr. Fairbairn has accomplished his task, availing himself of the latest and best resources of information, will render the book of great value to the student of the Bible, and such as I can cordially recommend.

THOMAS HARKING.

From the Rev. WATSON DYSON, Baptist Minister, Measham.

Its early numbers promised well, and the ensuing ones have redeemed their promise. Its theological character, as distinguished from Dr. Smith's Dictionary or Kitto's Cyclopaedia, seems to consist in the greater attention paid to strictly doctrinal subjects, which I for one take leave to think is an advantage. Of course, there are some things against which denominational objections may be taken (as a Baptist might, for instance, partially disagree with the article on baptism), but I apprehend the discontents will be few, compared with the concords. Orthodox without bitterness, learned without pedantry, popular without sensational glare, clear in its letterpress, and profuse in its plates and illustrations, it seems formed to be useful to almost all who may consult it, and is precisely the dictionary for a large class of readers. *Local preachers, heads of families, Sunday-school teachers, and intelligent and thoughtful young men, buy it and study it, and it will do you good.* I know this may be deemed *couleur de rose*, but it is the testimony of one who uses it frequently, and also has Dr. Smith's, and a considerable part of Dr. Kitto's on his shelves.

WATSON DYSON.

From the Rev. JAMES CLAPHAM, Superintendent of the Brunswick Circuit, Liverpool.

By the publication of their *Imperial Bible-Dictionary*, Messrs. Blackie & Son have done good service, not to ministers only, but also to a large class of thoughtful Christians, who have but few books, and little time for reading. I have tested its value by a careful examination of a considerable number of articles on various important subjects, and cannot but wish it a large circulation. The type is beautiful, and the illustrations excellent. The articles are well written, and supply the best and most recent information on the subjects on which they treat. Its treatment of difficulties is manly, and, as far as space will allow, thorough. Its loyalty to the Bible, and its pure and elevated religious tone, are quite refreshing. It may be placed on the shelves of the ripest scholar with advantage, and safely trusted in the hands of the youngest thinker. This cannot be said of some other productions of the same class. I consider it the best and most trustworthy of our large Bible-dictionaries.

JAMES CLAPHAM.

From the Very Rev. FRANCIS CLOSE, D.D., Dean of Carlisle.

I have examined the first part of Messrs. Blackie's *Imperial Bible-Dictionary*, and as far as I can judge it appears not only got up in those gentlemen's good style, but to be very useful in its general matter, sound and liberal in its religious tendencies. I have much pleasure in recommending it.

FRANCIS CLOSE, Dean of Carlisle.

From the Rev. THOMAS BOOTH, Minister of United Methodist Free Churches, Bristol.

Unquestionably the best help in reading the Bible for the better understanding of its varied contents is a good "Bible-dictionary," and of all the books published under that title, the one now publishing by Messrs. Blackie & Son entitled the *Imperial Bible-Dictionary*, and edited by Dr. Fairbairn, judging from the first part, promises to be the very best; the authors of the respective articles are among the most distinguished in Christendom; the information upon the various topics of the most recent date, and altogether it will form when complete a compendium of "Biblical literature" worthy of being designated a "miniature library."

THOMAS BOOTH.

From the Rev. WILLIAM HOWIE WYLIE, Baptist Minister, Ramsey, Huntingdonshire.

I have carefully examined the first part of the *Imperial Bible-Dictionary*, it promises to be one of the best, if not the very best book of the kind published as yet in England. The Editor's name is in itself ample security that the excellence manifested in the opening part will be sustained in the remaining instalments of the work.

Dr. Fairbairn's rich and varied scholarship as well as his conscientious care over the entire work is conspicuous in the portion which I have examined.

I should rejoice to see a copy of this most trustworthy guide to a right understanding of the Bible in every Christian's house in the land.

WILLIAM HOWIE WYLIE.

From the Rev. JOHN ROBSON, D.D., Glasgow.

I cordially recommend Principal Fairbairn's *Bible-Dictionary* as in my opinion the best of the kind which has been published.

JOHN ROBSON, D.D.

LITERARY NOTICES.

RECORD.

The work with which it obviously suggests a comparison is Dr. Smith's *Dictionary of the Bible*. We are soon able to see that this work is strongest where Dr. Smith's is weakest; and, at the same time, the converse is not to any extent true—that this work is weakest where Dr. Smith's is strong. Smith's *Dictionary of the Bible* is addressed rather to students and scholars; the *Imperial Bible-Dictionary* aims rather at extensive general usefulness. The greater part of the space of the former is occupied by learned references and elaborate discussions. The latter is a popular work, with the express object of supplying the wants of the laity and unlearned. . . . But it would be doing a great injustice to a band of learned and earnest men, to imply that these popular requisites are in any degree unaccompanied by the solid merits of vigorous thought and full information. In many of the similar articles, on a comparison, the palm of merit would probably rest with the writers of the present work; and there is scarcely any article which any critic would not treat with great respect. . . . The most watchful jealousy and care have evidently been maintained by the Editor that nothing should be admitted which would in any degree err against the integrity of the Christian's faith. This point is of such overwhelming importance that we own it would induce us to look very leniently on mere literary deficiencies; but, as a matter of fact, such deficiencies do not exist. The work is as sound and candid in reasoning and learning as in theology; and we may regard it as a kind of family commentary, well adapted in its subordinate capacity to lie by the side of the family Bible.

THE FREEMAN.

Two things strike us in particular, as distinguishing this *Bible-Dictionary* from others. The first is, its larger discussion of doctrinal points; and the second, the more harmonious proportion between its several papers. . . . Messrs. Blackie seem here, as in the previous publications of the Imperial series, to have found the happy medium between technical erudition and popular commonplace.

CHRISTIAN WORLD.

It conveys, in a readable form, a vast amount of precious information on almost every subject connected with the natural history, geography, rites and ceremonies, antiquities and customs, biography and doctrine of the sacred Word. . . . A very valuable addition to the standard theological works of the country.

THE DIAL.

We can speak of this *Dictionary* in the highest terms. It is erudite and scholarly, without being too profound for the general reader.

BRITISH STANDARD.

The matter is of the highest order, the letterpress most beautiful, and the illustrations equal to anything of the sort that has yet appeared.

WESLEYAN TIMES.

Taking rank as one of the best works of its class, we may also observe it will be one of the cheapest dictionaries of the Bible. . . . We know of no work more deserving of the widest patronage, or that will better repay the purchaser for his outlay.

NONCONFORMIST.

The publishers are celebrated for their "Imperial Series;" and the present work is to be conformed to its character, and thence draws its distinguishing name. The work is planned apparently with more direct reference to the average culture of society and to use in the family than is the case with the works we have previously noticed. The cast of the articles is popular rather than learned; although the educated reader detects the presence of knowledge, labour, and learned resource, not attempted to be displayed for their own sakes, in recording the results arrived at.

WEEKLY REVIEW.

This most valuable Biblical *Dictionary* is without a rival in the English language. We would commend it strongly for presentation to ministers by individuals or sessions.

CHRISTIAN ADVOCATE AND REVIEW.

The work was projected long before Dr. Smith's, and though it may not have such a show of scholarship as that well-known *Dictionary*, yet it has the advantages of containing a wider range of subjects, and of being uniform throughout in its teaching, that teaching being thoroughly sound, and combining deep research with humble reverence for the Sacred Scriptures. Two especial excellences we notice in this book: first, thorough orthodoxy combined with sobriety and moderation in dealing with disputed points; secondly, an attention to minor and comparatively insignificant details, on which information is needed by everyday readers quite as much as on the larger and more important topics.

NOTTINGHAM JOURNAL.

The woodcuts are freely interspersed wherever necessary for the elucidation of the text. The type is small but exceedingly clear, being printed on a splendid paper. The matter itself seems to be an embodiment of modern learning and research; the doctrinal and practical portions breathing the spirit of the Bible, and the historical being treated with sufficient clearness and interest.

CHURCHMAN.

Orthodox in tone, reverent in spirit, and showing in every page the marks of independent and industrious research.

CLERICAL JOURNAL.

This *Dictionary* has been brought to a conclusion with wonderful spirit on the part of all concerned in its production. . . . We should rejoice in knowing that such a help to their studies was in the hands of every young clergyman; for while he would not find everywhere his own opinions advocated, he would find, what is far better, the literature of Scriptural subjects stated fully and fairly, with a devout recognition everywhere of the supernatural and saving character of our holy religion.

EVANGELICAL MAGAZINE.

This work will be found of very great, indeed of pre-eminent, value, because of the careful safeguards with which it furnishes the student in his inquiries into subjects which have received a rationalistic and sceptical handling.

THE ESSAYIST OR TRAEHODYDD.

But there is one great deficiency for a Scriptural *Dictionary* in both these *Dictionaries* (Kitto's and Smith's)—the theology of the Bible is shut out of their pages almost entirely—in Smith's entirely. And now in this consisteth the peculiar excellence of the *Dictionary* under notice at present: it takes in the Theology of Scripture, as well as its History, Biography, and Geography; and in the articles we have read, in the parts that are now before us, an uncommon ability is manifested to lay hold on what is essential to each subject, and to present the reader (within a reasonable space) with an explanation of the mind of the Spirit thereon. The Editor is assisted in the work by many writers of rare abilities. . . . We rejoice in its publication, and desire to recommend it most heartily to our countrymen.

ENGLISH PRESBYTERIAN MESSENGER.

The articles are full and written with great care. Honest research, reverence for the Word of God, and the true evangelical spirit pervade the whole.

THE RAINBOW.

We sincerely wish all ministers of the gospel were able to procure this valuable book of reference. Of necessity it will contain the cream of costly works upon which the majority of Christian teachers are unable to lay their hands. We see the fruits of ripe scholarship and vast research in the parts before us; and as it is most desirable that this important undertaking should meet with the encouragement it merits, we respectfully suggest to the well-to-do laity the propriety of purchasing the *Bible-Dictionary*, and presenting it to their pastors.

CHRISTIAN WITNESS.

It is characterized by ample, though not obtrusive, learning; by a profound reverence for Holy Scripture; by an enlightened attachment to evangelical truth; and by a perfect competency in the treatment of a great variety of topics.

BELL'S WEEKLY MESSENGER.

Messrs. Blackie have established a kind of *specialité*, as the French call it, for Imperial *Dictionaries*, and these have all been so good that another from the same source may naturally be expected to be good also. The *Bible-Dictionary*, however, promises to be the best of all, and by very far the best book of the kind attainable; and in saying this we are perfectly aware that we are inviting comparison with the works of such men as Calmet, Isaac Taylor, William Smith, and many others perhaps equally qualified. The proportion between the amount of space allotted to the articles is accurately observed; and the questions of archaeology, history, and geography, the latest descriptions and discoveries, have been diligently investigated. On all these points the work is absolutely without a rival. . . . It may be remarked that, though not claiming cheapness as a chief merit, this *Dictionary* is actually the cheapest published, not merely because the best article is *always* the cheapest, but because it actually gives more type and paper than any other for the same money, while the illustrations are of the most elaborate kind.

THE FOLLOWING CLERGYMEN OF VARIOUS DENOMINATIONS ARE
SUBSCRIBERS FOR THIS WORK:

- AIKMAN, Rev. J. L., U.P. Ch., Glasgow
ALEXANDER, Rev. J., Free Ch., Edinburgh
ALISON, Rev. J., U.P. Church, Bonhill
ALLAN, Rev. J., Estab. Ch., Grange
ANDERSON, Rev. F. L., Curate, Gt. Ponton
ANDERSON, Rev. H., Free Ch., Partick
ANDERSON, Rev. J., Pres. Ch., Haltwhistle
ANDREWS, Rev. T., Wes. Ch., Tywardreath
ARCHIBALD, Rev. G., M.A., Fr. Ch., Udry
ARMSTRONG, Rev. W. T., Wes. Ch., Newark
ARNOT, Rev. W., Free Church, Edinburgh
ASTON, Rev. W., Con. Ch., Burt-Trent
- BAILLIE, Rev. J., Fr. Ch., Moy, Inverness
BALGARNIE, Rev. R., U.P. Ch., Charl'n, K'nt
BARKER, Rev. G., Bapt. Ch., Leigh-Buz.
BARRETT, Rev. W., Fr. Meth. Ch., Clay Cross
BARRETT, Rev. A., Prin. Wes. Col., Richmond
BARTRAM, W., B.A., Gram. Sch., Ciren'ster
BAXTER, Rev. J. A., Zion Ch., Nott'ham
BEATTIE, Rev. W., M.A., F. Ch., Alexandria
BENNETT, Rev. J. H. P., Gram. Sch., Falm'th

REVIEWS

OF

THE IMPERIAL BIBLE-DICTIONARY,

EDITED BY THE

REV. DR. FAIRBAIRN.

From the "RECORD" of 12th December, 1866.

The Imperial Bible-Dictionary, Historical, Biographical, Geographical, and Doctrinal. Edited by the Rev. PATRICK FAIRBAIRN, D.D. London: Blackie & Son.

Materials for Biblical Criticism.—Nothing is more characteristic of the contemporary history of religion and literature than the repeated and successful attempts which we witness to popularize the results of Biblical criticism. The words of Holy Writ are nowhere more true than in reference to Holy Writ itself, that many run to and fro, and knowledge increases. A great deal of the knowledge applicable for Biblical criticism has been gained by travel, personal inspection, geography, and archæology, while every advance in history, language, and thought, every addition in positive knowledge, helps to elucidate or illustrate the multiform contents of the Bible.

Era of Bible-Dictionaries.—Of late years we have reached the era of *Bible-Dictionaries*, in which scholars and theologians have sought to sum up and state concisely the results of human learning in reference to Divine teaching. There are at least four or five of such works, and it curiously happens that the present Dictionary, which is the last issued, has, with the single exception of Dr. Kitto's meritorious work, the merits of priority and originality.

The Imperial Bible-Dictionary.—It is now twelve years since the work was projected, and although the delay is on some accounts to be regretted, it has doubtless been productive of good in the patience and care that have characterized its execution.

Comparison of Bible-Dictionaries.—The work with which it obviously suggests a comparison is Dr. Smith's *Dictionary of the Bible*. We are soon able to see that this work is strongest where Dr. Smith's is weakest, and at the same time the converse is not to any extent true—that this work is weak where Dr. Smith's is strong. The *Dictionary of the Bible* (Smith's) is addressed rather to students and scholars; the *Imperial Bible-Dictionary* aims rather at extensive general usefulness. The greater part of the space of the former is occupied by learned references and elaborate discussion. The latter is a popular work, with the express object of supplying the wants of the laity and the unlearned.

This is seen by the style of the typography, by the literary character of the articles, by the remarkable wealth of pictorial illustration. But it would be doing

a great injustice to a band of learned and earnest men to imply that these popular requisites are in any degree unaccompanied by the solid merits of vigorous thought and full information. In many of the similar articles, on a comparison, the palm of merit would probably rest with the writers of the present work, and there is scarcely any article which any critic would not treat with great respect.

We shall presently point out the distinguishing features of this work, and will now indicate its cardinal merit. We are far from saying that there are not points on which we dissent from the writers of this Dictionary, and on which these writers dissent from one another. But these differences are emphatically on secondary points, and we are spared the phenomenon which so defaced Dr. Smith's Dictionary, of a house being fatally divided against itself.

Maintenance of Biblical Truth.—The most watchful jealousy and care has evidently been maintained by the Editor that nothing should be admitted which would in any degree err against the integrity of Christian faith. This point is of such overwhelming importance that we own it would induce us to look very leniently on mere literary deficiencies; but, as a matter of fact, such deficiencies do not exist. The work is as sound and candid in reasoning and learning as in theology, and we may regard it as a kind of family commentary well adapted in its subordinate capacity to lie by the side of the Family Bible.

The Editor of the Imperial Bible-Dictionary.—The Editor, Dr. Fairbairn, is favourably known by his work on the Typology of Scripture, and his Commentary on Ezekiel—the best commentary on that prophet with which we are acquainted. His own contributions to this work, especially in its earlier part, show equal industry and learning. We turn over very many pages of the first volume before we come to initial letters that denote a new authorship. The papers he has written both approach in character to complete treatises—*c.g.* "Daniel," "Inspiration," "Bible," "Baptism," "Christ Jesus," "David," "Elijah," "Deluge"—and, on the other hand, supply the short notices, the importance and difficulty of which are sometimes overlooked in their brevity. The care of the Editor has throughout never flagged, and on several occasions he has profitably inserted intercalary sentences among the contributions. So minute has been his care, that Dr. Fairbairn frankly avows that "the blame is his if any

thing should appear at variance with the Divine character and teaching of Scripture, inconsistent with the great principles of truth and duty, or palpably defective and erroneous in the discussion of comparatively common topics." Such language presents us with something very different to the entire abdication of editorial duties which we have had to regret on another occasion. The Editor has not failed faithfully to redeem his implied pledges. Much of his success in this way must be attributed to his care in the selection of his writers.

His Staff of Writers.—His list comprises some forty-three names, most of which are already favourably known. A large proportion of them is furnished from the professorial staff of Scottish Colleges, of the Established Church, the Free Church, and the United Presbyterian Church; English Dissent has yielded two or three papers; dignitaries and other clergy of the Church of England have well maintained the character of exact scholarship which they prize and well deserve; two distinguished foreign divines, Professors Delitzsch and Oehler, have lent their assistance; and two laymen, each eminently distinguished in his own path, Mr. Smith of Jordanhill and Mr. P. H. Gosse, are extremely useful contributors. Nothing has better helped to preserve the essential unity of the work than the fact that various writers have taken in hand an entire series of subjects relating to specific departments.

The Writers and their Contributions.—First among them the Editor enumerates the Rev. E. A. Litton, Examining Chaplain to the Bishop of Durham, and late Fellow of Oriol. Mr. Litton has taken in hand, besides other papers, the vast and important subject of the Life and Epistles of St. Paul. These articles are written with learning and devoutness of tone. Among Mr. Litton's papers we have especially noticed those on the Epistles of the Imprisonment. We compare the papers on the Ephesians, Colossians, and Philemon, with a separate work on these Epistles issued the other day by the Rev. J. Llewelyn Davies, of Marylebone. We really think that Mr. Litton's papers have as high a critical and literary value as Mr. Davies's separate octavo. It is free also from some defects peculiar to the latter writer. Mr. Davies draws out what we may call Gnostic elements before the time of Gnosticism. When St. Paul speaks of a fulness (plerōma) and a knowledge (gnōsis) he appears to be employing foreign terms, which indicate that the deceits of Oriental philosophy were beginning to infect the faith of the Colossians. The occurrence of such terms has led some German critics to impugn the authenticity of this Epistle, and assign it to the times of Gnostic or Montanist heresy. There can be no doubt, however, that these Gnostic errors existed in their germ long before the time of St. Paul, although they did not reach their full development till long afterwards. The subject forms an obscure and difficult element in this epistle, which, as Mr. Litton justly says, "has not been so much commented on as some others of St. Paul." Mr. Litton has not failed to give a careful discussion to the subject, and he seems to have done so in a more accurate and guarded way than Mr. Davies, who has fallen into the error of exaggerating the apostolic reference to the false theosophy. In other respects, when the opportunity for comparison occurs,

we prefer the articles of Mr. Litton to the commentary of Mr. Davies. We merely give this as a case in point, and various instances might be cited, that many of these articles are as valuable as distinct works on the same subject. The same remark would still more strikingly apply to the elaborate topographical articles of Dr. Bonar. His papers on "Jerusalem" and "Palestine" are in fact valuable books on these subjects. These topographical articles convey the results of much personal observation, painstaking research, discriminating study, and are helped with a very unusual amount of pictorial illustration. Mr. Rowland's (late Fellow of Queen's College, Cambridge) papers are very interesting, as giving the result of personal investigation and various vivid reminiscences of travel. Still more remarkable are the papers of the Rev. Edward Wilton, late incumbent of Scofton. He never visited the East, but, sitting in his own study, with a full knowledge of the languages and necessary learning of the subject, he arrived at results in which any Oriental traveller might well rejoice. The Editor has a touching sentence respecting this valued writer:—"Mr. Wilton was suddenly cut off in the midst of his labours; but not without having done good service both here and in his separate treatise (*The Negeb, or South Country of Scripture*) in vindicating the minute accuracy and truthfulness of Scripture." Specimens of Mr. Wilton's papers will be found under the letter J, in "Jeshimon," "Joshua," "Juttah," and other productions elsewhere—able, lengthy, and finished. In a brief supplement the Editor gives another, which Mr. Wilton had left in writing. The Editor makes special reference to his colleague at the Free Church College, Glasgow, Professor Douglas, and also to the articles "Isaiah" and the "Psalms," which have been respectively handled by Professor Delitzsch of Erlangen, and Professor Oehler of Tübingen, whose paper presents us with something very different to the ordinary notion of Tübingen theology.

As we have mentioned, Mr. Gosse is the first contributor who comes before us. The papers written by Mr. Gosse are of great interest. That distinguished naturalist has never shown himself to greater advantage. His papers are very pleasant reading, and a great relief to the generally solid character of the work. We may mention, for instance, his consecutive papers "Peacock" (*tukkiim*, which he identifies with the Indian peacock), "Pearl," "Osprey," "Ostrich," "Pelican," "Purple," "Pygarg" (De. xiv. 5). It will be perceived that we have only culled those which lie rather close together. The number of these articles is very considerable; and here, as elsewhere, we have in fact an independent work on the zoology of Scripture. Dr. Hamilton, an enthusiastic naturalist, has charged himself with the botanical papers; but his remarks are by no means restricted to mere botany. Our readers will easily imagine how pleasant and congenial a task it must be for a man full of devotional feeling to write papers on such subjects as "Cedar," "Lily," "Olive," "Palm-tree," "Vine."

Special Articles.—We have alighted upon many articles which well deserve special mention, and in a work of this magnitude many more must have escaped our notice. The paper on "Proverbs" by the Rev. Prebendary Constable illustrates the constant tendency of the Dictionary *super antiquas vias stare*, that attitude of reverence and cautiousness which is most becoming in

Biblical study, the aversion to mere novelties simply as novelties, combined at the same time with an unshrinking love of truth, and a perfect willingness to accept any theories which are substantiated by evidence and argument. Mr. Constable has bestowed a careful and exhaustive criticism on the suggestions which have been made respecting the authorship of the work. His remarks are very interesting and instructive, but here and frequently elsewhere the reflection occurs that this disquisition is too formal and learned for a professedly popular work. Dr. Fairbairn seems to have anticipated some such strictures as this, and acknowledges that some of the articles will scarcely be interesting or even intelligible except to those who have made Biblical criticism their proper study. This, however, is certainly a fault on the right side; and, generally speaking, the reader is presented with results, not processes, and the presentation of these results is made with simplicity and skill. In the case of the articles on the "Proverbs," Mr. Constable says, and those who follow his argument will hardly fail to coincide with him: "On the whole we do not see sufficient reason to separate this part into several (xxii. 16; xxiv. 22), or to assign it to a different author from that of the previous part. For this principal division of Proverbs (i.—xxiv.) we prefer the ancient tradition which refers it to the time and the hand of Solomon." The article shows an excellent method of counteracting the destructive criticism of Germany. Another writer with the same initials (H. C.—s.) is the Rev. Henry Christmas, whose paper on "Money" shows a large amount of numismatic information, and who has also given papers on the "Seven Churches of Asia," derived in part from personal inspection of the sites. Mr. Bonomi's papers, such as those on "Assyria" and "Babylon," belong to a writer who has a peculiar right to be heard with respect on such a theme. Professor Weir's papers, many of which relate to the Hebrew prophets, will fully sustain the reputation which he acquired from an early period as a Hebrew critic and scholar. Dr. Eadie, again, is known as one of the most laborious and earnest of commentators. He is not more remarkable for the extent of his reading than the accuracy of his scholarship. His contributions will have a claim to rank with those commentaries which will have a permanent place in the library of theology. We may especially mention Dr. Eadie's papers on "Persia," "Philistines," "Phœnicia," &c. "Rome" and "Athens" are done by Mr. Litton; "Greece" by Mr. Constable. A very interesting monograph on "Ships" is by Mr. Smith of Jordanhill, who is well known to have made the navigation of the ancients his peculiar study, and whose work on the "Voyage and Shipwreck of St. Paul" has been translated into nearly every European language. The important papers "Old Testament" and "New Testament" are respectively by Professor Weir and Professor Dickson. The paper on "Moses" is by the Rev. J. Muehleisen Arnold, who is well known for his Oriental attainments; "Pentateuch," by Professor Douglas. The paper on "Miracles" is by Dr. Macdonnell, Dean of Cashel. The Dean puts his point very neatly:—"We may conclude, in the very words of Hume, that the falsehood of the testimony to the Christian miracles *would in truth be more miraculous than the fact which it endeavours to establish.*"

The papers of the Rev. John Ayre, of Caius College, Cambridge, such as those on "Peter" and "Epistles of St. Peter," have been noted by us for special mention. If our space permitted, we should be glad more fully to particularize papers by the Rev. Thomas Scott, Rector of Wappenham, the Rev. William Arthur, and Professors Lorimer, Milligan, Lindsay, and others.

One of the more striking papers in the work is the article "Philosophy" by the Rev. William Webster. The writer has strictly confined himself to such subjects which might fitly find place in a Dictionary of the Bible. "In the general sketch we propose to offer," says Mr. Webster, "we shall confine ourselves to the branch of ethics, to the origin of men, the formation of the world, life after death, and eternal judgment. Such a review will show the exalted position of the humblest believer in Jesus contrasted with the wisest philosopher; the indescribable happiness and imperturbable repose of the unlettered disciple, 'who knows his Bible true,' even if this be the very limit of all he knows. The laboured and halting conclusions of philosophers are axioms, *i.e.* self-evident truths, to Christians." Mr. Webster traces out these subjects in detail in different speculative schools of antiquity, candidly drawing out whatever was good in each, showing the weakness and inadequacy of each system, and the enormous gulf which existed between opinion and conduct, and demonstrating how if on the one hand it has been a *preparatio evangelica*, on the other hand it has tended to pervert the plain gospel. Mr. Webster's voluminous article or dissertation on "Prophecy" deserves also to receive a special mention.

Concluding Remarks.—We cannot but think that it is a great defect in the work that there is no table of contents with authorship annexed; a great deal of trouble would be saved this way. An index would have been a truly valuable addition to the work. It is to be observed that the main authorship of the work is certainly not Episcopalian; and as Dr. Johnson in his *Debates* took care that the Whigs did not get the better, so Dr. Fairbairn takes care in the Dictionary that the Presbyterians do not fare the worse. Perhaps also most of those who read the work will agree in the truth of its Editor's remark, that in the present divided state of Christendom it is impossible to traverse the wide domain of Scripture without occasionally striking on the cherished convictions of some most intelligent and conscientious believers. But such will be most ready to endorse the Editor's further remark, that no needless offence is given. They will rejoice also in his refusal to treat Divine truths as "the component items or accidental accompaniments of an external and lifeless framework;" that the Bible is here emphatically studied, as no other book is studied, as the living Word of the living God. The helps for the illustration and elucidation of the Sacred page—among which this work will rank by no means as the least important—were never so multiplied in any other age; but they will be multiplied in vain if men read it, according to the advice sometimes given them, as they would any other book, with a merely literary and intellectual motive, and without beseeching for that Divine enlightenment which sheds the purest and safest lustre on the Divine revelation.

From the "CHRISTIAN WORLD" of 23d November, 1866.

Fairbairn's Bible-Dictionary.—The world is growing rich in dictionaries and gazetteers. There is a large demand for stores of condensed information on every topic of human science. The number of students, technically so called, has increased, notwithstanding the prevalence of light reading, and there has also been a vast addition to the ranks of those who stand midway between the scholar and the mere superficialist—persons who want to profit by the researches and lore of the more profound, but who have not the requisite time, or talent, or preliminary training, to follow their fellow-labourers into the deep mines of learning, and through their narrow intricate passages, in search of the precious metal. They are willing enough, however, to purchase the ore when it is brought to the surface, and they soon learn to be skilful in manipulating it for their own benefit and that of society. Dr. Fairbairn's Dictionary of the Bible is precisely the book for this large and important class of the community. It is not a student's book—if by a student we mean one who is striving after a profound acquaintance with languages or with science,—but, as the editor frankly and fairly puts it in the preface, it is designed to meet the case of that "constantly-growing class of persons in different grades of society, who, without any professional study of the languages and literature of the Bible, are yet possessed of sufficient culture and intelligent interest in sacred things to dispose and enable them to profit by works in which biblical subjects are handled in the light of modern learning and research, if not overloaded with scholastic forms of expression, or entering into very minute and lengthened investigations." In a word, this Dictionary is intended for the average type of a well-educated Englishman; and to persons of that calibre it conveys, in a readable form, a vast amount of precious information on almost every subject connected with the natural history, geography, rites and ceremonies, antiquities and cus-

toms, biography and doctrine of the sacred Word. We are glad to find, however, that where the writers have occasion to refer critically to the text they give the Hebrew or the Greek words as well as their translations.

But, although the work is thus popular in style, it would be unfair to depreciate the learning and labours of the numerous writers who have assisted the Editor in his long and difficult task. Amongst these writers are many men of remarkable ability in their several professions; and the churches ought to feel grateful to the promoters of any scheme which could bring such a body of men together, and give the world the benefit of their studies. Many of them are learned professors in different universities, and it is gratifying to find that through this work they are speaking to a class of willing listeners, immeasurably larger than any that can assemble in college lecture-halls. The volumes are also greatly enriched by the engraver's art.

Perhaps it may be as well to state that the work is emphatically what it professes to be—a Bible, and not a theological dictionary. Although it has many articles on doctrinal subjects, such as the atonement, regeneration, &c., yet such articles are really very few in comparison with those illustrative of historical, antiquarian, and scientific subjects.

Looking at the work from a practical point of view, we think that the labours of Dr. Fairbairn and his coadjutors (labours extending through many years, and involving no trifling anxiety, as well as scholarship) deserve handsome recognition from the churches. If the result had been a comparative failure, still the task of compilation would have been entitled to respectful mention; but we venture to say that the large body of working pastors, preachers, and evangelists will find here all the learning they require, and that in several respects the work is far better adapted for their purposes than more learned or elaborate productions.

From the "CHRISTIAN WITNESS" of January, 1867.

This work which is now completed, and to which we have referred several times in the course of its publication, was projected twelve years ago, when the only English work of the kind of any pretensions was "Kitto's Cyclopedia," now re-edited and greatly improved by Dr. W. L. Alexander. Dr. Fairbairn had already acquired to himself "a good degree" among our living theologians, and was well qualified by his previous studies for the work intrusted to him. The names of some of his associates in labour are not so well known on this side of the border as on the other; but they are names which command confidence and respect. "To some," he says, "he is more particularly indebted, having respectively taken an entire series of subjects relating to specific departments; in particular, the Rev. E. A. Litton, who, along with some kindred topics, has discoursed of the Life and Epistles of St. Paul; the Rev. Dr. Hamilton, and Mr. P. H. Gosse, who have respectively

charged themselves with the Botanical and Zoological departments; and Professors Weir, Douglas, and Eadie, who have each furnished a considerable variety of articles on subjects relating to the Old Testament. Similar mention should also be made of the chief writers of the more elaborate topographical articles—Dr. Bonar, the Rev. E. Wilton, and the Rev. J. Rowlands—who have enriched the work with the results of much personal observation, painstaking research, and discriminating study in connection with a large number of places." There are valuable contributions, likewise, on the books of Isaiah and Psalms, by Professors Delitzsch and Oehler. We have now only to repeat the judgment which we have already expressed on parts of the work. Without so much of the show of learning as some Dictionaries, there is a sufficiency of the reality; and readers and students who are in possession of this work will lack but little of the aid which Bible-Dictionaries can supply.

From the "WESLEYAN METHODIST MAGAZINE" of
January, 1867.

This work, projected nearly twelve years ago, as we learn from the preface, is now concluded, forming two handsome volumes of more than a thousand pages each. We have incidentally expressed a high opinion of its value as successive portions of it have come before us; and now that the Editor has brought his task to a close, it is a pleasure to be able to express an earnest approval of the work as a whole. In "general tenor and substance" it professes to be "adapted to the use of persons who have enjoyed a good ordinary education." To effect such an adaptation successfully is a much more difficult task than to compile a volume of erudite but incongruous articles from independent writers. It is one thing to parade authorities, another to balance them so as to benefit the ordinary reader. The latter the Editor of this Bible-Dictionary has, to a large extent, judiciously done. The result is a work which will have its distinct place among recent similar productions, and will be useful to a large number of general readers. Among the contributors Dr. Fairbairn himself occupies a prominent position; and we have from his pen such articles as Atonement, Antichrist, Baptism, Bible, Inspiration, Cherub, Daniel, Passover, Elijah, Elisha, Christ Jesus, together with a number of shorter pieces, which make collectively no small part of the Dictionary. Valuable topographical papers have been furnished by Dr. Bonar,

whose personal knowledge of the Holy Land, aided by frequent pictorial illustration, enables him to present Jerusalem and Palestine in a most interesting manner to the student. The article Sinai is from the pen of the Rev. W. Arthur, M.A., and is also the fruit of observations made on the spot. Scripture Zoology is fully and delightfully handled by Mr. Gosse. Dr. Eadie contributes important historical papers, Persia, Philistines, &c.

We have only named a few out of many essays which give this work no ordinary value, and must content ourselves by referring to those headed Parables, Miracles, Prophecy, The Apostle Paul, The Lord's Supper, as the way in which fealty to the Word of God may be gracefully combined with critical acumen, a philosophical spirit, and a correct taste. In the doctrinal parts of the work a catholic spirit is especially visible. The reader has only to consult the articles Faith, Impute, Justify, Adoption, to see the proof of this. The "great themes of salvation" are treated so as to give no offence to any except such as are unreasonable enough to demand a *perfect* agreement in the opinions of so many scholars and theologians. Abundant engravings, maps, and woodcuts, some of which are exquisitely executed, add to the value of *one of the very best aids to the study of the Bible, for general purposes, which it has been hitherto our good fortune to be able to recommend.*

From the "DAILY REVIEW" of 18th February, 1867.

We heartily congratulate both the Publishers and the Editor on the completion of this important work. The merits of the Publishers are conspicuous in the appearance of the book, and the comfort with which it is consulted. The labours of the Editor are not so soon appreciated. Dr. Fairbairn has had the advantage of the co-operation of a long list of distinguished fellow-labourers from all the orthodox churches. But the Editor's share is always a heavy one. In the great German Theological Encyclopedia, edited by Herzog, which has just been completed, a list of the articles contributed by each writer appears under his hand. Two hundred and eighty-one contributors are credited with their respective contributions, few or many; but under the name of Herzog himself a list of articles appears, the length of which is perfectly frightful. No such means are here supplied for calculating the number of Dr. Fairbairn's articles, and no list can ever reveal the trouble the Editor has with the articles written by others. But we have had the curiosity to look through this work with an eye to the Editor's especial share. And, speaking not of quantity only, but of quality as well, we should not easily express our admiration of the faculty and the acquirement he has been enabled to apply to the *Imperial Bible-Dictionary*.

Comparison with Smith's Dictionary.—The work with which everybody will naturally feel inclined to compare the one before us is Dr. W. Smith's *Dictionary of the Bible*. The *Imperial Bible-Dictionary*, it appears,

was planned and partly arranged for before Dr. Smith's appeared. But circumstances delayed the commencement of the work and also its progress. Hence Dr. Smith's took precedence in point of time, dating from 1863. "Yet," as Dr. Fairbairn in his preface modestly puts it, "from the plan on which this Dictionary was projected, and the distinctive aims it was intended to realize, there still seems to be a place left which it may, without presumption or needless rivalry, endeavour to fill." Probably we may best indicate the merits and uses of Dr. Fairbairn's Dictionary by following out a little the comparison or contrast here indicated. Dr. Smith's Dictionary is somewhat larger than the *Imperial*. It is considerably more expensive; a more numerous staff has been employed upon it, and, in consequence, a more thorough division of labour has been secured. Hence it often happens that the articles are longer; they go more fully, in many cases, into the minute details, which interest the scholar who desires to work up the topic from the sources, or wishes at least to form a pretty full idea of the way in which the topic *would have to be worked up*; and they refer more minutely to the literature. We may say it *often* happens that this is so, for it is by no means always the case; and while the reader might often turn from Dr. Fairbairn's Dictionary to Dr. Smith's, and find, in some respects, a fuller treatment of the subject which interests him, not unfrequently he might reverse the process, and find that it is to Dr. Fairbairn he must go to supply the deficiencies of Dr. Smith. But this by the way. So far

we have been enumerating the strong points of Dr. Smith's Dictionary, as regards its plan and execution. It is a very scholarly production, and a very desirable possession. We value it too much to wish to say an unjust word regarding it. But, on the other hand, there are certain features to be enumerated as a set-off. Dr. Smith's Dictionary admits great latitude of opinion among the writers, and that in very important points. Hence they vary much among themselves. In following out any set of articles belonging to the same biblical department, one may find a variety of inconsistent statements and positions, including some which trench closely on very important interests. In particular, while in its general character the book is commendably reliable, and written in an excellent spirit, there are extensive and important articles manifestly written from a somewhat neologian point of view. Now, to a reader who is pretty conversant with these matters, this fact is hardly a deduction from the usefulness of the dictionary. In some respects it is a positive advantage. Such a reader presently finds out what company he is in; he knows what principles he may expect to see applied, and what tendencies he will find manifesting themselves; and he can judge what he ought to rely on as information, and what he should dismiss or hold doubtful as mere opinion. But to many, even well-informed clergymen, the effect is annoying and confusing. What they want is a clear account of that which may be taken for ascertained and settled, and that which may be regarded as still debatable. In particular, they want to know how far the facts ascertained on any topic illustrate or confirm the views which prevail in the churches, and how far they offer difficulties still unexplained, raise fresh questions, and demand new investigations. A collection of treatises by various writers, whose theological positions vary, and, at the same time, are not explicitly declared, does not meet this want. Still less does it meet the wants of a great body of the intelligent membership of the churches. Again, the same general cause, viz., the inconsistent doctrinal positions of the contributors, has led to the elimination from Dr. Smith's Dictionary of a whole class of important articles, viz., those on doctrinal topics, or such as should bear on the exposition of biblical teaching. On the same grounds, also, the doctrinal aspects of those topics which the Dictionary does embrace are passed by. It is easy to understand why this has been done. But it is easy to see, also, that by taking this course the Dictionary has virtually renounced a large section of its proper functions. Now, in all these points Dr. Fairbairn's Dictionary is strong. It is not sectarian in its authorship. The Established Churches of England and Scotland, and the leading non-established Churches on both sides of the Border, are all strongly represented in the list. Neither will any fair critic represent it as one-sided in its information—as if it strained facts or veiled facts in order to support the views in which orthodox churches usually agree. As far as we have observed, on the contrary, the writing is conspicuously frank and candid. But being written by men who, though differing on many minor points, hold a theological position substantially the same on the most important and interesting questions of the day, it is fitted to perform a function which Dr. Smith's Dictionary cannot perform nearly so well. For those who are pursuing scholarly investigations on a larger or smaller scale, it gives a full scholarly outline and references to literature, which may well be called copious

enough—more copious certainly than most men will follow out. Meanwhile, for those who are merely seeking reliable information, it gives a view of investigations and results, and a statement of the relation of the topic to debated questions, the scale on which this is done being calculated with a view to interest the reader in the subject, and to meet practical wants. At the same time, the known principles of the writers afford a security that very much the same kind of interest has guided the investigation, and the same general idea of revelation has been kept in view, which the reader himself would have felt called upon to pay regard to if he had had leisure and means of prosecuting the investigation for himself. Further, in this plan there was no difficulty in introducing articles on doctrinal topics—such as the Atonement and the like. These are in fact little treatises on what the Germans call Biblical Theology, as distinguished from systematic and from polemic. They contain precisely the line of statement and the sort of material which are useful to the biblical student, whether he is aiming merely at increasing his own acquaintance with Scripture, or has to provide for the instruction of others. All this is done, and done so well, as to fit the Dictionary for the wants of an immense body of readers. These advantages would, indeed, be bought too dear if they were purchased at the sacrifice of scholarly qualities and acquirements in the contributions, or of scholarship in the articles. But this is not so. There are of course varieties and inequalities as in every work of the kind. But, throughout all its departments, a body of full and precise information is supplied by thoroughly competent men. And the plan and the mode of execution have adapted it to the especial wants of a very large class of readers.

Range of Subjects.—The range of subjects treated of in a work of this kind is of course immensely great—comprehending all the questions that can be raised about or out of the books and text, the persons and things, of the Bible. It is not of course a work of which the character can be illustrated by extracts. Nor would it be a very reasonable or modest undertaking to select from so large a work, composed of contributions so numerous and various, any articles as distinguished from the rest by exceptional merits. We do not intend to do so. That we may not seem to keep entirely to generals, however, we may say that among the topographical articles we have been particularly interested by those on Palestine and on Jerusalem. If the latter, for instance, be compared with that in Dr. Smith's Dictionary, most readers, we believe, will feel that for useful and instructive selection of matter, clear presentations of it, and a judicial and trustworthily survey of disputed questions, the article in Dr. Fairbairn's Dictionary, contributed by one who is now a fellow-citizen of our own, is clearly and greatly superior. Among the articles on books of Scripture we may specify that upon the Psalms, by Dr. Oehler of Tübingen, as a happy adaptation of German thinking and acquirement to the wants and habits of English Bible-readers. These instances have occurred to us in the course of using the work. We refer to them as specimens of the style of treatment adopted and the results aimed at.

A Work not for Ministers only, but for Laymen and Libraries.—We may add, in conclusion, the expression of a very earnest hope that this important work will not

be regarded and treated as a book for ministers only. To them, indeed, it will be most valuable, and we should be glad to think that they all possessed it. Many will make a point of having it. But in cases where the *res angusta domi* makes the purchase of a work like this a difficult and doubtful matter, a friend might do a friendly office in ordering it for the minister. But the work ought to circulate far beyond the ranks of the clergy. There are a great number of intelligent laymen whose wants it would precisely meet. It would continually help them in their reading of the Bible; it would be resorted to for the purpose of gaining full and accurate information on a thousand matters which are often alluded to, but seldom reliably explained in the current literature of the day; it would be a storehouse out of which to meet the awakening curiosity of the members of the family as their minds open and advance. More than this, the work ought to be made accessible to very

many who cannot reasonably be expected to possess it for themselves. It is a book for congregational and other libraries, especially where these have been founded in the midst of an inquisitive and reading population; and we venture to prophesy it would not be the book least run upon. There are numbers of young men, even among the working-classes, who would read large portions of it with lively interest. The learned details they would necessarily skip; but they could and would go into the statements of results. Many such young men would fain know how the land lies, and what the facts are, in matters of which they read, or in questions that are debated in the workshop. They cannot always find access to ministers to propound their questions. By-and-by, perhaps, their curiosity dies out, or it is satiated from very misleading sources. It would be a great benefit to have a book like this accessible, ready to be turned up and pored upon by such inquirers.

From "CHRISTIAN SOCIETY" of December, 1866.

"Here is a noble work," said the vicar, drawing me to a side-table; "one which just came down, *Fairbairn's Imperial Dictionary of the Bible*. Some half-dozen friends of mine have been writing in it; and I know Dr. Fairbairn by his book on Ezekiel, which I found very useful when I was working through that part of Holy Scripture some time ago."

Leaving the young people to converse, I drew up to the table, and spent a few afternoon hours very pleasantly in turning over the pages of the Work. I was particularly struck with the immense number of steel and wood engravings, some of which appeared to be remarkably well done. It is quite a popular encyclopedia; one intended not so much for students as for the general public, and not abounding with those crowded learned references which we find in Smith's *Dictionary of the Bible*. Yet it would be a great mistake to consider this merely a "popular" Work; all the papers are marked by learning and reflection, and many of them have an independent and original value of their own, which would do credit to any critical performance. In turning over the first volume, I was quite astonished by the immense number of papers contributed by Dr. Fairbairn himself, all of them marked by ample learning, and a high degree of literary excellence. In all respects his editorship formed a striking contrast to that of Dr. William Smith, in the case of the *Dictionary of the Bible*, Dr. Smith, to the best of my recollection, did not write a single line of the work which bears his name; only exercised a nominal supervision over his contributors, and his work was marked by the extraordinary differ-

ences of opinion which manifested themselves throughout the course of the work. In the present Dictionary there is an essential unity of design and execution. There is no doubtful and impugned orthodoxy here. It has evidently been the Editor's most anxious intention to build up his readers in the faith, and to allow nothing to appear in his pages which might tend to vain disputes and false philosophy. Several writers of great eminence have taken whole departments to themselves. After glancing at a variety of articles written by Dr. Fairbairn himself, we come to a paper by Mr. Gosse, who has written all the zoological articles, and they certainly could not be in better hands. The botanical papers are written by Dr. Hamilton of London, who is almost as distinguished a naturalist as he is a divine. Papers on the "Life and Epistles of St. Paul," are written by Mr. Litton. Mr. Webster, joint editor of one of the most valuable editions of the New Testament which we possess, has written papers which, as in the case of the article "Philosophy," almost amount to complete treatises. The distinguished German divine Professor Delitzsch, as also Professor Oehler, have written papers on subjects which they, if any living men, are competent to treat. Other names of contributors are such as those of Mr. Smith of Jordanhill, Joseph Bonomi, Dr. Bonar, Mr. Drew, Professor Eadie, Professor Lindsay, &c. The Editor especially makes mention of "Dr. Bonar, the Rev. E. Wilton, the Rev. J. Rowlands, who have enriched the Work with the results of much personal observation, painstaking research, and discriminating study, in connection with a large number of places."

From "OUR OWN FIRESIDE" of March, 1867.

The *Imperial Bible-Dictionary* is a monument of learning, ability, and patient perseverance. The Work was projected nearly twelve years ago, but the length of time that has been devoted to its preparation will surprise no reader who examines the mass of Biblical

information, comprehensive yet concentrated, which it contains. Possibly Dr. Smith's *Dictionary of the Bible*, on account of the profound research displayed in the discussion of some abstruse topics, may possess a peculiar interest to the scholar; although we are bound

to add that in several of its articles theological views are broached which can scarcely be harmonized with the Scripture testimony; but for the student who is anxious to possess a Dictionary of the Bible characterized by ample though not obtrusive learning, and by a distinctive and avowed attachment to evangelical truth, Dr. Fairbairn's Work stands foremost, if not alone.

Avoiding a very common error in such compilations, the Editor has not aimed to secure a large body of contributors with but a few miscellaneous articles from each, but he has so far narrowed his circle of literary coadjutors as to enable him to entrust a considerable number of articles—often a connected series—to a single individual. Thus, for example, the life and epistles of St. Paul, with several kindred subjects, are from the pen of the Rev. E. A. Litton, M.A.; the zoological articles are written by the well-known naturalist P. H. Gosse, F.R.S.; and all the botanical subjects are treated

by one who is an enthusiast in this department of science, James Hamilton, D.D., F.L.S.

The advantages of this arrangement will be at once apparent. It secures not simply an able writer, but the *ablest* writer for the *special* topic to which he has devoted time and thought; and also gives an individuality of character to the treatment of various branches of the same topic, which adds greatly to the reader's interest, and guards against otherwise almost unavoidable repetition.

A series of steel engravings accompanies each volume; and, interspersed with the text throughout, admirable woodcuts of plants, animals, scenes, and places, are introduced.

It would be impossible to express too strongly our appreciation of this Imperial Work. It is a treasury not only of Biblical information, but also of the whole science of divinity.

QUARTERLY REVIEW.

Dr. Bonar's article on Jerusalem indeed is unique; and though he has no theory to support, and looks for available and trustworthy results to future excavations, his monograph has all the freshness of novelty, and is at once the best and the most delightful *résumé* of all that is interesting in Jerusalem, from Josephus and Ensebius and Jerome down to Catherwood and Willis and De Vogué.

HOMILIST.

In looking through these two magnificent volumes, we regard the Work as equal in most respects to any of its competitors, and superior in others. We have compared it with Dr. Smith's *Dictionary of the Bible*, whose pretensions are great, and whose merits are many, and generally acknowledged, and it suffers not by the comparison; for though it does not treat on quite as many subjects, nor possess such a variety of contributors, nor make such a parade of learning, it omits no subject of importance, and treats the leading ones with greater fulness. Its contributors appear to be masters of the subjects they handle. And the learning, despite the lack of Hebrew and Greek type, is extensive and thorough. In the getting up—paper, type, illustrations—it is far superior.

THE FREEMAN.

Two things strike us in particular, as distinguishing this *Bible-Dictionary* from others. The first is, its larger discussion of doctrinal points; and the second, the more harmonious proportion between its several papers. . . . Messrs. Blackie seem here, as in the previous publications of the Imperial series, to have found the happy medium between technical erudition and popular commonplace.

THE DIAL.

We can speak of this Dictionary in the highest terms. It is erudite and scholarly, without being too profound for the general reader.

EVANGELICAL MAGAZINE.

This work will be found of very great, indeed of pre-eminent, value, because of the careful safeguards with which it furnishes the student in his inquiries into subjects which have received a rationalistic and sceptical handling.

BRITISH STANDARD.

The matter is of the highest order, the letterpress most beautiful, and the illustrations equal to anything of the sort that has yet appeared.

WESLEYAN TIMES.

Taking rank as one of the best works of its class, we may also observe it will be one of the cheapest dictionaries of the Bible. . . . We know of no work more deserving of the widest patronage, or that will better repay the purchaser for his outlay.

WEEKLY REVIEW.

This most valuable Biblical Dictionary is without a rival in the English language. We would commend it strongly for presentation to ministers by individuals or sessions.

CHRISTIAN ADVOCATE AND REVIEW.

The work was projected long before Dr. Smith's, and though it may not have such a show of scholarship as that well-known Dictionary, yet it has the advantages of containing a wider range of subjects, and of being uniform throughout in its teaching, that teaching being thoroughly sound, and combining deep research with humble reverence for the Sacred Scriptures. Two especial excellencies we notice in this book: first, thorough orthodoxy combined with sobriety and moderation in dealing with disputed points; secondly, an attention to minor and comparatively insignificant details, on which information is needed by everyday readers quite as much as on the larger and more important topics.

REPUBLICATION.

To be Completed in Thirty-six Parts, Price 2s. 6d. each.

THE IMPERIAL FAMILY BIBLE:

CONTAINING THE

OLD AND NEW TESTAMENTS.

WITH

MANY THOUSAND CRITICAL, EXPLANATORY, AND PRACTICAL NOTES; ALSO,
REFERENCES, READINGS, CHRONOLOGICAL TABLES, AND INDEXES.

ILLUSTRATED BY

AN EXTENDED SERIES OF ENGRAVINGS,

FROM THE WORKS OF THE MOST EMINENT PAINTERS.

THE IMPERIAL FAMILY BIBLE, almost from the publication of the First Part, and more especially from the time of its completion, was admitted to be the most magnificent edition of the Scriptures, for Family use, that had issued from the Press; and in calling attention to this REPUBLICATION OF THE WORK, it is only needful to state, that the present issue differs from the first, by having an improved General Introduction, and extended Chronological Index and Tables; the Illustrations also are increased to nearly double the number, the first issue having *Thirty-nine* Plates, while in this there will be *Seventy-three*.

THE TEXT, which is that of the most correct copies of the Authorized Version, is accompanied by all the Marginal Readings usually printed therewith, and which form a very important part of the Translation. THE REFERENCES to PARALLEL TEXTS are very numerous and accurate, and embody the most valuable of those given by Blayney, Brown, Clarke, and Scott. They have been carefully selected for this Work, and it is believed that they form a more satisfactory and useful series for general use than the entire References of any of the Commentators before named.

THE NOTES, amounting to many thousands, are either original, or selected from the great Commentators and Illustrators of the Scriptures, among whom may be named HENRY, SCOTT, CLARKE, PATRICK, BOOTHROYD, DODDRIDGE, CAMPBELL, LOWTH, BLAYNEY, BUSH, BARNES, JAHN, HALES, BURDER, PAXTON, MANSFORD, and many others, too numerous to mention. The notes are necessarily concise; and whilst the Editors have avoided all affectation of learning in spotting the columns with Oriental words, which could only serve to astonish the illiterate, without greatly benefiting the learned, their aim has been to bring out, so far as possible, the true force and meaning of the Text; and though the space occupied by the Notes is apparently small, they would, if printed in the usual

form, exhibit an amount of matter, and certainly of information, very much greater than what is usually given in Family Commentaries. Each Book is accompanied by INTRODUCTORY and CONCLUDING REMARKS, illustrative of the subjects therein contained, together with the Chronology of various periods and epochs.

THE GENERAL INTRODUCTION contains a summary of the arguments for the probability and necessity of a Divine Revelation, the written mode of Revelation, the genuineness, authenticity, inspiration, and uncorrupted preservation of the Scriptures; translation and history of the English Bible, and the importance of the duty of studying the Scriptures. Also helps for understanding the sacred Word, embracing the principles of Chronology, with the mode of computing Time; notices of Sects, Offices, and Conditions of Men; Tables of Weights, Measures, and Coins; &c. &c.

THE INDEX AND CHRONOLOGICAL TABLES embrace an improved and enlarged edition of BARRÉ'S INDEX OF SUBJECTS and concise DICTIONARY OF TERMS in the Holy Scriptures. Also Dr. Townsend's full CHRONOLOGICAL INDEX OF SCRIPTURE HISTORY. This gives not only the events in order of time, but embodies likewise a complete Chronological arrangement of the entire Scriptures, including a Harmony of the Gospels, under the guidance of which the reader may enter on a most useful and instructive mode of perusing the Sacred Volume. The Tables of Psalms and Prophecies, also from Dr. Townsend, will direct the reader how to take them up in connection with the time, events, and circumstances under which they were written or uttered.

THE ENGRAVED ILLUSTRATIONS, seventy-three in number, consist of a series of Historical Subjects, selected with much care and research from the Works of the Old Masters, and from those of the existing schools of painting on the Continent and in Britain; including among the latter the great works of John Martin—"The Deluge," "Belshazzar's Feast," and "The Crucifixion;" also specimens of Hart, R.A. Le Jeune, A.R.A., and Armytage, from paintings never before engraved; and in addition, Views of Important Bible Localities, from authentic drawings; the whole engraved in the most finished manner. In short, the *illustrative Engravings* of the IMPERIAL FAMILY BIBLE form a feature in which it certainly surpasses any edition of the Holy Scriptures that has hitherto appeared.

CONDITIONS.—The Work will be published in THIRTY-SIX Parts, at 2s. 6d., or TWELVE Divisions, at 7s. 6d. each, forming one large volume, imperial 4to. Each part will contain two, and each division six Engravings. Those in the First Part and First Division may be considered a fair specimen of the series.

Her Majesty the Queen and His Royal Highness the Prince Consort, each ordered a copy of the Imperial Family Bible on its first publication. And it was also patronized by a large number of the members of the Royal Household, by several of the bishops, and by many of the nobility, clergy, and landed gentry.

LONDON: BLACKIE AND SON, PATERNOSTER ROW; GLASGOW AND EDINBURGH.

Complete in 30 Parts, 2s. 6d. each; or Two large Volumes, imperial 8vo, cloth, £4.

THE
IMPERIAL DICTIONARY,
ENGLISH, TECHNOLOGICAL, AND SCIENTIFIC.

BY

JOHN OGILVIE, LL.D.

This Dictionary is based on Webster's English Dictionary, to which many thousand Words and Phrases have been added, including the most generally used Technical and Scientific terms, with their Etymology and their Pronunciation, and many foreign words used by English writers; also a SUPPLEMENT, containing an extensive collection of Words, Terms, and Phrases, not included in previous English Dictionaries.

ILLUSTRATED BY ABOVE 2500 ENGRAVINGS ON WOOD.

EVER since its publication, this Dictionary has been recognized in all quarters of the United Kingdom and the Colonies, by readers in every walk of life, as the best of its kind, and also as the most extensively useful for the purposes of every-day requirement. Adhering to sound English spelling and English forms of expression, it forms a much needed corrective to American works, which are introducing into this country vitiated forms of orthography and other undesirable novelties of speech.

For a number of years past a great revolution has manifestly been going on in the English language. Many words and terms formerly in common use have now passed into oblivion; many others have acquired new meanings, while the old ones have become obsolete, and in a greater variety of instances new significations have been added, while the old ones are still retained; and thousands of words and terms have been introduced into our language which were altogether unknown in the time of our older lexicographers. In ordinary literary and non-scientific works also, many words and terms are introduced which were formerly only to be met with in works of a strictly scientific character, and which have not hitherto found their way into any of our common English dictionaries. The ordinary reader must therefore remain in utter ignorance of the meaning of many of these terms, unless he be possessed of a library of dictionaries of the various departments of human knowledge, and even with that advantage, he will be often at fault, as not a few such terms have not yet been introduced into any dictionary whatever.

It is obvious, therefore, that an English dictionary of a comprehensive character—embracing all authorized English words both old and new, with their etymologies and various significations, and also the principal terms employed in the arts and sciences,

and serving as a book of ready reference to all classes of English readers—must prove of the highest utility, and must tend greatly to facilitate the progress and diffusion of general knowledge. To supply this *desideratum* is the great object of the IMPERIAL DICTIONARY.

Generally speaking, this Dictionary aims at containing all purely English words, and all words not English in ordinary use, together with the principal technical and scientific terms, and such as are to be met with in works not purely scientific. More particularly this Dictionary has for its object:—

1. To comprehend all the words contained in Johnson's Dictionary, with the additions of Todd and Webster, and words selected from the other standard Dictionaries and Encyclopedias, together with many thousand words and terms in modern use, not included in any former English Dictionary.

2. To exhibit the etymologies of English words, deduced from an examination and comparison of words of corresponding elements in the principal languages of Europe and Asia.

3. To render the pronunciation of words easy and obvious, by accentuation, by marking the sounds of the accented vowels when necessary, by printing the word a second time in different letters when the pronunciation is attended with any difficulty, or by general rules.

4. To give accurate and discriminating definitions of the words, illustrated by examples of their use, selected from the best authors, or by familiar phrases of undoubted authority.

5. To give explanations of Scripture terms and phrases, and when necessary, to cite passages not only to illustrate the scriptural or theological sense, but even the ordinary significations of the words.

6. To give accurate definitions and explanations of technical and scientific terms, including those of recent origin, in

Agriculture,	Dynamics,	Husbandry,	Military Art,	Phrenology,
Algebra,	Electricity,	Hydrostatics,	Mineralogy,	Physiology,
Anatomy,	Engineering,	Hydraulics,	Mining,	Pneumatics,
Archæology,	Entomology,	Ichthyology,	Music,	Political Economy,
Architecture,	Ethics,	Law (English & Scotch),	Natural History,	Politics,
Arithmetic,	Fortification,	Logic,	Natural Philosophy,	Religion,
Arts,	Galvanism,	Machinery,	Naval Architecture,	Rhetoric,
Astronomy,	Gardening,	Manufactures,	Navigation,	Sculpture,
Botany,	Geography,	Mathematics,	Numismatics,	Shipping,
Chemistry,	Geology,	Mechanics,	Optics,	Statics,
Commerce,	Geometry,	Medicine,	Ornithology,	Surgery,
Conchology,	Grammar,	Metaphysics,	Painting,	Surveying,
Divinity,	Gunnery,	Meteorology,	Paleontology,	Trigonometry,
Drawing,	Heraldry,	Metallurgy,	Perspective,	Zoology, &c. &c. &c.

7. To distinguish words that are obsolete, obsolescent, unusual, partially authorized, colloquial, local, low, or vulgar; care being taken to retain those words which, though now obsolete, occur in our old English authors of celebrity.

8. To introduce such *foreign words* and terms as are frequently met with in English authors, together with some of the more expressive words of the Scottish language.

9. By the assistance of DIAGRAMS and ENGRAVINGS ON WOOD to furnish clearer ideas of the signification of various terms, than could be conveyed by mere verbal description.

Although the IMPERIAL DICTIONARY does not profess to contain all the terms of every art and science, yet it will be found to contain the principal and most important, and those which are most generally used, and certainly many more than the general and non-scientific reader is likely to meet with. Especial care has been taken to give explanations, as clear, accurate, and full as possible, of terms connected with those

sciences and branches of science which are most important in their practical applications; such as Natural Philosophy, Mechanics, Mathematics, Chemistry, and Mineralogy. Of such terms, the number admitted is very great, and also of those employed in Architecture, Engineering, Machinery, Manufactures, Commerce, Agriculture, Geology, Navigation, and Astronomy. In Botany, as it was found impossible to admit all the orders, genera, and species, only those have been selected which are most remarkable, or which are most important in an economical point of view. A similar plan has been adopted with regard to Zoological terms.

The acknowledged merits of Webster's Dictionary pointed it out as peculiarly well fitted to be the basis of the IMPERIAL DICTIONARY. Dr. Webster spent thirty years on his Dictionary, ten of which were devoted to the etymological department alone, and he has accordingly thrown much additional light on the origin and primary sense of words, and on the affinities between the English and many other languages. In order, however, to adapt Webster's Dictionary to the present state of literature, science, and art, numerous additions and emendations have been found necessary, more particularly in the technological and scientific departments, in which that work is deficient; and in order to free it from the Americanisms in forms of expression and in modes of thought and spelling with which it abounds, and to adapt it to English modes and usages, a very thorough revision of the whole work was required. Not only have Americanisms been removed, and new and more correct definitions of many of the terms been given, but to Webster's addition of 12,000 words to Todd's Johnson, a further addition has been made of at least 15,000 words, terms, and phrases; and these additions have been still further augmented by 20,000 in the SUPPLEMENT, rendering this Dictionary much more extensive in its vocabulary than any of its predecessors.

Neither labour nor expense has been spared to render this Dictionary complete in all its departments. Upwards of ten years of unremitting toil and research were spent by the Editor in preparing the Work, besides six years devoted to the compilation of the Supplement. The scientific terms have been revised by individuals of high standing in various departments of science and art, who, besides verifying the definitions of the terms included by the Editor, have also supplied a number of additional terms, many of them of recent origin. The other additional words and terms have been carefully selected and prepared by reference to the best authorities.

The IMPERIAL DICTIONARY will be found to contain, along with the etymologies and the definitions of words and terms, a large amount of useful and interesting information connected with literature, art, and science. A simple inspection of its pages will show, that, wherever it may be opened, it presents something to interest and instruct—some useful fact stated in concise terms—some important maxim or sentiment in religion, morality, law, or civil policy; so that the charge usually preferred against English Dictionaries, that they furnish but *dry sort of reading*, will not apply to this Dictionary.

No work of this nature, however carefully compiled, can be expected to be perfect in the first instance. Long before the publication of the IMPERIAL DICTIONARY was concluded, it became apparent that a SUPPLEMENT would be required, not so much to supply what may be termed actual deficiencies, as to embrace a wider range of subjects, and thus render the Dictionary if possible still more cosmopolitan in character.

The SUPPLEMENT contains an extensive collection of words, terms, and phrases, in the various departments of literature, science, and art; together with numerous obsolete, obsolescent, and Scottish words found in Chaucer, Spenser, Shakspeare, and Scott, not included in previous English Dictionaries, making in all fully 20,000 additions to the Dictionary. All this section has gone through a course of careful revision, similar to that given to the original Work, by gentlemen specially versed in different departments of scientific knowledge.

A complete Vocabulary of *Greek, Latin, and Scripture Proper Names*, with their pronunciation, and a copious List of *Geographical Names*, also with the pronunciation, is appended.

The **Illustrative Engravings**, above TWO THOUSAND FIVE HUNDRED in number, form a peculiar and important feature in this Dictionary—a feature in which it stands altogether unrivalled. They include illustrations of terms in Architecture, Antiquities, Botany, Zoology, Heraldry, Mathematics, Mechanics, Shipping, &c.; representations of the principal plants used in the arts, manufactures, and in medicine, of animals interesting from their habits or from their value to man; and a variety of other illustrations tending to please, while they also instruct.

OPINIONS OF THE PRESS.

BRITISH QUARTERLY REVIEW.

"We must in honesty say that Dr. Ogilvie has not only produced the best English Dictionary that exists, but, so far as the actual state of knowledge permitted, has made some approach toward perfection. We scarcely need say that the work has our cordial commendation."

CLERICAL JOURNAL.

"The typographical execution of the work, and the correctness of the engravings, are worthy of the literary contents of the volumes. Altogether, they are a fine monument of learning, industry, and enterprise, both on the part of the Editor and the Publishers. For ordinary reference, even as to the meanings of terms of science and art, the Dictionary will be found sufficient, and we have never consulted it in vain. We know no book of the kind so well adapted to the use of the clergy, and we have introduced it to our readers with the full assurance that it will solve many perplexities and lighten many labours; while its pages are so full of pleasing matter, that they may be read for their own sake both with profit and entertainment."

ATLAS.

"It will be seen that the plan of this vast undertaking is of a magnitude befitting a work which, to realize its aim, ought to supersede all existing authorities. We have examined it attentively, and can report most favourably of its execution. Great vigilance has been exercised in keeping clear of doubtful or unnecessary speculations; the explanations are clear, sound, and full; the examples judiciously selected; and extensive learning is displayed in the department of etymology. It is certainly the most comprehensive work of the kind we possess, and will be of as much value in the laboratory and the manufactory, on ship-board and in the counting-house, as in the studio of the artist, or the cabinet of the man of letters."

GLASGOW CITIZEN.—SECOND NOTICE.

"We can safely pronounce this to be the most really useful, comprehensive, and entertaining book of information, in the form of a Dictionary, we have ever seen; and strongly do we recommend it as invaluable for the purposes of the family or general private library."

SUNDAY TIMES.

"Webster has worthily gained a modern renown on both sides of the Atlantic; and Professor Goodrich's edition of Webster comes as near as any production with which we are acquainted to the ideal standard of what, for completeness, combined with popularity, an English dictionary ought to be. It has been altogether overshadowed, however, by the 'Imperial,' which stands without a rival."

MORNING CHRONICLE.

"It not merely defines, but explains the meanings of words, and that in all their possible uses and applications. Thus, under 'Abatement,' we have not only the general, but also the legal and the heraldic import of the term, and the latter is elucidated still further by the aid of the graver's art. This expedient of illustrating technical and scientific meaning by wood engravings, which convey to the eye what language might fail of communicating to the mind, is throughout a very valuable characteristic of the work. Another distinctive feature of the *Imperial Dictionary*, is the clear and full information which it gives with regard to very many words of recent origin and frequent occurrence, whose precise import and derivation are probably not known to the generality of readers."

DOUGLAS JERROLD'S WEEKLY NEWSPAPER.

"A Technological and Scientific Dictionary, from the great additions of such terms to our language in the last thirty years, has become a necessity, and the present seems admirably calculated to fulfil the want. The just medium between a common dictionary and an encyclopedia seems to be properly adjusted. It is copiously illustrated with wood-engravings, and the explanations are given with pith and point, erring, if anything, on the side of brevity, which indeed should not be considered an error, as such a book is made for rapid reference, and the long details too usually introduced perplex rather than enlighten the reader. The present work should be at the right hand of every man to solve a doubt at the instant. For students it will be invaluable."

KEENE'S BATH JOURNAL.

"This splendid work is now completed. . . . We have tested it every way, and never find it deficient."

LITERARY GAZETTE.

"The *Imperial Dictionary*, with its Supplement, ought to be found in every library of books of reference."

FELIX FARLEY'S BRISTOL JOURNAL.

"So comprehensive as to embrace subjects hitherto confined to ponderous Cyclopedias, as well as the lexicography of our language. . . . The best English Dictionary that has ever appeared since Todd's Johnson, with the advantage, too, of embracing many thousand words which have since then been adopted in our vocabulary."

CHRISTIAN EXAMINER.

"It is a 'word-book' in the best and highest sense of the phrase, since it may be affirmed of as presenting all the terms and words in use, in the form, significancy, and illustration by which they can be examined profitably and pleasantly. The diagrams and engravings on wood are worthy of much praise. They are worthy of this from their own excellence, being both correctly and beautifully executed, and also from their adding correctness to the sense which the letterpress conveys. There are many objects of which words, however aptly used, fail to give us a distinct conception. The defect is here supplied. The two thousand engravings scattered over its completed pages, lend to this work a value hitherto unapproached by any similar productions."

MANCHESTER EXAMINER AND TIMES.

"Copious beyond all precedent in the staple of ordinary language, it is enriched with a mass of terse and comprehensive information under the heads of technical and scientific words—information which has become absolutely necessary for the general reader, in an age when the facts and language of science are invading the sphere of common life at all points. We must not omit to notice the novel and pleasant feature of pictorial illustration which the work exhibits. An immense abundance of exquisite little cuts are introduced, scarcely any occasion being allowed to escape, where the definition can be made to appeal to the eye, as well as to the intellect. These volumes have, indeed, so many attractions, that, after having enjoyed their use for some time, we begin to look upon them as a positive necessity."

FIFESHIRE JOURNAL.—SECOND NOTICE.

"A work which ought, indeed, to be in every library, and to the pages of which there is no one who can fail to be obliged to have recourse at times, and to which recourse will always be had with advantage and profit. From the richness and fulness of its contents, the *Imperial Dictionary* is calculated to supersede whole libraries of Dictionaries, and the elegance of its form, typography, and illustrations, are additional recommendations of it to general use."

CHESTER COURANT.

"We have no hesitation in recommending it to the favour of our readers, as a most useful, interesting, and able work of universal reference. . . . Extraordinary talent and research have been employed on this publication, and henceforth the *Imperial Dictionary* must be considered as a requisite book of reference in every library."

PLYMOUTH AND DEVONPORT JOURNAL.

"It is beyond comparison the best Dictionary in our language."

INVERNESS COURIER.

"A most valuable word-book, in itself a library of Dictionaries."

long, covered with scales, with a forked tongue, but harmless.

BLINK, *v. i.* [Sax. *blīcan*, to shine, to twinkle; *blīciend*, clothed in white; *ablican*, to appear, to whiten; D. *blīnhen*, to glance, to twinkle, and *blīnhen*, to shine, to glitter; *blīken*, to appear or show; Sw. *blīncha*, to wink, to connive; *blēha*, to shine, to twinkle; Ger. *blīchen*, to look, to glance; *blīnhen*, to glance, to shine, to twinkle, to wink; Dan. *blīnher*, to blink, to glance, to wink, to shine, to glitter. This contains the same radical letters as *light*.] 1. To wink; to twinkle with the eye.—2. To see obscurely. Is it not to see with the eyes half shut, or with frequent winking, as a person with weak eyes? One eye was *blinking*, and one leg was lame. *Pope.*

BLINK, *n.* A glimpse or glance.
BLINK, *n.* *Blink of ice*, is the dazzling whiteness about the horizon, occasioned by the reflection of light from fields of ice, at sea.

BLINK'ARD, *n.* [*blink* and *ard*, kind.] A person who blinks or has bad eyes; that which twinkles, or glances, as a dim star, which appears and disappears.

BLINK'ERS, *n. plur.* Expansions of the sides of the bridle of a horse, to prevent him from seeing on either side.

BLINK'ING, *ppr.* Winking; twinkling.

BLISS, *n.* [Sax. *blīss*, joy, alacrity, exultation; *blīssian*, to rejoice, to exult, to congratulate, to applaud; also *blīthsiān*, to rejoice. See **BLESS** and **BLITHE**.] The highest degree of happiness; blessedness; felicity; used of felicity in general, when of an exalted kind, but appropriately of heavenly joys.

BLISS'FUL, *a.* Full of joy and felicity; happy in the highest degree.

BLISS'FULLY, *adv.* In a blissful manner.

BLISS'FULNESS, *n.* Exalted happiness; felicity; fulness of joy.

BLISS'LESS, *a.* Destitute of bliss.

BLIS'SOM, *v. i.* [W. *blīss*, *blīssiaw*, to crave, that is, to reach forward.] To be lustful; to caterwaul. [*Lit. us.*]

BLISS-PRODUC'ING, *a.* Producing bliss.

BLIS'TER, *n.* [Ger. *blāse* and *blatter*.] It is radically the same word as *bladder*, in a different dialect. [See **BLADDER**, **BLAST** and **BLAZE**.] 1. A pustule; a thin bladder on the skin, containing watery matter or serum, whether occasioned by a burn, or other injury, or by a vesicatory. It is formed by raising the cuticle.—2. Any tumour made by the separation of the film or skin, as on plants; or by the swelling of the substance at the surface, as on steel.—3. A vesicatory, a plaster of flies, or other matter, applied to raise a vesicle.

BLIS'TER, *v. i.* To rise in blisters.

BLIS'TER, *v. t.* To raise a blister, by any hurt, burn, or violent action upon the skin; to raise a blister by a medical application, or vesicatory.—2. To raise blisters on iron bars in a furnace, in the process of converting iron into steel.

BLIS'TERED, *pp.* Having blisters or tumours.

BLIS'TER-FLY, *n.* The Spanish fly used in blistering. [See **CANTHARIS**.]

BLIS'TERING, *ppr.* Raising a blister; applying a blistering plaster, or vesicatory.

BLIS'TERY, *a.* Full of blisters.

BLITE, *n.* [*L. blitum*; Gr. *βίτων*.] 1. A genus of plants, called Strawberry Spi-

1.

nach.—2. A species of Amaranth, or flower-gentle.

BLITHE, *a.* [Sax. *blithe*, and *bleath*, *bleathe*, gay, joyful. This is probably the same word as *bliss*; *L. lætus*, Eng. *glad*. See **BLISS** and **GLAD**. The Ir. *lith*, happiness, seems to be the original word without the prefix.] Gay; merry; joyous; sprightly; mirthful.

For that fair female troop thou sawest, that seemed

Of goddesses, so *blithe*, so smooth, so gay. *Milton.*

BLITHEFUL, *a.* Gay; full of gaiety.

BLITHELY, *adv.* In a gay, joyful manner.

BLITHENESS, *n.* Gaiety; sprightliness; the quality of being blithe.

BLITHEsome, *a.* Gay; merry; cheerful.

BLITHEsomeNESS, *n.* The quality of being blithesome; gaiety.

BLOAT, *v. t.* [This word may be allied to *bladder*, from the sense of inflating, swelling; *W. blwth*, a puff, a blast; *blythag*, a fat paunch, a bloated person.]

1. To swell or make turgid, as with air; to inflate; to puff up; hence, to make vain; followed by *up*, but without necessity. To *bloat up* with praise, is less elegant than to *bloat* with praise.

—To swell or make turgid with water, or other means; as, a *bloated* limb.

It is used to denote a morbid enlargement, often accompanied with softness.

BLOAT, *v. i.* To grow turgid; to dilate.

BLOAT, *† a.* Swelled; turgid.

BLOATED, *pp.* Swelled; grown turgid; inflated.

BLOATEDNESS, *n.* A turgid state; turgidness; dilatation from inflation, debility, or any morbid cause.

BLOATING, *ppr.* Swelling; inflating.

BLOB'BER, *n.* [Ir. *plub* or *pluibin*, from swelling, pushing out, as in *bleb*, *blubber*; *W. llwb*, a bulging out. *Qu. bulb*, by transposition. See **BLUBBER**.]

A bubble; pronounced by the common people in America, *blubber*. It is a legitimate word, but not elegant.

BLOB'BERLIP, *n.* [*blobber* and *lip*.] A thick lip.

BLOB'BERLIPPED, *a.* Having thick lips.

BLOCK, *n.* [Fr. *bloc*; W. *ploc*, from *lloc*, a mound; *plociaw*, to block, to plug. The primary sense is, set, fixed, or a mass.] 1. A heavy piece of timber or wood, usually with one plain surface; or it is rectangular, and rather thick than long.—2. Any mass of matter with an extended surface; as, a *block* of marble, a piece rough from the quarry.—3. A massy body, solid and heavy; a mass of wood, iron, or other metal, with at least one plain surface, such as artificers use.—4. The clump on which criminals are beheaded.—5. Any obstruction, or cause of obstruction; a stop; hinderance; obstacle.—6. A piece of wood in which a pulley runs; used also for the pulley, or the block itself, and the sheaves, or wheels.—Blocks for pulleys are of great importance in various operations in naval tactics, and architectural constructions. They are single, double, treble, or fourfold, according as the number of sheaves is one, two, three, or four. A *running block* is attached to the object to be raised or moved; a *standing block* is fixed to some permanent support. Blocks also receive different denominations from their shape, purpose, and mode of application. No less than two

hundred different sorts and sizes are made at Portsmouth, in England, for the royal navy; besides which, there

Blocks.

a, double block; *b*, treble block; *c*, class line block; *d*, long tackle block; *e*, snatch block.

are various sorts used only in merchant ships. The manufacture of blocks for the navy is now performed by machinery, invented by Mr. Brunel about the year 1801. It enables four men in a given time, to complete the shells of as many blocks as fifty men could do by the old method, and the blocks produced by the machinery far surpass in make those produced by the hand.—7. A blockhead; a stupid fellow.—8. Among *cutters in wood*, a form made of hard wood, on which they cut figures in relief with knives, chisels, &c.—9. In *falconry*, the perch whereon a bird of prey is kept.

BLOCK, *v. t.* [Fr. *bloquer*.] To inclose or shut up, so as to hinder egress or passage; to stop up; to obstruct by placing obstacles in the way; often followed by *up*; as, to *block up* a town or a road.

BLOCKADE, *n.* [It. *bloccato*; Port. *bloqueado*, blocked up; Fr. *blocus*.] The siege of a place, formed by surrounding it with hostile troops or ships, or by posting them at all the avenues, to prevent escape, and hinder supplies of provisions and ammunition from entering, with a view to compel a surrender, by hunger and want, without regular attacks. To *raise a blockade*, is to force the troops or ships that keep the place blocked up, from their respective stations. To constitute a *blockade*, the investing power must be able to apply its force to every point of practicable access, so as to render it dangerous to attempt to enter; and there is no *blockade* of that port, where its force cannot be brought to bear.

BLOCKADE, *v. t.* To shut up a town or fortress, by posting troops at all the avenues, to compel the garrison or inhabitants to surrender by means of hunger and want, without regular attacks; also, to station ships of war to obstruct all intercourse with a town or nation.

BLOCKADED, *pp.* Shut up or inclosed by an enemy.

BLOCKADING, *ppr.* Besieging by a blockade.

BLOCK'HEAD, *n.* [*block* and *head*.] A stupid fellow; a dolt; a person deficient in understanding.

BLOCK'HEADED, *a.* Stupid; dull.

BLOCK'HEADLY, *a.* Like a blockhead.

BLOCK'HOUSE, *n.* [*block* and *house*.] A house or fortress, erected to block up a pass, and defend against the entrance of an enemy.

BLOCKING COURSE, *n.* In *arch.*, the course of stones or bricks erected

RECOMMENDATIONS.

From PHILIP KELLAND, M.A., *Professor of Mathematics, University of Edinburgh.*

I HAVE examined with some care the first three parts of your *Imperial Dictionary*, and I have derived great pleasure and much instruction from the task. To the *Scientific Terms* I have paid the most scrupulous attention, and I find them explained in terms sufficiently clear to be understood by all, at the same time that they are strictly accurate.

July, 1860.

I have no hesitation in expressing myself as strongly in favour of the *Imperial Dictionary*, now that it is complete, as I did some time since before the appearance of the SUPPLEMENT. It forms a very complete, accurate, and commodious repertory of scientific and general information.

From PROF. WILLIAMS, of *St. David's College, Lampeter.*

THE *Imperial Dictionary* is certainly one of sterling worth. It embodies everything valuable in the great work of Webster, and possesses, in an eminent degree, this advantage over that excellent work that, in explaining the language of the arts and sciences, it is both more full, and what is perhaps of still greater consequence, more clear and successful; because the explanations are addressed not only to the understanding, but, by means of a very large number of neatly-executed woodcuts, to the eye also. And this, since it is so difficult, as almost every one knows, for the uninitiated to comprehend mere abstract definitions of terms in the arts and sciences, is an advantage by no means to be lost sight of.

From the Rev. CHARLES EDWARD TINDALL, *Rector of St. Andrew's Church, Dublin.*

I HAVE examined the *Imperial Dictionary* closely and critically, and can safely pronounce it to be the most perfect work of its kind that has ever appeared. No man, literary or mercantile, should be without it.

From the Rev. W. R. CROUCH, M.A., *late Fellow of New College, Oxford, Master of the College School, Taunton.*

The *Imperial Dictionary* is, in my judgment, a most valuable addition to our literature. All the most important knowledge is given in a condensed form, and the illustrations give it a clearness and precision scarcely attainable by other means.

From the Rev. THOS. LUBY, D.D., *Senior Fellow of Trinity College, Dublin.*

I HAVE tested the *Imperial Dictionary* in a variety of ways, and with considerable care. In the great majority of instances, I must say, I have experienced the highest degree of satisfaction. The definitions of scientific terms, with which I am more especially acquainted, appear to me to possess the logical requisites of clearness and adequacy, and the descriptions and explanations through the work to be extremely satisfactory. The pictorial illustrations are felicitous and well designed. To all, but chiefly to the young and inexperienced, these will be found to be of immense value in the arts and in natural history, and even still more in matters relating to remote countries or to ages long gone by. The etymological department appears to me, in all the trials which I have made of it, to be very complete. It evinces both discretion and judgment on the part of the compilers, and a very extensive range of philological knowledge and research.

From JOHN CRUICKSHANK, LL.D., *Professor of Mathematics, Marischal College, Aberdeen.*

HAVING frequently consulted the *Imperial Dictionary*, I think that it fully answers the expectations which were formed of it; that serving, as it does, to a great extent, the purpose of an encyclopedia, it supplies a defect which was previously much felt; and that it does great credit to its Editor.

From the Rev. JOHN R. BEARD, D.D., *Member of the Historico-Theological Society of Leipsic; Author of Cassell's Latin Dictionary, the People's Dictionary of the Bible, &c. &c.*

THE *Imperial Dictionary* and its *Supplement*, is a very full and most instructive repertory of accurate and reliable information touching the English language. No work of the kind, now in existence in our literature, can bear a comparison with it for completeness and utility. There is no department of study, the cultivators of which may not find in this admirable Work such instruction as may be expected from a Dictionary of the English language, while equally there is no branch of knowledge on which Dr. Ogilvie and his coadjutors have not supplied exact information. The Work, though comprehending all that is good in previous publications of the sort, is anything but a compilation, but rather a digest of the ascertained results of scholarship, made in accordance with well-considered principles, and for clearly defined and most important objects.

The value of the *Imperial Dictionary*, already very great, has been much increased by the publication of the *Supplement*; and we think the proprietors have consulted the interests of their customers in making the *Supplement* a separate addition. This opinion we entertain the rather, because, as the English language is a growing thing, and will never in any given time have come to a conclusion, so another Supplement may, ere very long, become desirable, in order to do for some future day that which, by means of this *Supplement*, the *Imperial Dictionary* accomplishes for the present: namely, supply the necessary information on every word in use at the time of publication. That this important office is discharged, I have satisfied myself by inspecting the pages. The following words have lately been introduced among us; they are words which do not tell their own meaning, nor can explanations of them be found in ordinary Dictionaries: namely, *Asterolepsis, Caucas, Extradition, Eliolate, Etiology, Eunomia, Feish, Feticism, Rationalism, Rendition, Solidarity, Subjective, Objective, Transcendental*. These, with very many terms similarly circumstanced, are here correctly expounded, and sometimes with an amount of information which would almost justify the application to the Work of the epithet Cyclopaedia.

My remarks, however, would convey a false impression, did they lead any one to think that in these pages knowledge was merely massed together. By a well-formed system of notation, the literary value of the words is clearly and exactly set forth, so that the tyro may use the information with safety, while the scholar may add to the stores of his knowledge. Some of the definitions are of a nature to remind me of the advantage which might have been derived from the profound philological scholarship of the Grimms; and in the department of provincialisms there is some deficiency.

Complete in 20 Parts, imperial 4to, price 2s. 6d. each.

WITH A FULL DESCRIPTIVE NOTICE OF EACH BUILDING.

THIS Work is intended to supply a selected series of plans of houses which have been already built, and which being characterized by excellence of design, convenience of arrangement, and fit adaptation to locality, are therefore suited to be studied as suggestive models, and to aid in the production of new art and in improving the taste in domestic architecture.

In this Work the architect may study the methods by which his professional brethren have sought to overcome difficulties of arrangement, site, aspect, and construction, and the architectural student will find in it examples for imitation and suggestions to aid him in self-improvement. The builder has here presented to him designs that have stood the test of practical experience, and have been found suitable in their dimensions, arrangements, and construction, to the requirements of domestic comfort, combined with an appropriate treatment of style, a distinctive character, and elegance of appearance. To those who contemplate the erection of a Villa or a Cottage, this Work offers most valuable aid in assisting to form and settle their ideas respecting the accommodation they require, the conveniences of arrangement most desirable, the character and style of the architecture, and lastly, that most important consideration, the actual cost of the whole when finished.

Most of the works hitherto produced on this subject have consisted simply of designs by individual architects. These are liable to be characterized either by sameness of ideas and expression, or by modes of construction and arrangement prevailing in particular localities; and in consequence of not having been carried into execution, they are frequently open to the serious objections of waste of space and exu-

berance of ornament. This Work, on the contrary, presents a selection carefully made from Plans of buildings already erected, from the designs of eighteen architects of acknowledged position and ability.

The examples are selected from a wide range of country, and show diversity of style, arrangement, and structural treatment of materials. They generally consist of houses of moderate dimensions, erected at a cost ranging from £500 to £2500, but include a few of larger and more expensive character. The locality of each building, the name of the architect, and the date of erection, are regularly given; and a description of the site, the internal arrangements, materials, and manner of construction, accompanies each set of Plans, together with a statement of the actual cost of the building in nearly every case.

The buildings are fully illustrated by finely-executed engravings of plans, elevations, and sections, carefully reduced from the working drawings, the scale employed for the principal elevations is $\frac{7}{8}$ inch to 10 feet, and that for the ground plans and minor elevations $\frac{5}{8}$ inch to 10 feet. By presenting the ground plans and minor elevations on a less scale than the principal elevations, it has been found practicable materially to increase the number of the buildings illustrated, without increasing in a corresponding degree the price of the Work; whilst from the uniformity of scale of the plans throughout, the relative sizes of the houses illustrated may be approximately ascertained at a glance. In nearly every case the plans of every story are given, and wherever it is found requisite the four sides of the house are shown. Perspective views and enlarged drawings of the ornamental and constructive details are added as occasion requires.

VILLA AND COTTAGE ARCHITECTURE is completed in 20 Parts, imperial 4to, price 2s. 6d. each, forming a handsome volume. Each part contains four fine Engravings, with descriptive text.
